the lamp, while the Captain produced from the hatchway a large, covered tin box, which, on being opened, disclosed several compartments, each with its own cover of tin, and containing eggs (packed in salt), sugar, tea, etc. As soon as the coffee was boiled the tin plate with the ball was "put over," a piece of butter dropped in (from a water-tight earthen jar, which can be lowered into cool water when in camp), and two eggs, one for the Captain and one for the crew, were broken on the plate and soon fried. A loaf of bread, in a tin box of its own, was brought out, and while the Captain ate his supper the tin pail of water, was heating, with which the dishes were to be washed after the repast. Meanwhile Judy, who had been waiting patiently without, was fed with bread and egg cut up together, and served on the clean gravel by the boat's side. Although the Captain evinced a certain ignorance of the customs of the *oyster* in smoking his briar-root while washing the dishes, that ceremony was nevertheless well done, and each piece of tinware was put away as shining and bright as a new silver dollar.

It was now fairly dark, and a slow rain commenced falling; so the two voyagers, after a race to the end of the point and back, crawled under the shelter of the little tent. Judy was soon asleep in her accustomed place, and the Captain, after lighting a candle and writing up the log for the day, unrolled the wooden blanket, straightened out the carriage robe for a mattress, and at seven o'clock at night, with the cork seat for a pillow, and nothing over the bottom planks of the boat but the thin lap robe, enjoyed as luxurious a bed as any darling of fortune on a couch of elder-down. The rain drops fell in a "patter-patter" on the tent over head, the wind made the branches of the trees creak and groan, and as the monotonous "chug-chug" of the paddles of the tow-boat became fainter and fainter as she receded down the lake, the Captain of the Gypsy sank into a sweet slumber, not to awaken until

"The morn is up again, the dewy morn,
With breath all license and with cheek all bloom."

SEXSEA.

* It was not the general rule to cook under the shelter of the tent, it having been done in this instance in expectation of a shower.

OARE VERSUS COOT.

CLOSE and continued application to regular routine of business, reinforced by unusual cares, having succeeded in establishing their "first parallel" against our citadel of good digestion and sound sleep, we determined that "discretion was the better part of valor," and ran away. It is the story of this flight which is offered to other weary workers, that they, too, may appreciate the fact in its best senses, that

"He who fights and runs away,
May live to fight another day."

Having decided upon our "skeddaddie," it did not take long to determine upon the plan in general, and route in particular. Something out of office, into open air, away from care, to the full enjoyment of an absorbing pleasure! As we gave free rein to fancy and inclination, old scenes came rushing into view, the pulse quickened as we lived again in pleasant recollection the experience of days thus called to mind.

After due preparation—getting together the whole outfit and paraphernalia, which is more precious than so much gold or silver—the trusty eleven-pound ten-bore, clean and true and close as their outside lines of "hammerless" betoken, due ammunition, the snipe guns, rubber cloth boots and trousers, cow-vesters, Cape Ann oilers, and the whole business of flannels, heavy coats, cleaning rods, oils, etc., etc., we found ourselves toward noon on the 25th of October leaving the cars at Good Hope, and looking around for "Sydney" and his "U. S. Mail," to take our traps to Pond-quoque, while we stretched our legs by walking the two miles of sandy road which intervened.

Of this mail wagon and its genial driver let us say naught but the soberest truth. Of modest look, appearing to have approached the "early candle light" of its usefulness, suggesting just a little shakiness, you are surprised to know that "thirteen men, all heavier than I be—and I weigh two hundred and thirty—has been carried in this 'ere waggon to-night."

It is hardly worth while to insist on the accuracy of this statement: it is at once banished when the eye, leaving the vehicle in wonder, travels rapidly over "the team" and harnesses.

A hundred minor and indescribable something at once convince you that "Sydney" only told the truth. The discouraged and resigned flop of the ears, the subdued switch of the tails, the sleepy drag of the eyelids, the pokey gait, the protesting harnesses, with their bent buckles and substitutes and honorable scars—in fine, the speaking *tout ensemble* proclaim the fact.

Curbing our desire to ride in even such a distinguished official van, we walked for the exercise. If you do as we did, however, you lose an enviable chat with an enviable and solid old friend, Sydney Wells, stage driver and U. S. mail carrier.

"May he die fat!"

A swinging gait and heavy roads brought pedestrian and coach to our old friend Foster's together. And for comfortable house, pleasant rooms and good kitchen, and, best of all, for hearty, hospitable welcome to old friends, commend us to his good wife. While Carriack demands him at stated seasons, she maintains the good standard of things at home with graceful ease of true hostess.

As we stretched ourselves before the roaring wood fire in the evening, having unpacked guns, and donned the flannels and garb of the hour, we chatted with her of all changes since last we talked, of the chances of birds, of the weather. We were surrounded with an atmosphere of comfort and rest and pleasure, which promised sound sleep, good digestion and full health without measure. May her life be long, and her avocations never less.

Would that our pen could picture to each eye the group of old friends who dropped in later. Uncle Ed, George, Joe, and the philosopher, Gill.

Uncle Ed, the hero of many a season's gunning, and to-day as active and keen in his enjoyment of sport as he ever was, and always full of hopeful prognostications or consoling uncertainties.

George, his little boy. Nothing Cassius-like here—no "lean and hungry look" about him. Fat as he is jolly, and true to friend or needle to the pole.

Joe, whom everybody knows and everybody wants, whom the "children cry for."

And Gill, the philosopher and orator, and whose tongue "lubricates by its unctuousity rather than irritates by its asperity," who can talk more to the square inch than—well, pen fails—words are inadequate.

There we sat, and as the fire burned, sending its white wreaths of smoke into the keen frosty night air outside, we in the warm glow within talked of seasons gone by and rehearsed the story of successful bags or more frequent disappointment, and laid our plans for the days to come.

The cooler weather, though unseasonably warm, and the hoped for southwest wind, promised fair sport, if only the birds were in the bay. Many had been seen, and they were surely somewhere. Uncle Ed talked vaguely of "a big bunch of" broad-bills up in the North-east," but they had been shy in coming to stool and bags yet had been small.

Putting all arrangements into the hands of George and his father, (than whom no better fowlers are to be found along Long Island waters, we promised to be aboard by five o'clock next morning, said "good-night" all round, and after one more observation of wind and weather, went up to bed, if not to immediate sleep.

Crawling in between the sheets, fancy found eyes which penetrated the darkness with which night had veiled the familiar scenes around us. We could see the lofty beacon of Shinnecock Light flashing its guiding rays far across the bar to trusting ships outside. We could see the Life-Saving Stations, away to the east and west, with their sleepless patrol pacing the sandy beach. We could see "The Island" within the bay, as well as "Hole in the Wall," "Goose Point," "Bunker Bay," and the scenes of many an earlier day's exploit, while we *thought* we saw broadbill, cool and redhead in unconscious security taking counsel as to the morning's flight.

As our eyelids drooped we almost thought we could hear the monotone of earnest preparation over at "Lane's" for the morrow's start; but a smile broke over our faces, for we knew "old Yiah" must start early indeed to interfere with our tried friends. And we slept. Slept, as not for a long, long time at home.

All too early came the rousing knock in the morning, but tumbling out of bed into ready and fitting habiliments, hot coffee, hot breakfast, and Mrs. Foster's beaming face started the day successfully, with guns well oiled with "dead-shot," ammunition bags and cases filled, and all things needful for a day's campaign, we fled out into the dark, each following his leader, before day gave any sign of breaking. The hoped-for wind was treacherous; only southerly, not southwest; only moderate and not fresh. But those comforting souls at the front called bravely of possible change for the better during the day, and Uncle Ed "threw in his lot" like a hero. What an anchor is Hope! Although we were off early we saw the dim outline of sails to the westward, and we knew that Lane's folks were also early starters.

Shall we tell of all the secret counsel and commings, the depth of profound skill and divination, the subtle knowledge of birds and haunts, that a little later planted our double battery in a certain place, and left us in our snug boxes surrounded by the most seductive of stools? Crumble this pen first.

Never were boxes tighter; never was a "rig" more deftly and skillfully set; never were two minds so determined on doing their whole duty; never were guns so carefully loaded and handled, as when we settled down, while the first bird—a glorious forerunner of coming scores—sped swiftly down the bay against the rosy sky of an awakening autumnal day.

The glory of sunrise! The beauty of early morn! With the ripple of clear water in one's ear, making melody while all nature is in a most subdued tuning, what wonder the heart acknowledges Supreme Goodness, and pays its willing tribute of recognition and gratitude!

So as it grows lighter the birds begin to fly; singles, in pairs, and fair bunches. We watch them on their swift course, and enjoy all things together, discoursing of the chances, and waiting for the sun to rise, for we are law-abiding, and may not shoot until Old Sol's eye is fairly on us.

It is nearly sunrise, when we see a bunch of six or seven wheeling round to drop to stool. Discerning whether yet to shoot if the chance offers, all doubt is dispelled by the double "boom" of two guns from another battery away to the east, and judging that the other fellows have caught sunrise in saying time, we rise and bring three with our first barrel and one with our second. A good opening for our first day's ducking in '81!

The ball has opened, and all day long the chances are taken with varying success. A brotherly rivalry between these two boxes lends additional zest to the sport, and individual scores are closely kept, while shouts to the "tender" as the sails are used to secure the prizes drifting to the leeward, urge George or Uncle Ed to an unflinching effort to secure the sun total.

The speeding hours fly too quickly. No time can be lost, so much is sent for and eaten in battery, while comparison of shots and scores is made, and the wonderful kills, which every gunner knows are always made, are discussed with gusto. A bunch of geese, high up, sailed over, and the first brant of the season were seen in the season and the nooning." After all this brotherly contest, and when toward night we called in the tender, took up rigs and sailed homeward with a goodly pile of birds, we counted (we'll never tell exactly how many) broadbills, redhead, coot, one venture some sprigtail; and each hammerless was credited with the same score of dead.

But of all batteries in the bay for that day—it came out later—we had the leading scores. In succeeding days the warring brothers cutshot him, and even brought to bay a solitary canvas-back.

And so was spent an entire week. On gunning days, always in battery, fair weather or foul, and one day proved a pouring rain—all day long—"off-days" bagging snipe and different bay birds, or taking long tramps back on to the hills flushing an occasional bevy of quail. Then we wished for "Ray" and "Pete," the faithful partners of our upland sport. How we slept! How we ate! We had found a panacea—better than bolus or draught.

All things came round to us again, however, and the unwelcome hour came round to leave this haven of enjoyment and active quiet, for further scenes of sport which claimed our renewing acquaintance.

We had ordered "Capt. Bill" to have the yacht waiting at Sug Harbor, with full supplies for a week's cruise, and the time had come to go down and board her. So we again shook hands all round and left Pondquoque for another year.

Quiet, peaceful spot! May your bells never fail, may your fowl always be in the season and in good numbers, and may "George" and "Uncle Ed" secure the lion's share till port and battery know them no more!

Later, if this long story does not bring sleep to some waiting watcher for FOREST AND STREAM, we may spin a yarn of our week's cruise through Gardner's Bay and around Montauk, which may not fail in this, if it does not excite appetite and good digestion.

A RECORD OF HONOR.

BY ANNE G. MALE.

"A NOTHER Victim of Hydrophobia" heads a paragraph in a letter by a mild dog. And this mild dog, with such excellent statements that one would suppose that over the weakest people carries diabolical intentions packed away in his innocent, docile-covered nodules, meeting only it opportunely for their fulfillment.

The evil that men do lives after them
The good is oft interred with their bones

wrote Shakespeare. True as this saying is in regard to human kind, it loses nothing if parodied thus:

The evil that dogs do doth live for aye,
The good, if recompensed—with gift of bones—
Is oft forgotten ere accomplished quite.

For such is the usual apportionment to the canine race.

So frequent is the mention of my mischief that a dog does, and so exultant the tone in which his misdeeds are related in most of our pulp prints, that there is little space for noticing, and little heed paid to the many acts of office and heavy duty that mark his career. His intelligence is granted, unquestioned; but who that has taken the trouble to note has not been convinced that for one culpable deed blazoned abroad one hundred virtues of commendation in private without a word of praise—one thing has been made to outweigh years of honest, useful and unobtrusive duty—one ebullition of anger or one demonstration of the old savage nature is allowed to cancel all obligations on the score of the most intrepid bravery, the most complete self-alienation? It is refreshing to meet occasionally with some acknowledgment of the valuable services rendered by these useful and noble creatures. If such acknowledgments could be offered more publicly the ill name that weighs so heavily on many of this much-maligned sort could be removed, and something like justice be accorded them in general estimation. It is reasonable to suppose that those acknowledgments would be forthcoming if some systematic arrangement of the matter were instituted.

An excellent method of settling the subject regularly before the public would be the establishment of a Record of Honor in the columns of FOREST AND STREAM, in which every person may at liberty to place the name and praiseworthy deeds of any dog. The information thus obtained and disseminated would be both interesting and valuable.

It is in order to express this suggestion, I will commence the Record by mentioning one dog who will always have a green place in the memory of the little circle who know him best.

1. Jack, who rendered several years of faithful service as a dog in my father's family. A combination of the mastiff and the spaniel, he was extremely sagacious and docile. Though occasionally showing high temper, he was very affectionate and gentle to all who treated him kindly. A change of residence for the family made a change of homes for Jack absolutely necessary, and to the regret of those whom for so many years he had served so well. Soon after this change he sacrificed his life to the sense of duty; for to the last he was unflinching in his brave old hero! He was night keeper of his new master's store. This store, which adjoined the house, took fire. In the dead of night the family were aroused from sleep by Jack's loud and continuous barking. He might easily have been taken for a ferocious brute, but he remained at his post and perished by suffocation.

2. A recent English paper says that a child about two years old was saved from drowning by two dogs—a retriever and a terrier. The child belonged to a fishing family, and the dogs were his sister, Mr. Bell, of the Thirk estate. It was left to the trust of the sister. The sister being busy, the child strayed to a pond a short distance from the house, and his absence was not noticed till the children came into the house barking. The sister followed the dog, who went toward the pond, where she found the terrier holding the child above the water.

3. An Irish setter, Jack by name, a noble animal, the property of a Romish priest in Newburyport, Mass., early last spring, by the loss of his own life, was the means of saving others. His master was absent from the city, and Jack, who had charge of the care of the paragonage. Late in the evening the servant retired, leaving the dog in the dining-room below stairs. Toward morning one of them was awakened by the dog, who was dragging and pulling at his bedclothes and making a great noise. The chamber was filled with smoke, and the man had returned to arouse the other servants before flames burst from the walls. Poor Jack went down stairs to his usual resting-place and soon expired. When the fire was extinguished his remains were found unharmed. He had probably suffocated almost immediately after giving the alarm.

4. A full-blooded St. Bernard, who bears the proud title, Dom Pedro, was for a long time the pet of a friend and neighbor of mine. He had a voice clear as a bell, and a temper, like, however, to his own. He was very fond of his master, and by every of joke, sending its notes ringing and echoing all around the neighborhood, no one ever had reason to complain of the quantity or quality of the music he had made. Being playful and affectionate, he was a great favorite with the children. But once, in fun, in sheer make-believe, apparently, having returned to his love plays with a pretense of biting, one timid prentice made such complaint that he was banished from city life. And so Dom Pedro was banished from the city, and began to develop a fondness for Lucerne pursuits, enjoying all the pleasures of company of his master's cows and oxen as much as he had that of the city children, not only preferring their society by day but sharing their quarters through the night—a self-constituted guard and keeper. One night the miller was awakened from his peaceful slumbers by a great uproar in the barn, tramping and bellowing of the cattle, but, high above all, Dom's voice as if in expostulation and entreaty. He quickly dressed and hastened to the scene of action. His noble oxen had broken from their stalls, and were gorging themselves at themselves. Dom, if aware of the danger, was using his utmost exertions of voice, teeth and feet to dissuade the culprits from their suicidal feast. Had he not aroused their master, who, with no little trouble, had won them as such as could be made, he would have been a fearful sacrifice of fat cattle the next morning.

5. On the 24th of last May a house and barn at Andover, Mass., occupied by Robert S. Hayes, were burned. Probably the fire was incendiary. About two o'clock in the morning the family were awakened by the curious and noisy behavior of the dogs, and the bravery they undoubtedly owe their lives, for everything in the house, even all the clothing, was burned, and with the barn, nearly all the animals and farming utensils were lost.

It is a curious and interesting fact, that a very little terrier, who I have named George, and who is now in the hands of a friend, must confess enjoys startling the neighbors by his noisy behavior of barks. My friend has been sadly tried by this trick of her pet. But he is so affectionate in his disposition, and is such a comical bunch of good nature and intelligence, that his noise might easily be forgiven him. But, alas! some unkind, envious, spiteful to such orders from any one else, and he not refuse but the churl who stigmatized him as a "troublesome dog" gets a good share of growls and howls when he least desires them. These brief notices, the Record of Honor being now fairly opened, let us have enough of the good and the bad of the hundreds of worthy dogs. Let them have their full measure of merit, and that with promptness.

THE WILD HOG OF HAMPDEN.

BY B. HORSFORD.

(The incidents narrated in this paper are substantially true. The story has been told in print before, and has been rewritten for the FOREST AND STREAM.)

IT must have been between '48 and '50—particular dates not being necessary—that a little circle of friends made their headquarters in Wallace's saloon, a basement opposite Clark square in Springfield, Mass. Here they often met to drink health to the community, compare notes and experiences, relate exploits, and not unfrequently to all unite at once in discussion, when the weight of argument would be truly overwhelming. As these four persons figure largely in the story, a word of personal history seems necessary. One, a man of blood, a butcher, often sacrificed time instead of hogs when suckers, trout and pigeons were plenty; still his trade was a visible means of support. Another caught pigeons in early spring, shad in summer, and pigeons again after the Glorious Fourth; minks and muskrats in the fall; in the winter, nothing. Another did—well, we give it up. The last of the quartette was the puny husband of a dashing milliner, and, of course, he was left to help the others. On the whole, they were an easy, vagabond set, a Springfield necessity under the circumstances, and, as is often the case in great events, doubtless raised to meet the emergency.

Somewhere in the lofts above lived a man—sometimes called "Doctor"—broken in health and ambition, eking out an existence, if possible, more mysterious than either of the others. Sympathy drew him near, and sympathy and fellow-feeling opened the circle and he was admitted. But a strange depression was at once apparent. Rufus leaned his chin on the back of his chair; Sol bit off the stem of his pipe trying to smoke; Ruel often brought his fist down upon the table with terrible force, but said nothing. By judicious questions and great caution the Doctor at last reached their confidence and the reason why they were so cast down. They had spent a whole summer in futile attempts to capture a hog. Traps, nets, pitfalls, twine, stocks, alike availed nothing against the extreme caution of the creature. And to think a hog had done it! Had not Sol slain his thousands, and Ruel his? But we forbear! Here they were obliged to acknowledge defeat with aggravations, and no wonder they felt bad. "Damit," said Ruel, "he escaped in that general stampede down hill we read of, and the same devil possesses her still and helps her on." "My friends," said the Doctor, "the case is truly discouraging, but not hopeless. There is not a creature on the earth that must not fall before human intellect and human skill united. You have here the nicest of all jobs if cunning is to decide it, and the hardest if left to physical strength. You have before you a creature whose caution and endurance has no equal on this continent. Take renewed courage, for you will certainly fetch her at last." The meeting broke up, as it had so often done before, after a unanimous vote that "That hog must be caught!"

As we can make but little headway without the principal figure, we will go back and bring her up.

Some two years previous to this time Captain H.—, of the gun ship Medusa, was "up the Straits." "Hey on the Dardanelles!" While at some port in Asia Minor a native brought along a litter of five wild pigs for sale. Now, to see fresh pork appreciated, go to a general in war time or to a sea-captain on a long voyage. Only think of it—roast pig and homeward bound! Without loss of time a bargain was struck and the pigs carried on board. But hopes are often raised to be broken, and disappointment lurks where we least expect it. The little wretches would neither eat nor sleep, and the Captain saw with regret one after another given to the sharks as they died, till, on reaching the port of Boston, one sole survivor remained. The idea of pork in that directi— had entirely failed out, and skin and bones were consigned to the first friend willing to accept them. Soon exhausting both patience and perseverance, the pig was sent to Mr. Edward Cordis, of Longmeadow, a gentleman of leisure and means, that he might develop whatever might be hidden beneath that rough hide—and surely the chance grounds for improvement were most strikingly apparent.

The creature was placed in a pen, or high box, and showed up as fast as she grew her wild, untamable nature. Not one mouthful of food would she take while a human countenance was in sight, but would plunge into a hole she dug into the earth, with the vain hope of hiding from a human eye.

There was a plank eighteen inches high running across the pen to separate eating and sleeping apartments. She would mount on the edge of this plank and walk for hours back and forth without stepping off—ever restless, ever moving, searching for a hole to escape or hide.

After she was one year and a domestic male hog was placed in the pen; she brooked no such intrusion, and flew at him with all the ferocity of her nature, and he was withdrawn to save his life. Another trial was made with a regular old bruiser, and they fought continually till he was taken out sadly demoralized.

After this all hope of domestication or improvement was abandoned. The creature was kept and fed because—well, they didn't know what else to do with her. She had grown to the height of nearly three feet; long, lean, gaunt—not one inch round the shoulders or hips—and such a snout! Look at the illustration.

And so the year went by. People would call, look awhile at the creature and go away. At last a neighbor, having filled his pockets with acorns, threw them into the pen. She eagerly devoured them—the first food taken openly while, in confinement.

The night following she went out of a window eight feet from the floor, by either a standing leap or climbing the wall—a question never settled as to years afterward she went out where there was no hole before or afterward, demonstrating the presumption that she might or could have left by the key-hole or a crack in the boards just as well as by the window. At any rate, out she went and scooted for the nearest woods.

II.

The town of Longmeadow is divided into east and west sections by track of nine or a mile or more in breadth, reaching from Pecowick Brook, near Springfield, to the Shaker Village, in Enfield, Conn. This tract of abandoned land is covered with sand-blows, sloughs, swamps and underbrush chaparral. Here the Hog took up her abode; here she lived three years, and here the Pigeoners first made her acquaintance. She would visit the pigeon stands at night, eat the wheat, disturb things generally, heave the smooth beds into heaps, so that a visit from the owners was necessary in the morning to put things right for the pigeons. This caused great uneasiness—on one side at least—and had the male-dictions been half as effective as they were energetic, the Hog had been annihilated at once. Be that as it may, at the regular meeting the case assumed definite proportions, for they had each the same story to tell. The discussions were animated, the arguments conclusive, and the vote unanimous that this waste of wheat must proceed no further, and "That Hog must be caught."

About this time a mail came up from the Shakers of spoiliations not to be endured. "Ye and Nay" had heard that a "school-mistress was abroad," and now they had positive evidence of her proximity. They would plant potatoes through the day but to find them dug up at night by a creature of voracious appetite, while corn, beans and other "deposits" were removed unceremoniously. With proverbial philosophy they replanted again and again with the same results. Nothing was said aloud, but there were indications that pent-up feelings caused expressions the canons did not allow.

The first plan submitted was Hubbard's. He sunk two sugar "hogheads" (no pun was intended) in his pigeon-bed, one below the other, making a large well some ten feet deep, covering it with a trap to let her fall in while eating the bait placed in the centre, the whole covered with two inches of earth. The Hog came on to the bed, walked around the charmed circle night after night eating the wheat, but not one foot would she place on the trap or over the well, although smoothly covered with earth. At last this was voted "no go" and abandoned.

The next plan was Ruel's and Hubbard's together. They made a net of small cord, attaching it slightly to four poles like quilting frames, and suspended it by ropes to fall squarely upon the Hog's back, when, by a jump, she would carry the whole net with her and roll upon the ground, enveloped like a Sioux baby, and just as helpless. The thing was all figured out and the result certain. The net was set and the Hog went under it and, while eating in the centre, sprung the trap. The net had three feet to fall, while she had more than six feet to jump; but she cleared it in time, striking some ten feet outside. But this was only a slight mistake in figures. The net was raised higher, and, after a little coaxing,

she again ventured under it; then they lowered it a little more and repeated the operation till it almost touched her back. The trap was again set, and the net fell squarely upon her. As though she had from a mortar she went through the net, making a large hole, but without breaking the slender attachments to the poles. What was said on viewing the premises the next morning is not recorded. Hubbard was too thoroughly bred to come to express on all occasions what he felt, and Ruel got relief somehow, for he came

into the next meeting cool and collected.

The following winter an attempt was made to run the creature down with dogs and either capture or kill her; at any rate, to rid the farmers of an outlaw and relieve the Springfield band of disgrace accumulated until the cannon's bark was dreadfully warped. True, parties from Hartford, Worcester and intermediate places had hunted the Hog till fully satisfied. But then, they didn't know much; and how should they? "None of 'em ever seen a wild hog."

Notes from a journal kept at the saloon will best describe the hunt with dogs and the result:

Monday night at Wallace's.—The Hog started early and ran well, but the dogs pressed her so closely that she had hard work to keep ahead.

Tuesday night.—She kept clear of the dogs by doubling on her track, but evidently showed great fatigue.

Wednesday night.—She held out wonderfully, but was left near Pecowick Brook, a mile from Springfield, all beat out.

Thursday night.—Found her ten miles from where they left her the night before. The Doctor said she was getting stiff in the joints from lack of exercise, and had merely taken an evening walk to keep in trim.

Friday night.—"She runs like the devil," was about all that could be got out of them.

Saturday night.—"Damit," said Ruel, "I measured jumps to-day of sixteen to eighteen feet, and the brute runs better than she did Monday."

All hope of running down the Hog with dogs was given up; all plans thus far had proved abortive, and the depredations continued. When corn was green she would enter the fields and "eat like a hog." When the corn was out, not one ear would she eat in the field. She would come out of the woods only in the night, walk straight to a shock of corn, seize a bundle and retrace her tracks to the woods, and there, in a dark corner, eat it. She would mount a fence and walk like a cat upon it. Once only was her track seen around the pen of a domestic hog. One day a pack peddler crossing the woods was horrified to see a large black creature bound into the road behind him. Dropping his pack he "went for his life," and the Hog went for "hern." Looking over his shoulder the pack was mistaken for the Hog in pursuit. At any rate he told a terrible story of his escape.

III.

We believe this the only view of the Hog obtained in the three years of constant warfare in which she lived. Invisible to human eyes she would make tracks just as long as men or dogs chose to follow. She would leave the fleetest with laps of twelve to sixteen feet by actual measurement; she would double on her tracks, and then by a tremendous leap sidetrack the surest hound.

The next effort to capture the Hog was the third summer after her escape. This plan was to stockade around a depression in the ground made by digging out rabbits. She was decoyed to the place by scattering buckwheat from a pigeon-bird close by to a small heap in the hole at the bottom. Leaving a space for entrance, they began a stockade, right and left, of hard pine trees to six inches in diameter around this depression, adding to it daily, and setting them over two feet deep in the earth. The plan captivated the Doctor in the outset, who said, "There is science in it and you will certainly catch her, because her hips while eating are full forty-five degrees higher than her head; consequently she must bring her hind feet down to her nose, then raise her head forty-five degrees before she can jump, which will be most certainly a little late to reach the opening. And another thing, when you close the stockade on the other side she won't go in"—as it proved. The opposite side opened, she again went in to feed.

They then closed the stockade some six feet high, and the entrance in the same manner, then hooped the whole and spiked all together. The Hog entered fearlessly so long as the way seemed clear beyond. The trap was so made that moving a little stick in the pile of wheat while eating would let fall both gates at once. A gun was lashed to the stockade which the fall of the gates would fire off.

Having got all things fixed, the friends took their station half a mile away and waited—waited—all night. But she would be hungry, and the next night would surely bring her. This sprung the Doctor, and the second night he lay in the woods with them, but no signal nor sign was heard.

The third night proved that she knew all the time "somebody was round," so the fourth night they all stayed at home. Between nine and ten the next morning, the friends having overslept from broken rest, approached the palisades, and seeing the gates down sprang forward with a shout, and mounting the palisades looked in, and then at each other. Ruel looked at Rufus and Rufus at Ruel. To say that they were astonished is a failure; blank amazement is a failure, and we doubt whether any language short of Feejee could

express their looks—there was no Hog there! Language failed entirely, wrath refused to explode.

Not so thought the Hog a few hours before. She was undoubtedly surprised to see a gate shut in her face just as she was going through it, and more surprised to find one shut behind her at the same time. She probable took in the whole scope of the question at once. Caught at last; now to get out, and that immediately. Palisades fifteen feet high—no hope in that direction. The gates looked like Saurian teeth—no hope there. She went round the pen with a ditch two feet deep, throwing the earth to the centre and laying bare the stockades nearly to the bottom; then taking the weakest and only possible spot, drove her nose between the posts and literally "following her nose" forced her body out, the stockade closing entirely behind her.

The next meeting at Wallace's was "so solemn as a court of justice." Little was said, no speeches were made, and the usual vote was brought out only by peremptory demand of ayes and noes—and feeble at that. The truth was, a general demoralization had fallen upon them all. They even doubted the Doctor's philosophy, because he only said they would catch her, implying doubt of their ability to keep her when caught. They doubted everything. But sorrow and disappointment wear off in time, and the cause remaining still fresh and vigorous courage and hope again revived. "That Hog must be caught!"

In the southern part of the Hog country toward the Shaker village was what was called the Big Swamp. On its eastern borders there was a tavern or public house where the comforts of life were always obtainable and where foreign parties made their headquarters and recruited strength after the fatigues of a chase.

IV.

As the hunt continued year in and year out, the unbelieving and profane began to point in derision at the place with the remark that a "stripped pig" in the barn was the only Hog in the neighborhood, and that the hunt was never off the premises; a vile slander as every one testified who hunted the Hog. But through evil as well as good report the Springfield band held to their first love and first resolution. The Hog lived, and, dead or alive, "we shall fetch her at last." The Doctor said as if he didn't know, who does? And, besides, there was a terrible weight of responsibility resting on them; their reputation as hunters was at stake. And then the "championship of America" rested entirely on their shoulders, and as men of principle, having a good hold of the plow handles, looking back wasn't there.

There was in all this time occasionally a man to be found "fighting on his own hook," and slyly endeavoring to bear off the honor of capturing or killing the Hog while the regulars were beating the bush. One hunter found himself in front of a switch-up which would have slung a dog or dog "higher'n a kite" had a foot been put in it. There was also exhibition of three bristles and a piece which Eskrine carried in his wallet and often displayed to the less fortunate, and which he said he cut from her side at less than forty yards. Much of this credit, however, was due to the gun. Wasn't it a-rusher? "I saw him put into that iron a handful of powder, then a plug or wad, then sixteen buckshot, then another plug, then sixteen more buckshot, then another plug, making thirty-two fine rifle balls." Now if "unlatching" the crank in the breech, the Hog brought only the trophies mentioned, it was nothing to brag of much. If any man doubts the truth of this last assertion, we give him the full benefit of the doubts. We simply state what was stated to us; we would add, however, that it was and is considered derogatory to doubt each other's word. Isn't the man's word who "saw it done," more reliable than any number of men who didn't "saw" it? In this connection we must not pass lightly over an important part carried by a man in the edge of Somers in Connecticut. He was a thorough sportsman, drove a good horse, kept the best hounds in the state, and if his purse had a bottom, we think he never saw it. It was fitting, therefore, that Sol should be elected general-in-chief, and as the "puss" afore-said was the only one in the company, the election virtually made him quarter-master, sutler, surgeon-general and head of the sanitary commission.

The last plan was matured with deliberation. They met on it; they "sot" on it; they slept on it, so that when unfolked to the public it was such an exhibition of generalship, human skill, and human endurance combined, as is only met in a century. When the plans were laid out, "the standard of the prophet" was raised, and a hundred stalwart men raised their arms. We do not mean guns, for a three-years' war had pretty conclusively shown that in hunting this Hog fire-arms were an incubance. True, a good many shots had been fired into the swamps where the Hog might or might not have been, in the early years of the hunt; but now it had come to be believed that a man on a smart horse might traverse the Hog country with tolerable safety.

It was about the time that a member of a party from Hartford to find, seeing the bushes more, "used a gun" and had the Hog been where his dog was, he might have been hurt. As it resulted, he told at night how his dog seized the Hog and was quickly dismembered in the contest.

But this is a digression. The hotel on the confines of the big swamp was turned into a camp and filled with men eager to do or die, as might be necessary. Two men were to start the Hog from her lair and pursue with "expedition," stamping out every track as they went. Parallel roads cross'd the Hog country, and the hunters, and in these roads sleighs were plying back and forth with fresh teams. Where the tracks crossed the road two fresh men were let loose and when the pursuers came up they were taken up to be dropped again or unbalanced up to camp for repairs or exchange. You will see that by this method she was driven as no dogs could do it, and soon found there was trouble behind. She would shoot from pursuers but to find them close at her heels. She would double, twist, and repeat on her tracks but lost every time, while the call for tracks was incessant. At dark, the hunters which were lighted, were ordered to clear through the trees, with an occasional "wo!" for encouragement, a horn-added terror to the fight. Tuesday and Tuesday night, Wednesday and Wednesday night, and Thursday, passed in this way—and Thursday, just at night, the pursuers caught a fair view of the Hog, the first, with one or two exceptions, in the three years preceding.

That night she made the most desperate efforts to confuse her pursuers—and she lost every time. Friday morning opened with the Hog in the fire, and the pursuit grew intense. If it had from a woman she would fall as if shot, and then bound forward as the pursuers came up. Friday afternoon the final struggle came on and also off. Sol with a fellow craft took two heavy Newfoundland dogs into a sleigh, and they were driven to the woods for the death struggle. The Hog went reeling across the road just in front of the horse; the men, coats and hats off, sprang from the sleigh; the dogs fastened one on her hind quarter, the other on her opposite foreleg. She dragged them into the woods with the seeming power of a locomotive. The men came up, and Sol, plunging in between the dogs, seized one hind leg which he took to the other side of a tree in passing; this brought all up and siding; the assistant seized the other hind leg on the opposite side, and the Hog was thus resting on her forefeet, her hindfeet high up, and astride of a tree, in the hands of two men not likely to let go. Then, not a yell but a "hollo!" went through the woods for miles. The irruption of a volcano would not have told more surely where to run, the men in sleighs, "the cattle lot," by high ways and by-ways, cross-ways and all ways. In a few minutes all were there. A noise was first thrown over that pair of jaws, then the feet securely tied, then the Hog was hoisted into a sleigh, and the cavalcade—twenty-five teams, slightly demonstrative—strated for Springfield. There was "music on the breeze" a mile in advance of the line; the shouts, not abating, soon degenerated into sounds hoarse and uncouthly, which brought every household out of doors, in fear and wonder as to the uproar. The said powder mill was blowing up; some thought and thought they knew.

Arrived in Springfield and remembering the stockade, a stall in a horse stable was boarded up and the Hog placed in it, with a double guard outside—a modest insinuation that you don't catch us napping again.

The poor Hog had now no place to hide. She squatted on a little pile of straw in the middle of the stall, and, shivering with fear, seemed only striving to sink from human sight. The Doctor came in, and looking through a crevice not half an inch wide noticed that she had her eye on that side the instant that his own was fastened upon it; he went to the

opposite side, and she closed that in the same manner. This was several times repeated, to substantiate a rare phenomenon in natural history—the effect of hopeless terror. The dogs did not tear her flesh badly, in no case touching the functions of life; the exhausting chase could not have done so, but to these add fear, the most powerful emotion known to organic life, and you have an intelligent solution of the "why" she thus squatted on a handful of straw, closed her eyes—and in a few hours was dead. She was really scared to death.

Thus perished the Wild Hog of Hampden. The wrath of the Springfield band was assuaged.

The skin of the Hog was set up by the writer, and the stuffed effigy, grim, savage and threatening, was preserved in a glass case in Springfield for many years. Afterward it was taken to Boston, where it graced a private museum, until the great fire came; and it was destroyed in the flames.

There is a truth, broad and deep, underlying this story of life, which the doctor wishes may never be separated from it. It is the progenitor of our domestic hog at first, the most untamable creature on the earth, just as the Creator blocked it out and left us to finish up. An article of food suited to men as wild and savage as itself, they seem to have followed down the course of time and progress of humanity, merging at last into the creature we now possess; just as we have passed from savage to civilized life. Six thousand years, more or less, was required in either case. The type is not lost, but we have made substantially a new creature. The red-headed woodpecker in all our domestic animals and fowls. By domestication we enlarge, enoble, beautify and increase capacity of usefulness the orders of life below us. It is our part of the work of creation, just as active and efficient today as in the beginning, and successful just in proportion as we study and follow the immutable laws which in every case govern and regulate organic life.

Natural History.

HOW TO PREPARE BIRD SKINS.

A TEXAS correspondent writes: "Can you direct me how to remove and preserve the skins of birds so that they may be mounted by a taxidermist?" We can certainly give directions which will enable our correspondent, if he has patience and perseverance, to make skins which a taxidermist can mount, but we venture to say that his first essays at skin making will not be satisfactory. To unpracticed fingers a bird skin is a very delicate thing to handle, but use will soon give the requisite dexterity. Our method of making skins is as follows:

Fill the bird's throat with cotton, and plug nostrils and any large shot holes with the same. Place the specimen on its back on a table with the tail toward you. Break both wings close to the body. Separate feathers along the median line of lower breast and belly, and make an incision from the posterior extremity of the sternum to a little beyond the vent, taking care not to cut through the walls of the abdomen. Push the skin aside and raise it on one side until the knee joint is visible, using the handle of your knife and your fingers, and avoiding cutting as much as possible. Do the same on the other side. Cut off the legs at the knee, skin down carefully as near to the tail as possible, and then divide the vertebrae, taking great care not to cut through the skin. Stand the bird on the point of its breast, and push the skin down toward the shoulders, working it down evenly and using the knife little or not at all. Cut off wings at break, and continue to work the skin down until it has passed over the head, and is thus turned inside out. Pull out the delicate ear membrane with the finger nails and cut that behind the eye, taking care not to injure the eyelid. Remove the eyes, taking care not to puncture them; and having cut off the head, cut away the tongue and all the flesh from the skull. Break away the base of the skull and remove the brain. Cut away the broken end of the humerus, and the flesh lying between the radius and ulna, loosening with the thumb nail the quill feathers from the latter. Skin legs down to tibio-tarsal joint, and remove the flesh. Powder the inside of the skin everywhere with white arsenic. Use plenty. Place a pellet of cotton large enough to fill it in each orbit, and with large birds wrap a little cotton around the legs. Turn the skin right side out again and draw out legs and wings into proper position. Give the skin a few shakings and the feathers will fall into their proper places. Take the bird by the neck about as thick as the bird's neck and carefully introduce it into the neck, making sure that it passes up into the skull and does not catch the skin and push that into the brain cavity. See that the neck is short and thick rather than long and slender. Introduce another little bit of cotton into the throat from below, to give that the requisite fullness. Fill the body with cotton until it is about the size of the bird in life. Do not get it too large. (Close the opening in the belly by two or three stitches, or by a pin or two. Open the eyelids and pull the skin about the head up or down, as may be necessary to give the head and neck a natural appearance.)

To fix the wings in position is the most difficult part of the whole process. They must be placed close to the sides of the body, as the bird holds them when alive, and to get them in just the right position will take considerable practice. The wing must be pulled upward and backward, that is, toward the head and back of the bird, and the scapular feathers be brought forward over it. It should then be bent and placed close to the side, the feathers of the breast covering its border. If its position is right there will be no feathers standing on end near it; if wrong, the feathers will point half a dozen ways. It must be made right, or as nearly so as possible; for as it is left so it will dry, and then, after the other wing has been arranged, and any stray feathers that are out of place have been lifted into their proper position, the specimen should be placed on its back in a half cylinder of paper, pasteboard or tin, in such a way that its back will be properly rounded, and left to dry. Before leaving it, however, the feet should be crossed and tied together, the bill prevented from opening by a pin or a thread run through one nostril and the throat and tied. A label giving age, sex, locality, date of capture, collector's name, and any other items of interest, should be tied to the feet. Some collectors place the birds to dry in paper cones, others put a wide band of paper about the shoulders, and others still merely support the shoulders and wings by wads of cotton. A little attention paid to the skin while drying will pay for the trouble attending it.

BEECHNUTS AND WOODPECKERS.

LOOMIS GROVE, Lewis Co., N.Y., Nov. 20, 1891.

Editor Forest and Stream:

In the issue of your paper, dated Nov. 17, 1891 (p. 307), is a brief note, headed "Habits of Red-headed Woodpeckers." Its author, "S. Sialis," a writing from Bradford, Pa., speaks with the air of finding the red-headed woodpecker (*Melanerpes erythrocephalus*) engaged in picking beechnuts, and says that he was told by a wood-chopper that they were gathering winter's supplies. After some remarks upon the habits of a Western congener you append a note from Ned Buntline to the effect that he shot one of these birds in the act of picking beechnuts from the tree. Now, I am not aware that our species lays up provisions for winter's use, but I have long known that it fed extensively up in nuts, and finally by the middle of the year. In my "Re-view of the Birds of Connecticut" (p. 66) you will find the following: "In Northern New York (Lewis Co.) during certain seasons, 'they' subsist almost exclusively on beechnuts, of which they evidently are extremely fond, eating them apparently with equal relish, whether green or fully matured. It is truly a beautiful sight to watch these magnificent birds, together with their equally-abundant cousins, the yellow-bellied woodpeckers (*Sphyrapicus varius*), creeping about after the manner of the warblers among the small branches and twigs, which bend low with their weight, while picking and husking the tender nuts, the bright crimson of the head, neck and breast, the glossy blue-black back and creamy-white belly, together with the scarcely less striking colors of their yellow-bellied companions, contrasting handsomely with the deep-green foliage."

My field notes during the past ten years prove beyond question that the presence or absence of the red-headed woodpecker in Northern New York in winter is governed almost by the abundance of the beechnut crop, and is in no way dependent upon the severity of the winter. There is not a large yield of mast every year, but with us a full crop "happens round" pretty uniformly every other fall, at least such has been the case during the period (10 years) covered by my notes. It is also a fact that mild winters are apt to follow good beech-nut years.

According to notes kept by Dr. C. L. Bagz and myself, the species under consideration was abundant here during the winters of 1871-72, 1873-74, 1875-76, 1877-78, 1879-80, and 1881-82. The beginning of the winter of 1881-82, they are still here in numbers, and will doubtless remain throughout the winter. Each of these winters followed a bountiful supply of nuts. During the alternate winters—1872-73, 1874-75, 1876-77, 1878-79 and 1880-81—they were either rare or did not occur at all. Hence with us a good squirrel year is synonymous with a good year for *Melanerpes*, and *vice versa*. Of course by far the greater portion of the beechnut crop falls to the ground and is buried beneath the snow, where it is inaccessible to the woodpeckers; yet enough nuts hang on the trees to furnish abundant subsistence to those species that fed upon them. Besides the red-headed and yellow-bellied, the hairy woodpecker (*Picus villosus*) and the downy (*P. pubescens*) eat largely of mast and are most numerous during beech-nut years.

C. HART MERRIAM, M. D.

Editor Forest and Stream:

Since I wrote you last about the red-headed woodpecker eating nuts, an old woodchopper of this county has told me that he has often found the holes and nests of these birds, which winter here, full of beechnuts and seeds. He says the extreme cold so freezes rotten wood, grubs and all, that the woodpecker, like the squirrel, would starve but for the stores they lay up. They do not bud, as the ruffed grouse will, in cold weather, keeping in good condition on birch buds, etc. In regard to the damage the red-headed does to birds, etc., your other correspondent is right. The little cussies are regular pirates. They kill and destroy everything in their way, and where they are plenty will drive grays squirrels away, though the latter are their size. The gray is no fighter. The red is all for fight.

Yours truly,

NED. BUNTLINE.

Engle's Nest, Nov. 19, 1891.

* Why many of your correspondents still persist in publishing natural history notes over some outlandish non de phrase is to me as incomprehensible as it is deplorable. Such notes are often of scientific interest, but they are not worth the space they occupy in your paper, if accompanied by the author's name, while as they are utterly worthless.

THE DIVINING ROD.

Editor Forest and Stream:

The Polytechnic Association, a branch of the American Institute, meets Thursday evenings, from September to June, room 34, Cooper Union Building, New York City, at the request of the Board of Trustees. On November 17, an excerpt was read from a Western newspaper, to the effect that so practical business men as the engineers of a large railroad were using a divining rod, presumably the ancient forked twig of witch hazel, to aid in determining where to dig for water along the line of the road.

The President thought it within the province of the association to compare notes on this matter. He did not know of any candid efforts to determine the efficiency or the fraud of these fabulous modes of finding running water. It was not easy to subject the matter to rigorous experiment. It was alleged that only certain persons, perhaps morbidly sensitive persons, could make the stick perform, and that only the witch hazel, *Hamamelis virginica*, or the *Ulmus montana*, would serve.

Dr. P. H. Vanderweyde had seen experiments made with wire bent and twisted together to form a corresponding fork, which had been alleged, and probably correctly, to produce the same effect as witch hazel. The magical dinner failed completely in attempting with his limber spring to find water pipes in a house. By its aid he located them confidently in the wrong place. It was a mere guess.

Two gentlemen said they had known instances where what was called a divining rod had been used, and abundant underground currents found. They could not give particulars. The general result appeared to sustain the ancient notion.

Professor Keith had seen experiments in Colorado with a split stick of the required slenderness. They were not particular what wood was used, or its condition as to dryness. A skillful operator could make it point downward or upward at will, without any apparent change of his muscles.

Mr. Sutherland believed, with the last speaker, that all the magic about the alleged finding of water by the divining rod lay simply in the fact that some men, otherwise ignorant, bad, by intuition or by practice, acquired excellently at judgment in locating wells. They used the forked hazel simply as a blind.

Mr. J. W. Sutton had known an expert in this line in the Seneca River valley in this State, an ignorant, intemperate man, whose success was remarkable. The wells in that district were from fifteen to thirty feet deep, with great differences in the depth and productiveness. It was particularly important to strike one of the strong underground streams. In some formations it is of little consequence where we dig. We would get water from sand on Long Island or Cape Cod, with about the same liability in all situations.

That man had a great local fame. He used a slender crotched twig of green wood, alleged to be witch hazel, about three feet long, the butt about one foot and the arms about two feet each. He held it by the small ends, one in each hand. It was sufficiently flexible to describe about a quarter circle by its weight. He walked solemnly and as steadily as his condition would allow, holding the simple twig before him with one fork in each hand, the butt end depending by its weight so as to hold about, say six inches lower than his hands. It was not easy to be certain that there was any marked increase in the descents or plunges of the free end at the place he would light on, but the operator seemed to feel or believe there was a difference, and he usually, and he believed universally, selected favorable places. A remarkably copious well near the public square in Waterloo, N. Y., was located by that man, using the forked twig and professing to be aided thereby.

ELK HORNS IMBEDDED IN WOOD.

PINEY FALLS, NOV. 19.

Editor Forest and Stream:

The skull of a bighorn imbedded in the trunk of a tree, as illustrated in your issue of November 3, reminds me of a somewhat similar circumstance, which was related to me in my younger days by an old Indian chief, who was one of the few wise counsellors of the Seneca Nation. Although an Indian, he was a man of rare qualities, and great perceptive faculties, and I may say possessed all the virtues of an Indian, with but few vices of the white man. He stood six feet in his moccasins, and was considered the best shot and one of the best hunters in all that region. When in his communicative moods I have listened with eager attention to his graphic and matter of fact descriptions of many exciting incidents which occurred during the eventful life of this old veteran of the forest. I shall not attempt to note down the particulars of a very interesting elk hunt, as related by the Indian, except so much as relates to a pair of horns, the substance of which was about as follows: He, with several other Indians, had killed a large elk with uncommonly large antlers, and having packed the meat, which they had to carry a long distance, each one having a heavy load, they were compelled to leave the horns, which were taken off with the upper part of the head, and placed or wedged in the forks of a stout sapling, four or five feet from the ground. Here they remained fourteen years, as he ascertained when passing that way again for the first time since they had left them. The tree had grown to more than double its former size, and still larger where the forks joined. The wood had grown entirely over the skull and had closed up around the butts of the horns, which gave them the appearance of having grown out of the solid timber. They were apparently sound, but were bleached out nearly to the whiteness of chalk. ANTLER.

NOTES ON FELICA AMERICANA—Vicksburg, Miss., Nov. 17, 1881.—The bird called "mud hen" at the north "pull doo" here, and "Indian hen" at New Orleans, must be very prolific, or else their wonderful increase must be attributed to the fact that, being nearly worthless as an article of food, they are not killed off by hunters. Webster describes them as "a bluish-black vading bird (*Felica Americana*), common in the United States—the *Rallus crepitans* of the south." Just before leaving Lincoln, Nebraska, in the latter part of October, in a small lake or marsh near Ashland, I think I saw at least ten thousand of these birds. They were so numerous and restless that they interfered materially with the shooting by our party at ducks. I came down here by river from St. Louis about the 1st of November, and found great flocks of them in the water the entire distance. Here the darkeys find them an easy prey to their old muzzle-loaders, and take them in out of the wet on all occasions as a sweet morsel. Last week a commission merchant here received a mud-hen in a coop of chickens that had been shipped him by Mr. Goforth of St. Charles, a little town out in the pine woods on the railroad east of here. It being quite a curiosity several called to see the stranger. It seemed to be quite gentle, but had a warlike disposition, and delighted in pecking at any one who came near it. I wrote Mr. Goforth asking him to give me its history. He replied saying that it had been picked up on the roadside by a little boy, that it made no effort to get out of the way, that his son kept it in a coop three or four days, and then, as nobody out there would eat it, he thought it would make a nice dish for Vicksburg, winding up by saying that as I seemed to like the bird he would try to send me some more. He said they were known out there by the name of "thumb-pinchers," the name no doubt originating from the habit of the bird of pecking at every finger pointed near its sharp white beak. What was this bird doing out among the pines on dry land, away from its watery element?—BRIAN H. POLK.

MICHIGAN NOTES—Cadillac, Michigan, November 17, 1881.—*Editor Forest and Stream:* Deer hunting in this part of the State cannot be called a success so far this season on account of too much rain. A party of three of us spent three days in the woods, and succeeded in getting three the last day, two does and a buck. One of the does was a crotch horn and weighed about 100 pounds. I should judge about four years old and had apparently been dry for the last season. The first snow fell November 3, and was all gone by the 17th. A small flock of snow buntings was observed October 15; a fine snowy owl, October 28. The redpoll limits came November 2, and the 4th of the morning of the 2d the first English sparrow reached Cadillac. If the rain would only hold up this sport could be had here, for there is plenty of deer, ruffed grouse, geese and duck shooting. The black-backed woodpecker (*Picoides arcticus*) is a resident here, as is also the pilated woodpecker (*Lygobates pilatus*). I have secured one specimen of the banded-backed woodpecker (*Picoides maculatus*). The pine limnet (*Chrysomitris pinus*) is now very common here. Last summer I found the snow bird (*Juncus hyemalis*) and the white-throated sparrow (*Zonotrichia albicollis*) breeding here. Taking into consideration I think this a fine field for the ornithologist sportsman. A. B. COVART.

Game Bag and Gun.

DEER AND PARTRIDGE.

NEAR THE ADIRONDACKS, NOV. 23, 1881.

Editor Forest and Stream:

It is only a short time since I returned from my yearly trip to the South-woods, as we call the Adirondacks here, where I have been since the first of August, most of the time in camp on the Sixteen-mile Level, above Blue Mountain, in the St. Regis district.

Owing to the uncertainty of getting my mail, I did not leave orders for the *FOREST AND STREAM* to be forwarded to me. I was nearly repaid for the loss, however, by having such a large quantity of good reading on hand at one time. I have been greatly interested in reading the reminiscences of hunting and fishing trips that have appeared in the late numbers. Nearly all in some part of them remind one of like experiences they themselves have gone through at one time or another in times gone by. I have been interested on the subject of rust spots in gun barrels. There seems to be a great variety of opinion as to the cause as well as to the best preventive. If I think, as you first suggested, to be careful not to get the barrels perfectly clean, and then use nothing but the best of oils as a preservative as any recommended.

Deer were plenty all over the St. Regis district when I came away. Any one wishing for a locality to still-hunt could not find, I think, within the Adirondacks, a better place to go the remainder of the season than to Blue Mt., and hunt in the tract of country south and west of there. There is a great tract of unbroken wilderness there which has been but very little hunted. It is the home of deer and other large animals found within the Adirondack region, and is a sort of reservoir of game, from which the districts on its borders, which are easy of access, keep up their supply. It is also a place of refuge for the game when hunted to excess with dogs in those localities.

Those who may wish to go there to hunt will find as good and cheap accommodations at the Blue Mt. House as can be found anywhere at any establishment of the kind within the Adirondacks. The house is just on the northern border of the above tract of wilderness; and one could hunt over the northern part of it and keep the districts on its borders. There is also a splendid tract of country for still hunting several miles in extent, bordering on the river to the east of the Blue Mt. House, beginning only about three-quarters of a mile away, and reaching to Meacham Lake, some eight or ten miles across it. Partridges and squirrels are plenty near the house in any direction one may choose to go.

I was intending to say something about the fishing on the Level in August and also about the slaughter of deer there, through the early part of the summer, but I shall reserve that for another time.

Here in Northern New York, in Franklin county, at least, for the last two years, partridges have been unusually plenty. And we have all these agencies that have been mentioned as destructive—the pot-hunters, foxes, squirrels, hawks, owls, breech-loading shot-guns, etc., all except the "snare." During the forty years I have resided and hunted in Northern New York I have never yet seen a snare set for bird or animal. We have as cold winters as they do almost anywhere within the United States, and plenty of winter that prey upon the ruffed grouse with the number of pot-hunters, fox-hunters, men and boys also; yet partridges are plenty, as the following figures will show:—There is a man here in Franklin county, who has been buying partridges for market ever since the season opened. (He tells me he has bought and shipped already this season 2,000 partridges, and expects before the season is over to get as many more. He had bought on the day I saw him (last Friday) thirty-two. He has promised to let me know how many he has received when he is done buying. A man living near his village has shot at odd spots now and then upward of seventy this season with the help of a little cur dog he has. During the past month several partridges have been seen in the yards and gardens within the village. I scoured one up myself the other morning out of a yard in front of the school house here, as I was passing by. About a week ago, as a young man living in the village was dressing himself one morning, he saw a partridge sitting in an apple tree near his bedroom window. There happened to be a gun in the room already loaded, and when he got up and opened the window, he shot the bird and had it cooked for his breakfast.

The 2,000 partridges bought up by the person referred to above were nearly all killed in the northwest portion of the county, over a territory about twenty by eight miles in extent. He has boys and young men shooting for him all over this part of the county, and goes round once in so often and picks them up. Out of the 2,000 bought, I don't think twenty-five were shot on the wing. We have shooters here who can cut off the head of a partridge four times out of five shots, but I know of none that can drop one on the wing twice out of five shots. No one about here thinks it is unwise to shoot to shoot a partridge when sitting or in any position they can get the chance. And I find all sportsmen that come here from abroad think the same after they get here.

I shall not attempt to account for the scarcity of partridges in many localities where they formerly have been plenty. But here I have always noticed, that if we had a cold and rainy season during the hatching time of the partridge, that they would always be scarce the following fall. On the other hand, if the weather is warm and dry, they are always plenty, as has been the case here the last two seasons. Although the partridge, like the goose, when grown is a hardy bird, there is no bird more tender when first hatched, except the gosling.

Of course many partridges are destroyed every year as well as other birds by animals and birds of prey. But no more so of late years than formerly, when the country was first settled. So I don't think the trouble can be charged to them. It may be, as you suggest, that the partridge fly that troubles them in some localities. I have examined a number of partridges here, and have only found one that had the fly on it.

The red squirrels were very plenty here last season and are so this year. There is one thing I don't understand, and which is, that last year I found on the Sixteen-mile Level more spruce partridges than any other kind, but this year I have not seen the first one. What has become of them all I don't know; but they have either left for other parts, or have been destroyed in some manner. I found the boxes and leathers last season of several near my camp that had been killed by minks, as I suppose. The mink tracks were plentiful around some I found on soft ground. But I cannot think the mink destroyed

them all. Good partridge hunting can be found now in the woods south of here, where they have not been hunted so much. Those near the settlements have become very wild, and when flushed fly a long distance before alighting. And I doubt very much that the man who is buying them here will get the 2,000 more he expects to this season.

ADRIAN ONDACK.

THE HURLING GROUSE AGAIN.

NEW YORK, NOV. 25.

Editor Forest and Stream:

If your correspondent "L. I. F.," who writes from McDonald's Corner, N. B., will practice on ruffed grouse in the way that all of us who can hit them have done, he will soon learn to kill birds in such a style that his tutors in shooting will open their eyes to a new revelation of possibilities. Let me suggest to L. I. F. that the way to kill ruffed grouse is to shoot at them on sight and not to wait for a straightaway open shot.

When I first began to shoot them, it was in company with an old-shooter, who averaged one ruffed grouse to every two shots, day in and day out, and he fired at every grouse that he saw, too, no matter whether the bird was just dodging behind a tree, or describing a corkscrew around a bunch of alders, or exhausting Euclid in geometrical curves. My instructions were to "always aim at a bird on sight, no matter where he was, or whether there was any chance of my hitting him or not." Those instructions I carefully followed, and now a good many years having elapsed, and a good many ruffed grouse having come to grief, it is a positive pleasure to me to have a grouse do his worst when he bursts forth from the brush. A good many shooters have seen your humble servant in the brush, and although they have often seen much better shots, they can nevertheless tell you that something is liable to happen to a grouse when he gets up within gunshot of

MARK WEST.

LORD DUNRAVEN AND NOVA SCOTIA GAME LAWS.

HALIFAX, NOVA SCOTIA, NOV. 21.

Editor Forest and Stream:

My attention has been called to an article in the *New York World* on the above subject, purporting to give the result of an interview with Earl Dunraven, which contains so many gross misstatements of facts, and misrepresentations as to the nature of the game laws of this Province, as to demand a reply. Lord Dunraven is reported to have stated that he was arrested for hunting without a license "under a law of one of the counties of Nova Scotia, and on the ground that he had failed to take out a county license, though he had applied for a general license for shooting in the Province." This is not correct. There are no game laws in this Province applicable to one county more than another, and there are no "county licenses," as Lord Dunraven well knows; for he is perfectly well posted in our game laws, and on a former occasion had to pay a fine for their breach. Our system of game laws is a very simple one, and easily understood by those who wish to do so. Game licenses are granted to persons not having their domicile in Nova Scotia who may wish to hunt therein, for which a fee of thirty dollars is charged for one year. This is a general license for the whole Province, and they are issued in Halifax, but for the convenience of sportsmen, who may enter the Province for sporting purposes at outlying districts, a number of licenses are deposited with the clerk of the peace of different counties in which the game districts lie, who are authorized to issue them. Under these licenses a sportsman can kill two moose and four caribou in any one year, and if he shall not have killed the prescribed number in any one district he can do so in any other, upon making affidavit before the game commissioner of the number he had previously shot. You will observe that Lord Dunraven says that he had "applied" for a general license, but he does not pretend to say that he had received it before he commenced to hunt, and his Lordship is a magistrate, ought to know, that he had no more right to hunt without having a license in his possession than a liquor dealer has to sell, after he has applied for, but before a license has been granted to him. The truth is that Earl Dunraven had no license to hunt whatever, until after he had left the county and gone to another, and was consequently liable to the penalty.

Now, as regards the mode of the collection of the fine, there was a blunder made in this case, by the game warden of the district who had his writish arrested, and arrested a *capias*, instead of following the very simple provisions of the law, and suing him as for an ordinary debt. But the mistake of the official doesn't alter the fact that his lordship was guilty of a breach of the game laws, for which he was, and still is, liable to a penalty. The story about his having initiated proceedings in Halifax for false imprisonment is all rubbish. The noble earl gave Halifax a wide berth on his return, and if he had come here he would have found the proper legal papers awaiting him.

Now, a word to the *New York World*, whose editor (without probably ever having seen them), undertakes to assert "that the Nova Scotia game laws" (a copy of which I send you) "seem to be made less for the purpose of protecting the game of that interesting region than with an eye to making it impossible, for the stranger and the wayfaring sportsman to shoot anywhere in Nova Scotia without paying at every turn for the privilege." I would beg to inform the erudite individual, whose head appears to have been so much by the wrong end of an interviewing "live bird," that the Nova Scotia game laws were framed by a body of gentlemen who are true sportsmen, whose sole desire was to devise means to preserve our game from threatened destruction, and not to make money out of strangers or anybody else; and I think, Mr. Editor, that upon reading them, you will agree with me that they will compare favorably with those of any of your States. As there is now no grant from the Legislature for the protection of game, the game system was adopted for the purpose of raising a fund to recompense in part the commissioners and wardens for their services, and to delay the expense of protecting the game generally, and I am sure no true sportsman would object to paying the small fee imposed, when he knows the purposes to which it is applied.

Thanking you for the space you have given me, I am,

A MEMBER OF THE

NOVA SCOTIA GAME PROTECTION SOCIETY.

CALIFORNIA.—Gilroy, Cal., Nov. 16.—Game is booming in our country at the present time, and it is a very common occurrence for an amateur bag from four to six dozen quails every day. I have also seen a few pheasants at the present time, and I have heard of bags ranging from one to five dozen per day near here. As for myself I have not had a turn at the snipe yet, but expect to within the next week.—H. M. B.

WILD FOWL SHOOTING ON LONG ISLAND.

NEW YORK, Nov. 23.

IT may not be interesting in view of your article of November 17, entitled "Wild Fowl on Long Island," to give you a few of the thoughts prompted by reading that article, and of my experience in search of sport near the locality mentioned. I spent a few days duck-shooting at a place between Great South Bay and Shinnecock Bay. In reference to this subject it will be necessary to state the condition of things existing in August last, when snipe shooting was in order on the "meadows." These meadows just out into the bay from the sand-hilled beach that protects the shoals of the south coast of Long Island from old Carolina's incursions. These shoals, which are the same as they have existed for centuries, though salish, their shallowness affords an excellent bed for the growth of grass—duck-grass—as it is called, upon which, as is well known to every shooter, the ducks in their spring and fall flights feed so greedily. This grass has a more luxuriant growth this year than is usual, ergo, the ducks are unusually numerous. It became evident to those experienced gunners living adjacent to this body of water, that there would be good shooting this fall, so, when August was ushered in, flocks of black and teal, and wild ducks were arriving, also large bunches of teal, and while sniping parties were ostensibly shooting snipe, they did not disdain a shot at any duck that ventured within the range of their guns; and long before the duck law was "off" many a flagrant act of violating the game law was committed, and many a day witnessed a bunch of black ducks, teal or gray ducks as the result of the day's "snipe shooting." This shooting of wild fowl, before the season opens, I surmise, is indulged in wherever the ducks congregate, be it Long Island, New Jersey, Virginia or North Carolina, and the question is: Are sportsmen, as a rule, so nicely adjusted in their moral attributes when engaged in the pursuit of bay birds, as to resist the temptation to knock a black duck over, if he comes within range? I do not offer this as an excuse for violating the law, but isn't it characteristic of a follower of the gun, when arrayed in his panoply of war, so to speak, to blaze away at anything that comes to his "blind"? The fact is, that so far as the waters confined in the shallow bays along the coast of Long Island are concerned, there will always be shooting; there will be "off years," as there are in crops, but so long as there is good "feed" in these bays, you cannot drive the ducks away. Shooting uninterrupted will make them wild, which is wise provision of nature, for if these birds were to remain gentle, and obligingly offer to come within easy gun-shot range, fly slowly, balance themselves in the air, or stand on their tails, while the sportsman takes aim, all the resorts of wild fowl would be thronged with ardent shooters, and the wild duck would soon be a dreamy reminiscence—a halloved memory.

It is a mistaken idea to make the breach-loader responsible for the scarcity of game. As well charge the multiplying reel with the destruction of trout or black bass. It is true one can get more shots with one breach-loader than with one muzzle-loader. But the bayman I am in the habit of engaging, when going duck-shooting (and he is not an exception in this respect) uses always two muzzle-loaders, and not infrequently three, and I know he gets as many shots as I do with my one breach-loader.

And now, in rounding up, I beg to present to you for your consideration, the following facts: Within a few hours' journey from this city is a spot I have been in the habit of visiting regularly every spring and fall for some years. Last fall the bayman referred to did not use five pounds of shot, and thought somewhat of selling his surplus stock of guns; this fall he has used nearly 100 pounds of shot, and is bound to have a breach-loader.

Last spring I went two days with a friend, and we brought back but six birds apiece; this fall I have seen more birds and got more, and I have brought back almost sixty ducks, mostly black ducks, with some teal, and among them being three canvas-backs, two redheads, and four teal.

I missed the big day's score mentioned above, in the one instance by nearly a week, and in the other, I was a day "behind the fair," but I had royal sport, a healthful recreation, and returned both times rejuvenated, and while firmly believing in the wisdom of making close seasons for all kinds of game I maintain that legislation protects the wild fowl very little as the law now stands.

And now, only sensible legislation would be to enact laws abolishing "spring shooting," and the beneficial results would amply repay the temporary disappointment, so that when the wild ducks and geese take their annual flight south in the fall of the year, the prospects for sport would certainly be increased, some forty fold, and some a hundred fold.

VAN.

PHILADELPHIA SHOOTING NOTES.—Nov. 26.—Owing to the great scarcity of upland game this autumn many of the Philadelphia sportsmen are devoting their entire leisure time to duck shooting; and we find at the leading gun stores the demand for large caliber guns has been very materially increased. At Havre de Grace canvas-back ducks which had not put in their appearance in very great numbers, have shown themselves in larger bodies since the rain of the 23d and 24th inst., and during the following cold clear up. Brant, black ducks, blue bills, and a sprinkling of the other varieties of wild fowl are increasing in numbers in the bays along the New Jersey coast, but the continued south-easterly and easterly winds of last week made shooting in those waters poor, as it influenced the flight of all traveling flocks at great distances away from the best islands and points of ambush and decoying. Thus far this fall Canada geese seem to have left Barncott and Tuckerton bays, N. J., in the lurch, for great bodies have passed "right along," very high in the air, not even answering a hawk," said a native to me. Just now your correspondent thinks he could, with Capt. Coffin, of Berlin, Md., find and foot these very geese in Sinepuxent Sound, using the Captain's surken boxes on the beach as a hiding place, and having his live wild geese decoys or lookers as persuaders.—Hoxo.

ILLINOIS.—Charleston, Nov. 22.—(Tabiti shooting is good. C. Calhoun and George Thrall bagged 18 the other day.—J. B. D.

"MAINE WARDENS AND VISITING SPORTSMEN."

Monson, Me., Nov. 22, 1881.

Editor Forest and Stream:

I read with a great deal of interest both of the recent letters from two different gentlemen upon these subjects.

As I have the honor of an acquaintance with both writers, I can testify to the honor and integrity of each of them.

And although to some there may appear to be a conflict in regard to the facts which both have borne witness of, yet I believe the two statements are substantially true.

There are many visiting sportsmen who are not as conscientious and honorable as is our esteemed friend, L. L. Hubbard, Esq.

There is a class of these men who are flagrant violators of all our game and fish laws. Their influence is bad. Their operations are often no more nor less than outright poaching. And yet they help swell the vast amount of revenue which so many of our interior towns and villages annually receive by virtue of "sporting" in general.

But this should not be considered a mitigation of their bold infractions of the law, nor as a reason why their acts should be tolerated.

There are many men of Maine who entertain an honest desire that all of our laws relating to these important matters should be impartially enforced.

But we have a strong local public sentiment in nearly every county (so far as my knowledge extends) which is directly opposed to our laws, and the one great argument which they continually present, that in their enforcement the "sportsmen" are not prosecuted with the same ardor and to the same extent that our own citizens are.

They claim that there is an unfair discrimination made between these gentlemen and the Maine "recreant," which smells a little of the ancient "Forest Laws" of Old England.

I do not now, and never have, espoused the cause of these complainants. Every line that I have, in my humble way, written, and every word that I have ever uttered upon this subject has been such as in my judgment would aid in promoting a healthy public sentiment in favor of the enforcement of the laws with equal and exact justice to all, and I only refer to these facts now to show the reason why wardens and other officers of our State labor under difficulties.

Public sentiment is not yet up to the proper standard, and this demoralization is partly owing to the very facts set out in Hon. E. M. Stilwell's letter.

On the other hand, there are many disgraceful cases of willful negligence on the part of wardens and other public officers, just exactly as stated by Mr. Hubbard.

I rejoice that some of our best writers and one of your valuable journal have commenced a discussion of this question which is of such vital importance to the "Pine Tree State," as well as to the sporting world.

These evils exist. They are glaring. The doers of them seem to defy and scorn law and justice, and taunt and sneer at those who have the courage to advocate sentiments and opinions adverse to poaching.

The fact is that any poacher of game and fish who infringes upon the law of the State or who, in the words of one of the Forester and Stream's editorial writers, "takes trout or venison out of season, except to supply his necessities when beyond civilization, is a thief." This is true whether he comes from a far city with all of the rich paraphernalia of a "lord of the manor" or whether he be the most humble "native," who, with his cheap "set lines," catches his "pung load" of trout and hauls them to the village market to swap with the merchant for the barter and truck of the country store.

Neither class is above the law. Both should be so severely punished for the commission of these sins that future generations shall find out that poaching in Maine is a crime.

But what is the remedy most needed to day?

I leave this question to be answered by others of your readers more able than myself.

J. F. SPRAGUE.

BANGOR, ME., NOV. 27, 1881.

Editor Forest and Stream:

I departed from my usual custom when I replied to what I deemed a wholesale aspersion of the wardens of Maine, several of whom I have had in my employ, and whose friendship and respect I am proud of. My departure from my habit has met with that result which my experience had taught me to expect—personalities and unsustained assertions. I am again impelled to break away from my resolve, but my statement shall be short, and will be the last from me in response to any attack.

Two years since the Commissioners of Fisheries, with their wardens, had the honor extended by legislative act to include the game of the State, but no provision was made to enable them to execute the laws of their increased duties. The wardens are appointed by the Governor and Council, the law not even requiring a reference to us of their qualifications. The law directs that their pay shall be fixed by the Governor and Council, and adds "provided that the whole sum paid to all the wardens shall not exceed \$1,500." My list of wardens from the Secretary of State's office at Augusta, a year since, contained fifty-three names. Many have since been added, whose names even we are ignorant of. I have referred above to fish wardens, whose powers have now been extended to game. The game wardens as such have no salary by statute, their pay being one-half of the penalties when a party is convicted.

It is almost impossible to make out a case of hunting deer with dogs. The dogs can be, and are, killed to great extent, but whence is to come the pay of the faithful warden for that duty? Men go into the forests with packs of hounds; we know they intend to hunt our deer, but what then? Men go into our forests, during the close time of our game, armed with both shot-gun and rifle. The "unimus" is there the same as in the case of the hounds, and yet we are powerless in both cases. Occasionally one of our wardens is fortunate enough to obtain evidence upon which a conviction takes place, but never, we sincerely believe, with any discrimination as to summer tourists or citizens. Our native poachers, as a rule, kill only when they can market their game. They do not kill for the pleasure of the chase, but do so for sale, such as the killing of a muskrat, which is sold to all the fur traders, or the killing of a marten, which is sold to the same parties. They are caught they do not run into print. Most of our poaching is done in cold weather by pot hunters. At other seasons they are employed as guides, or are illegally taking salmon, spearing or netting trout in spawning time, rarely, if ever, in any honest labor.

The oft quoted cases of "Mapong Lake," "Lead Mountain," "Citizens of Bangor," etc., have been answered again and again in several papers by complaints of loss of dogs. Faithful wardens have been sent to the State Prison for other crimes, and our work is being done. Must we advertise all our

movements, and thus defeat them, to protect ourselves from charges of partiality emanating from those whom our wardens have convicted? We do not think our Bangor citizens referred to credit us with much forbearance toward them. We know no personality in arrests made. They are made entirely by the wardens, who are only accountable to us when charges are made and substantiated against them. There is no law by which we can compel a warden to do work when there is no provision made for his payment. Our instructions by statute are "to examine into the working of the law." We have no power of arrest. The wardens have. They are expected, without a salary, to leave their occupations at home, and go into the forest at their own expense, and try and make out a case of hunting deer with dogs, in anticipation of the rich reward of one-half the penalty in case of conviction, and the very remunerative privilege of killing at sight any dogs found running deer.

We cannot admit the right of persons traveling strictly for their own amusement armed with shot-gun and rifle during the close time for our game, "to cke out the scant fare of camp table," by killing either our birds or our venison. For what other purpose do sportsmen ever take down their shot-guns or rifles? Surely not to shoot for market. We do hold all persons responsible for the acts of their guides and employees. Every one, however exalted his position, owes to society the moral tax of a worthy example for all those that look up to him; and there are none in this world so low down that they are not guides to some one humbler or weaker.

The Provinces of Nova Scotia and New Brunswick have found it not only necessary to protect their game from the utter extermination by stringent laws, but also by requiring a license fee of \$30 in the former, and \$25 in the latter Province, for the right of any visitor to hunt, trap or shoot. The result has been to precipitate upon us all those who formerly sought their amusement or profit there. We require increased means to employ and pay efficient officers. This will all come in time. We are steadily progressing to a better system of fish and game laws. Are we expecting too much in looking to sportsmen, without distinction of residence, for aid and sympathy? We shall ever believe that with every true sportsman the law of *noblesse oblige* will prove the only true and reliable guide wherever he may go.

E. M. STILLWELL.

A NEW JERSEY PARTY IN THE SOUTH.

NRE's, Van Slyke's Landing, Nov. 23.

WELL, here we are; and yegods! how it does rain! The fountains of the great deep are broken up, and it verily pours down in sheets. The gunners, and there are some eighteen here including our party from Jersey, are disconsolate. With lugubrious countenances they severally and resolutely shut their umbrellas and pray for a let up. Several have donned their rubbers and oil-skins and essayed an attempt to cross the bay. But it is too moist, and the fowl will not fly well in a dead rain and no wind. There seems to be plenty of fowl here; and for several days the bay has echoed to the boom of the breach-loaders in every direction. There are a goodly number of geese and many canvas-backs. All are waiting for a cold snap they say. Two members of the Society Club on Friday last bagged to their two guns 100 geese. Seventy red-heads and a number of ducks in a boat is about the thing (they say) for the Circuit Club. They certainly have done shooting enough, or did yesterday.

We left Gotham on Saturday last, Al Heritage, Dr. Burdett, Capt. Johnson, Ben Payne, Thos. Hall and your humble servant, on the "Old Dominion" of the Old Dominion Line, where we were joined by Mr. Laucke, an old plover shot of Long Island. We had a delightful trip, though we had some rough water and considerable wind, especially crossing the Delaware—the good ship was as steady as a clock. The Old Dominion is the largest we believe in the line, a side-wheeler and rolls very little. Capt. Geo. M. Walker, commodore of the line, is too well known to be complimented by us. An old sea-dog from his boyhood, every inch a sailor and for nine years master of the SS. Fulton plying with the Aragon between New York and Havre, he made many friends. He has been captain of the line since she was launched, some ten years ago, and has been in the line since then. He is a fine old fellow, courteous and attentive to his passengers, they all feel safe when he is in command. Jas. M. Gallagher (also a commodore, purser, has been with the line since its organization, fifteen years ago. We found him a gentleman and well posted in the duties pertaining to his position. How from small things great ones grow. The Old Dominion Line now has nine steamships running to Lewes, West Point, Norfolk and Richmond, besides five steamboats plying between Portsmouth and West Point, and six between New York and the Pacific Sounds of North Carolina. In Mr. O'Brien's another commodore, commodore steward, we found that personage so necessary to the comfort, good feeling of passengers, the right man for the place, and all were more than satisfied with the good things he provided and in the way it was done.

The Old Dominion has an electric light on her bow, which is used when cutting or leaving harbor or running up the river to Richmond. This is of 5,000 candle power, and takes a six-horse power engine to run. The first time the Old Dominion first came into one-half with the light on in full force, there was somewhat of a commotion, especially among the drskeys. They thought they millennium had come, and they fell on their knees, many in the bottom of their boats, calling on the Lord to save them and take them to glory.

We reached Norfolk about 6 p. m. Sunday eve. Had a splendid trip throughout Sunday. We found George, the "boss" porter, awaiting us at the wharf, and we were met by Purcell House. Of course we had a good time there. Mr. R. T. James knows how to run a hotel, as his guest's always come a second time if traveling that way. Six a. m. found us on the Cygnet. With all the freight to carry, and at this time of the year the large number of passengers, it is astonishing to us that they don't put on a larger boat with some kind of accommodation. The Cygnet is a dirty little tub, about the size of a bathtub, with a few bunks, no state-room, but little room on deck, besides a small cabin, we believe, down below. As there were some twenty-five passengers, among them several ladies, and it proved a rainy day, you can imagine what a tedious time we had crawling through the canal and down the canal. We were j. j. ned at Norfolk by Mr. E. E. Pray, of the Kitty Hawk Club. He, with his friend Biel, took the same dose with us, and they both over the next time they come they will come by cars and take the steamship Harlaner at Norfolk and get off at Cain Dock, and then six miles across. So say we all of us.

Monday eve at 7 o'clock found us here at Mrs. Nye's; and in a few minutes I was surrounded by a crowd of business every inch of her, and there are several inches (weight about 180), with an eye like a hawk, and a tongue—well, Heaven help the man she "objects at," when she is aroused. The Kitty Hawk Club found that out. And she says she is not through with them yet. But she does keep a good hostelry; sets a good table, and is attentive personally to the wants of her guests. Looks after everything herself and is emphatically "boss of the rancho."

We made a short call at the Kitty Hawk Club. They are very pleasantly situated temporarily, some 400 yards from here. They expect to build a club house further south. We found Major Bailey in charge, backed up by Ed. Gray, who came down with us and made those wonderful shots with his new Scott gun. We saw him kill a grouse that we thought was fully 130 yards, and two crows at 80 and 100 yards. He used the threaded cartridges. He is one of the enthusiasts in the shooting line, as good shot and good company as all true sportsmen should be. Bailey, the Major Dowd of the club, is a fine, soldier looking gentleman of education, and evidently enjoys the situation of which he is master. We were most courteous and invited to go down with him on Saturday over the grounds of the club, which extend some 250 miles south, embracing some of the best shooting points in the United States. More of this soon.

JACOBSTAFF.

HINTS ON HANDLING A GUN.

SHOOTING on the wing is a mechanical art like billiard playing, boxing or fencing. There will, of course, be degrees of excellence, but any one with the full use of his faculties and the ambition necessary to success in anything can acquire it.

The secret lies in the hand becoming subservient to the eye. The two must be connected as by electricity. The eye is never at fault; if it were there would be little hope of improvement, but any one may improve the quickness of the muscles of the arm. Look at the expertness of professional card players and conjurers in the art of manipulation. The same practice applied to the gun will make the brilliant shot.

One often hears it said "to be a good shot requires a quick eye." It matters not how quick the eye is unless the muscles are educated to act in unison with it. Every one can see quick enough. Let one bird out of a trap before five hundred people and they will all see it at the same time, but only the practiced shot can throw up a gun to his shoulder with accurate aim and simultaneously pull trigger before the bird has flown ten feet. Take the adroit fencer or boxer; he sees an opening and his practiced muscles obey the eye and send the thrust or blow home quicker than the unpracticed eye can follow.

Of what use then is the sight on a gun? Very little, as is seen by the successful way gunners kill ducks when it is too dark to see the sight or scarcely to see the barrels.

A sportsman should not game the same as an Indian shoots his arrow, by looking at the object with both eyes open. It may be done by closing one eye, but there is nothing gained by this.

There are two ways of shooting on the wing. One to throw up the gun to the shoulder and pull the trigger at the same time. This is termed "aim shooting." The other, equally good and better to begin with, and more certain upon the whole, particularly in open shooting, is to follow the bird and when covered fire while the gun is in motion. When you pull the trigger the other hand has a tendency to stop. That misses the bird, but education will teach it not to stop, the same as we teach both hands a different action while playing on the piano.

E. B.

MUZZLE LOADER VS. BREECH LOADER.

SOMERVILLE, Mass., Nov. 8.

Editor Forest and Stream:

I would like to hear from some one who can give me a little bit of information through the columns of your much esteemed paper, if it is not asking too much. I will try to state the case so as to make it as plain as possible.

When a boy I had a small muzzle loading rifle with which, after some practice, I learned to pick a squirrel's head for a dead certainty. In loading, I always used a round ball and a greased linen patch. Whenever I pulled the trigger I knew (whether I looked at the target or not) where the bullet had gone. This I mean for distances short of fifty yards.

Well, about a year ago I purchased a new thirty-calibre breech-loading rifle, thirty-inch barrel and about eight pounds weight, and as I think a well-made one. It was rim-fire at the time that I bought it, chambered for the regular thirty-two long cartridge. Well, I commenced practice with it, and found that I could not depend upon it for close-shooting, as it would, perhaps, pick out three spots of a playing-card and then a ball would go three inches wide of the mark, or over or under. I was told that rim-fire cartridges were uncertain, so I sent to the factory where the gun was made and obtained a central-fire breech-loading rifle. I then bought some central-fire thirty-two cartridges and went to shooting with them, with the same result. Both kinds of cartridges were made by the Union Metallic Co., of Bridgeport, Conn.

Then I gave up for a while, and thought that the fault was in myself, and that close-shooting was one of the lost arts with me. But remembering that when I used to shoot well, I met a muzzle-loader and a round ball, I went to William Read & Sons, and obtained some No. 1 buckshot (which just fits a thirty-two calibre for muzzle-loading, with a linen patch) and went at it again. After getting my sights "tuned," I found that by first putting in a central-fire shell and loading from the muzzle I could cut a spot on a card almost every time, and I did "pull the gun off the mark." I knew it when I pulled.

I determined to test the matter thoroughly. I arranged a vice so that I could turn it on a pivot, and then clamped the rifle between the jaws in such a manner that I could load it from either the muzzle or breech, and proceed to make my test. The following is the result of ten shots each, rim-fire and central-fire, breech-loading, and loading from the muzzle with round ball and patch, distance, twenty-five yards:

Breech-loading.—Rim-fire. Seven balls inside inch ring, one three inches away to the left, and two about two inches high, close together. Central-fire.—Six balls cut each other out, one one inch below the others, one two inches above, and the other two about half an inch to the right and close together.

Muzzle-loading, with round ball and patch, the ten shots cut out a hole about as large as my thumb-nail.

I would add that the gun was not removed from he vice and was swabbed clean after each discharge.

Now, what I would like to ask is this: Is a muzzle-loading with a round ball and patch, in its shooting, as good as loading with a slug or conical bullet? Or is it the fault of the cartridges made by the U. M. C. Co.? If the fault is in the rifle, why is it accurate with round balls loaded from the muzzle? Of course I refer to the naked cannelured bullet in breech-loading, and not to the patched ones such as are used in long-range rifle matches.

IRON RAMROD.

REELFoot LAKE.

THE number of gentlemen sportsmen who have gone to Reelfoot this year from Nashville, Columbia, Franklin, Bowling Green, and other parts of Tennessee, exceeds any ever known before.

German Binkhous and Tom Waterman led the van from Nashville; then followed Messrs. Burt Bray, T. Morris, J. Cook and Bill Winans, from Bowling Green. On Saturday, the 19th, the aristocratic club of this city started, consisting of Col. V. L. Kirkman, Clarke Pritchett, Geo. W. Darrien, J. P. Dronellard and John Thompson, Jr. Maj. Bun, Felix Mitchell, J. Palmer and John Nicholson leave on Saturday next. From Columbia and Franklin the list has been augmented by Alf. Hersely, Tom Perkins, Mr. Cliffe, Ed. Wheat, and several others. These gentlemen go fully equipped for both shooting and fishing.

Col. Kirkman's party got to his shooting box on the Lake, where every comfort and luxury that good taste and money can procure is provided. The other gentlemen have their boats, private stores and servants, though they stop at Carpenter's, where they can be cared for in better than ordinary country style. The weather is now favorable for sport, and doubtless large bags and creels will reward them for the hard work they will have to perform.

Partridges (quail) are now plentiful in market, though the price, fifteen cents each, is high for this market.

General Smedes has opened a restaurant in this city at which woodcock, snipe, ducks, choice fish, frog legs, venison and "prissum" appear on the bill of fare daily. The woodcock come from Cincinnati, and command one dollar each.

Geese in the Cumberland River are more numerous than usual at this season, but they are so wild as to evade the most skillful hunter.

Squirrels have almost entirely disappeared from the State; like the darkeys, they have exodus for a more genial climate.

J. D. H.

Nashville, Tenn., Nov. 17, 1881.

VALUE OF FIELD SPORTS.—The will of the late Inslee A. Hopper, of Newark, N. J., who, for many years, was President of the Singer Manufacturing Company, gives all his property to his wife excepting his fishing-tackle, guns and other sporting implements. These he bequeathed to his sons, expressing his desire that they will cultivate a love for fishing and field sports. Of the intrinsic value of the outfit we are not told; but the advice we know to be worth thousands of dollars to young men. There are hosts of gray-haired veterans to-day who would not exchange pleasures found in field sports for a very valuable money consideration.

—FOREST AND STREAM.

And those old "gray-haired veterans" are the healthiest men in the world. Some people have very curious ideas about field sports. They think if a man owns a gun and a dog, he is of no account. If he goes fishing once in a while, he is "neglecting his business," and "will never amount to anything." We can remember when, in this city, it was considered by some of the old fogies almost a crime to own a dog. We believe in hunting and fishing, and a breath of the glorious free country air. We believe that the Lord never made man to spend their whole lives cooped up in close, musty stores, and dingy little offices, so absorbed in the business of money making, that they absolutely shrivel up. Their sons come on; they keep them in school till their poor heads are literally stuffed with knowledge, then put them at some confining work, and then wonder why they are not healthy. If the youth asks for a gun, and says that he would like to go out sometimes and shoot a little, his father holds up his hands in horror, and tells him that he will never make a business man, and, referring him to some old, yellow, dried-up business man, who knows no God but money, and whose soul is so small that it would rattle around in a gnat's ear like a pea in a filled balloon, says: "Look at Mr. Skidmore, he never hunted a day in his life." If ever we have a boy, we intend to get him a gun as soon as he is old enough to know how to load it properly, and a dog too if he wants it, and if he don't die and leave a vast estate for his children to wrangle over, he will have the satisfaction of having had some real pleasures. We know of some men who actually are afraid to let it be known that they hunt, "for fear that the business men will think less of them." Let the business men think what they please. If a man supports his family and pays his honest debts, whose business is it? If he wants to hunt, let him hunt, and the same in regard to fishing. We love both, and we don't care who knows it, and if we go shooting every day for the next seventeen years, it's nobody's business but our own. There are a lot of wooden-headed fellows sitting around this town who unless somebody aimed it and put it in a vice for them, and yet they play billiards, pool, cards and even throw dice, in an airy and graceful manner. Get one, when he is loquacious of fishes, loaded up with beer, and ask him if he ever hunts or fishes, and he will tell you "Oh no, pa says a man who hunts is no account." If some of the "pa's" around town would instill a little more love of honest manual sport, and of exercise in the good country air into the minds of their boys, they wouldn't wake up so often at midnight, and go down and find the night-gear still set, and then "wonder where Johnny is."—*Evansville Argus.*

CROWS FOR THE TRAP.—Camden, Nov. 26.—I notice in last week's paper an article by "Colin" in which he suggests crows as a substitute for pigeons for trap shooting, and says to his knowledge it has never been tried. I have a friend who became a crack shot by shooting them from a trap. He lived on a farm where crows were plenty in winter, and caught them in a pigeon net, baited with offal. When he commenced shooting he would shoot the bird to the trap by long cord, and if he scored a 10, would pull him in and try long cord. Sometimes he would have as many as 150 or 200 crows confined in an old chicken-house, where they were fed and taken out as wanted.

A. A. B.

AN OLD TIME REPRISAL.

OUR little party, hungry, tired and thirsty, stopped at the door of a small farm-house, which was beautifully painted by many a fiercer winter snow and blow, tempered and blended on the palette of time. We walked in, and while we were sipping the colder something is said of old guns, when our host at once joined in the conversation with spirit. He "had a rifle—not one of your new-fangled things, open at each end or broken in the middle—to let in a charge, but a good sensible gun one could load to suit themselves, and could tell at which end the charge would come out." He disappeared in an adjoining room, and we await his return. At the first sound of approaching footsteps the end of a small round wooden rod appears at the door at which our old friend had disappeared. Following the same along with our staring eyes, we discover a black octagon barrel into which the rod runs. As the sound of steps draw nearer the end of the rod and barrel first discovered disappear somewhere in the opposite direction, and soon our worthy farmer appears grasping this line of octagon pipe as if to steady himself as he walks. A hasty examination of the gun convinced us that it had been made by some of the past generations for a rifle. It was in a wonderful good state of preservation, and seemed to be all unimpaired working order, which led us to inquire if it could be fired now. Well, he "guessed it was, and if they had had such rifles in the war, there would have been more killed. It had been ruled out of such and such shooting matches," owing to its never-missing qualities. In fact, we were led to suppose it was one of the mysterious pieces described in Nick Whiffles' yellow-covered novels. The writer was seized with a great desire to see it work, and, procuring some loose powder and removing the gun to a safe place, a few grains of powder were placed in the "pan" and the flint drawn back. A pull at the trigger gave a snap, a spark, then a flash, much to our surprise as well as amusement. But this only fan-d the spatter of curiosity into a flame, and nothing was now to be but a match with this ancient rifle. After much searching in old and dust-covered boxes, a quantity of bullets were found securely tied up in a time-worn, rusty bag, and, guided by the owner of the rifle, we proceeded to an open, level field backed by thick woods, against which he proposed to shoot. We agreed to shoot once each and to be governed by the farmer's rules. He proceeded to step off one hundred yards or paces, we following with boards and timber for a target, which was quickly put up so as to present a face of about three feet wide by five feet high, with a white chalk mark in the centre. Our instructor loads the gun after his own fashion, which is accomplished after some delay, such as flaking the flint, making a priming pin, etc. Then the rifle was pronounced ready to shoot, and one of our number quickly faced the butts and prepared to shoot from a pile of timber, according to instructions from our leader, who wished us to shoot first. All ready—snap, dash, bang! and away sped the ball to some unknown, and, we hope, uninhabitable quarter of the globe; ditto the next shot, and so on until all our party had shot, and it came the owner's turn. He took a long, deliberate aim, but an examination of the target failed to reveal any trace of where the ball had gone. Then he "knewed by the sound of that gun that something was wrong with it." As no one had yet hit the whole face of the target, and every one claimed to have sent the ball the nearest to it, a second round had to be called, when some very lucky hits were made. It is not at all likely that any more shooting can be done in this vicinity, owing to the enraged farmers in the surrounding towns, who were badly frightened by bullets whistling over their heads, and until they heard of the match they thought that the Washington assassin had escaped from prison and gone up in a balloon and was being shot at by the whole nation.

North Andover.

"GORGES AND SWINDLE"—University Club, 370 Fifth Avenue, New York, November 1, 1881.—Editor Forest and Stream:—Some of the many of my fellow-sportsmen contemplate a trip to High Point, N. C., for quail shooting this season, perhaps the experience of myself and friend might be useful. We decided to visit that locality a short time since upon the mis-representations of a New Jersey man, who is now keeping the Bellevue Hotel at that point. We were assured by this person that he had arranged to secure us the shooting over a large extent of country, whereas, on the contrary, we found nearly every farm "posted," and in every case, every man we were "warned" not to go, and the owner in the end made some insulting remark. Had it not been for the courtesy of one or two residents of the village we would have had no shooting at all. As a specimen of the innkeepers' rapacity, permit me to quote a few items from our bill: Board, 44 days for two, \$22.50; board for 3 dogs, \$4.50; fires in room, \$2; 3 lunches (when we did not dine at the hotel), \$4.50; corkage on wine, which we sent down from New York city and opened ourselves, 75 cents per bottle, etc., etc. Comment is unnecessary.—W. E. C. M.

GENKING ACCIDENT AT SPESBIA ISLAND.—Dr. Jos. W. A. Clarkson, a prominent Baltimore sportsman, met with quite a serious accident, while duck shooting at Simon's fishing grounds, Spesbia Island, Harford county, Md., on the 23d inst. He and Mr. Adam, of Adams Bros., Baltimore, were companions on the shooting trip. Dr. Clarkson was in a blind alone about fifty or sixty yards from the shore. Mr. Adams was in another blind on a point about 300 yards distant. Having two guns with him Dr. C. discharged the first at a flock of redheads that darted at his decoys, and laying it down took up the large one for a second shot when it fell from his hand and exploded, both barrels going off. Part of his clothing was torn off, his ribs scratched and his right arm badly wounded. The blind was set on fire by the discharge, and thus attracted attention and brought relief. It is believed that Dr. Clarkson's arm can be saved, though at first it was feared amputation would be necessary. Strange to relate, this same arm blind where the accident occurred was the very one in which Mr. R. Q. Taylor, of Baltimore, lost an arm by the premature discharge of his gun some years ago.—Hoxo.

"THE OREGON TRAIL."—Did you ever read a little book entitled "The Oregon Trail"? My boy not it out of our school library. It contained an interesting and instructive account of the killing, by the author and his friends, of numerous buffaloes for their tongues. It is very instructive and valuable reading for our boys, a good thing for our school libraries, and, if properly recommended, may train up a generation of pot hunters.

W. H. L.

["The Oregon Trail," if we mistake not, is by a distinguished historian, Francis Parkman, who would doubtless be amazed at the criticism offered by our correspondent.]

CHESAPEAKE BAY DECKS.—Mr. Pierre Lorillard is on a duck shooting excursion in the Chesapeake Bay with a select party of friends in his steam yacht Radha. Fowl are in abundance in the Chesapeake Bay and adjacent waters.—Hoxo.

DEER AND BEARS.—Hornellville, N. Y., Nov. 27.—A great many deer have been killed near here this season. Eleven killed in one day at Cedar Run. Five were waiting all day yesterday to be shipped. Geo. Humphrey and Will Harris killed two in one hour, both fine specimens, only a few miles from here. One deer was killed last week inside the corporation limits. Hugh Jordan recently killed a monster bear which weighed 560 pounds. It is said this makes the twenty-ninth bear killed by him in this section. Mr. Jordan is a noted hunter and trapper.—J. OTIS FELLOWS

CORRIDOR FOR SHOOTING SUIT.—Northbridge, Mass., Nov. 7.—*Editor Forest and Stream:* Can you tell me where I can get the genuine Irish corridor of dead grass color. My tailor says he has looked over Boston and New York and cannot find it. I want to have a suit made by my own tailor after my own ideas.—H. T. W.

[We have been unable to find the goods.]

ADIRONDACKS.—The deer shooting at Upper Chauteaugy Lake, Ralph's hotel, has been very fine, it is reported. We understand that Ralph's house is to be enlarged for next season.

LIVE QUAIL.—Ad Hall, Milam County, Texas.—*Editor Forest and Stream:* I can supply live quail to order for stocking purposes. My address is as above.—G. A. VINCENT.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.
Black Bass, *Micropterus salmoides* and *M. pituitus*.
Masouline, *Bozo nobilis*.
Pike, *Esox lucius*.
Pike or Pickers, *Esox lucius*.
Pike-perch (wall-eyed pike) *Stizostedion americanum*, *S. griseum*, etc.

SALT WATER.
Smelt, *Osmerus mordax*.
Sea Bass, *Centropristis striata*.
Striped Bass or Rockfish, *Morone saxatilis*.
White Perch, *Morone americana*.

With very few exceptions, the game fish are those which do not confine themselves either to salt or fresh water, throughout the year, but visit one or the other, as their habits and taste, but principally the propagation of their species, direct them. These migratory fishes are, without any exception, the strongest, the boldest, and, as such, afford the best sport of their tribe; nor are they, for the most part, to be surpassed by any in excellence, firmness, and flavor, when in their best condition. Those fish which never visit the salt water at all, are unquestionably so much inferior to others of their own family which run periodically to the sea, that they are with difficulty recognized as belonging to the same order with their roving brethren; while of those which do not leave the fresh water, but are but two or three kinds, are worth taking at all; and even these are not to be compared with the migratory, or the pure sea fish.—HENRY WILLIAM HERRICK.

PIKE FISHING ON THE LEHIGH.

THE Lehigh River at Bethlehem, Pa., affords excellent sport for the lovers of bass fishing, and quite a number of nice bass have been taken at this place during the present season, the largest weighing, I think, four pounds. But for a good day's sport and a fair string of fish (pike), Chain Dam, a station on the L. V. R. R., nine miles below Bethlehem, is no doubt the fishing place, par excellence, of the Lehigh. On that river we spent a day with the pike, the result (8 lbs.) is considered good for this part of the country.

At 9:45 A. M. we embarked at B. and started on our nine-mile trip, "Jim" seated in the bow and myself wielding the paddle. All went smoothly until we came to what is known as "Jones' Island," where we prepared to meet our first difficulty in the shape of a quarter of a mile of rapids, and ugly ones at that, the water being very shallow, and running like a mill-race; but, nothing fearing, we pushed bravely on. When half-way through and while congratulating ourselves on our good luck in not getting stuck, we saw just in front of us an immense rock, partly submerged, and vain I tried to pass it, the current proved too strong, and with a bump and a scratch we were high and dry. After half an hour's work we were once more afloat and speeding onward. Having covered myself with glory in delaying the expedition half an hour, I resigned the paddle and changed places with "Jim," in the bow, and once more we glided on.

In nearing Freemansburg, we struck what we thought would prove a busy place, so, casting the troll and letting out about twenty feet of line, we paddled silently past the place, waiting patiently for a rise. Suddenly we felt one, and with a quick twist we hooked, as we supposed, a pike. Our supposition proved correct, for on landing him, he proved to be a splendid specimen of this gamey fish and measured seventeen inches. We fished this spot for half an hour, catching two smaller pike, and left it, well satisfied, as we depended mainly on "filling our creel" at Chain Dam our destination.

Passing Freemansburg we reached our second rapids, which, although worse than the first, we passed without a scratch, owing, no doubt, to the skillful manipulation of the paddle in "Jim's" hands. From this place to our third and last rapids, it was plain sailing, and the journey was passed in silence, excepting now and then, certain uncomplimentary remarks concerning the rain, which had begun falling on our entering Freemansburg, and which was still falling "as though it had never rained before," as Jim remarked.

The last obstruction consisted of a dam about three feet high, through the center of which was an opening eight feet wide. Through this the water rushed in one large volume, curving up at the bottom into a wave two feet high. Through this chute we passed in great style, and our old tub would not ride over the aforesaid wave, we took the next best course and went through it, shipping, in the passage through, considerable water. After a mile of shallow water and aggravating ripples, we struck smooth water, and, passing Reddington, we ran about three miles over the placid surface of the Lehigh at its finest point, from Reddington to Chain Dam.

At three o'clock, exactly, we arrived at Chain Dam, having stopped to dine on "Turkey Island," a beautiful spot in the river midway between the two last named places. From 3 to 5 P. M. we fished with good results; and as we glided swiftly by the rocks, our trout, in the smoking car of the 6:15 train, we had no reason to complain of our "luck." The eight-pound string of pike more than compensating us for our work in getting them; for it was work—not fun—in paddling a heavy flat boat nine miles through rapids and over long stretches of still water, in a driving rain storm, on a cold day, with the section of a broken car for a paddle.

PIKE-FISH.—I was very anxious to obtain a specimen of the pike-fish (*Naustrates ductor*). Dr. Günther quotes with approval Dr. Meyen's opinion that the pike feeds on the shark's excrements, but adds also that it obtains a great part of its food directly from the shark, in feeding on the parasitic crustaceans with which sharks and other large fish are infested, and on the smaller pieces of flesh which are left untouched by the shark when it tears its prey. On seeing a solitary pike-fish near the vessel one day I attached a small gut-hook to a trout-fish line, and tried various baits, such as dried cod, herring and beef, without success. I, however, succeeded in hooking him with a small piece of pork fat, but unfortunately the point of the hook afterward gave way. Mr. Moseley, in his interesting book, "Notes by a Naturalist on the Challenger," says: "The pike-fish often mistakes a ship for a large shark, and swims for days just before the bows, which it takes for the shark's snout." This, however, is not, I think, always the explanation of the pike's appearance without its mesquite. Sharks are often known to accompany a vessel for days together swimming unobserved beneath when the vessel is in motion, and only appearing during a calm. This I have been assured is the case by many sea-faring men and competent observers, and it may account for the pike's apparently solitary appearance.—*The London Field.*

DESTROYING NEW JERSEY FISHERIES.—Seabright, N. J., Nov. 21.—The wholesale destruction of moss-bunkers by the crews of steam fishing-boats sent out along the northern New Jersey sea-coast by the owners of fish-oil and fertilizer factories caused a heavy loss to Monmouth county this year. It has been claimed by eminent lawyers that the State authorities had no right to enact laws prohibiting fishing in New Jersey waters by boats owned in other States, even if they did destroy fish that attract bass, cod and bluefish to the shore of New Jersey. A letter upon this subject, signed by J. Baird, United States Fish Commissioner, says: "It is generally believed that the United States has the right to regulate the sea fisheries off its coast within three miles, but the said right has not been acted upon by the general government, and it is probably within the power of New Jersey to enact reasonable legislation on the subject. The State of Maine has assumed this right by limiting purse-seining for menhaden, etc., within a two-mile line." At the coming session of the State Legislature the question will be brought up for action. All fish prohibiting fishing for menhaden by the crews of steam vessels within two miles of the beach is being drafted for presentation to the Legislature.—R.

THE ANGLER'S NOTE BOOK.—A publication but little known on this side of the water is the "Angler's Note Book and Naturalist's Record" and yet it is of the highest order of merit. The book is a quarto issued monthly until twelve numbers are given, and then it is stopped until convenient to begin another volume. The Green S. Press, so called, from its cover, ceased with 1880, and we now see that another will be begun. The prospectus says: "The distinctive feature of this series will be the reproduction of the angling matter, ungarbled, from old, scarce and valuable books, and more especially from such as only deal incidentally with fishing, and which, though necessarily included in the libraries of great collectors, are forbidden, by consideration of space and expense, to those who content themselves with a modest gathering. Of the more important reprints copies will be taken separately and sold as 'The Angler's Note Book.' The price not given, but that of the last was six shillings, post free. It is published by W. Satchell & Co., 12 Tavistock St., Covent Garden, London, W. C."

MAINE FISHING NOTES.—Portland has packed about 100,000 barrels of mackerel this season, an increase of twenty-five per cent. over last year. The mackerel recently landed at Eastport within ten days with sardines and other fish. The Eastport Sardine factories are busy; one week recently the workmen's pay-roll amounted to between \$12,000 and \$15,000; one boy earned over \$14 cutting fish, and several others \$4 to \$10. Small fishing is lively at Damariscotta.\$3,300 has been paid this season at Bangor as duties on cans containing lobsters from the provinces; the fish come in free, and the cans only pay a small duty. Persons are now employed in Rockland harbor trapping lobsters for the New York market; the fish are worth from \$3 to \$4 a barrel in New York.Some of the Maine fishermen are employed in the waters of Virginia.

A NEW REEL SEAT.—We have recently seen a new reel seat which we think is an improvement on the old-fashioned sliding reel. The reel is held in place by a flat, stiff brass double ring, which is held in place and held in place by a screw in the center. Each end of this spring bears against a ring which is fast in its place at either end of the reel seat, and to put the reel in position it is slipped under the forward one first and then moved back under the other. The spring is stiff enough to keep the reel in place at all times, and will allow reel-plates of different thickness to be used. It is patented by Mr. C. F. Orvis, of Manchester, Vermont, who will add it to all his rods in future.

WHERE THE TROUT HID.—I notice in my letter to Judge Caton, published by you Oct. 20, in one place where I said, this sediment is softer and not so white as the more solid part. You had it, not so white and the more solid part. Again, where I wrote I took an eight-pound white-fish near the ore dock, you have it one hour and one day. There was but one dock at that time; there are three now. I think you were right about the trout hiding in the sediment as there is nothing else for cover in Trout Lake.—A. F. YOUNG.

THAT NINE-POUND FLY.—Escanaba, Mich., Nov. 15.—*Editor Forest and Stream:* That captions critic, "D," in FOREST AND STREAM, Nov. 10, must be off his feed. I think the rule of telling fish stories is not to fail below the mark. I have only weighed twelve pounds and ten ounces and nine hundred miles from the truth. He says, "one of your correspondents says, etc." I say it was not one of your correspondents.—A. F. Y.

Fishculture.

THE GOLDEN ORFIE OR IDE.

RECENTLY Mr. George Eckardt, Jr., now engaged in carp live golden orfe in a large scale near Cincinnati, O., received twelve live golden orfe from his father, who is a noted carp culturist in Germany. This we believe to be the second importation of this fish into America, the former lot having been received by Professor Baird and sent to the ponds of the Maryland Fish Commission, at Druid Hill Park, Baltimore.

This fish is a purely ornamental one. It surpasses the gold fish in the depth of its golden redness, which shades off to white on the abdomen. It has been afflicted with almost as many names as it has scales. It is a cyprinoid fish related to the tench of England and to the "shiner" of New York, *Leuciscus*. To begin with its systematic nomenclature, the Germans usually call Hechel and call it *Ibus melanotus*. It is the *Leuciscus idus* of Gmelin; *Cyprinus idus* and *G. orfus* of Linnaeus, etc. For common names it has in different parts of Germany the following: Gold-orfe, nerding, rollings, wies, urf, eilt, and erfel. In France it is "orfe" and in England golden tench, as the *Tinca vulgaris* resembles the fish in question somewhat. In America it has been called "golden ide" and "gold orfe." The former name has misled by its sound and it has been thought to be golden-eyed, therefore the name of orfe would seem to be preferred. The golden orfe is an active fish, and from what we have seen of them in the aquaria of Germany, a smarter, handsomer fish than the gold fish for all purposes of ornament. It is said to bear confinement in a small tank better than the gold fish, which is much abused in that respect. Looking into an aquarium school of golden orfe in a fountain they present a gorgeous sight. We were also informed that the orfe obtains its golden color soon after leaving the egg, which makes it more valuable to those who know how to display the gold fish in the matter of coloring, few obtaining a golden hue before the second year, many not until the third, and some never assuming it.

We have no doubt of the complete success of this hardy fish in our ponds, and in fact these Baltimore have thriven in the ponds of the park, and are so numerous that they are now becoming a general favorite. We think that Mr. Eckardt is associated in business with Mr. Hugo Mulert, the dealer in aquaria, etc., of Cincinnati, who lately contributed a valuable article to our columns on the subject of "Pond Culture," in which he has bred last year from an imported pair. Truly this is the only country can keep all its good things within its borders, especially if it be a fish which a fish-culturist of another land has considered a desirable acquisition to the fauna of his own.

HOW MISSOURI CARP FEED AND GROW.

THE following is a specimen of many letters received by the U. S. Fish Commission from the distributors of carp. It was written by a gentleman in Missouri and, not being intended for publication, we do not give his name. He is evidently enthusiastic enough to make his whole farm into a carp pond, if it could be done. We give it as it was written:

AUGUST 24, 1881.

Prof. S. F. Baird:

Dear Sir—After many months of hope and fear I am ready now to rise and explain. The carp which I received from you a year ago in June, I allowed no sign until late this spring, when I saw one of them that appeared to be a carp, and I immediately supposed that the rest of them had "gone up the spout;" so a friend went to the station to get ten young ones for himself and also as many for me. These latter were about four inches long, and in the evening, when I saw them, I was very much pleased. I had heard from the water, hoping to see them again after many days. That was about the first of June. On the 16th of June, while taking my usual walk around the pond, the water seemed to be moved in some mysterious way, and on looking, I saw a great multitude of little carp, so great that no man could contain them; the surface of the water was literally black with them.

O! Mr. Baird; no pen can write, no tongue express the joy and happiness I felt. Like the little negro, in telling his experience, he said it was as happy as when the angels were pouring "lasses on his head." Well, I saw them three days in succession, and then knew it was no idle dream, so I told the neighbors the pleasing story, and they came to see the fish and rejoice a while with me, but many fish we saw! Day after day and night after night I could not get my mind away from them. When I was alone, I thought of happiness I had enjoyed? Was it all a delusion, a fraud, a snare? I got the ague (you have done had 'em, hint you?) and after going through those beautiful, healthy, life-restoring gymnastics of shaking, etc., I walked one day, pensive and alone, around the pond, and I saw the bank again, and I saw the fish. I had no more. The placid water became like a huge boiling cauldron, lashed into foam by—shall I say it?—by the fish.

They were floating so high that their heads, tails and fins were visible chasing one another around like little balls. I believe the least of them to be two inches long, and I think the first twelve are all alive and fully two feet long. Three of them swam at my feet. I could have reached them with my hand, the head of one at the tail of another. They looked like some great sea-serpent. Yesterday I took some dry bread and cast it into the pond, and one of the big ones flapping out from the bank, where he was rooting, I dropped some crumbs. He came out and began to eat, and in less than ten minutes (I guess, because I could not count) I could see the head of forty of them with a two-foot stick. There is no deception in this! I have never before seen them float and play and are more astonished at them than I.

The carp have rooted out the flags, or cat-tail, as thick as your wrist, and flaps six feet tall are chawed off as though a calf had done it. Some of the neighbors say that the fish splash in the water so at night that they can't lead their mules up to the trough, and I would not be surprised to find the carp out in the cornfield some morning. Where did they come from? Are not those ten and twelve inches of last year's hatch? One-fourth of them are covered with scales, and I have seen one fish of ten feet on a thousand hills. I will add six or eight ears to the pond this fall. What more can I do? Advise me, lest they eat me up, as they have the moss.

CARP FOR EASTERN PENNSYLVANIA AND SOUTHERN NEW JERSEY.

WENONAH, N. J.
Editor Forest and Stream:
I have established a rendezvous at 607 Arch Street, Philadelphia, Pa., from which I am now distributing Government Carp in Eastern Pennsylvania and Southern New Jersey. I am personally in attendance at the rendezvous on Wednesdays and Saturdays of each week. The demands for carp are numerous, but the supply will be equal to it. A large percentage of those receiving carp, however, might as well wait until the fish are grown up as into the places where they place them—drip ravine ponds, mill-ponds, etc., devoid of suitable vegetation and already stocked with catfish, pike, bass and other predatory varieties. Commendable preparations are being made throughout South Jersey for engaging in carp culture, and numerous ponds have been constructed according to scientific principles and employing all the latest improvements. In carp culture, as in any other business, perfect system is necessary in order to insure success. Without system failure will be the result. Success is assured.

[While we agree with our correspondent so far as to believe that mill-ponds may not be the best places for carp, we must say that they usually contain vegetation, and we find that gold-fish not only live in them, but that the latter abound in lakes where all the fish are taken aside. I have seen where the gold-fish are taken, the carp will also, even though many of the young are devoured.]

There were twenty-one starters for this event, which were drawn to run in the following order:

side the stem, and a jib of 70 ft. on the foot is such a preposterous idea and such a mechanical incongruity that, whether we like it or not, we will have to conform to British experience and build a square-headed cutter for the occasion. It may not be flattering to our national vanity, but, unless we pocket blunder and look things square in the face, we may as well make up our minds to as sound a thrashing from a foreigner next year as Scheiner, Mistral, Wavo and others received at the hands of the little ten ton Madge this fall. To depend upon Grace in a hard fought match with a cutter is simply to invite grotesque failure. To depend upon a new sport of ridiculous dimensions emanating from some "practical" genius, is absolutely hopeless in view of recent experiences with the Pocahontas. We are glad, therefore, to find that the leading members of the New York Yacht Club are alive to the occasion, and propose to lay down a grand ship of the cutter type (14-winter and to have her in the best of trim in the hands of a well-drilled crew in time to meet an invasion from abroad. Her success will only help to tell us if we wish to retain the International trophy on this side of the Atlantic.

THE STATESMAN ANSWERS COMMODORE AND COOK.

Editor Forest and Stream:

I notice that both the "Commodore" and the "Cook" have written to *FOREST AND STREAM*, giving more or less praise to the Rice Lake canoe. Allow me to say that in Canada these canoes are considered to be greatly inferior to the Sterner open canoes, and that at the Lake George meeting last year there were twenty-one Rice Lakes among the fifty canoes there present. The "Alderman" uses a "shadow," and will never see anything else. No higher testimony to the superiority of the shadow to all other canoes could be given. The Rice Lake canoe is practically obsolete. THE STATESMAN.

HAPPY BOSTON.

THOSE who thought cutters would not become popular in America will water run uphill are discovering how poorly they judged the pulse of the yachting community. Lawley & Son, of South Boston, are to build a regular out-and-out Madge, 40 ft. on load line, 8 ft. beam, 9 ft. draft of water. The air is full of new cutters, and we hear already of nearly twenty such craft in contemplation for next season. The good cause is bounding!

YACHTING NEWS.

AMERICAN MODELS IN FRANCE.—Among the best yachts at Argenteuil, near Paris, belonging to the C. V. P., are: Miss Helen, five tons yawl, by Texler, 32.5 ft. by 6.4 ft. by 5.9 ft., all lead ballast, built 1879, belonging to M. Paul Leroy d'Étalle; Houtpelle, six tons schooner, by Le Marchand, 37 ft. by 5.2 ft. by 5.9 ft., belonging to M. de Salinville. Besides the above French built keel boats are the two English built cutters, Para, ten tons, and Tine, ten tons, also the Jersey built Hec, six tons, and Yacht, thirty-five ton schooner. There are numerous French built centerboards, besides two Americans—viz., the steam Yankee, five tons, recently imported and considered a failure, and the long years ago. The Paris boats are now consid-

ered far superior to either the old or new American models, as it seems that nearly all the sail boats can beat the newly imported Yankee. Among the best centerboards are the cruising cutter Amaran, ten tons, 34 ft. by 13.1 ft., built 1876 by Texler, and the racing sloop Tine, ten tons, 36 ft. by 14.1 ft. by 5.4 ft., considered the fastest centerboard of her size in Europe; the Albator sloop, seven tons, 30 ft. by 13.5 ft. by 5.4 ft., by Texler, 1880, a racer; Turquoise, ten ton sloop, 34 ft. by 13.5 ft. by 5.4 ft., by Texler, and the Commodore four and one-half ton sloop, 36.5 ft. by 8.1 ft. by 2 ft., built 1880—perhaps the fastest of the whole fleet. Ows her success to her ingenious owner, M. Caribotte, who had sloop sails made on purpose for her at Lyons, and who by means of that light material has been enabled to snow an extraordinary amount of canvas. The only defect seems to be the extraordinary expense and the great care necessary to preserve the canvas. —London Yachting Record.

SAN FRANCISCO YACHT CLUB.—A very successful season was spent to a close with a dance and lunch at the club house, San Francisco, Nov. 5, and a cold sail with the guests. Owing to the want of wind, only the Annie, Fred and Aggie got under way for the cruise. As the winter months, with long calms and easterly winds, have settled in upon the Pacific coast, most craft have been laid up and stripped. Four new schooners, about 50 ft. are building, and will be shipped in time for next season. Yachting has become the leading sport in San Francisco, and is growing space every year. In proportion to population the fleet of the Pacific is more numerous than that of any port of the country, New York and Boston excepted. There is Chicago, with half a million inhabitants, and scarce half a dozen craft fit to be termed yachts; there is Philadelphia and Baltimore with more than a score between them, and a dozen lesser cities where a yacht has never been seen, and all as advantageously located for the sport as the fleet of the Pacific is more numerous than that of any port of the country, New York and Boston excepted. Dr. Merritt, of the schooner Casco, has recently spent some time in the East, and, with his fondness for the sea, did not lose the chance to inspect some of the best of our metropolitan yachts. He is strongly in favor of keels, and thinks our small craft too much of the butterfly order. When he first saw a few tons of lead on the Casco's keel, the project was derided. Now, experience has taught him that the only mistake made was in not putting on just twice as much. The Casco has made a cruise of more than 10,000 miles down the Mexican coast and among the South Sea Islands, during which the schooner behaved admirably and gained the good will of a number of young ladies who had taken passage with the Doctor.

PRESERVING SAILS.—Several inquiries are informed that there is no royal road to the preservation of sails. They require careful attention all the year round, plenty of airing, and should never be stored in a damp place. There is nothing which will effectually remove mildew, and yet none of them showing the life and by steeping in the well-known mixture of one pound sugar of lead dissolved in one gallon of soft water, then allowing the canvas to drain and again steeping in a solution of one pound of finely powdered alum dissolved in one gallon of soft water. For large areas use more in like proportions. Fents, bags and canvas coats may be made fairly water-proof by the same process. The articles should not be rinsed, but allowed to dry by exposing to the atmosphere. All methods of cleaning sails should be discouraged. The least hurtful is a light scrubbing with soft brush, fresh water and castile soap, then sprinkling with dilute lime water and drying in the sun. Every

time sails are scrubbed the face of the canvas is worn down. It is better to use a soft brush and take time to the work than apply hard bristles and quickly ruin the sails. Our own plan is to have a row of gunboats, made of canvas with rubber soles, assorted sizes, ready in the gangway for the guests on a cruise, who are requested to step the nearest ft. and tumble their longshore freight cars down below upon coming over the side. Blackened shoes can generally be charged with more injury and dirt to sails, paint-work and mouldings than all other causes combined.

CUTTERS.—No better evidence of the increasing popularity of cutters could be asked than that the New York Herald deems it advisable to give its readers a column and one-half on the subject. The article which appeared in the Herald Thursday last was fairly well written, and as a lesson in cutters, what they are and why they are superior to sloops, deserves a word of praise. *FOREST AND STREAM* has for years been a champion of the cutter, and it was only a question of time when our provincial prejudice would wear away against a type and in much superior to the craft of home waters. We therefore welcome the great help the good cause of honest boats has received through the medium of the Herald's article, which will do much to taboos from our waters far too long through the narrow-minded prejudices of the old school which cannot see beyond its own little rind paid gate.

SEAWANAKA YACHT CLUB.—At the general meeting, held at Belmont's, Nov. 23, the following members were elected: Leopold Eldridge, Jr., Wm. Hall, Thos. B. Brown, H. S. Latrobe, E. F. Post, Philip Little, Wm. Whitlock, W. W. Tompkins and Paul Tuckerman. The Commodore reported the season's work, and the following success, as seventeen yachts already avail themselves of the moorings inside the club breakwater. The following very able committees were appointed to consider the details of the arrangements for the season: Dr. H. G. Pittard, John Hyslop, M. L. Schuyler, A. Cary Smith and W. E. Iselin. Notice was also given that, in view of the rapid increase in cutters, sections of the club were to be struck from the regulations. The section refers to keeping boatswains and jib laces fast.

OSHKOSH YACHT CLUB.—The fourth annual hop of the club was held Thanksgiving Night at Turner Hall, and proved a brilliant success. The arrangements were perfect, and the gathering included with prominent members of the neighborhood and their ladies. After the dancing an elegant supper served to bring to a close a very enjoyable evening, which has resulted in material benefit and moral support to the yacht club. The Commodore reported the arrangements in charge was composed of Commodore G. W. Hurrell, Vice Com. G. F. Stroud, Capt. A. H. Woodworth and Messrs. Frank Heilig, Charles Emery, W. B. Folger and Adolph Von Kaas.

MIXED.—Our French cousins, who have been tumbling so headlong into the adoption of American models of late, now find themselves suddenly brought up with a round turn. Since the Madge took down our vanity a trifle our French admirers are decidedly mixed, and their cherished belief that by copying our light drafts they were slyly getting the weather gauge of the British has given away to a feeling of doubt, and they are now upon the ragged edge awaiting further developments and amusing themselves with a side show in sharpies in the meantime.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate observation, investigation and research. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

BOUND VOLUMES.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 5 (fine) burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle P.G.—"Sea-Shooting."—P.G. and P.F.G. The P.G. for long-range rifle shooting, the P.F.G. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6½, 12½ and 25 lb. kegs. P.G. coarse, P.F.G. fine.

Dupont's Sporting, Mining, Snapper and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by P. L. KNEELAND, 87 Beaver St., N. Y.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island, this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound each.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 6 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, PFG and "Sea Shooting" P.G. in kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and PFG are favorite brands for ordinary sporting and the "Sea Shooting" P.G. is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

THE HUNTING SIGHT

LYMAN'S PATENT COMBINATION GUN SIGHT

Makes a Sporting Rifle perfect. Send for circular containing full description. Address

WILLIAM LYMAN,

MIDDLEFIELD, CONN.

FERGUSON'S PATENT ADJUSTABLE JACK LAMPS, DASH LAMPS, FISHING LAMPS, Etc.

For Night Hunting and Fishing, Spearfishing, Camping, Boating, Yachting, Driving at Night, and General Illuminating Purposes. Bicycle Lanterns, Dark Lanterns, Musicians' Band Lamps, Pocket Lanterns, Hand Lanterns, etc. Send stamp for Illustrated Price List. Name "FOREST AND STREAM."

ALBERT FERGUSON,
Office, 65 Fulton Street, N. Y.
(With Conroy, Bissett & Malleson.)

Bird Dealers and Fanciers

will find it to their advantage to call at Headquarters, where they constantly can find a full assortment of Song and Fancy Birds, also all kinds of rare animals adapted for Zoological Gardens and Show purposes.

Chas. Reiche & Bro.,

35 Chatham St., New York.

(Established 1847.)

WE WILL BUY

Live Rocky Mountain Sheep, Beavers, Antelopes, Wolverines, Whooping Cranes, Wild Turkey, Prairie Chickens, Quails, Woodducks, Etc., Etc.

ESTERBROOK'S STEEL PENS

Leading Numbers: 14, 048, 130, 333, 161.

For Sale by all Stationers.

FOREST AND STREAM

ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Published According to Act of Congress, in the year 1881, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.

Terms, \$4 a Year. 10 Cts. a Copy.
Six Months, \$2.

NEW YORK, THURSDAY, DECEMBER 8, 1881.

Vol. 17—No. 19.
{ Nos. 39 and 40 Park Row, New York

CONTENTS.

EDITORIAL:—	
The Angler in Winter; The Hair Snake; The Cost of Stupidity; Theodorus Garlick.....	363
THE SPORTSMAN TOURIST:—	
In the "Mash;" Cruise of "The Nipper;" Autobiographical Fragments—III.....	365
NATURAL HISTORY:—	
The Enemies of Game Birds; Death of the Tame Partridge; Fish and Frog Showers; Suggestions about Acclimation.....	367
GAME BAG AND GUN:—	
A New Jersey Party in the South; The Mellow Horn; Maine Warden and Visting Sportsman; Deer in the Adirondacks; The Great Hinkley Hunt of 1818; How He Got His Ducks; Relative Velocities of Rifle Bullet and of Sound; Eight Rules for Treeling Grouse; Shooting Grouse on the Wing; Deer in Massachusetts; State Pigeon Tournaments.....	367
SEA AND RIVER FISHING:—	
Angling in California; Worm and Fly-Fishing by Night.....	371
FISH CULTURE:—	
Carp Distribution; More Carp for Pennsylvania.....	371
THE KENNEL:—	
Eastern Field Trials; Louisiana State Field Trials; National Field Trials; Training vs. Breaking; Kennel Notes.....	371
RIFLE AND TRAP SHOOTING.....	376
ANSWERS TO CORRESPONDENTS.....	376
FACETING AND CANOEING:—	
Measurement; How to Race Madge Fairly; American Canoe Association; Rice Lake Canoes.....	376

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondence will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France. To clubs of three or more, \$5 each.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 8.

THE MICHIGAN NON-EXPORT LAW, which provides that venison shall not be shipped out of the State, is said to be a dead letter. It is reported that the law is systematically evaded by parties who take the venison to small towns near the line and carry it thence in wagons out of the State, and there re-ship it. The law, if it can only be enforced, is an admirable one; we hope to see it carried out. There ought to be a like provision against exporting game from this country to Europe.

SPORTSMEN have always been legitimate game for the punsters. Joe Miller (England, 1684-1738), had his crack at them: "A gentleman who had been a shooting brought home a small bird with him, and having an Irish servant, he asked him if he had shot that little bird? 'Yes,' he told him. 'Arrah, by my faith,' replied the Irishman, 'It was not worth the powder and shot, for this little thing would have died in the fall.'"

THE ATTENTION OF SPORTSMEN is just now largely directed to the field trials of sporting dogs. We have spared no expense nor pains to present to our readers accurate and intelligible reports of these meetings.

HAIR-SNAKES AND THEIR EGGS.

IN the middle of September last Mr. F. W. H. Hahn brought us a hair-snake, *Gordius aquaticus*, which he found in a New Jersey brook. The animal was placed in a jar of water on our desk and began laying its eggs on the 19th, finishing on the 24th. The "snake" was seven inches in length and the knot which its eggs were tied in would if straightened out appear like a fine thread four or five yards in length.

This is the worm which is believed by many to come from a horse's or other hair, but in reality is a parasite of grasshoppers, crickets and water beetles. This worm is quite plentiful but escapes observation by its small size. Trout culturists find numbers of them knotted together on the screens of their ponds at the close of summer. No doubt these little animals destroy many noxious insects, for they are exceedingly prolific, and the insect in which they take up their abode is said to die without increasing its species; and Prof. Riley says that all the *Orthoptera* (grasshoppers, crickets, etc.) which came under his observation which contained a Gordius, nine in all, were females.

Prof. Leidy, in speaking of the variable Gordius, says: "I observed one nine inches in length by two-fifths of a line in thickness, commence laying eggs and continue the process very slowly and gradually during two weeks. They were extended in a delicate cylindrical cord, resembling a thread of sewing-cotton. At first it broke off, as extruded, in pieces about a foot in length, but toward the end of the process the cord appeared to be less tenacious, and broke off in pieces a few inches, and even a few lines in length. The pieces in the aggregate measured ninety-one inches; the thickness of the cord was about one-tenth of a line. The eggs are very minute, and in the cord were compressed together so as to be polyhedral. In a transverse section of the cord I counted about seventy eggs, and in the length of one-fortieth of an inch twenty-six eggs, which, by calculation, gives 6,624,800 as the whole number of eggs in the cord. The eggs, when isolated, assume an oval shape, and measure about the 1-750th of an inch long by the 1-1,000th of an inch broad. The development of the young from the egg is readily observed from day to day, and it takes about a month before the process is completed. * * * In about four weeks the Gordius reaches maturity, and escapes from the egg totally different in appearance from the parent."

Undoubtedly many of the young perish and fail to find a "host," but an animal which lays over six million eggs does not seem liable to become extinct soon. The eggs which were laid by our specimen have failed to hatch, and now, near Dec. 1, they are covered with a fungoid growth, resembling that which comes upon a dead fish egg. According to Dr. Meissner, the young Gordii enter their hosts at the joints of their legs and abdomens and become encysted in the muscular system instead of being intestinal parasites. They have also been found in the muscular portions of fishes, where they have probably obtained entrance through the destruction of some insect by the fish.

THE ANGLER IN WINTER.

THE Northern angler, whose business and whose purse allow it, practically knows no winter. He goes South. The Southern angler keeps it up all winter, in fact that is his best season, for the combined effect of heat and insects renders his summer fishing a most questionable enjoyment.

With these two classes our present article has naught to do. We write of the angler of the North whose lakes and streams are frozen and who, for various reasons, cannot spend two or three months in Florida. What can he do? Many of the hardier sort fish through the ice for the ever-hungry pike. Holes are cut, fires are built and the angler, well swathed in woollens, keeps his blood in brisk circulation by running from one hole to another to take out the fish which has notified him of its readiness to be so taken by hoisting the flag attached to the "toggie" at the upper end of the line; or he goes to see that the hole has not frozen over and that the line will run free. If the ice be free from snow he does this on skates and, although many attempt to despise it as "hand-line fishing with no chance to play a fish," it is a good and a hardy sport, and we have enjoyed it many a time and oft, from Minnesota to New York. The cold air is exhilarating,

and the appetite is enormous. After a week of such fishing, in ordinary fair winter weather, a man returns "like a giant refreshed with wine."

This and smelt angling near the sea coast are about all that the Northern angler gets, unless he takes the lake trout in much the same manner; but the lake trout is not often found in the smaller lakes and is usually taken by professionals, in winter. The black bass in the North hibernates and so do most Northern anglers. Winter is the time that the tackle is overhauled, rods varnished, reels repaired and lines tested. The tackle maker receives orders for new rods, made to a specified length and weight, not to exceed a hair's breadth in the former nor a feather's avoirdupois in the latter, and the old lines are examined foot by foot for flaws that might lose the largest fish of the coming season. Flies are inspected and laid away in camphor or, better yet, in tightly corked bottles, to keep the moths away. The gut is looked at with a critical eye, and the trayed parts cut out or rubbed smooth with India rubber.

What anticipations of glorious sport the care of fine tackle brings! What memories of past achievements its contemplation conjures up! The cleaning and oiling of the smooth-running reel is a pleasure. Its sharp click recalls the struggle with a two-pound trout in the pool under the roots of the old sycamore; or the silent whirl of the multiplier suggests the fierce fight with the great bass, which was the envy of the local fishermen and the talk of the town for days after, and which was finally recorded in the pages of FOREST AND STREAM.

The Northern angler in his hibernation has these enjoyments, and others besides. He now looks back over the printed record of angling in all parts of the country in the pages above referred to, which he only had time to hurriedly scan in summer. He reads the angling books which he has bought during the summer, especially to be read during these long winter evenings; for your enthusiastic angler loves fishing books next to fishing, and always has a corner in his library where a goodly collection of them is to be found. With his slippers on, before a cheerful fire, pipe in mouth, the liberating angler of the North takes in a world of quiet pleasure and learning from his books and his FOREST AND STREAM—pleasures which those who can fish all the year round know little of.

THE COST OF STUPIDITY.—A Boston correspondent sends us a newspaper slip recounting some thirteen accidents with fire-arms; and our friend suggests that few people are aware of the numerous exhibitions of carelessness in the handling of firearms, or the result of the injuries resulting therefrom. The cases mentioned in the newspaper cutting include the bursting of guns, the shooting of companions in the field, and fatal accidents caused by pulling the guns out of boats and over fences, with muzzles pointed toward the unfortunate victims. As we have pointed out before, these casualties are in almost every instance due simply to the sheerest stupidity and criminal carelessness of the handlers of guns. Every fall the diligent exchange editors of our esteemed daily contemporaries collect a long string of such accidents under the heading of "Sportsmen's Perils." This fall and winter will prove more than usually productive of such items, owing to the flooding of the country with cheap guns, which find their way into the hands of men and boys who are about as fit to handle guns as a two-year-old baby is to play with a can of nitro-glycerine. We may always expect that men will kill themselves by their own stupidity with guns, just as they manage to be run over by railroad trains, blown up by kerosene fire-kindling; or contrive to fall off from precipices, and down into wells; or are kicked by mules; or have their hands taken off by buzz-saws and threshing machines. When the millennium comes, and the lion lies down with the lamb, perhaps the shot-gun and the didn't-know-it-was-loaded idiot can lie down in safety together, too; and both get up again. But it must be remembered, as we have said before, that the number of persons who are injured by gunning accidents compared with the whole number of persons who use firearms is exceedingly small. The list of these accidents which do not result from sheer carelessness is still less important.

THE BEST HOLIDAY GIFT for a gentleman is a year's subscription to this journal.

THEODATUS GARLICK.

THE FATHER OF AMERICAN FISHCULTURE.

THE name of Theodatus Garlick, physician, surgeon, artist and scientist, is a familiar one to most readers of the *FOREST AND STREAM*. It affords us much pleasure to present this week a portrait of the Doctor. It has been engraved from an ambrotype, taken when he was fifty-one years of age, and shows him as he appeared when at the busiest period of a well-occupied life. Before advertising to Dr. Garlick's work in fishculture, the following brief mention of his life will be welcomed.

Theodatus Garlick was born March 30, 1805, in Middlebury, Addison County, Vermont. His father was Daniel Garlick, a farmer, who married Sabra Starkweather Kirby, daughter of Abraham Kirby, of Litchfield, Connecticut, and sister of the Hon. Ephraim Kirby, who in 1804 was appointed by President Jefferson United States Judge for the Territorial District of Louisiana.

In 1816, young Garlick, then but a mere boy, eleven years old, left his home for the West, trudging on foot and carrying a knapsack. At Elk Creek, now Girard, in Erie County, Pennsylvania, he tarried two years, and then went on to Cleveland, Ohio, where he had a brother who was by trade a stone-cutter. Here he spent some years and became proficient in the art of carving and lettering on stone, afterward going back to his Vermont home to finish his education, which had been irregularly received at the common schools and under private tutors. In 1823 he again returned to Ohio, accompanied by his father and family.

In 1829, when at the age of 24, he entered the office of Dr. Ezra W. Glezen as a medical student, afterward continuing these studies under the direction of Dr. Elijah Flower, then a prominent physician and surgeon at Brookfield. After some years of assiduous study, and after attending full courses of medical and clinical lectures, he graduated at the University of Maryland, in the city of Baltimore, in 1834. For many months thereafter he had the benefit of close social and professional relations with Professor N. R. Smith, who at that date occupied the chair of Surgery in the Maryland University. Declining flattering inducements to remain in Baltimore, Dr. Garlick returned to Ohio and settled in what became the city of Youngstown, where he engaged in the practice of medicine and surgery; and following his tastes and talents he made of the latter a specialty. He spent eighteen years here, his fame as a skillful surgeon growing all this while, and then removed to Cleveland, Ohio, where he formed a partnership with Professor Horace A. Ackley. Here he was elected a member of the Board of Censors of the Cleveland Academy of Natural Sciences.

As a surgeon Dr. Garlick soon took high rank among the profession in that city, and of the country. He probably had no superior in that most superior branch of the art, plastic surgery. He performed numerous and most skillful operations of this class, both in the Cleveland and Medical College and elsewhere. One of the most important of these was in the case of a young lady who had lost nearly all of one side of her face and two-thirds of the upper and lower lips by "sloughing" of the parts. The whole side of the face was restored and the deformity removed by the perfect fitting of flaps which were cut up to supply the lost parts. Professor John Delemster declared that there was not a more difficult or a more successful case of plastic surgery on record, and placed its value in money at \$10,000. He performed the operation of lithotomy with unusual skill and success, in one case fracturing first and then extracting a stone which measured three and a half by four and a half inches; in shape like a coconut. He successfully removed the half of the under jaw twice, disarticulating in each case, and twice tied successfully the carotid artery. He made some valuable improvements in the methods of operation for harelip, and for fistula in ano; introduced new splints and dressings for fractures, and applied the principle of anatomical models to animals and parts of animals, and especially to fishes.

Dr. Garlick had early developed a taste for art, and possessed much talent for sculpture. He began his work in this while in college, and subsequently made most creditable additions to this branch of American art. While at the Maryland Medical University he produced bas-reliefs in wax of five of the professors of the college, which were pronounced excellent likenesses. The statuettes in baso-relievo of General Jackson and Henry Clay, both of whom gave him sittings, were soon after completed. A life-size bust of Judge George Tod, of Ohio, was another of his productions, admired for accuracy and artistic merit.

His last work of art is probably his masterpiece, and has a peculiar interest because of the circumstances under which it was completed. It is a life-size bust of Professor J. Kirkland at the age of sixty, made in 1874. A disease of the spinal nerves of more than ten years duration, and which incapacitated him from standing without the aid of crutches, kept him closely confined to a lounge, and in a recumbent position, and while suffering acute pain, he modelled this ad-

mirable bust. The bust was modelled partly from an alto-relievo which he produced in 1850, and partly from sittings by the Professor. It was most truly a labor of love. No pecuniary recompense would have induced Dr. Garlick to undertake it. His deep affection for Professor Kirkland enabled him to persevere in it until its completion. Dr. Garlick made the first daguerrotype picture (a landscape) taken in the United States, and himself constructed the instrument and apparatus to take it in December, 1839; besides making in 1840 the first daguerrotype likeness ever taken anywhere without requiring the rays of the sun to fall directly upon the sitter's face—in other words, in the shade.

This talent as a sculptor was applied in a most useful way to the construction of anatomical models. He also made many valuable pathological models, which represented rare forms of disease. These models were duplicated, and are to be found in the medical colleges of Cleveland, Cincinnati, Buffalo, Charleston, Toronto and elsewhere. They are considered to be superior to the works of the celebrated Anzoux of Paris.

THE PIONEER IN AMERICAN FISHCULTURE.

It is as the pioneer in American fishculture that Dr. Garlick's name will have the most enduring fame. Attracted by the reports of the experiments of Gehen and Remy in France, he at once recognized the practicability of artificially increasing some of our more valuable species; and, being an angler, naturally selected the brook trout to begin with. Associ-

THEODATUS GARLICK.

From an ambrotype taken at the age of fifty-one.

ating himself in this enterprise with Prof. H. A. Ackley, Dr. Garlick started for the Saut Ste. Marie to obtain adult fish for this purpose, in the month of August, 1853, while Prof. Ackley prepared a pond for their reception by making a dam below a spring on his farm, which was some two miles from Cleveland. The first attempt at transporting fish from the Saut Ste. Marie, nearly 500 miles, was a failure; but three subsequent attempts resulted in placing 150 trout in the pond. In September he made a trip to Port Stanley, Canada, and brought more. It was supposed that the journey would interfere with their spawning the same year, but in this the experimenters were agreeably mistaken. On the 20th of November the fish had so far progressed in nest making as to be ready to occupy the beds scooped in the gravel; and on the following day the Doctor caught and stripped the first pair of fishes so treated on the continent of North America. All the details of development, which are now so familiar to fish-culturists, were then veiled and unknown. Were the little eggs impregnated? Would they hatch?

It was forty-eight days, or not until Jan. 9, 1854, when the Doctor placed one of the eggs under the microscope and saw an unmistakable embryo. Thirteen days later a fish emerged from the egg, and the triumph was complete.

On the 14th of February Dr. Garlick described these experiments and their success in a paper read before the Academy of Natural Sciences of Cleveland, O., which was published in its proceedings, and from which the above facts are taken. In December, 1856, he exhibited microscopic views of the embryo trout before the same Academy at three different meetings, and showed the changes in the structure of the embryo at different ages.

In 1857 he published a book entitled "Fish Culture," which was for years the standard authority on the subject; a second edition, revised and enlarged, appeared last year,

and was reviewed in *FOREST AND STREAM* of Sept. 16, 1890.

Dr. Garlick's early experiments in fishculture were published in the *Ohio Farmer* and at that time did not attract much attention outside of his own circle of acquaintance, nor did his experiments and successes strike the public as having any practical bearing upon the every-day concerns of life in the way of increasing the food supply, which was for no way scant in his State. Indeed they were rather viewed as a curious recreation of a gentleman addicted to scientific experiments, and as a harmless way of spending his time and money. Unfortunately for trout culture the Doctor was possessed of an ample income and therefore felt no necessity to enter into the breeding of fish as a business venture, nor to push it. He had demonstrated the fact that it was practicable to breed fish and proved it his own satisfaction, as well as that of his neighbors; he had published the result of his work in both scientific and popular papers; and there the matter rested. If he had been a poor man his natural enthusiasm, added to his native energy, which in other things showed his great powers of pushing things to their farthest limits, would, even in that early day, have awakened an interest in the culture of fish which would have given it a start that it did not acquire until fifteen years later.

Although he saw in the artificial breeding of fish a rare and important industry he had no conception of the preparations that he has been spared to see it assume. He has seen it pass from the stage of scientific experiment to an industrial pursuit, and from that to become an important department in the internal economy of nearly every State in the Union by the appointment of Fishery Commissioners with State and National appropriations more or less ample for the propagation of food fishes. He has watched the interchange of fish eggs with foreign countries and the safe shipment of ova to the antipodes. He has seen the salmon restored to the Connecticut River; the chad successfully planted and grown on the Pacific coast, where they were unknown, until fresh shad are so novelty in the markets of San Francisco. He has seen the fishes of the West firmly established in the East, until the trout of California has been perfectly acclimated there. He has noted the fact that the sea-fishes also have been propagated and that the cod and the Spanish mackerel can be increased by artificial means. Truly a grand retrospect for the pioneer in American fishculture, and a glorious record with which to close a busy and useful life.

During the past years of physical suffering with which Dr. Garlick has been prostrated, his mind has been clear; and now in his seventy-sixth year, he watches the *FOREST AND STREAM* for new movements in fishculture. He has been an occasional contributor to its columns and has lately been much interested in the culture of carp, of which he has a pond and hopes to see them increase. He was a diligent student of natural history and other kindred sciences. Professor J. P. Kirkland was his first and only preceptor in natural history, and was his intimate friend and associate for more than forty years. In 1857 the Doctor described the large-mouthed black bass of Ohio waters as *Oryzias luytoma*, its specific name being his own and descriptive of its large mouth, a name so appropriate that it is unfortunate that it has to give way to the law of priority and be passed into the realms of synonymy.

When in health Dr. Garlick stood six feet two inches in his bare feet, and weighed 235 pounds. His magnificent physique and even, genial temperament enabled him to perform an unusual amount of work requiring endurance and patience. The brief outline of his life given above is the record of a busy, well-spent career, well rounded by notable achievements in different spheres of work; it is the sketch of a remarkable man.

Dr. Garlick has been married three times. His first and second wives were sisters and daughters of Dr. Elijah Flower, his medical preceptor. He had two children by his second wife, one son, Dr. Wilmot H. Garlick, and one daughter. In 1846 he married Mary M. Chittenden, his third wife, by whom he had one daughter.

WE ARE INDEBTED to the courtesy of Prof. Alfred M. Mayer, of Stevens' Institute, for the data respecting the relative velocities of a rifle bullet and of sound. The subject was brought up by the reported circumstances attending a target marker's death, it being asserted that the marker heard the sound of the rifle when fired, and then stepped out and was killed by the ball.

THE WIDE CORRESPONDENCE printed in our columns, to-day, is suggestive of the great variety of American game, and of the extensive territory open to sportsmen in this country. December is in many States the last month for general shooting; with the first of January comes the close of the season.

INVALIDS IN THE WOODS.—We are promised by our correspondent Nesmink some pertinent facts about the Adirondacks and the people who go there to get well. The subject is of grave importance, and its discussion in our columns will be followed with interest.

The Sportsman Tourist.

IN THE "MASH."

LEAVES FROM A LOG-BOOK—III.

CAYUGA LAKE gives a straight course for the canoeist of thirty-eight miles. On both sides, for nearly its whole length, are high cliffs and wooded hills, with numerous cascades and tumbling streams dividing them by ravines and gorges of a hundred or more feet in depth. The only winds experienced are either due north or south, and are seldom fierce enough to endanger the voyager in the most diminutive craft. The hunter can bag a reasonable number of ruffed grouse or quail on its shores in season; ducks are quite plentiful, and fly-fishing for black bass or trolling for lake-trout is excellent.

At the foot of the lake, where its waters are emptied into Seneca River, begin the Montezuma Marshes, extending along the river for two miles and varying in width from one-half mile to two or three miles. Myriads of wild-fowl make these marshes their spring and fall resting-place a few years ago, and black and summer ducks found it a safe breeding-ground; but railroads and city sportsmen, sink-bombs and batteries, and the native, whose water-spaniels are trained to catch the young ducks before they are able to fly, have so decimated the numbers of birds that a whole day's work now will scarcely bring a score of ducks to bag.

The inhabitants of the marshes are a peculiar class of people—illiterate, poor, shiftless and lazy—and are isolated from the rest of the world as if dwelling on an island afar out in the ocean. Their employments consist in "frying" fish in summer, and shooting ducks and cutting "flag" in fall, with perhaps the cultivation of a small garden to supply them with enough "sters and "turnicks" to last through the winter. Few of them possess horses, the greater part of their going and coming being done by water; but on this element they are accustomed to.

It was nearly dark on the 10th, October night when the canoe Gypsy, with Captain and Judy aboard, crossed the bay from Cayuga village to Mud Lock, and entered the sluggish current of the Seneca. The thirty odd miles that had been traversed from Bushy Point had been accomplished without fatigue, a friendly south wind having borne the little boat along at a good rate; but now the sail had to be lowered and slowed, and the feet and back braced for a steady paddle for two or three hours. There is a sort of tired-and-easy delight in traveling thus along, not knowing where fate will call a halt for the night's rest, a delight only experienced by two of the human kind—the canoeist and the tramp. The former has rather the better lot of the two, for he has a comfortable shelter to rest in, no matter where darkness overtakes him, while the tramp must needs make the best of it as he can, now in a barn, next under a haystack, or, perhaps, beneath the blue vault of heaven, with no shelter but the lee-side of a stump fence.

While the Captain is moralizing as above, the sun has withdrawn its large, friendly face, and the horizon, and the noisy cackle of the mud-hens belokening with an infallible certainty the speedy approach of darkness. Soon the outlines of the grassy shores become blurred and indistinct, and the stars and the new moon show brightly against the dark blue of the nocturnal sky. There are many cuts and channels through the morass, dividing it in every direction, but the Captain has hunted the marsh through many times and knows the channel well, so, whistling a gay tune in time with the paddle stroke, he threads the winding passages, turning here to avoid a shoal and there to escape the three poles of a fisherman's fyke as he skims along. No trees break the monotony of the dim vista, only here and there a tall stake—driven into the mud to indicate the whereabouts of some "fish-car"—rises grim and ghost-like, nodding its head with the surge of the current.

By and by the roar of falling water and a steersman's long-drawn "Go-o-o-on, Johnny," tell the Captain that he is nearing the Aqueduct, where the Erie Canal is taken across the river by a massive structure of concrete masonry. The river flows beneath this structure through a number of arches, passable for a skiff except at high water, but unpleasant on account of the continual leakage and overflow from the canal above. For a moment the Captain pauses to don his waterproof coat and button the apron around the well, and then strikes out boldly for the most easterly arch, where there is less overflow than at any of the others. The water gurgles and whirls as it dashes through the passage, which looms up black and uncanny ahead. The Captain hesitates to trust himself in the dark, but it is too late now, and with one stroke of the paddle to direct the canoe aright, he bows his head and shoots into the dismal cavern. The paddle is of no use here, and he can only direct the canoe by pushing with his hands on the slimy wall above. A sheet of falling water seems as if it would burst through the light deck of the boat, and indeed nearly takes the Captain's breath with its force, but after what seems an age, but is really only a minute, the canoe dashes through on the other side, and the Aqueduct is passed.

Now a dim light, like a will-o'-the-wisp, is seen to glimmer faintly ahead, right in the centre of the marsh, and toward this the Captain makes his way. If his surmise be true, this light comes from the shanty boat of old John, the Hermit of the Marsh, who lives alone the year around in his old ark, fishing, hunting, trapping and battling with the mosquitoes and the "fever-n'-ager." To all mankind this old recluse is a surly, uncommunicative soul, allowing no one to set foot within his strange domicile, and his two dogs are effective aids in keeping him free from intruders; but the Captain knows him better than do the rest of the world, and recognizes under his rough and repelling exterior the instincts of a true lover and worshiper of nature, and a heart as noble and kind as ever throbbled in human breast. There must have been a bond of union felt between this old hermit and the young Captain, in that each loved the solitude of nature—the one partaking of it in his canoe, paddling whither he would through lake and stream, and the other floating here and there in his awkward craft, back and forth through the great, bleak marsh. At any rate, the Captain was the only one known to have crossed the hermit's threshold, and even to him the hermit was rarely communicative, and never demonstrative. Perhaps he had some secret romance in his strange choice of life, but the Captain never invaded the sanctity of his inner self, and his secret, if secret he had, died with him when he was buried in the Potters' Field, with none to mourn him but his two faithful dogs.

As the canoe approached the light, one of the dogs began bark a warning, and the light suddenly disappeared. The

Captain knew the hermit would not show himself, trusting to the dogs to keep intruders away, so he was compelled to hullo to make his identity known. Instantly the glimmer of the light re-appeared, and in a moment the door of the cabin was opened and the bronzed face and grizzled locks of the old man were illuminated by the lantern he held aloft in his hand.

"Down, Jim! down! Is that you, Cap'n?"

"Ay, ay, John."

"Pull up alongside the little boat and hitch to the stake to your left. Don't get tangled in the fykes."

Now a word of greeting nor a shake of the hand did the Captain receive as he stepped into the low-roofed cabin, but the hermit quietly placed a shining tin tea-pot on the little round stove, the while intently scanning his visitor from head to foot. At last the Captain spoke:

"I see, John, you have hauled your house out on land."

"Yes, I've hauled her out. She leaks at every seam, and all the pitchin' and patchin' I can do won't make her float again, so I've jist laid her up here, and here I guess she'll stay."

"But next spring's freshet will lift her off."

"She'll stay as long as I do, Cap'n, and we won't neither us last till the ice breaks up."

The lantern, hanging from a hook in the roof of the cabin, gave light enough to show the scrupulous neatness that pervaded the hermit's quarters. Everything, from the mattresses of dried marsh grass in the one end of the cabin to the old-fashioned wood stove in the other, showed the painstaking care of the old man. The finished stock of a ten-pound muzzle-loader, made by William Greener, reflected the light of the lantern with dazzling brilliancy, as it hung on its wooden pegs. The simple articles of tin and earthenware necessary for the hermit's cookery shone on their shelf as if just from the shop, and bottles of root extracts and oils of his own collecting were ranged neatly in order on another shelf. A pair of flat-irons on the stove and some damp underclothing on the table showed that the old man was just about to do his week's ironing.

"Cap'n, you can get your own supper, for the irons is hot and the clo's sprinkled, and I must 'tend to 'em. There's bread, grease and pickles in the chest, and pork in the bar'l outside, so you can help yourself."

"All right, John," and the Captain proceeded to prepare the meal. While searching outside for the pork barrel he saw that the hermit had a number of wild ducks—winged or wounded birds that he had carefully nursed to recovery—peeped in an inclosure. He also discovered a fat pig on the farthest point of the grassy island, whose obesity was due to a liberal diet of fish, which he devoured with the greatest avidity.

"John," said the Captain, returning with his pork, and noticing a pair of mallards hanging near the door, "are many ducks about yet?"

"Not many," answered the hermit; "there's too many sportsmen for an honest man to bag any."

"What do you call a sportsman, John?"

"A sportsman is a city feller, Cap'n, who lives all his life in a brick house and knows nothing about a wild duck and less about a gun; who calls every man that shoots a muzzle-loader and don't wear coroduroys with brass buttons a 'pot-lunter,' and who fires at a bird forty rods away, not to kill it, but jist to hear his britch-load bang; a man who wants a stove put up in his hush-house to keep his dainty feet warm, and who ends up his trip by gittin' drunk, rippin' up a fisherman's fyke nets and settin' fire to the mash with his Heavny cigar."

"Your idea of him is partly correct, John, I've no doubt."

"Correct? I know it's correct, Cap'n. Before them fellers begin comin' here there was ducks and geese in plenty, and now they fly two miles high to pass over the mash. I've seen 'em, Cap'n."

"Then there's no use putting my gun together?"

"Well, I've baited 'em pretty well jist below in the cove, and mebbe we can get one or two in the mornin'."

The supper over, preparations were made for an early start for the ducks next morning, and at a late hour the two men retired to rest on the hermit's cushions. SENeca.

(TO BE CONTINUED.)

CRUISE OF "THE NIPPER."

IN THREE PARTS—PART I.

SHE met me, by appointment, at Booneville. With praiseworthy punctuality—considering her sex—she had arrived several hours before me. The express agent assured me that her conduct had been most exemplary.

The tourist, male and female, were just then thronging into the Wilderness from either side. Everything on the Northern road brought its quota of seekers for pleasure, recreation or health. The Nipper was interviewed remorselessly. Well-dressed ladies, neat young girls, and even children approached her irreverently. They examined her graceful lines. They made comments on her unknown owner, and invariably ended with lifting her gently by the nose, with exclamations quite irrelevant. No gentleman tourist passed her by without critical examination and comments. As they raised her carefully, they said: "I've my wrappings." "Holy Moses! who's going to paddle that eggshell?" "Clergymen said: 'I do declare! Is that intended to go on the lakes?' The ladies remarked, "Oh, my!" "Did you ever?" "Dear me!" "What a beauty!" etc.

None noticed the little gray-haired fellow, who, dressed in coarse blue flannels, smoking a clay pipe, dangling his short legs off the platform, and reading the last number of *Forest and Stream*, was quietly taking in the thing—until the agent pointed him out as the Skipper of the light craft they were admiring. He was immediately interviewed, and questions were frequent and fast.

"Do you expect to live in her on Raquette Lake?"

"Can you stand rough water?"

"Can you throw a line from her, and handle a good-sized fish?"

"Isn't she too frail?"

"And what is that little green canoe in the corner? She looks just smaller."

The Skipper answered the last question first. The little green canoe is the Nessmuk that was paddled last summer over 550 miles, came out tonight and staunch, was taken 230 miles to northern Pennsylvania by rail, paddled on the rocky altitudes of the upper Susquehanna, and is going back to the wilderness, still tight and seaworthy. The second question, Yes; she is frail. She is intended, both by her owner and builder, to be the lightest canoe of her dimensions ever built of oak, elm and cedar, with light spruce gunwale. (Here the Skipper showed a letter from her maker, Hushion, ex-

pressing doubts as to her strength, and giving pen and ink diagrams of the way she might be strengthened by bracing, thwarting, etc.)

"But," said the Skipper, growing enthusiastic, "she don't need strengthening. The two pairs of strips nearest the keel are of full thickness—3.16 of an inch. The third pair taper a little toward the gunwale, and the three upper pairs run light, very light. Her weight is sixteen pounds; length, ten feet, six inches; beam, twenty-eight inches; rise at centre, eight inches; at stem, thirteen inches; ribs, forty-five inches. Gentlemen, if any of you are canoeists, you know that you have no business to put weight on the upper strips of the gunwale. All weight in a light canoe must come on the keelson, and the first two, possibly three, pairs of strips. The Nipper is strong enough for me. As to throwing a line from her, she is the very best trout tow you in any direction you please, until she floats helpless. I have done it in the Nessmuk.

As to rough water and squalls, I expect to stay as long as the average guide boat of the Adirondacks, and ride more steadily than a salt-ramp."

With expressions of sympathy and hopes that they might see the light canoe and her Skipper on the lakes, the tourists went off on the inevitable buckboards, and the Skipper began to organize for a cruise. It was necessary to make the first twelve miles of it overland, and the route was not pleasant. Hills, hollows, sand up to the hub, boulders, and six miles of coroduroy road. Such was the first twelve miles—as every man knows who has made the route from Booneville to Moose River.

The trip was made in and on a lumber wagon, with the canoes packed in straw and guyed with heavy twine, the Skipper kneeling on the port side and keeping a death-grip on the gunwale of the *The Nipper*, unmindful of the hemlock lee-board that was steadily abrading his spinal column. The charge for the tow was four dollars, with a stipulation that the horses should walk all the way. When the latter clause of the contract was enforced by the Skipper the disgusted driver relieved his feelings by a twelve-mile string of oaths that would have struck a Missouri bullwhacker with paralysis.

It is a weary trip that road from Booneville to the "Tantery." But it has an end; and both driver and canoeist felt better when the two canoes made a landing on Tom Nightingale's porch, without crack or scratch. A double nip of whisky quieted the driver, while the hearty greeting of Jolly Tom, St. Holliday, Charley Phelps, Colonel Claskin, and a dozen others, made the Skipper feel as though he had gone home.

Moose River is not by any means a bad place to stop at. The hotel is well kept, fairly very pleasant, and charges reasonable, let alone that pretty fair trout fishing may be had in several spring brooks, easily reached in an hour's walk. It took four days to work these brooks and a few spring-holes in the river, the result being a reasonable supply of fine brook trout, saving none under six inches.

The road from the "Tantery" to foot of the Fulton Chain is so rough that no prudent tourist will send a light canoe in the worst side, as a Joe's Camp, on the point of guides. And even in this way they do not always get through safe. There was a fine new boat sent in that way last July, in which the guide contrived to knock an ugly hole. So the Skipper decided to send his dulle by buck-board to the Forge House, make the nine-mile carry through the woods to Jones', and paddle the twelve-mile stillwater to the lakes, which he did. In fact, he overdid it by taking the right-hand trail when within three miles of Jones', and carrying The Nipper over to Little Fall Lake. This lengthened the carry to twelve miles, but the visit to this lonely, beautiful lake almost compensated for the extra labor. It was late in the afternoon when Jones' Camp was finally reached and the Skipper learned that the camp was bare of trout. Pork, potatoes and tea were indulged in to a moderate extent, and the night's rest which followed was of the soundest. The next day was spent in a faithful but vain attempt to inveigle a mess of speckled trout from their old haunts in the Moose; and as he remembered with regret that these same haunts gave a daily supply of trout on the previous season, Everywhere, so far, trout had been found less plenty than in the summer of '80.

A second night of sound sleep at Jones' Camp, and The Nipper was put afloat for the first time, her owner boarding her rather cautiously for a canoeist who had faith in himself and his craft. She proved marvelously steady, however, and a paddle up-stream of three and a half miles in one hour brought her to the carry around the foot-rail, and gave the Skipper a moment's rest in her steadiness. The lower lake landing was easily made inside of four hours, and, once in the boat-house at Barrett's, the cruise of the Fulton Chain was finally commenced.

And here let us drop the third person singular, and pick up the eternal *Ego*, that I am as sadly weary of as my readers possibly can be.

At the Forge I met very many whom I knew last season; also, many who were visiting Brown's Tract for the first time. Among the latter were the invalids of the Lower Ossipee type, who did not seem very favorably affected by the damp, chilly weather, which prevailed during July and well into August of the past summer. As to the brigade of consumptives who came to the Northern Wilderness last summer in search of health, which they were destined not to find, I shall have something to say further on. Many were induced to come through reading a magazine article entitled "Camp Lou," and the disappointment felt by most of them was sad and bitter.

Evening of the 16th of July when I paddled out from the Forge House for a native extended cruise through the Fulton Chain, Raquette Lake, Forked and Long Lakes, the Raquette River, Tupper Lakes, and, by a circuitous route, back to the Fulton Chain. It was a very pretty programme, destined to be carried out only in part.

The afternoon was gusty and stormy. Black, wind-laden clouds went whirling across the sky with ominous speed, and I heard a guide remark, "Uncle Nessmuk ain't anxious to take this in." So I laid my gun case into a cushion and struck out. For a mile and a half up the channel the canoe flew along smoothly with the wind dead ast. Then came the open water of First Lake, white and spumy, with short, sharp seas, that I must take fairly abeam to the inlet, where I could see the waves dashing white over the large boulder at its mouth. I hesitated for a minute about trying for the inlet. But it was the trial trip of The Nipper. If she would swamp in a blow, better do it on one of the smaller lakes, and I pulled out. When fairly out of the roughest water her behavior surprised and delighted me ex-

ceedingly. She rose and settled on an even keel with a steady head. I should have correctly looked for a boat of twice her size, and threw off the steep, sharp seas like a duck. I thought then, and still think, that for a light, comfortable cruising canoe, under paddle, her model cannot be improved.

When about half way across the lake a low, ugly looking black cloud came up from the southwest, and when just over the lake let go a torrent of water that drenched me to the skin in three minutes. It was no time nor place for struggling into a gun coat, and I went both hands on the paddle, as I took it as philosophically as possible. It ceased as I rounded the rock at the inlet, and I went flying up Second Lake with the wind astern, only dipping the paddle for seaerage way; and again there came a thunder gust, with a down-pour of rain. But, as I could be no wetter, I rather enjoyed it.

Running the Eagle's Nest, I ran under the lee of the forest-crowned point and sponged out the canoe, for she was getting loggy with the water that had fallen into her, and then paddled across to Third Lake camp. Perrie, with several old acquaintances, met me at the landing and gave me a woodland welcome, besides lending me dry clothes that I greatly needed.

I and the camp charged to thrice its former capacity, and filled to overflowing with boarders and tourists. Four of the inmates were suffering from pulmonary troubles, and did not seem to be getting much benefit from "balsamic breezes" or "ozone." Each one had his or her peculiar cough: the season had been wet and cold, and the bright, open air here, that should be inseparable from a camp in the wilderness, was, for the most part, lacking. On the night of my arrival the wind shifted to the northeast with a cold, drizzling rain, and in less than forty-eight hours after landing I had joined the little band of coughers, coughing oftener and louder than any of them. As I had made the trip to the woods for health mainly, this was most provoking. I thought it was only a surface cough, so to speak, but it was constant, hard and irritating. There were plenty of cough remedies in the house, and I tried them all, with little or no effect until I resorted to balsam, taken directly from the little blister on the blisterer's finger, sealed tight and allowed to percolate slowly down the throat. This gave relief, and I mention it for the benefit of any future tourist who may get lashed upon a cruise by a cough and cold.

By the 23d I was sufficiently recovered to assist at a dinner given at Dunakin's Camp, on Fourth Lake, by Messrs. F. J. Nott, S. F. Fish and L. M. Crowell. The dinner was entrusted to Sam Dunakin as cook and purveyor, and it was a neat affair. The guests, estimated at six, turned out thirteen strong at the table. State Game Constable Dodge being one of the number, and I thought he looked a little glum as he tasted the "mutton," which had a rather gamy flavor, as though it "had lain in the roses, and fed on the lilies of life" (or of the lakes.) Whatever he thought, he said nothing, and the dinner was one of the pleasant episodes one never forgets. Our hosts were capable of good red wine, with a bottle of Martell at the finish. The trout were excellent and well cooked, and all three of our hosts sang glees in capital voice and good taste, aided by the game constable, who, by the way, struck me as being the right man in this third place. Just at dark I paddled leisurely down to Third Lake with an impression that the 23d of July, 1881, would be a good day to mark with a white stone.

Next day I tried salmon trout at the buoys, and brook trout at all the spring holes, with no success. In fact, the fishing on Third Lake, after the first of July, was not worth the trouble of putting a rod together or wetting a buoy-line.

NESMUK.

AUTOBIOGRAPHICAL FRAGMENTS.—III.

"NESMUK."

* * * And I remain yours sincerely, NESMUK, which means in the Narragansett tongue, or did mean, as long as there were any Narragansetts to give tongue, Wood-duck, or rather, Wood-drake.

Also, it was the name of the athletic young brave, who was wont to steal me away from home before I was ten years old, and carry me round Nepmug and Juncamaug lakes, day after day, until I imbued much of his woodcraft, all his love for forest life, and alas, much of his goodnatured shiftlessness.

Even now my blood flows faster as I think of the rides I had on his well-formed shoulders, a little leg on either side of his neck, and a death-grip on his strong, black mane. Or rode, "belly-bumps," on his back across old Juncamaug, hugging him tightly around the neck, like the s-lish little Eg-nist that I was. He thr? He drown? I would as soon have thought to ride a wolf or drown a whale. At first, these excursions were not fairly concluded without a final settlement at home—said settlement consisting of a head-raking with a fine-toothed comb that left my scalp raw, and a subsequent interview, of a private nature, with "Par," behind the barn, at which a yearling apple tree sprout was always a leading topic. (My blood tingles a little at that recollection too.)

Gradually they came to understand that I was incorrigible, or, as a modern way of the old school put it, "I was too good for myself, so that I did not run away from school, I was allowed to 'run with them dirty Infjuns,' as the aunt afore-said expressed it.

But I did run away from school, and books of the dry sort, to study the great look of nature. Did I lose by it? I cannot tell, even now.

As the world goes, perhaps yes.

No man can transcend his possibilities.

I am no leviathan in the supernatural; mesmerism, spiritualism, and a dozen other things are to me, but as feists. But, I can times and times myself, did the strong, healthy, magnetic nature of that Indian pass into my boyish life, as I rode on his powerful shoulders, or slept in his strong arms beneath the soft whispering pines of "Duglas Woods."

Poor Nesmuk! Poor L! Fifty years ago the remnant of that tribe numbered thirty-six, housed, fed and clothed by the State. The same number of Dutchmen, under the same conditions, would have over-run the State ere this.

The Indians have passed away forever; and when I tried to find the resting place of my old friend, with the view of putting a plain stone above his grave, no one could point out the spot.

And this is how I happen to write over the name by which he was known among his people, and the reason why a favorite dog or canoe is quite likely to be called

NESMUK.

Natural History.

THE ENEMIES OF GAME BIRDS.

CADILLAC, Mich., Nov. 21.

Editor Forest and Stream:

In reference to your inquiry as to whether the nests of the ruffed grouse are destroyed by the red squirrel, I offer the following remarks. In the spring of 1883 I found the nest of a ruffed grouse, containing four eggs, and as I wished to obtain a set for my oological cabinet, I left the nest undisturbed for the mother bird to complete her laying. I used to visit this nest quite regularly, sometimes finding the mother bird absent, but frequently flushing her from the nest. She would allow me to approach within a few feet of her, and then with a whirr, she would leave the nest and in some way generally manage to cover her eggs with the fallen leaves. I never came to a sure conclusion as to how this was done, but think it was accomplished by the use of both wings and feet.

On visiting the nest one day, I found it deserted, and the eggs, seven in number, showed plainly that they had been bitten into by some animal, not one egg had escaped being mangled.

Some few weeks after, and within a short distance of the former nest, I discovered a second, which I have no doubt belonged to the same bird. This nest contained seventeen eggs, and from their weight I knew that incubation was somewhat advanced, and I therefore left them undisturbed.

In visiting this nest about a week after, I caught a red squirrel in the act of destroying the eggs. On my near approach the "imp" took refuge in a tree close by, and with a chirp and a chatter seemed to defy me to stop his destructive work; but with a charge of No. 8 shot I brought him to the ground and put an end to his misdoings. On examining the nest I found that but four eggs had been broken. These I removed, and found that the young birds were nearly ready to leave the shell. My next visit a few days after, found the young hatched and gone. The red squirrel has also, for some reason, a decided dislike to the nests of the humming bird (*Trochilus colubris*) and the blue-gray gnatcatcher (*Polypterus ceruleus*). At my old home at Ann Arbor, the gnatcatcher is one of the most common birds of the woodlands, and I generally found from a dozen to twenty nests every season, and often as soon as the nest was completed, I would find it destroyed. One day or two the birds would again be at work, generally on the same tree; perhaps the nest would again be destroyed and then a new tree would be selected and a third nest built. I have known a single pair of birds to keep on this way until seven nests had been built. At first I referred this to various causes, thinking that perhaps the site chosen had not proved satisfactory, or that it was the work of the cowbird (*Molothrus peccator*), but at last, in the case of the seven nests, I discovered the cause and put a stop to it. It was the red squirrel.

In conclusion, I would say with Mr. Bishop, if there is any good done by the red squirrel let us hear of it.

ADOLPH B. COVERT.

Ferrisburgh, Vt., Nov. 22.—Editor Forest and Stream.—Mr. Bishop's theory of the scarcity of ruffed grouse is novel and ingenious, but it seems to me that the same objection which "Verde Mont" makes to the hawk, fox and owl theory squelches this. There have always been red squirrels since any of us were born, and they were plentier twenty years ago than now, and so were grouse. Have the squirrels all at once turned their attention to the destruction of young grouse? Almost every one who has seen a nest of young grouse in the young of small tree nesting birds, but has any one ever seen them killing ground nesting birds? If they would kill young grouse, why not young chickens? They have been plenty about our house ever since I can remember, but we never lost a chicken by them that we knew of, though they have destroyed the young robins and blackbirds at a great rate.

I am glad that the FOREST AND STREAM has drawn the attention of sportsmen to this matter of the increasing scarcity of ruffed grouse, and I do not doubt that some one will get at the true cause, but do doubt that any one has hit it yet.

Meanwhile, I will stick to my theory of partial migration, a theory which is strengthened by the stories I hear of the plentiness of grouse among the back hills.

R. E. R.

BOSTON, Mass., Nov. 20, 1881.

Editor Forest and Stream:

The inquiries in your paper regarding the gradual disappearance of the ruffed grouse, make any light thrown upon the subject of general interest to sportsmen and others. The enclosed item, copied from the Concord (N.H.) Monitor, may account for the scarcity in some localities. It is as follows:

"To sportsmen and ornithologists there have been several strange circumstances of late in regard to that favorite target for the hunter's aim—the partridge. A large decrease in their numbers has been manifest this season, but very few being shot, and those that have been secured have been scarcely more than skin and bones, and far from being the commonly delicious article to eat. A large number have been found dead which have no doubt suffered from the hunter's greed, something very unusual, and especially at this time of the year. A gentleman of this city, a few days since, carefully examining one which was found dead, found an explanation in the shape of three small ulcers upon the sides and top of the head, in each one of which was a small tick, which had made its way through the skull into the brain, causing death. An explanation of this singular pest by scientific gentlemen will be awaited with interest."

Being myself in Oxford and Andover Counties, in Maine, the past summer and fall, and having seen several being found dead, their heads upon examination disclosing ticks. One old resident and hunter had found quite a number, and attributed the diminution in numbers entirely to that cause. Last year it was the same, he said, and he, being a very observing man, and something of a naturalist, I think his observations in that direction of some value.

Mr. Bishop's letter in the last number of your paper mentions what is to me a new enemy of the grouse. Squirrels, however, are very scarce in the localities mentioned above, and I do not think they destroy the birds, though probably eat destroy more or less.—J. N. D.

much harm was satisfactorily identified and its habits described in the columns of FOREST AND STREAM. Since many of our present readers may not have seen the information then printed, we give a brief abstract of it. Any further observations which may have been made on this pest should be reported at once. There is no doubt that it is the most destructive enemy, except man, against which the ruffed grouse has to contend.

The so-called ticks are the larvae of a fly, which we have called the partridge fly. It has no other English name but its scientific appellation is *Olfersia (Perosia) Americana*, Leach. It belongs to the family *Hippoboscidae*, a group of flies usually found in or near forests and woods, of which the common small brown horse fly is one of the most familiar examples. The species included in this group are most of them very troublesome to horses and cattle, and feed on blood. The young of this insect are produced alive, and in their general appearance resemble ticks, but any one who closely examines one will see that it has but six legs instead of eight, which the ticks, as belonging to the *Arachnida*, all possess. These larvae are provided with a very fine delicate proboscis, through which they suck the blood of their unfortunate victims. They are produced alive, and it seems probable that the adult fly deposits the young on the neck or heads of the newly hatched grouse. Instances where young grouse, too weak to fly, have been caught with many of these parasites clinging to them are on record in FOREST AND STREAM, vol. XII, p. 25, Mr. Charles Baylies says:

"Some time in the fore part of June (1878) my dog started a flock of young partridges, perhaps one third grown, one of which seemed to lag as though it were wounded. The dog caught it and brought it to me. I noticed several ticks (sic) on the side of its head, about as large as a No. 4 shot and about the same color."

We have ourselves seen one young grouse which had no less than thirty of the parasites on its head and neck. These varied in size from a pin's head to a No. 2 shot, and were plump, round and full of blood. It can readily be seen that no young bird could long survive such a dire calamity. The one just referred to was picked up from before the dog's nose, the vermin removed, and the bird was then freed. Several times afterward we saw him, for he was readily to be distinguished from his brethren by his small size, and the last time he came under our eye he seemed, though small, as strong and well as any of the family.

Allied species of flies, which resemble *Americana* quite closely, have been taken on many hawks, owls and herons. The red-tailed hawk (*Buteo borealis*) is infested with a similar fly belonging to the genus *Alindanus*, and I have found some resembling the partridge fly on the osprey, barred owl, long eared owl, marsh hawk, night heron and great blue heron. It does not seem probable that this parasite destroys the adult grouse, and if not, the damage that it does must be confined to the summer months when the young birds are its especial prey. That it destroys considerable numbers of birds can scarcely be doubted, but at the same time it must be remembered that it is no new thing and that the birds have always been subject to its attacks. When, however, the old birds from their age or any other cause, fail to rear their broods during summer, and are then killed off in fall, the prospects for much grouse shooting in that locality in the future cannot be said to be encouraging.

The adult form of the same or a similar fly we have often found on quail, although we have never seen the young birds with the larvae attached to them. It is scarcely necessary to say that the death of the bird is caused by loss of blood, and not by the insect boring into the brain, as is stated in the newspaper clipping quoted by Mr. Bishop. To our knowledge more fully will find frequent references to it in FOREST AND STREAM from Volume XI. to the present time.

DEATH OF THE TAME PARTRIDGE.

WORCESTER, Mass., Dec. 1, 1881.

Editor Forest and Stream:

The item which appeared in your last number dated Oakham, Mass., and signed "E.," concerning the tame partridge at Coldbrook Springs gives a very wrong impression. One would get the idea that the party who did the killing knew the bird and wantonly slaughtered it, notwithstanding he was urged not to do so by a "passer by." It was one of the first, if not the first, of the many deaths of this remarkable bird, and I give the facts as they were told me by one of the party who did the mischief, and who then did not know that such a thing as a tame partridge ever existed. A real estate broker, whose office is in Worcester, took two men, who are residents of the adjoining town of Shrewsbury, to Coldbrook Springs to look at the wood-lot at Parker's mills which has for the past three years been the home of this wonderful bird, when and in the immediate companionship of Mr. Parker in our own town.

The three men were looking over the lot when the bird appeared to them running about their feet. One of the party knocked the bird over with a stick, but, probably, it was not fatally injured. Just then it occurred to the broker that it might be the mother of a late brood of young who was trying to attract their attention while the clicks could hide, and for that reason begged him to try to save the bird alive, but no young ones could be found, and fearing the bird was injured past recovery, he rapped its head on the trunk of a tree. His broker has been a personal acquaintance for many years, and on meeting me after their return to Worcester, and, knowing me to be a sportsman, told me of their adventure with the bird with much eagerness, and then asked me if I had ever known anything like it or could give any explanation of the bird's actions. Before the story was through it was all plain to me, and I told him of the mischief they had done and what a sad loss it would be to Mr. Parker. And here let me say that I no more believe any one of that party would have killed Mr. Parker's pet, knowing it to be such, than that he himself would have killed his stable and killed his best horse. There is, however, too much for which I think them worthy of censure. Several days afterward these men asked Mr. Parker to show them the bounds of this wood-lot, and while out with them he spoke of his pet, and desired to show it to them and tried to call it for that purpose, and failing to do so expressed fears that something had befallen it. Under such circumstances not every one would have come out with the story. Still, to my mind, that would have been an honorable thing to do, and I do not wonder that you have not begun to hear they now ask Mr. Parker for the loss of his pet very keenly, and also, that the men treated him very unkindly, in not telling him frankly of the mistake they had made. So much has been said of this bird in the papers and, so remarkable seemed the case that a great many people have visited it, especially the past year, many going a great dis-

tance. While Mr. Parker made no charge for showing the bird, hardly any one would allow him to leave his work without compensation, and in some cases parties paid him liberally. I am told that he has taken as high as nine dollars in a single day, so that his loss is not only that of a highly prized pet but a pecuniary one as well. Mr. Parker has the sympathy of sportsmen, and I might say of everybody. It has, however, been a common remark that it was a wonder that the bird had never met with any mishap. It had become so tame that it would sit on the shoulder and take bits of food from the mouth of a stranger, and sometimes he was almost an annoyance to Mr. Parker when about his work. Subject as he was to fall a victim to some stranger at any time it seems really wonderful that he should have existed so long.

[We are glad to receive the above letter. It seemed hard to believe in the existence of any miscreant, who, knowing the facts, would have wantonly killed Mr. Parker's bird. All that has been published since the bird's death has, however, conveyed the impression that advantage was taken of his tameness to kill the partridge. We are glad that it was not.]

FISH AND FROG SHOWERS.

I INDORSE fully your editorial note relative to the above. What "people say" or believe has but little weight in scientific reasoning. It is generally "believed" that a hair from the tail of a horse, put in water, though merely an empty tube, can become endowed with life and have conveyed to it, in some mystic way, all the organs necessary to the life and existence of an animal of its class. But who has yet met with the man who can state that he has with his own hands accomplished or brought about this miraculous transformation? That has himself plucked the hair, and watched it as it lay inanimate on the bottom of the vessel for days; that has seen its first wriggle, its subsequent general motion or locomotion, and its first meal? No! No! It is only another "Barnacle Goose" story; and how firmly this latter was believed in by "the people" at the time!

There is, however, more truth in the matter of "Fish and Frog showers," but here, likewise, "the people" have added their proportion of the mysterious and ridiculous. If a whirlwind has been known to catch up and carry heavy objects for considerable distances, we can readily believe that smaller and less weighty objects might in like manner be carried to very much greater distances. The red ashes of volcanic districts have been known to have been carried off many miles from their original location; so also the pollen of plants. In like manner small frogs and fishes have been so snatched up by a swirling wind, and distributed along the coast of the storm. But such events are rare and local and hardly worth discussing. They are not "showers," for they do not come from the clouds, but are rather drifts, similar to sand and dust drifts. Small toads come up out of the ground thickly during showers, so do earth-worms, but these creatures come out to meet the rain and do not come down with it. In fine, sir, I am every day experiencing the little dependence that is to be placed in "popular belief," which is an argument as unsound as it is unscientific.

Montreal, Nov. 23th, 1881.

HENRY G. VERNON.

SUGGESTION ABOUT ACCLIMATION.

The following letters explain themselves:

To J. M. LE MOINE, Esq., President Literary and Historical Society, Quebec:

DEAR SIR—As President of a Society owning an extensive collection of birds as well as on account of the efforts you have made to increase and protect the game of Canada and to popularize the study of Natural History, I beg to draw your attention to the capercailzie specimen of the English pheasant, black-cock and capercailzie, which I now send to your rooms for exhibition. You are no doubt aware that the capercailzie is a northern species, a denizen of Norway, living on the top of pine and spruces as lofty as our own; you are no doubt also cognizant of this fact that the Duke of Sutherland and the Earl of Fife have succeeded in adding to the Scotch fauna these magnificent birds, which are now re-introduced and breed abundantly in Scotland. Will no sportsman take the lead in a movement to introduce this bird and naturalize him in Canada? Awaiting for an expression of your views,

I remain, dear sir, yours respectfully,

A. WATTERS.

Quebec, 4th November, 1881.

To MR. A. WATTERS, Quebec:

DEAR SIR—I have pleasure in acknowledging the receipt of your letter of this date, advising me that you have sent on exhibition to our rooms some remarkably handsome English pheasants, black-cock and capercailzie, as specimens of the art of Scotch taxidermists, and asking my opinion as to the probability of adding to our fauna, the splendid game bird known as the capercailzie. It is now some time since I pressed this very subject on the attention of some of my sporting friends. The efforts of Col. Rhodes to introduce here the European house sparrow, show what energy and hard cash can do, and I trust the same success will attend the Colonel's praiseworthy efforts and expenditure to add the Messina quail to our Canadian moors and forests.

I have a dozen of the Colonel's Sicilian quail at present in my aviary. The breeding season being over when I got them, and am awaiting for April to let them loose, in order to test Col. Rhodes' theory about this migratory species.

The capercailzie, without being as delicate a bird to eat as our ruffed grouse, from its size, would be a very welcome addition to our fauna. In Canada he would find a climate, haunts, food and protection similar to what he meets with in the pine forests of the north—in Denmark. It is worth while trying, if he can be naturalized here. I hope yet to learn that some well-spirited sportsman will undertake the introduction of this noble bird, the capercailzie, and succeed here, as has happened in Scotland.

I remain, dear sir, yours most obediently,

J. M. LE MOINE.

Rooms of the Literary and Historical Society, Quebec, 4th November, 1881.

With respect to the above, Colonel Rhodes, of Quebec, writes to the FOREST AND STREAM that the importation of Messina quail has not been an entire success. He has turned them loose at Quebec and at Tadoussac, and they have been freed at Sherbrooke. He has seen two nests of quail, with nine eggs each, and one nest hatched eight young birds, which he saw just as they were born, but he never saw the young

birds again, so he concludes that they perished in the wet weather which followed. The Colonel is of opinion unless Messina quail can be turned out to hatch about the same time as the Canadian grouse (*Centurus*), viz., the first week in June—they will not raise a brood in Canada; and unless young birds can be raised, migration into the country in the spring need not be expected.

There is no doubt that these quail migrate in the autumn, as they remain about the farm until the first of September. The birds, when accidentally killed, are full of eggs, so the plan appears to be to place them in a climate where the young birds can grow to maturity, or to winter over a lot of quail and turn loose in the spring. This experiment Mr. Le Moine is now following, and we must hope he will succeed.

Colonel Rhodes is under the impression about 15,000 Messina quail have been turned loose in the North, and no person has caught or killed one of these birds in the spring.

Gauze Bag and Gun.

A NEW JERSEY PARTY IN THE SOUTH.

CONCLUDED.

THANKSGIVING DAY proved misty in the forenoon, but it stopped raining about 1 P. M., and some fair shooting was done.

Friday was a better day. Mr. Pray, of the Kitty Hawk, on Rattlesnake Island, bagged 71 red-heads to his own gun, but he was largely helped by a double battery lying to the southwest about three-quarters of a mile, and the red-heads were driven toward him in large numbers. Capt. Bill Henry Walker and his partner Dixie in the battery gathered 102 brace red-heads, and 4 brace of wigwags. The undersigned and partner on the same day killed a couple of geese, besides a score of common ducks. They style everything common, with the exception of canvas-back and teal. Wigwag, sprigtail, mallard, black-neck and teal with us are considered ducks, but here they are of little account, some of the market men even refusing to shoot at them, especially when the other two are around. To tell the truth we (who is the subscriber) were glad to bag any of the above variety.

We had out five of Nye's wild geese decoys, but as they had not been used for a year they were very tractions, clattering and pulling at their straps continually, and when geese were in the air, instead of hooking and pulling their fellow decoys down, like the trained geese of Bill Lane at Shinnecock Bay, they shut up as tight as the fastenings and were no more use. After a while we took the old gander and staked him down around a point out of sight of his fellows, and immediately we had noise enough, and had it been as good a day as the day before (they always say that, you know), we would have made a big bag.

Previous to this little arrangement of the big gander Dr. Burdett had killed a wigwag flying over our stools, and it had dropped behind us about fifteen yards and lodged in the grass. Some seven or eight geese were seen approaching to the westward, where our live decoys were working and flopping their wings that almost deafened us. Ah! that is the thing, they'll fetch them this time. The long line of distended necks stretched out, and seemed to be lowering to us. Now they are dropping. We'll get a shot, sure. Just then the increased furor among our decoys caused me to turn my eyes toward them, and I saw that they were indeed in a terrible state, their necks stretched out even with the water, cackling and thrashing about in what seemed to be an extremity of terror. A moment there was a rush of wings and a dark cloud seemed passing over our heads. Upon looking up a monstrous gray eagle was seen swooping across our decoys. It was but the work of a moment for the doctor and your subscriber to raise, and let him have a couple of barrels (No. 5), and another one No. 2, with no perceptible effect, as he only went off screaming, but as he left we noticed something drop and strike the water just outside our decoys. "The scoundrel has dropped a duck," I said. "Yes," replied the doctor, as he glanced backward, the blasted pirate had just shot. The third and fourth birds he had us close to our backs and scooped up the bird. If we had only seen him at it, a seven-foot bird from tip to tip would be long, have graced the table of the Jersey City Heights Gun Club.

Saturday found the wind still in the north-east, the bay low and the weather warm. Great rafts of wild-fool, geese, swan and ducks of various varieties lay out on the bars. A south wind would fill up the bay and drive these birds for food around and along the points on shore. Several more gunners had arrived at Nye's, making some 30 in all (19 more arrived, we learned, on Monday evening), showing the effect of a short "A" of Mrs. N. in the FOREST AND STREAM, and there was a scramble every morning for the best points. Nye missed it largely when he allowed the Kitty Hawk Club to get possession of Long Point and Rattlesnake Island. They are really good points, and the best the Kitty Hawk have here, but Nye has yet several points equally as good, and better, perhaps, when colder weather comes; but he ought to have held them.

We have heard that some of the clubs in New York were very much exercised lest some of the J. C. H. boys should shoot over some of their points. Let them rest their souls in peace, the J. C. H. don't propose to intrude themselves on any one's premises, and while your correspondent was there, Major B., with E. P., the secretary of the club, to back him, were too well posted in their duties to the club to extend any invitations to foreigners, no matter what the previous promises or indebtedness may have been. The Kitty Hawk Club have laid out a large amount of money in this section and further down, and they are entitled to all it is worth.

In the neighborhood of Van Slyke's are other clubs known more or less to fame. The well-known Currick Club (Gen. Hancock, who was a guest here, had some good shooting at a point opposite us last week), "The Light House Club," "The Crow Island Club," "The Palmer Island Club" and "The Monkey Island Club," all were bounding power in larger or smaller quantities, and the bay echoed and re-echoed to the 10,000 ruffs that ran to sun.

Sunday we were down at the landing (no gunning here on this day) listening to Capt. Bill H. Walker's stories—he is the big shot and best gunner in the bay, so said—when a large canoe was discovered coming across the sound. It proved to contain, besides the boatman, Judge Tufis and Mr. Keeler, of Boston, members of the Monkey Island Club.

Being Sunday they had come visiting, also, I believe, to get a little corn for baiting their canvas-back gunners. As we wished to see what of the country we could and we learned that Monkey Island was only about four miles from Jasper White, another famous shooting resort, like unto Nye's, we made a bargain with the boatman, with the very courteous consent of Messrs. Tufis and Keeler, to take us over with them. So after dinner we bade good-bye to Mrs. Nye (dear her dear heart "there are far worse nor she"—if you don't cross her) and Thos. Hall and your humblest embarked. We left big-hearted, as well as big-bodied, Ben Payne, Capt. Johnson, Dr. Burdett and that practical joker, A. Heritage, waving their hats on the wharf as we sped across the bay. We found Messrs. Tufis and Keeler most pleasant fellow voyagers. Upon reaching Monkey Island we were cordially invited to land and visit their club house, while the boatman changed our things to a lighter craft. We entered the club house. Ah! what a sportsman's home was here. We were introduced to the other two members of the club, Mr. Ricker and Mr. R. H. Bishop, of New York. The club has but four members, all bachelors, we believe, and men of ample means. They have an ample club house, large gun-room in the centre, with old fashioned wood fire-places; four bedrooms at the four corners. Only four persons are ever allowed at the club at one time. If one member is sick or cannot come, he telegraphs or lets the others know somehow and they cast lots who shall take a friend. They have ample out-buildings, dining-room, kitchen, cellars, etc., etc., and the best points for canvas-backs in the whole bay. And don't they take comfort, those four jolly souls! The club keep a record of all their day's shooting during the season or year, and it is a paying investment financially it seems. We were kindly allowed to look over their last year's work. We do not remember the number of swans, geese and canvas-backs they brought to bag, but each man's count for each day was faithfully kept; and besides the large number they sent North to their friends, the number they allowed their steward to send to market brought them \$651, while their expenses in all were but \$430, leaving a net gain of \$221; and they live well too. They are gentlemen who, we hope, may live long to enjoy it all well-earned good things.

We reached White's in due time, found the water here as good as anywhere, and very pure. Several gentlemen have no land waiting for a south wind and a cold snap to fill up the bay and set the fowl flying. Mr. Sanders, Collector of the Port of Albany, with his friend, ex-District Attorney for Albany County, Mr. Hotaling, had been there several days, but with the exception of one day, when they bagged 130 ducks, they had poor shooting, getting only some fifteen or twenty birds each day, which is killed there poor business. We tried the snipe one day, but found it hard work. Looked over the several fine points of White's when there is shooting, and six o'clock Tuesday morning found us howling across the bay for Nott's Island, where we took the dirty little "Cygnets" again for Norfolk, at which place, after that tedious ride through the canal, we arrived in time to take the steamer Virginia, of the Bay Line, for Baltimore. We regretted very much there was no Old Dominion Line boat until the evening of the next day, Wednesday. We had half a mind to stay over in Norfolk; but as the weather was yet warm, and we had a box of ducks, besides some game, that we wished to present to our friends, we were fain to go home as soon as possible.

There are three desirable routes to the shooting grounds of Currick, I. C. Old Dominion Line to Norfolk, then little "Cygnets" through canal and bay to Nott's Island, where if you send word in advance John White will meet you and carry you across four miles to his place; or go in Cygnets ten miles further to Van Slyke's. 2. After arriving in Norfolk by steamer you can take cars to Elizabeth City, then steamer Harbinger, a nice by-pont very pleasant trip to Cogan Creek (that keeps a good hostelry here), then across country six miles to Nye's. 3. Or you can go by cars to Baltimore and then by Bay Line to Norfolk, or continue on through the State by cars to Snowden Station and then across country seventeen miles to Nye's. This trip can be made, they say, from New York to Nye's in twenty-four hours, but I reckon it a rather hard thing across the sand seventeen miles. Many of the Currick Club take this route. Our next venture shall be the Old Dominion to Norfolk, cars to Elizabeth City, Harbinger to Cogan Creek, or Canal Bridge, as it is sometimes called, then for a dollar across country six miles to Nye's. The Harbinger is pleasant boat; the living is good, and the Captain is said to be "one of them." May we meet him next year.

JACOB STAFF.

THE MELLOW HORN.

THERE is nothing so sweet, soft and graceful to me, as the notes of a fine fox-horn, when sound-d by one who knows what he is about. There is as much individuality in the notes given by different horns as there is in the human voice. This is very much the case, also, with the report of shot-guns and rifles. I can tell the report in an instant of any gun I ever owned. This I have done upon a wager. The horns purchased from the shops are generally an abomination from their inception. The best horns are homemade. Procure a fine taper horn, as straight as you can get it naturally; do not have it scraped too much; and do not have the mouth-piece too sharp, nor the hole in it too large. The best horns are not over ten or eleven inches long. They can be heard further when squealed; are mellow and sweeter every way. I have found that the sheep-skin bag, in a deer with the horn removed, and drawn over the mouth-piece, down one-third of the horn and neatly fitted, keeps the horn from jarring, and is a good thing, and need not be unsightly. Hunting dogs and horses, either of them, can have a beautiful gloss put upon their coats very quickly, when not in work, and otherwise in fine condition (when fitting for the bench or prize ring) if mixed with generous feed in quality and quantity (combined with accurate grooming) a small quantity of flax-seed, or better, flax-seed meal be given. The latter must not be rusty. R. M. CONWAY.

ONE-ARMED GUNNERS.—Several one-armed gunners have made themselves famous. Some time ago we recorded a pigeon-shooting man who had been shot the right arm. Visitors to the Fair de Grace are familiar with the exploits of Wm. E. Moore, who has but one arm, and is among the finest duck shots of that locality.

TEXAS.—HOUSTON, Nov. 23.—Ducks and snipe are plentiful, quail and chickens very scarce in this locality, but water and mud make it unpleasant sporting. Out of twenty-three days of this month about nineteen of them have been rainy.—WANDERER.

tion, and from there shoot and kill the game within reach. Cleveland, Newburg and Royalton were to form on the north line, Brecksville and Richfield on the east line, Bath and Granger on the south, and Medina, Brunswick and Grouseville on the west. Preparations on an extensive scale at once commenced throughout the entire region and the excitement for the impending chase began to run high. The 24th day of December came. It was a clear, brisk day. A slight crust of snow covered the ground and the hills. The ground was frozen hard. Before the morning sun had risen the forest was covered with the ice and shivering trees, the noise and laughter of men, and the sharp ring of rifle shots re-echoed through the woods from far and near. Startled and alarmed, the deer started from their lair and bounded in long strides for refuge in the wild confines of the central township. Many of these animals are overhauled in their flight by the swift bullet before the fun of the day has really commenced. The wolves and bears just returning from their night's raids in the settlements sneak off in precipitous flight before the ungodly noise, and hide in the thick swamps and cavernous recesses of Hinkley.

Soon the large hunting host is in line on the four sides of the battle-ground. The men take their positions and form the square is perfect. The north line, composed of the settlers of Cuyahoga county, numbers about 130 men, many of them from the then infant settlement of Cleveland. It is under command of T. N. Ferris, of Royalton. The west line has about 125 men, of Brecksville. The south line, under command of James Hamilton, numbers about 100 men, and the west line, under Abram Freeze, of Brunswick, numbers about 120 men. These five captains form the Board of Managers and the whole affair is under their immediate control and direction.

The hunters stand alert and anxiously wait for the signal to pass. Then a long-drawn blast from a horn comes from the high hills in the north and echoes down the valley. It is answered on the west and down it passes along its line, then it comes east and back it goes to the north. As the bugle sound dies away the word "all ready" passes from mouth to mouth, and with it the advance begins. Steadily the columns press on, silently at first; then comes a wild shout and soon the echoing roll of musketry as the wild game dashes through the woods and the thick underbrush before the advancing host. The north column is the first to close in the square on the center; then follows east and west and south. It was now almost a solid phalanx of men staring close to one another.

Driven into madness by utter despair by the terrible confusion and slaughter, the deer, led by the stag, rushes against the lines; many are shot, others are forked and clubbed, and some, the larger and deer, escape—bounding over the heads of the hunters. The frightened animals, quivering and foaming, with their large eyeballs extended, rush back and forth, from side to side, and the massacre continues. The orders are strict that all firing must be done low and towards the centre, to prevent injury to the men. In one of the rushes made by the deer against the north column, Lethrop Seymour accidentally receives a bullet in his shoulder and one in his left arm. He is disarmed, and is conveyed back to the rear to have his wounds dressed. It is now past noon, and the carcasses of several hundred deer lie strewn on the ground through the woods. One or two bears and several wolves had been killed up to this time. It soon became apparent to the captains that it would be impossible to kill all the game closed in the square—especially the bears and wolves, the extermination of which was really the purpose of the hunt—without another advance being made from the four sides. This could not be done without endangering the life and limbs of the hunters. A council of war was called, and it was decided that the lines should hold their positions, and that no further long range firing be done, and the killing of deer and small game be prohibited. William Cogswell, of Bath, Me., the prince of huntmen in his day in Ohio, and "Riley the Tover," another famous hunter, who was located at Cleveland, and whose proper name has slipped the memory of the old sportsmen, Lethrop Seymour more men, to advance toward the centre, and "sit" up the wolves and bears and have them come out. The men on the lines were to keep watch, and kill the animals as they came out from their retreats. The men entered the arena, and their experience is best told in the words of Cogswell, who started in in advance of the little squad.

"I soon came in contact with plenty of wolves and bears, and shot several of them, when I saw near the centre a very anxious man, thinking the largest I ever saw of that species. He wound round him twice, so that he dropped each time, then he retreated toward the south line, and I followed in hot pursuit. About this time the north line advanced about forty rods; they had become so enthusiastic in the hunt that they could be restrained no longer, and this brought them within a short distance of the bear and myself. My dog, whom I had left in the rear, seeing me after the bear, broke away from the young man who had him in charge, and came running to my assistance. I met the bear just as he was crossing a little creek on the west line. The bear was about twenty-five or thirty feet from the creek, and stood several feet above him. About this time the men on the south line commenced shooting at the bear, apparently regardless of me and my dog. There were probably 100 guns fired within a very short space of time, and the bullets sounded to me very much like a hail storm. As soon as old Bruin got his head still so I dare shoot I laid him out. While they were firing so many guns, a great many people allowed to me to come out or I would be shot; but, as it happened, neither myself nor dog was hurt. The bear soon scrambled to the high land that was being poured into his bow. When the monster had been killed the south line broke, regardless of all orders, and they were soon joined by the three other lines."

Now a general search commenced in the centre and through the haunts and caves in the sides of the hills. Several more bears and wolves were found killed, the last one being a wounded wolf which had secreted itself in the top of a fallen tree. Firing now closed; darkness was coming on. The men were now in the thick of the woods, and were ordered to discharge their guns and then stack them. Then the labor of discharging the game commenced. First the wolves were drawn out, and there were just seventeen.

It was then decided that the bounty money—then paid by the State for wolf scalps—should be expended in refreshments for the hunting host. Accordingly two men were dis-

patched to the settlement of Richfield, several miles on the east, there to procure what the hunters and return with it to the scene of the day's action. Within a few hours the men returned, bringing a barrel of whisky, drawn in a sled by a yoke of oxen. In the meantime the other game had been gathered, and it was found that there were over 200 deer and twenty-one bears. A rousing big fire was built, and the scene which had recently been a vast slaughter pen had now turned into one of boisterous jubilation and merriment. A roll call was made, and it was found that there were four hundred and fifty-four men on the ground. And then, as "Riley the Tover," of Cleveland, the bard of the occasion, describes it in his lines on this hunt, composed some years after:

"They set the barrel on one end,
And tore the cork out;
They dug for tapers to attend
A ladie made of tin.
"The whisky, made by honest men,
Was drank by men upright;
And none would deem it hurtful then
To drink on such a night.
"Then every man drank what he chose,
And all were men of spirit;
But not a fighting warrior of force,
And not a man got drunk."

The word was now passed that the whole squad camp here for the night. A half dozen men soon jerked off the big bear and, drawing him up by the hind legs, jerked off the skin and the fat. The greasy carcass was soon roasted and spiced before the large camp fire. But few of the hunters had brought a little "Johnny cake," and a slice of bacon or venison, and they all evinced a sharp appetite for something to eat. When the roasting had been completed an onslaught was made with bowie knives on the body. But as there was no salt in the camp the food served became nauseating. From this it went to song, then speeches, and finally the night wound up with anecdotes of adventure and pioneer life. As morning came a division of the game was made. A committee consisting of Henry Hoyt, of Liverpool; John Bigelow, of Richfield; and William Cogswell, of Bath, was elected to make the division. After the proportionate shares had been allotted to the different companies the journey homeward was commenced, some of the hunters living twenty and thirty miles away.

Many of the men who had congregated here on the wonderful occasion had been entire strangers to one another, but after the night's strange and unusual festivities they had grown from terms of brotherly friendship. It had been a joy and pleasure to all these sturdy pioneers who were the first to unfold the beauties of the "Adirondack" to meet some of their kind here, isolated and alone as their days had to be spent then in battling with the forest and clearing their farms. The game was tied on sticks, and then away the hunters wandered up the hills and down the valley, north, east, west and south in twos, with the end of a stick on their shoulders, the trusty rifle under their arms and a deer, wolf or bear hanging between, its bloody head dragging over the frozen, snowy ground.

Then this "valley of death," with its quiet little stream, which had many centuries ago been a powerful torrent, and for many, many years had filled this broad expanse with a mass of rushing and scolding waters, grew still again and remained so for several years, until in 1822 the settler came with his axe and plow, and it is now a land of fruitful fields and pleasant homes and fine houses. C. N.

HOW HE GOT HIS DUCKS.

BALTIMORE, Md., Nov. 28, 1881.

Editor Forest and Stream.
There is, and has been for some time, good shooting on the Gunpowder Bridge, about nineteen miles from this city, on the P. W. & B. R. R. Fair accommodations may be had at the bridge for \$1 per day. I have been out twice, but, being only a tolerable shot at ducks, I did not bring many to bag. At a low estimate, I should say from seventy-five to one hundred men were on the bridge this morning, armed with every description of firearm, from an old army musket to a No. 4 breech-loader.

I left at noon with six in bag and double that number which fell to my gun in the possession of other runners. There are a lot of fellows who make a practice of claiming every duck that falls in their neighborhood. Some of these fellows claim to be gentlemen. There was one of this description on the bridge this forenoon, armed with a W. & C. Scott & Sons' No. 10 and an 8-bore by Green, who actually claimed every duck that he fired at (although I saw him make countless palpable misses), and his man was rapidly picking up ducks until he had a bag of a bat when I left. I suppose he had about sixty to his credit (?). It was so polite when he claimed his bird that no one seemed to dispute the point.

On my return home I casually related my experiences of the forenoon and happened to mention this fellow's name to a gentleman who knows him well. "Why," said he, "that man is one of the poorest shots I ever knew, but he always manages to get more ducks than any one else. He was so notorious for catching ducks that did not belong to him that no one would shoot with him when he was a member of the Carroll Island Club, some years ago." If it should meet the eye of the party in question he will learn that at least one of his victims knew he was being duped at the time.

You will, perhaps, wonder why some one did not "kick." What good would it have done? His man picked up all the ducks he claimed and remained out in the stream in his boat. I shall organize a clique that can outclaim him when next I go ducking. CHAS. A. PEASE.

VIRGINIA—Abingdon, Nov. 30, 1881.—Our quail shooting began Nov. 1, and birds are not abundant anywhere near town. Some five or six miles east of town they are reported to be numerous and but little disturbed. Quails have been unusually plentiful this fall, and have been hawked about the streets for 5 cents each. Stuffed grouse, in local prices, pheasants, are said to be found in fairly large numbers on the "knobs," from two to three miles from town. The rugged character of the country they frequent prevents their being hunted to any extent. Two bears were killed on the mountain twelve miles south of town, two weeks ago. Mast, while scarce in most localities this season, is abundant here, hence the prevalence of squirrels and other rodents. Some deer and turkeys are reported on the mountain, but there are very few within easy reach of town. I am planning a short excursion in a day or two, and will report results.—WILL.

VELOCITIES OF RIFLE BULLET AND OF SOUND.

STEVENS INSTITUTE OF TECHNOLOGY,
Hoboken, New Jersey, Dec. 2, 1881.

Editor Forest and Stream:

You have desired me to state the facts relating to the relative velocities of rifle bullets and of sound. They are as follows: The velocity of sound in air at the temperature of 32° Fahrenheit is 1090 feet per second. This velocity increases exactly one foot for each degree Fahr. above 32°, and decreases by the same amount for each degree below 32° Fahr. Thus, at 50° Fahr., which is 63° above 32° the velocity of sound equals 1153 feet per second; while if the air has the temperature of 0° F., the velocity falls to 1038 feet per second. Taking the above range of temperature (50°) as that of the air in this latitude, we have for the corresponding range of velocity of sound the difference between 1153 and 1038, or 115 feet.

The various velocities of rifle balls, depending as they do on the calibre of the piece, and on the relative weights of powder and ball, extend through a considerable range. Without much error the range of velocities may be put down at from 1000 to about 2000 feet per second.

Thus, the United States Government cartridge is of .45 calibre, and contains a ball weighing 70 grains, with 405 grains of powder. The writer has made a series of careful experiments of the velocity of this ball when projected with the above charge of 405 grains of powder from a double-barrel Express rifle made by the Colt's Arms Manufacturing Company. The determinations were made with the same chronoscope which the writer used in his experiments on the velocity of fowling-piece shot which were published in *FOREST AND STREAM* of Oct. 28, 1880.

Five measures were made, with the following results:

No. of Expt.	Velocity of Ball.
1.....	1521 ft. per second
2.....	1529
3.....	1529
4.....	1564
5.....	1558

Average velocity.....1540

If this ball be fired at a target on a 500 yard range it will take 1-10 seconds for it to go from the rifle to the target. Sound will go over the same distance in 1-3-10 seconds if the temperature of the air is at 62° Fahr. Thus we see that the marker at the target will receive the sound of the discharge of the rifle 2-10 of a second after the impact of the ball on the target.

The highest velocity given of a rifle ball is that found in Greener's recent work on "The Gun." He states 1928 feet per second as the velocity given by a .45 cal. Express rifle carrying a hollow ball weighing 270 grains, and driven by 150 grains of powder. If we suppose this ball fired at a target on a 1,000 yard range, it will take it 1-3 seconds to go over the range. Sound at the temp. of 62° Fahr. has a velocity of only 1120 feet per second, hence it will take 2-6-10 seconds for the sound of the discharge of the rifle to reach the marker at the target. He will, therefore, hear the impact of the ball on the target one and a half seconds before the sound of the discharge of the rifle reaches him.

From the above you will see that it is impossible for a marker to be apprised, by the sound, of the discharge of the rifle, then go out and be struck by the ball. Indeed, if death should be instantaneous he would die without hearing the discharge of the piece which killed him.

ALFRED M. MAVER.

EIGHT RULES FOR "TREEING GROUSE."

TREEING VS. WING SHOOTING AGAIN.

Montreal, Nov. 26, 1881.

Editor Forest and Stream.

At this late date I will redeem the promise made over twelve months ago, and give a few facts regarding "treeing" grouse, that may be of service to some sportsmen who have not advanced far enough into the science of "wing shooting" to be able to bring down this most difficult of game birds to shoot, when bounding away at full flight.

I expect that this letter will be condemned by many old sportsmen, but when we consider the difficulty in hitting this bird while on the wing, and that but a portion of the birds that are struck are brought to bag, we must allow our younger brothers the liberty of shooting at this game wherever they can see it. Elsewhere "crack shots" (so called by our friends on our "off" days who would come home with but scant bags if we did not occasionally "put him" these birds after they had "treed," and on our "on" days we all make many misses, notwithstanding that certain correspondents claim to kill every bird flushed. Wonderful shots "on paper" are those fellows. When a bird gets up they, in a cool, calm manner, simply pitch their gun toward the game and bring it down, and sometimes also cut down a large tree that happened to be in line, winning the admiration and an excessive wage-of-the-hill from their intelligent dog, who is pleased to thus be provided with a stump, as he passes by to retrieve the quarry that lies riddled with shot some distance further on.

The habits of ruffed grouse vary greatly according to locality and season; for instance, in our Canadian wilderness where the timber is mostly hemlock and spruce, with an ordinary dog they can be readily "treed," while in the settled districts, if flushed in second growth hardwood timber, they but seldom "tree," unless early in the season, when the leaves are thick on the bushes, where the timber is of larger growth and a mixture of hardwood and evergreen. They "tree" more readily in September than later on in the season, and also "tree" better when beechnuts are plentiful, which fattens them, than when food is scarce and they are poor in flesh. In sections of the country where their natural enemies—foxes—are plentiful, they become accustomed to "tree" for safety, and will, when flushed with a dog, usually take to the nearest hemlock.

There is a great difference in dogs that are used for these sports. A light-footed fox-colored dog, who understands his business, will steal close on the birds, and make them take to the nearest trees, where a heavy, clumsy-footed spaniel would flush them before he came near, which would cause them to fly some distance before stopping.

The following rules in sections of the country where the timber is of large growth, and a mixture of hardwood and evergreen, will be found by those who observe the habits of the ruffed grouse, to be in the main correct:

1. When this bird is flushed on level ground, should he fly swift and low out of sight, he will usually swing to the left, and alight on the ground.

2. Should the bird, when flushed, gradually rise and suddenly drop upward, look for him on the nearest evergreen to where you saw him start; but if he at once rises to the top of the tree and then shoots off like an arrow, don't waste time looking after him, for he is a strong flyer and is away to some distant cover.

3. Should the bird fly up to a steep hillside it will alight on the ground.

4. But if from a hill to the level below, then look for your game well up in some tall hemlock or spruce, standing straight and immovable, on a limb near the body of the tree.

5. If the bird flies from one hill or knoll across a ravine to another hill, it will alight on the ground.

6. When flushed on a side hill and it flies off to the left, it will alight on the ground; but if it flies away to the right, it will, when near the end of its flight, either turn to the left up into a tree-top, or to the right into a low evergreen or dark covert.

7. If it flies down a ravine and you observe it turn to the left, look for it in a low thicket on the bank; but if it turns to the right, look for it in a low evergreen.

8. If it flies by the point of a knoll it will usually double around it, if to the left, will seek some covert under the bank; but should the point be to the right, it will alight in some evergreen not high up.

Remember, the shorter the distance the bird flies before alighting the more ready he is again to take to flight. If he trees immediately after being flushed he will take the most prominent limb in view, and, unless your dog holds his attention, will be away when he perceives you approaching; but should he fly some distance and be well followed up by your dog at once jump and cry, he will select some large hemlock or spruce and alight on a limb near the body of the tree, hug its feathers close and stand as motionless as a knot.

Why to get a side shot at him, as it is sure than a frontal one. When approaching, if possible get a tree between you and your bird. If there is no cover, walk along in a careless manner as though you did not see him and intended passing by, and when within range shoot the instant you stop or he will be off like a bullet, unless your dog is keeping his attention fixed on him by incessant barking.

I do not claim the above rules to be infallible, but have found them to be generally correct in the settled districts that I have shot over in Northern Vermont and the Canadas. The gun used should be one of the best, and a large caliber, for ruffed grouse are, late in the season, very tenacious of life and often, after they are shot through and through, will fly a long distance before dropping. As to the breed of dogs for this sport, I would recommend the red collie; they are very intelligent, with good voice and fair nose, with light, foxy movements, which make them well adapted for this work—treeing grouse. The young sportsman should try all fair wing shots, and as he occasionally is successful in bringing his bird down he will gain confidence and become a more expert shot, and as he grows older will quite likely deny shooting ruffed grouse otherwise than when on the wing.

STANSTEAD.

SHOOTING GROUSE ON THE WING.

SOMERVILLE, MASS., DEC. 7, 1881.

Editor Forest and Stream:

Mark West, of Dec. 1, is as "sound as a nut" on the subject of shooting grouse on the wing, and I repeat it. Shoot at them on sight; let them have it, hit or miss. It seems as if this noble bird was possessed of something more than instinct, for if it is a possible thing for him to surely put something between you and himself when he starts on his electrical trip through the brush. A bunch of grouse, the top of a pine, hemlock, spruce, or a large rock, or even the butt of a large tree will answer his purpose; for I suppose he thinks that if he is out of sight he is out of mind. Now, my experience has taught me that it is almost useless to attempt to follow him with a "beat," for long before I can take sight on him he has landed in Canada or some other place; and especially if it is a quattering shot to the right. When a partridge starts, I look to see which way he is going, and as they generally rise from the ground I throw my gun up to my face (instead of dropping it to the line of aim) and keeping both eyes open, shoot in ahead of where I last saw him. I am governed by the distance that he is from me as to how far ahead I shoot; but perhaps two or three feet, if a quattering shot, and he has just started. His going behind a tree-top or bunch of bushes is just what suits me, for when I see him going I know just what to shoot at. Now, although this manner may not be the best for open field shooting, I have faith to believe that there is none better for partridges in thick cover. What kept me back in the dark a long time was the use of fine shot. I used to shoot No. 8 and No. 10 at them, and in a while I would kill one when an open, straight-away shot offered; but how many, many times I have fired at them just as they were going behind a tree-top, and would see the leaves and twigs fall. The shot struck just where I intended to have it, but the grouse would go on as unconcerned as though there had been no shot in the gun; that is, apparently, but I have sometimes found them dead afterward. It is a self-evident fact that to cut down fifteen or twenty feet of bushes or tree-top, you must use heavy shot and plenty of powder besides. In the next place, it wants shot heavy enough to smash any bone in the bird after going through the brush, so as to drop them then and there, and not let them go away and die after long suffering, or to be caught by vermin. After using fine shot a long time, I commenced using No. 4. The result was, that the first day I used it I killed four single birds dead in succession, and winged the sixth bird so that I soon got him, making five out of six. That converted me from fine shot for covert shooting. I now use a nine-pound, ten-gauge breech-loader, with 44 drams charge Lightning powder, and 1½ oz. No. 5 chilled shot, and thenceforward, to use the current slang, often literally "tumble to the racket" of IRON RAMBON.

HAVRE DE GRACE DUCKING—Christiana, Pa., Nov. 28.—Since the 1st of November I have made many strolls for rabbits. Find them very scarce. Not one bird have I seen. I spent four of the first days of ducking at Havre de Grace with Broomfield and Collary. We bagged over seven hundred ducks, most all were of the red-head species. Black-heads were not shot. That is why "Homo" found them so scarce in market. They do not bring the price that the good variety bring, and gunners do not shoot for them. They were, in fact, so few that bald-pate and blue wings. Black ducks were also very plenty. Canvasbacks would not dart to the boxes. The bushwhackers got some, and stole lots of red-heads from the box-shooters. They should have a law passed to prevent its occurrence another season.—G. P.

DEER IN MASSACHUSETTS.

ALLEN'S, POCKETT, MASS., NOV. 30.

THE open season for deer hunting closes with us to-day, and for the last three days little rest has been given to either dogs or game. As yet I have heard no estimate of the number killed, but I think it falls below the amount of last season. One man last year bought two hundred fresh hides, and he could not have got near all of the deer killed, as many are sent off whole.

A great many have been shot this season that could hardly have seen a snow storm in their lives, they were so small. It seems to me that a law which prohibited the killing of fawns, might tend to preserve the deer. Among the deer stalkers of Scotland the aim was not for hinds and fawns, but for stags. Killing these did not lessen the number of fawns in a season, and deer did not decrease as fast as where all are shot that are within range. Of the large number killed this fall very few are found with more than two or three points on their horns. A large number have no horns whatever; for does, and fawns too small to have any, are killed oftener than bucks. Fawns are often killed with the mothers, and one was shot near this village, the live weight of which was twenty pounds—no larger than a turkey cock. Sportsmen, while quailing, lower their gun without firing when the old bird rises from the cover followed by a half-fledged brood of young, the product of a second or third nesting. Why not spare the fawns as well? The hunter whose first deer weighs but twenty pounds has little to be proud of in the way of game.

The deer in this State are found mostly in the towns of Sandwich, Falmouth and Marshpee; a few may be found in Plymouth and Barnstable. Should the Cape Cod Canal be built, those in Plymouth would be isolated from those on the Cape. They used to be plenty in Plymouth woods till the fires burned over so much territory that neither food nor cover was left.

The question of hunting with hounds has been ably discussed in the *Pockett and Stream*. Here hunting seems to be the only method. I have never heard of any jacking or torching. Still hunting is out of the question on account of the dense thickets of shrub oak. The way with us is to surround one of these thickets and send in the dogs. I have known as many as nineteen men in one party, whose shares in a twenty pound deer would be a mouthful apiece.

[We heartily second the suggestions of our correspondent that the killing of these fawns should be stopped. Such business is simply disgraceful.]

STATE PIGEON TOURNAMENTS.

NEW YORK, NOV. 21.

Editor Forest and Stream:

I not only agree with you fully in your views as to the pigeon tournaments of State Game Protective Societies, but I foresee the disruption of the association in this State if the present programme at its convention is continued. The idea of an association for the protection of game seems to me a simple of slaughter for game for wagers is an absurdity that will disgust legislators, and thus destroy the very instrument by which it is prepared to attain their ends.

I was one of the dozen men who instituted the association, and was its president, but I retired in consequence of the abandonment of its purpose of organization.

CHAS. H. HANWELL.

A STILL-HUNTER'S ADVENTURE—Moirs, Franklin county, N. Y., Nov. 29.—Editor Forest and Stream: A report has reached here that a man by the name of William Merrick, of the town of Brandon of this county, was, while still hunting deer, on the 17th, in the vicinity of Deer River, shot at by some person and slightly wounded. Merrick's account of the affair is that he was following the track of a deer when he found struck in on the same trail he was following, which he shot. A moment after he heard a noise in the woods to a little one side from where he was standing. He went to find out the cause, and came to a ledge of rocks having a cliff-like face on one side, and leaning forward to peer over he had hardly put his face where it could be seen from the base of the cliff, when a gun was discharged from that point, the ball passing along his cheek and through the rim of his hat, without doing any more serious injury than to make a slight scratch on his cheek. The muzzle of the gun was so near his face that the powder blackened and burned it considerably. The discharge came so sudden Merrick was dazed or stunned by it, so that before he could recover to pursue or even observe his assailant the latter had disappeared and eluded detection. It is reported that the owner of the dog is known and conjectures are made as to the man who fired the shot. But as nothing that is reliable is known as yet, the name is withheld. Some of Merrick's neighbors, it is reported, think that the story was fabricated by Merrick himself, and that he was accidentally wounded by the discharge of his own gun, and that he made up the above story to create a sensation. I am not personally acquainted with Merrick; therefore, will not express an opinion as to the truth of his story. I have only heard of him as being one of a number of still-hunters that hunt deer in that vicinity and make a practice of shooting all dogs that they find chasing deer.—ADRIAN ONDACK.

GETTING OVER THE FENCES.—The movements of a young city sportsman never fail to furnish amusement for his older and more sedate companions. His fineness and vigor in the morning create a laugh, and when he crawls along and wants to lie down after a few hours' hunting, smiles are exchanged at his expense. His manner in taking fences is characteristic. The first yearling with one hand on the top rail, while the gun is held high in the air. The second fence falls out a leap which shows considerable less spring. The third is taken with one foot on the lower rail. The next is climbed over with a lively sort of a scramble. He sedately climbs the fifth, lies upon the next and rolls over it, sits a little while on the seventh, crawls under the top rail of the eighth, the middle rail of the ninth, the bottom rail of the tenth, hunts for an opening in the eleventh, and positively refuses to take the next until he has rested his gun against it and stretched himself full length on the ground for a while. His hunting, which commenced with a bold dash through all the rose-brier patches and thickets in the first few fields, is now confined to the cow-paths and open places, and he is willing to let his companions start all the game, or even to second any motion to give up and take to the roads, shame alone preventing him from making the proposition. His

shoes are cut through at the toes and the bottoms of his trousers worn to fringe in the contact with the briars and twigs in his early rushes; his hands are bleeding, and the back parts of his knees feel very much like giving in; but he a rabbit start or a quail flush, and all the troubles are instantly forgotten, and he is as alert as his oldest and most seasoned companion, but as soon as the excitement is over he relaxes again and shudders at the thought of the next fence.—NEWARK CALL.

RANGERLY NOTES—Rangleley, Nov. 25.—Still hunting thus far has not been satisfactory, the light falls of snow wholly disappearing or forming a crust, making it too noisy. Soon after the first snow, some four weeks ago, D. T. Haines and Rufus Crosby, not-d guides and hunters, who had been trapping near Arnold's Bog, started a caribou which one of the first named hunter wounded, but failed to get, owing to melting of snow. Since then they have shot a large buck with unusually fine antlers. Haines got in the first shot with a Winchester rather high in the shoulder. The buck ran and Crosby who gave him a charge of buckshot, one of which entered the eye and brain, bringing him down dead. Last Tuesday Elmer Snowman, while hunting in company with the above named parties near the same place, shot a two-year-old caribou, shooting twice with a light sporting eighteen-inch .32 calibre rifle, hitting at each shot, grassing him while on the run. As I write the air is redolent of drollish steaks of said caribou. Thanks to the generous hunter who also brought me a share of the one shot by Messrs. Haines and Crosby. Last Wednesday was enjoyed by the local gunners in a grand hunt with seven on each side, captained by A. J. Haley and Charles Neal, Haley's side winning by thirty points in a total count of nearly five thousand. Sharp practice was charged by the defeated party, nevertheless enjoyed a capital supper at the expense of the latter at the Oquossoc House. On the day preceding the grand hunt a party of a dozen or more with several dogs chased a three-footed bear till dark unsuccessfully. Brin, though heavily handicapped, could take care of himself on a long chase. He had been hunted the two preceding days by a party of three and a dog.—WARFIELD.

PHILADELPHIA NOTES—Nov. 30.—The season thus far for upland shooting has been a total failure, as was prophesied. All our sportsmen going out from Philadelphia and choosing their grounds in New Jersey, Delaware and Maryland, report quail scarce. Those who happened to strike the flight of woodcock had sport, but this was but of short duration. We had a few days of a few quail to start in December for North Carolina, where birds suffered less in winter. Duck shooting at Havre de Grace is moderately good. The fowl are fast learning the difference between a body of their own kind and a flock of stools or decoys, and do not give the shooting they did earlier in the month. Ten brant were killed at Burnegat and Tuckerton Bays last week.—HOMO.

NORTHERN MICHIGAN—Washington, D. C., Dec. 1.—Have just returned from my month's trip to Northern Michigan. Found game plenty in neighborhood of Reed City and to the northward. Had only one slight tracking snow up to Nov. 22, which lasted two days and was duly improved, about thirty deer being killed in that vicinity. The new Michigan law in regard to not shipping game out of the State is a dead letter, as venison is shipped to the little towns near the State line and taken across the line in wagons and re-shipped to all parts of the country.—T. F. E.

MASSACHUSETTS—Lynn, December 3, 1881.—Birds are quite plenty along all the shores of Massachusetts now; mostly coot and old wives, some widgeon, and now and then a broad-bill. One of our gunners shot fifteen last Wednesday in an hour. An unknown man shot a white-winged teal on the marshes a few days since. I never saw one, but take the word of older gunners than myself. The geese are flying this week quite plenty, but fly too high.—S. M. S.

THE SHENANDOAH VALLEY.—Dear, "pheasants" (ruffed grouse) and turkeys are more abundant this year in the Shenandoah Valley than for a long time. It will really pay those of your readers who are lovers of deer and turkey hunting to seek their ground somewhere in this valley. Your correspondent saw a letter from Wilcox Mills, Va., to-day, in which it is stated that quail were comparatively plenty there, notwithstanding the snows of last winter.—HOMO.

WOODCOCK NEAR HARTFORD—Hartford, Conn., Nov. 29.—On Tuesday, Nov. 29, a friend and myself killed seven woodcock, all within ten miles of Hartford. They were large, fat birds, and in better condition than any I have seen this season. While I have occasionally shot a straggler later than this, I have never in twenty years' experience known so many woodcock so late as Nov. 29.—WM. M. HUNSON.

A CORRECTION—New York, Dec. 5, 1881.—Editor Forest and Stream: In issues of Dec. 3 and 7 I advertised Greener Hammerless, No. 208, as winner of Anybody Cup at the Western Kennel Club reception. I am informed it was mistaken as to the gun, and that it was a gun of another maker. I desire the correction to be made.—HENRY C. SQUIRES.

MISSOURI—Columbia, Dec. 2.—Our game is usually plentiful, i.e., the smaller varieties—turkeys, prairie chickens, quails, grouse, etc., and to be prevented from killing the same in season or out of season, our sportsmen (?) would look upon as a restriction of their rights, and inconsistent with the freedom of an American citizen.—C. B. R.

A WHITE DEER.—Number Four, Nov. 23.—A white deer was brought out of the woods after a few days ago. It was all white but the head, which was the ordinary color. It was caught in the water after being driven by hounds.—MRSSIT.

NEW BRUNSWICK—St. Martins, Nov. 23.—Game is very scarce here. Ruffed grouse nearly all gone. Caribou very scarce. Ducks have been plenty, but are now all gone south.—H. V. S.

WASHINGTON TERRITORY—Fort Walla-Walla, Nov. 9.—Sharp-tailed grouse are more plentiful than I expected to find them, and fair bags have been made.—C. BENDIRE.

NEW JERSEY—Wenonah, Nov. 21.—As I reported to you last spring, the destruction of quails was almost universal in this region.—MILTON P. PRIOR.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides*, and *M. dolomieu*.
Mudminnow, *Umbra limba*.
Pike, *Esox lucius*.
Rock Bass, *Ambloplites*. (Two species).
Yellow Perch, *Perca flavescens*.
Striped Bass, *Morone chrysops*.
White Bass, *Morone americana*.
Crappie, *Pomoxys nigricaudatus*.
Bachelor, *Pomoxys annularis*.
Chub, *Semotilus corporalis*.

SAIT WATER.

Smelt, *Osmerus mordax*.
Sea Bass, *Centropristis atrarum*.
Striped Bass or Rockfish, *Morone chrysops*.
White Perch, *Morone americana*.

SAIT WATER.

Volok, *Polyactis carbonaria*.
Tautog or Blackfish, *Tautoga onitis*.
Weakfish or Squetaque, *Cynoscion regalis*.
Channel Bass, Spot or Redfish, *Sciaenops ocellatus*.

ANGLING IN CALIFORNIA.

SAN FRANCISCO, Nov. 15.

Editor Forest and Stream:

Nothing as an art is fast increasing on this coast, and where one man indulges in the tackle, and practiced legitimate angling five years ago, there are twenty now. There is less of the "get 'em anyhow" feeling, which always pervaded the settlers in a new country, and more attention paid to the delicacies of scientific angling. Of this class of anglers of course San Francisco is the centre, and your old correspondents—B. B. Redding and E. J. Hooper—did much to bring this about, both by precept in FOREST AND STREAM and example at home.

There is excellent angling in our bay for smelts, perch, tomcod, etc., and it is a favorite amusement of clerks and others who cannot go to the salmon rivers of the north, nor to the nearest trout streams. These latter have been greatly depleted, owing to illegal and wasteful modes of fishing, and there are few good trout streams to be found within less than six or eight hours' ride from the city. Our Fish Commissioners are doing nobly in stocking our streams, and in trying to educate the people to appreciate their labors, and to protect the fish which they furnish. More enthusiasm is needed among our angling clubs, and more public spirit in extending protective laws to waters not controlled by them. The fact that the clubs so far have been content with protecting only the waters where they fish causes our protective laws to be looked upon as of a somewhat selfish production.

Trout fishing in San Mateo County, in the Pescadero and Purisima creeks has not been good for some years, and the fishing in the Lagoon, in Marin county, is almost a thing of the past, and we must go further north for fishing of the old kind.

Bourne.

WORM AND FLY-FISHING BY NIGHT.

WE take the following stories from "My Life as an Angler," by William Henderson, a book published by W. Satchell & Co., London, which we noticed in our issue of May 5.

One evening in June, when seated by the fireside of the inn at Wotton Bridge, Charlie and I fell into a discussion on night fishing, with worm for trout in warm weather, and we agreed that it would be well to give it a trial and ascertain how far our views were correct. "Well, then," said I, "no time like the present;" but Charlie was too comfortable and sleepy to respond to my summons. So, preparing my rod and line, I started to a stream half a mile down the river. The night was very dark, and I found my way with difficulty. Arriving at the intended spot, I waded across the deep stream to reach one still deeper near to the further bank. Standing in the water, I placed a lively job on the hook and cast my line up stream; the worm scarcely touched the water when I felt a tug and succeeded in drawing a large trout toward me. Having basked this I threw again with the same result; and now astonishment awaited me. There was not a breath of wind—the water was flowing gently and caused but little sound—when all at once my ears were assailed by such a tumult of fish splashing and splashing as I never before heard; the river seemed alive with large fish. My heart beat, for there seemed something uncanny in the affair; still I persevered, and succeeded in securing four more fish. Suddenly all was still; not a fish was heard to move, and not another bite was to be had. I could neither see nor hear anything to account for the sudden change, so I started, proud of my prize of six fish, considerably larger than any we had taken in the river by daylight. The unpleasantness of angling with worms in the dark is so great that I have never tried the experiment again, but of its success there can be no doubt.

One night when at Gersnach, in the Black Forest, a strange fancy took such strong possession of me that I felt constrained to bow to it. The night was pitch dark, and distant thunder gave the proverbial warning that all fishing was out of the question; still, mad as the idea seemed, I determined to make one essay in front of the hotel. So black was the night that a lighted lantern was necessary to guide me in arranging my rod and tackle at the door. This done, I sought the edge of the lawn, by the side of which rushed a rough, rapid stream, which sped from a mill immediately above. Scarcely had I taken my position near the top of the stream when the lightning blazed forth, illuminating the pine-clad hills and making a sudden glare far exceeding that of the brightest sun-bite. Each tree of the forest might be distinguished while the lightning quivered in the sky, and then followed a darkness so intense that I could not see the rod, and could scarcely distinguish my hand. The dark intervals between the flashes might be five minutes, and it was during these that I cast my flies straight across the rushing mill-stream. The instant the flies fell on the water I felt a tug, then a rush, and all was quiet. I was amazed, but at length con-

cluded that a passing shaft had struck my hook. Another cast of the line, and here was no room for doubt, a heavy fish was pulling violently. It was long before the strength of the current allowed me to land my prize, indeed it was only by the lightning's flash that I could judge where or how to do this. I fished the stream steadily downward for about a hundred yards; the lightning showed me where to throw my flies; all around was inky blackness. I cast and rarely failed either to hook or take a fish. The strength of the current enabled many a fish to break away, but at the end of half an hour my basket held eight fish, and when these were landed at the hotel they proved to be three trout, three grayling, and two fish resembling chub. The least was three-quarters of a pound in weight, and the largest a pound and a half; altogether a beautiful dish, and the fish by far the largest in size that I had captured during my week's angling. * * * What speculations these two experiments forced upon the angler's mind, as to the feeding of fish on dark nights, when they are commonly supposed to be at rest! I am compelled to the conclusion that in these night banquets is frequently to be found the true answer to the fisherman's too common question, "Why do not the fish take? The water is in good order, the wind is right, and everything bespeaks a good day's sport, but they won't take." The response should be: "Dined already, and require time for digestion."

ANGLING LITERATURE.—Should any one be inclined to wonder at the fascination which this literature exercises over its votaries we would have him reflect that in the plain, almost rustic simplicity of the best books on the subject those charms of wood-land and river scenery which are so dear to the wandering fly-fisher are faithfully reflected. The songs of the birds to which he listens, and the flowers which he marks as he passes down the brook, remind him of their scent and echoes, as preserved in many a quaint little volume of the seventeenth century by some angler whose tastes were similar to his own. The directions such manuals give for making the angler's "harness" or the flies they prescribe for trout may long since have become antiquated, but the "one touch of nature" which is sure to show itself amid the duldest disquisitions on rods and lines redeems the book from oblivion. Hence the difficulty which the world-be collector of angling books finds. Black-letter volumes on angling he may as well at once despair of procuring, save after devoting a life-time to the search. The early manuals—say those of the seventeenth century—are now rare. Facsimiles, at least, so-called facsimiles—have been published of many, and these are in most instances as unattractive as originals. Any good modern book on angling speedily goes out of print. Thus Ephemer's "Book of the Salmon" and Mr. Wetwood's "Bibliotheca Piscatoria," of the respective dates 1850 and 1861, have long been rare, owing to no new editions being published. One or two well-known collectors possess unrivalled libraries of angling literature, but every angler with the least tincture of scholarship or love for his art has a shelf full of favorite authors, whom he values equally with the implements used by him at the water-side.—*The Athenaeum*.

WHITEFISH TAKE THE FLY.—MIRA, N. Y., Nov. 30.—I noticed an article some time ago in the FOREST AND STREAM in regard to whitefish taking the fly or bait. We have a fish in the lakes in the Adirondacks that is called whitefish. I have never seen one and the whitefish of the Great Lakes together, but, as far as I can see, they look alike. I have caught them in Chaumaux Lake many a time with a fly hook, and have frequently caught them with angle-worms when fishing for trout there. About the last of August, I think it was, they used to take the fly which we called the "shad fly," and we could take large numbers of them in this way.—ADRIAN ONDAK.

THE CARP AS A FOOD FISH.—PHILADELPHIA.—Mr. Richard Holliday, of Queens Co., Md., has presented to Col. Hughlett, State Fish Commissioner, thirty-two German carp, raised by him for distribution to the Potomac and Wisconsin rivers. The carp were shipped last week in car of an agent of Col. Hughlett, and were turned out at Snow Hill and Salisbury—sixteen at each place. They weigh from 2½ to 3 pounds, and are about two years old. Mr. Holliday has been a very successful propagator of these fish, and he thinks them delicate, and as finely flavored a fish as any he ever ate.—Homo.

THE LATE S. A. KILBOURNE.—In the window of the publishing house of Charles Scribner's Sons, on Broadway, we have noticed a fine crayon portrait of the late Mr. S. A. Kilbourne, the celebrated artist, whose delineations of our game fishes have so often been noticed in our columns. The likeness is a most perfect one, and to those who had the pleasure of knowing Mr. Kilbourne it will be a satisfaction to see this most perfect counterfeited.

Fishculture.

FISH DISTRIBUTION IN NEW YORK.

ROCHESTER, N. Y., Nov. 25.
The N. Y. State Fish Commission are now ready to receive orders from any parties in this State wishing to stock public waters with salmon trout, brook trout, California mountain trout, black bass, rock bass, Oswego bass, yellow perch and bullheads. Parties applying will please give description and names of water and where located. Applications will be received until March 1, 1882. Address, SEYMOUR GREEN, Supt. N. Y. Fish Com., Rochester, N. Y.

CALIFORNIA SALMON IN NORTH CAROLINA.

MORGANTON, N. C., Nov. 28.
It would appear that a California salmon, arrived at maturity, has been taken in this State. Major J. W. Wilson, former President, now Chief Engineer of the Western N. C. Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds. The fish was taken near Marshall, west of the Blue Ridge, from the French Broad River, on a trap. Other smaller specimens have been taken. The fish contained a roe, so nearly ripe that it was fit for use.
A few land-locked salmon and California trout were sent to tributaries of this stream in the spring of 1880, but they could not have grown so large in so short a time, and we are obliged to credit the specimen to the brood of twenty-seven thousand California salmon made there in Dec. 1877.

I have other evidence of the presence of salmon in that stream, as they were taken and eaten last year. Major Wilson, however, is better acquainted with the salmon in a fresh state than most of our citizens, and his statement is more conclusive. Whether this specimen had ever left the headwaters to seek the gulf of Mexico is a question. S. G. WORTH, Supt. Fisheries.

CARP IN TENNESSEE.—Nashville, Nov. 24.—Within the limited confines of a double bath-room your humble correspondent is reluctantly waiting the delivery of 1,500 German carp, received here this morning by Col. Geo. E. Akers, from the National ponds at Washington, D. C. The fish were brought here by Mr. F. L. Donnelly, and as an evidence of his careful watching not one died while en route. That the fish are eminently adapted to this climate the inmates of the ponds at those already mentioned here is incontrovertible proof. Last week one was caught in the Asylum canal, which weighed, after being killed, six pounds. Captain Frank Green has assured me he knows of one in his pond that is even larger. Col. Akers, with his usual enthusiasm, hired a German to plant the fish, and was invited as well as a number of gentlemen of the press, to partake of the delicious morsel the following day, but a much-abled "Jew" got in his work first, and devoured the dainty, but, through the mistake of a careless boy, with whom it had been left in the plunge during the night. Dr. Callender, however, promised to repair the damage by sending in a couple of "whoppers" next week.—J. D. H.

CARP FOR MASSACHUSETTS.—The result of the experiment of the Rod and Gun Club of Webster to stock the ponds in that town with carp will be watched with interest. The five cars received from the United States Fish Commission arrived safely, and the Young carp will be kept in the ponds until they are large enough not to be eaten by the picker and bass, when they will be transferred to "Chaubungungamony," or "Big Pond."

IMPORTATION OF TENCH.—On the 2d of this month Capt. Auguste Briand, of the French steamship St. Germain, presented to Mr. W. A. Conklin, Superintendent of the Menagerie at Central Park, New York city, twenty tench—*Tinca vulgaris*. The fish had been twenty-five days in the ponds at France, and the passage had been stormy, yet they were in good condition. This fish is a cyprinoid, and, like the carp, loves warm, still waters. It has very small scales, is of a dark olive color, and seldom exceeds two pounds in weight. In Europe it is quite a favorite food fish, especially on the Continent, but in England it is not much valued. It is one of those which we have eaten was rather mild in flavor and not equal to the carp. Captain Briand has brought over many fish, as well as taken some of our catfish and other species to France, and takes great interest in the interchange of valuable species.

MORE CARP FOR NEW YORK.—Commissioner Blackford has received from Washington the second thousand carp fry for distribution in the vicinities of New York. The fry, now nearly exhausted, Mr. Wm. L. Allen, of Newark, N. J., has received from Mr. Blackford several lots for ponds in Morris county, N. J., which he has forwarded to those owning them. Excuse me for saying that the fry of this pond at the Neck, L. I., with them, and Mr. Blackford expresses the opinion that within two years there will begin to be a moderate supply of German carp in the market. This will no doubt increase, as when the German residents find that they can obtain the real article, in place of the "half-bred," "half-breed," and other things that they now buy for carp, the demand will grow with the supply.

DEATH OF A FRENCH FISH CULTURIST.—Mr. A. Colombe, Administrateur-Directeur of the Societe Anonyme Francaise, died a few weeks ago. The S. city is largely interested in fish culture in both France and Belgium and has a capital of 200,000 francs. It was to this society that Prof. Baird sent 100,000 eggs of the trout, which he had received from the Societe d'Acclimation, Mr. Colombe is succeeded by Mr. Osiris Mendes, France, who will now fill the office of Director. The Paris office is 17 rue Chateaux d'au.

The Kennel.

FIXTURES.

BENCH SHOWS.

December 14, 15 and 16, at Lowell, Mass., Lowell Dog Show. Entries close December 12. Chas. A. Andrew, West Boston, Mass., Superintendent.

December 18, 14, 15 and 16, Atlanta, Ga., Dog Show. Entries close Dec. 5. Charles Lincoln, Superintendent. Office at Heinz & Berkeley's, Atlanta, Ga.

FIELD TRIALS.

December 10 (or immediately after the close of the National Trials at Grand Junction, Tenn.)—Pennsylvania Field Trials. Entries close Dec. 5 at 9 A. M. J. R. Stanton, Secretary, Pittsburgh, Pa. Address will be Grand Junction, Tenn., after Dec. 1.

THE EASTERN FIELD TRIALS.—II.

(A full report of the Trials last week contained a summary of the running up to Tuesday night and the result of the first heat. We will now give a more detailed account of the running on WEDNESDAY.)

When the morning broke everything was enshrouded in dense fog, but as we left the dock, the sun broke through, and just before we reached the island, a nice breeze sprang up from the southwest, cheering us with prospects of a fine day.

LIZZIE LEE AND DASHING MOSARBY.
We landed at 9:45, and Monarch and Lizzie were at once sent off in the lot just east of the Club House. Monarch had been very sick the night before, but appeared to be better, although his work showed that he was far from being himself. Working east, he pointed just in the edge of the cover, then roading and feeling the birds out, he located them nicely, although he did not appear to be perfectly sure. Lizzie had been beating in the stubble, but swung into the cover, and almost simultaneously fluzed on them a few yards to his left. This was very good, and scored a point for both. Martin flushed and killed to order, and both were steady. Monarch ordered the birds to the cover, and the birds were on the edge of the cornfield, Lizzie pointed a fresh berry, and Monarch backed. Haight flushed and killed to order, and Lizzie retrieved fairly. Beating the cornfield to the west, Lizzie half pointed, and Monarch backed grandly. The bird was flushed, and Lizzie dropped the bird, and the bird was on the edge of the stubble, and Monarch backed, but the former discovered her error and moved on. Monarch swung into the cover at the northwest corner, pointed, and Lizzie backed. He moved on to order and again pointed, but soon moved on. Nothing was found and he scored a false point. Beating round the island, Lizzie was on the edge of the stubble, and pointed very nicely. They were ordered up and Lizzie Lee awarded the heat at 10:10. Down altogether nearly two hours. This was a good heat, and well won by Lizzie, who demonstrated that the dog was a good one, and was a judge, although not in good form, ran gamely and gave her a good race.

CROXTETH AND BELLE.

Croxteth and Belle were at once put out in the sprouts, and circled round to get at the wind, when they were worked back without a find, although there were birds in there, as one was flushed by the steward. The cornfield was then drawn blank, and the dogs were on the edge of the stubble, where a judge carried a flush. Croxteth challenged once, but nothing was found, and a break was made for the brier lot on the east shore. This was well worked, but nothing was found. Then passing through the Club House to the sprouts, we again turned east to the gully at the south end of the brier lot, where Croxteth going down wind scored

THE NATIONAL FIELD TRIALS.

(Special Telegrams to FOREST AND STREAM.)

GRAND JUNCTION, TENN., Dec. 6, 1881.

The meeting of the National American Kennel Club now being held here promises to be a great success. Large numbers of sportsmen, representing almost every section of the country, have assembled here, and the greatest interest in the coming contests is manifested on all sides. The place is admirably chosen for the running of the trials, and there seems no likelihood that, as was the case last year, the elements will interfere with the successful carrying out of the programme of the meeting. At present the weather is delightful, and from all that we can learn birds are to be found in great abundance on grounds chosen as the scene of the contests.

Many leading dog lovers are here, and all those assembled here look forward with high hopes to an agreeable meeting.

We have examined many of the dogs which are to compete, and certainly a finer-looking lot it was never our good fortune to inspect. Many of the cracks have made records for themselves in one place or another, and it is expected that when they meet, some marvellously fine work will be done.

THE DERBY.

Of the forty-eight entries for the second annual Derby of the National American Kennel Club, which closed April 31, fifteen qualified. These were as follows:

Captain Pat, Henry's Adair, black and white setter bitch, whelped July 1, 1880, by Pride of the South out of Cammie.

Mr. P. H. Bryson's London, blue Belton setter dog, whelped July 22, 1880, by Gladstone out of Cisp.

Mr. D. Bryson's Bessie T., black, white and tan setter bitch, whelped April 7, 1880, by Gladstone out of Floy.

Mr. J. H. Dew's Glida, blue Belton setter bitch, whelped April 7, 1880, by Gladstone out of Floy.

Mr. D. O. Sarnon's Gertrude, white, black and tan setter bitch, whelped June 4, 1880, by Gladstone out of Nellie.

Mr. David McK. Lloyd's Mack Laverack, lemon Belton setter dog, whelped April 2, 1880, by Thunder out of Peers.

Mr. Jos. J. Snellenburg's Lu Laverack, lemon Belton setter bitch, whelped April 2, 1880, by Thunder out of Peers.

Mr. Jos. J. Snellenburg's Pet Laverack, black and white setter bitch, whelped April 2, 1880, by Thunder out of Peers.

Mr. Edward E. Hardy's Clair, black and white setter dog, whelped May 15, 1880, by Dash III. out of Diana.

Mr. Edward E. Hardy's Pollux, black and white setter dog, whelped May 15, 1880, by Dash III. out of Diana.

Mr. Clarence K. Drane's Dashing Novice, white, black and tan setter bitch by Dash II. out of Novel, whelped July, 1880.

Mr. E. F. Stoddard's Lady Friend, red Irish setter bitch, whelped May 7, 1880, by Bob out of Friend.

Harvard Kennel Club's Bess, black and white setter bitch, whelped May 24, 1880, by Dash III. out of Countess II.

Mr. W. B. Gates' Tom Paine, white, black and ticked setter dog, whelped June 4, 1880, by Gladstone out of Sarnon's Nellie.

Mr. Ed. J. Carr's Shadow, black, white and tan setter bitch, whelped Sept. 11, 1880, by Lincoln out of Daisy Dean.

These are a fine lot of dogs and promise to make the Derby of 1881 an extremely interesting event.

The drawing for the running resulted in the placing of the dogs in the order given below:

Mr. Clarence K. Drane's Dashing Novice against Mr. Jos. J. Snellenburg's Pet Laverack.

Mr. E. F. Stoddard's Lady Friend against Mr. R. H. Bryson's London.

The Howard Kennel Club's Bess against Mr. J. H. Daw's Glida.

Mr. Ed. J. Carr's Shadow against Mr. Jos. J. Snellenburg's Lu Laverack.

Mr. Edward E. Hardy's Clair against Captain Patrick Henry's Adair.

Mr. David McK. Lloyd's Mack Laverack against Ed. D. Bryson's Bessie.

Mr. D. O. Sarnon's Gertrude against Mr. W. B. Gates' Tom Paine.

Mr. Edward E. Hardy's Pollux a bye.

FIRST SERIES.

The attendance on Monday, the first day of the trials, was swelled by the addition of a large number of late arrivals, so that the number of spectators on the ground when the first brace was put down was large.

DASHING NOVICE AND PET LAVERACK.

The contest between Dashing Novice, sixteen months old, and Pet Laverack, twenty months old, was very interesting, and beautiful work was done by both dogs. Dashing Novice, however, lost the best of it, and was finally declared the winner of the heat.

LONDON AND LADY FRIEND.

The next brace put down were London, about eighteen months old, and Lady Friend, sixteen months old, London being declared the winner.

BESS AND GLIDA.

The contest between Bess and Glida was a superb piece of work, and excited a fervor of enthusiasm in the hearts of all present. The two bitches were very evenly matched, and the contest was a close one, resulting finally in a well-earned victory for Bess.

SHADOW AND LU LAVERACK.

Shadow not yet fifteen months old, and Lu Laverack twenty months old, were now put down. This heat was not particularly noteworthy, though fair work was done, Shadow winning.

ADAIR AND CLAIR.

When Adair, seventeen months old, met Clair, eighteen months old, we were given another exhibition of most excellent work. The contest was a close one, but the victory at the last remained with Adair.

GERTRUDE AND TOM PAINE.

Gertrude, eighteen months old, and Mr. W. B. Gates' Tom Paine, her litter brother, were next cast off. The heat resulted in favor of the bitch, who won without much trouble.

SUMMARY FIRST SERIES OF HEATS.

Dashing Novice beat Pet Laverack.
London beat Lady Friend.
Bess beat Glida.
Shadow beat Lu Laverack.
Adair beat Clair.
Gertrude beat Tom Paine.
Pollux a bye.

SECOND SERIES.

The running of the first series of heats had proved so interesting that great things were expected when the winners of the previous heats should come together.

DASHING NOVICE AND POLLUX.

The race between these two cracks, it was thought, would be a grand struggle. Dashing Novice had already shown on this ground what stuff he was made of, while behind Pollux was his record just made as winner at the Eastern Field Trial Derby. The expectations of those present were not disappointed, for the heat was a good one. Both dogs seemed to feel that much was expected of them, and their work was worth taking a long journey to see. Both showed good speed and style, but Dashing Novice won, though his victory was by no means an easy one.

BESS AND LONDON.

were now cast off, and after a short heat, the former won.

SHADOW AND ADAIR.

were then put down, the former winning.

SUMMARY OF SECOND SERIES OF HEATS.

Dashing Novice beat Pollux.
Bess beat London.
Shadow beat Adair.
Gertrude.

THIRD SERIES.

The list had now narrowed down to four and the heats were run with the following result:

SUMMARY THIRD SERIES OF HEATS.

Dashing Novice beat Bess.
Shadow beat Gertrude.

FOURTH SERIES.

Dashing Novice beat Shadow without much difficulty, and therefore won first prize. After some consultation the judges concluded to let Bess and Pollux run in order to decide which should compete with Shadow for second place. Bess won.

ALL-AGED STAKES.

The following are the contestants in the All-Aged Stakes: Harvard Kennel Club, Bessie by Dash III., out of Countess II.

Mr. C. B. McGinnis' Gordon, by Rupert, out of Whip. Harvard Kennel Club's Dash III.

Mr. J. J. Snellenburg's May Laverack, by Thunder, out of Cisp.

Mr. L. L. Martin's Maxwell, by Luke, out of Rena. Harvard Kennel Club's Countess May.

Capt. Patrick Henry's Breckenridge.

Mr. George Knowles, Jr.'s Kinnikinnick, by Reed's Druid, out of Bessie Lee.

Mr. J. C. Higgins's Dashing Monarch.

Mr. Geo. G. Ward's Maud W., by Gladstone, out of Juno.

Mr. A. M. Waddell's Maid, by Lincoln, out of Daisy Dean.

Capt. C. E. McMurdo's Pindee, by Dash III., out of Doll II.

Mr. Wm. C. West's Leta.

Mr. E. A. Givens' Minerva, by Lincoln, out of Nellie.

Mr. J. R. Stayton's Nellie III., by Belton, out of Floss.

Mr. D. C. Sarnon's Belton, by Belton, out of Dimple.

Mr. McIntosh's Biz, by Dash, out of Florence.

Mr. D. C. Sarnon's Count Noble, by Count Windeem, out of Nora.

Mr. J. R. Hendrick's King Dash, by Belton, out of Floss.

Mr. E. Orgill's Kush, by Flake, out of Lilly.

Mr. Wm. A. Buckner's Grouse Dale.

Mr. R. T. Vanderwort's Don by Bang out of Peg.

Mr. D. Bryson's Peep o' Day, by Gladstone, out of Clip.

Mr. T. F. Taylor's Dashing Rover by Dash II., out of Norna.

Mr. J. O. Green's Trix, by Birkley, out of Ruby.

These were drawn so run in the following order:

DRAWN TO RUN.

Bessie against Gordon.
Dash III. against May Laverack.

Maxwell against Countess May.
Breckenridge against Kinnikinnick.

Dashing Monarch against Maud W.
Lad against Pindee.

Leta against Minerva.
Belton III. against Nellie.

Biz against Count Noble.
King Dash against Leta.

Grouse Dale against Don.
Peep o' Day against Dashing Rover.

Trix a bye.

BRACE STAKES DRAWING.

The result of the drawing for the Brace Stakes was as follows:

Count Noble and Nellie.
King Dash and Belton III.
Dashing Monarch and Grouse Dale.
Countess May and Dash III.

There is a very large attendance of sportsmen, representing different parts of the country. Birds are scarce, but the work done is fair. The weather is raw to-day, with a rain storm threatening. The Pennsylvania Field Trials Stakes are filling well.

At a meeting of the National American Kennel Club in the evening, Capt. Patrick Henry was chosen President, with Messrs. Luther Adams and J. J. Snellenburg, Vice-Presidents; Mr. D. Bryson, Secretary and Treasurer. Executive Committee, Messrs. Theodore Morford, D. C. Burghental, E. C. Nichols, M. C. Campbell, and Major J. M. Taylor; Board of Appeals, Messrs. C. H. Raymond, Anthony Higgins, T. C. Martin and Dr. Jno. Fottler, Jr. Committee on Rules, Messrs. J. J. Snellenburg, C. B. Whitford, and Patrick Henry.

It was voted to hold the trials of the Club here next year if the birds are then plenty.

GOOD DOG STORY.—The following clipping is from the Boston Journal of Nov. 30. If true, the story is most remarkable: "Mr. C. D. Daggett, of this city, is the owner of a little Scotch terrier about ten years old, which has given proof of the possession of something greater than instinct. On Monday morning the dog disappeared and nothing was heard of it until yesterday morning, when Mr. Daggett received a postal card from the Homeopathic Hospital on West Concord street informing him that on the previous evening the dog, which wore a collar bearing the owner's name, had presented itself at the dispensary with a broken leg. On calling for his dog Mr. Daggett learned that the little creature had got to the hospital at about five o'clock and barked at the door until admitted. When it was found that he had a broken limb the matter was taken in charge and proper surgical attention was given, the dog quickly subsiding. The question arises as to how the dog, which is not known to have been at the hospital at any previous time, happened to go there on this particular occasion."

TRAINING VERSUS BREAKING.

IN TEN CHAPTERS—CHAP. V.

WHAT is more pleasing to the eye of the sportsman than the evolutions of a well-trained dog as he systematically quarters his ground? With what satisfaction and pleasure we gaze upon his graceful motions as with head high in air he gallops across the wind, ever turning at the signal or the promptings of his own good judgment, and crossing just in front covers the whole ground! Pardonable, indeed, is the pride of the sportsman who possesses such an animal, for well we know how rare it is to see this performance in perfection.

Many dogs seem to possess a sort of instinct for this, and without any special training will quarter their ground very fairly; while others appear to have no inherent sense of the matter, but will beat straight ahead in whatever direction they are started, and neither turn to the right nor left, nor stop until they find scent, or are recalled by the whistle. Should your pup prove to be of the former class, thank your lucky stars for the kindly fortune; but relax not your efforts so to train him that his performance shall be faultless. On the other hand, should he display no aptitude for this, do not despair, for with proper training he can be taught to acquit himself very fairly, so well, in fact, that his performances will compare favorably with those of a large majority of other dogs that he may meet in the field.

Before commencing his lessons in quartering our pupil should fully understand the meaning of the word "On," and readily move forward on hearing it. He will also have acquired some knowledge of the meaning of the motion of your hand as indicating the direction that you wish him to take from the practice that you have given him at "To ho." For when you have thrown the piece of meat for him to point, he has noticed that this motion is invariably in the direction that he saw the meat thrown, and as he is possessed of reasoning faculties of no mean order, he has figured it all out and has arrived at correct conclusions in the matter, and you will find upon trial that he will readily start in the direction you wish him to take at the first wave of your hand.

While instructing him in this branch of his education we may as well improve the opportunity to get his head in the air where it belongs, for when we get in the field with him we shall find this accomplishment to be very desirable; indeed, I always adopt this plan from the first in his practice at "To ho" unless he is naturally high-headed; and even then it can do no harm. You must be sure that he is well adapted to the trial, and if he is taught before you attempt to teach him this. Then when he is very hungry take him into a large yard, or still better into some open field where you will be free from interruption by any one, and having provided yourself with two kinds of meat (as mentioned in his first lesson at "To ho") and also with two or three sticks about two feet long and as thick as your finger and sharpened at each end, you are ready to commence operations. You should always enter the field from the leeward side as in actual hunting; and after making your pupil charge, you will walk away from him about twenty yards. Do not go directly up wind but diagonally across; thus if the wind is west you will go to the northwest or southwest, as you may prefer; and after impaling a piece of meat upon the end of one of the sticks, set the other end in the ground just firm enough to remain in position. I think that it is better to set it in a bunch of grass or low bushes, that it may be hid from his sight, as it is time to teach him that he must depend upon his nose. If there are no bushes, and you can easily carry with you a few leafy twigs, or if in wintered time you have a few bare sticks, one or two in front to hide it from view. In this way place one or two more pieces at some little distance from the first one and also from each other, taking care to put them so that you can work up wind toward them, and be sure that you do not forget their location.

Now return to your pupil and praise and pet him for his good behavior in remaining quiet, and reward him with a bit of the same kind of meat that is on the stick. After he has eaten it, and is intently watching for more, take another piece of the same kind and let him smell of it; and then make him lieve throw it in the direction that you wish him to go, which should be at an angle from the meat upon the stick; thus, if the stick is northwest from you, make the motion toward the north, which will take him across the wind and also bring him near enough to the meat to smell it when he gets opposite it. Carefully watch him and the very instant that he strikes the scent you must make him "To ho"; then walk up to him and praise and pat him, make him hold his position while you advance and pick up the stick and take the meat therefrom and put it in your pocket, taking good care that he has a good view of the whole performance. Now abundantly reward him with praise and give him a piece of the other kind of meat to eat.

After a few moments' rest you can proceed to give him the next piece in the same manner, and if he shows no sign of weariness you can continue to the third. Beyond this I do not think it advisable to go at the first lesson, nor even so far if he shows the least sign of having had enough of it. Indeed, in all his lessons and practice it is much better to stop far short of satiety than to weary and perhaps disgust him with too long continued application. Your own good judgment will generally tell you when to stop, and you will find that five minutes', or even one minute's practice, that leaves your pupil in a happy frame of mind induced by the bestowal of your well merited praise is much better than an hour's that finds you both fagged out and disheartened by the failure to accomplish satisfactory results. We have learned by experience that the shorter the time devoted to his lessons the better, provided that he is practised every day, several times if you like, and a satisfactory performance of his task obtained.

After a few lessons of this kind, if he goes through the performance in a satisfactory manner, you can venture a little further and try him with a turn by making the motion in the wrong direction. Be very easy and go careful now, for much depends upon starting right. When all is ready wave your hand in just the opposite direction from the one that you have been accustomed to, and when he has taken two or three strides, sound the two short notes with your whistle, and at the instant he turns his head toward you, wave your hand in the other direction and proceed as in former lessons. Should he be loth to turn, you must use good judgment and get him used to it without getting him discouraged; perhaps by making him "To ho" when he refuses to turn, and then sending him in the new direction you will get safely over the difficulty. But it is seldom that you will have any trouble if you have followed the proper course in his earlier lessons and thoroughly instilled into his mind that he must obey. We have been often surprised to see how readily our pup would

at the first trial turn and take the direction indicated, thus showing that our efforts to make him feel confidence in us and that he could implicitly trust us, were crowned with success, and that instinctively as it were he obeyed the motion of our hand, although thinking that the meat was in the opposite direction.

After you once get this first turn accomplished the rest is comparatively easy, but do not hurry him as nothing is gained, and much may be lost by undue haste; and you will find that if you drill him in this he will be reasonably perfect before going any farther, that when you come to try him with the second turn, he will all the more rapidly comprehend and obey. If at the successive steps in these lessons you are through with each one before attempting the next, you are sure to find your reward for your patient labor in the great satisfaction that you will experience when you cast him loose among the birds and witness the practical illustration of your wisdom and success as a teacher that he will be sure to afford you.

It is better to confine his beat to quite narrow limits at first, as this will keep him near you and make it easier for you to check him if necessary, should his performance be faulty. Three or four strides will generally be found sufficient, and in some cases even less will be found enough, and occasionally we may have a pupil whose natural aptitude for this may be indulged from the first and a still wider range allowed him: but in either case the range should be circumscribed until he appears to understand what is required, and to readily and cheerfully obey your signals and the different motions of your hand. This is very important accomplishment cannot be taught in a week or a month, indeed you will do very well if you succeed in obtaining fair work out of him in a year; my but long before this time he will beat his ground in a manner that will cause even old sportsmen to pronounce him a prodigy, but as we are striving for perfection, we will not be satisfied with a mediocre performance, but continue perseveringly to practice our pupil until he will not only regularly quarter his ground in front of us and instantly obey each signal, but will wheel of his own accord when he reaches a proper distance from us, comes to fence, hedge, or stream that he should not cross. This knowledge that he must not cross a fence or hedge without orders is of great importance and easily imparted by working him along a fence after he has learned to beat his ground and turn at the signal. He will, after a few lessons, understand what you desire and readily keep within bounds. Should he at any time transgress and go through or over the fence, care must be taken that he returns at once, and at the precise spot where he went through. This is of great importance, for if he is allowed to return at any point, the same mistakes are made, that he will fail to realize that he has done wrong, but if you insist on his returning at the exact place, he will at once understand that something is wrong and will be more careful in the future.

While our pup is yet young he should become accustomed to the water; most young dogs will take to it readily; but should he appear to have any fear of it he must be handled with care and gradually made acquainted with it in such a manner as shall not frighten him. When he has acquired some little knowledge and you begin to take him out for a walk, you should visit with him some small stream, or shallow pond, and sit down on the bank and give him time to get acquainted with it. If he shows no inclination to wet his feet you will find it a very good plan to hold a piece of water where the water where it is but an inch or two deep, and where he cannot get it without putting his feet in it. By carefully working him in this way he will soon learn that it will not hurt him; and in a short time he will fearlessly wade across the shallow stream with you and soon, if the right course is pursued, he will venture anywhere. You should never think of him, no matter how much you may feel disposed to do so, but rather as a creature for himself that water will not hurt him, and he will soon lose all fear.

THE HORNELLVILLE KENNEL.—Mr. Geo. H. Wicks, of Peterson, N. J., has recently paid a visit to the kennels of Burr Ellis, and J. O. Fellows, Hornellville, N. Y., breeders of cocker spaniels, and has been highly pleased with the work which he says looks finely. The dogs are in fact a grand lot.

MR. FARNUM'S SHOT.—We have received from Mr. Clarence Farnum a fine photograph of his pointer dog shot. Shot by Finkney's Diamond out of same owner's Juno (both now dead), is liver and white in color, and was trained by his owner. Mr. Farnum writes that she has a long nose, is staunch, retrieves nicely and has no faults, that she is a grand lot.

ATLANTA DOG SHOW.—Dec. 3.—*Editor Forest and Stream:* The committee of this show have concluded to keep the gates open until the 12th instant, the day before the opening of the show. The judges are as follows: For English, Irish and Gordon setters and for pointers, Major J. W. Taylor, of Lexington, Ky.; for German pointers, Major J. H. Hogg, of Atlanta, and Major Taylor; for spaniels, box hounds, beagles and Scotch deerhounds, Capt. W. J. Heyward, of Atlanta, and Major Taylor; for fox terriers and all non-sporting dogs, Capt. W. J. Heyward.—GEO. LINCOLN, Superintendent.

A CHALLENGE.—Charlestown, Mass. Nov. 29.—*Editor Forest and Stream:* As there are several gentlemen, whose names I will not mention, residing in Boston and vicinity who are constantly talking of their wonderful pointers and setters, and asserting that they can beat everything and anything, I now make the following proposition to induce them to try their dogs on trial before the season is closed: I will hunt my black setter bitch (Finkney's) against any pointer, setter, or any other dog, on any day, for three to six consecutive days on the Cape, on quail, for from one hundred to two hundred and fifty dollars aside. May, money and dog ready at any time. LEOXARD.

No. 140 Medford, Charlestown, Mass.

A PROLIFIC CANINE.—Mr. Nelson E. Angus, Amherst, Mass., is the proud owner of a bitch which has been the subject of records by bringing forth 18 puppies, alive and healthy, at one litter. The mother is black, a cross between a Newfoundland and St. Bernard, weighs 60 pounds, and is but ten months old, and has been bred to a black and white pointer, the father is an English, black dog, yellow with white breast, is three years old, and weighs about 35 lbs. The litter consisted of 11 dogs and 7 bitches, but the latter were killed by the owner after they had lived 24 hours. The eleven remaining are all smart and active and are doing well. The mother was excited considerable curiosity among local dog men, none of whom ever heard of so large a litter before.—B.

[This is a very large litter, but our correspondent is mistaken in calling it the largest on record, as some years ago Mr. Frank Fairbank reared a litter of 21 puppies, 19 of which were pointers, 2 of which were whelps, 19 the first and 21 the next. We have also recorded in these columns other instances where the number equals or exceeds the litter of Mr. Angus' bitch.]

IMPORTATION OF SMALL COCKERS.—We understand that Mr. J. H. Winslow, of Baltimore, has recently received from England a brace of black and tan cocker spaniels. They are said to be of the old-fashioned breed, and are very pretty and attractive.

The dog, Sontag, is black and tan with white on brislet, and weighs about 16 lbs., while the bitch, Gink Baby, is black and tan and weighs 12 lbs. The dogs are full of heart, and it will be interesting to see whether they are two small for work. We shall hope to hear from their owner on this point.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be printed in **PLAIN LETTERS**, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which it belongs, whether pointer, setter, or bulldog. A careful study of the notes in this number of the paper will show just what is wanted. Our aim is to have everything correct; but until contributors will take the necessary trouble to conform to the above request we cannot answer for the mistakes that may occur.

NAMES CLAIMED.

Sontag—By Mr. J. H. Winslow, Baltimore, Md., for small imported black and tan cocker dog by litter out of Gypsy.
Gink Baby—By Mr. J. H. Winslow, Baltimore, Md., for small imported black and tan cocker bitch by Nip out of Whisky.
Norfolk Jack—By Mr. J. H. Winslow for imported liver and white Norfolk spaniel; pedigree unknown.
Blacky—By Mr. J. H. Winslow for liver and white field spaniel dog puppy by Norfolk out of Hazel Kike.
Madison, **Blair**, **White**—By Mr. J. H. Winslow for liver and white field spaniel bitch puppy by Norfolk Jack out of Hazel Kike; also claim for liver and white bitch puppy, same parentage; also Linda for liver and white bitch puppy, same parentage.
Princess Fan—By Mr. J. H. Winslow, Baltimore, for red Irish setter bitch puppy by J. H. Stromeberg's Heia (Elcho)—Lady Palmerston out of Reckless (Elcho's Duke)—Tailor's Filly. Fan was whelped May 14, 1881.
Grouse—Claimed by Mr. E. A. Dawson, of Moshannon, Pa., for his Gordon setter pup, whelped March 19, 1881, by Aileen's Glen out of S. C. Hester's girl.
Burt Royal—Claimed by Mr. Henry Grafton, Rosendale, Wis., for his Bully pointer, whelped July 4, 1881, by Champion Ranger (Elcho's) out of Gypsy (St. Louis Kennel Club's Champion boy-Duke's) counties Royal.
Dan—Claimed by G. T. Wells, Faulkner's, Mass., for red Irish setter dog, whelped June 23, 1881, by imported Max out of owner's Fannie (Druck Hatterick's) Bridget Queen.
Fritz—Claimed by Mr. Geo. H. Woodbury, Newport, N. H., for liver and white cocker dog pup out of Champion Feather by Bragg.
Boys—By Wm. E. Louden, Reading, Mass., for his Gordon setter dog puppy, whelped Oct. 13, 1881, by Mr. W. B. Long's Billy (Reed's Duke Snow's) Sadio out of Mr. M. Labeley's Minnie (Barry's Captain—Shirley Maroon).
Glenn—By Mr. W. L. Jarvis, Jamaica, L. I., N. Y., for black and white Gordon setter dog, whelped Jan. 6, 1881, by Edward Johnson's Leah, out of Stephen's girl.
Scott—Claimed by Mr. H. D. Chauncey, Midland Park, N. J., for black and white ticked setter dog pup, whelped July 23, 1881, by Mr. J. H. Atwell's girl (Elcho's) out of S. C. Hester's girl, and Rogers, Bridge Hampton, L. I., out of Mr. E. L. Miles' Topsy (Hodman's) Dash and J. P. Jones' imported Nellie strains.
Scotty—By Mr. J. H. Russell, New York City, for his liver and white pointer dog pup, by Mr. A. C. Blunt's 1, out of Mr. W. S. Albert's Blanche.
Clara—Claimed by Mr. J. A. Middlebrook, Bridgeport, Connecticut, for brown and white pointer dog, whelped June, 1880.
Ray—Claimed by Mr. L. Reynolds, New York City, for black, white and tan setter bitch, by Mr. H. H. Raymond's Guy Manning, out of same owner's girl.

BRED.

Queen—Mr. Edward Odell's (New Orleans, La.) pointer bitch Queen, formerly known as Munson's Queen, was bred October 16, 1881, to St. Louis Kennel Club's boy.
Daisy—By Mr. J. H. Winslow, Baltimore, Md., for liver and white setter bitch (Mason's) Dora—Copeland's (Sue) to F. B. Fay's champion, Coin (Hose)—Leicester.
Henrietta—By Mr. J. H. Winslow, Baltimore, Md., for liver and white setter bitch (Mason's) Dora—Copeland's (Sue) to F. B. Fay's champion, Coin (Hose)—Leicester.
Gink Baby—By Mr. J. H. Winslow, Baltimore, Md., for small imported black and tan cocker dog Sontag.
Juno—By Mr. A. S. Agar, of New York, on Nov. 4, his black and white bitch Juno, imported July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Rays—By Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Ray, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Toronto Bess—By Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Bess, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Clara—By Mr. J. A. Middlebrook, Bridgeport, Conn., for brown and white pointer dog, whelped June, 1880.
Ray—By Mr. L. Reynolds, New York City, for black, white and tan setter bitch, by Mr. H. H. Raymond's Guy Manning, out of same owner's girl.

PRESENTATIONS.

Tribe—By Mr. J. H. Winslow, Baltimore, Md., to Hon. Ossian Ray, Lancaster, N. H., the liver and white field spaniel dog puppy Trix (Norfolk Jack)—Hazel Kike.
Elcho—By Mr. J. H. Winslow to Mr. John Lytle, Waverly, Md., the field spaniel bitch puppy Elaine (Norfolk Jack)—Hazel Kike.
Elcho—By Mr. J. H. Winslow to Mr. John Lytle, Waverly, Md., the field spaniel bitch puppy Elaine (Norfolk Jack)—Hazel Kike.
Linda—By Mr. J. H. Winslow to Mr. Carlos Fox, Baltimore, the field spaniel puppy Linda (Norfolk Jack)—Hazel Kike.

WHIPPED.

Daisy—By Mr. J. A. Agar's (New York) imported bitch Daisy, whelped July 23, 1881, by Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Ray, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Toronto Bess—By Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Bess, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Clara—By Mr. J. A. Middlebrook, Bridgeport, Conn., for brown and white pointer dog, whelped June, 1880.
Ray—By Mr. L. Reynolds, New York City, for black, white and tan setter bitch, by Mr. H. H. Raymond's Guy Manning, out of same owner's girl.

SALKS.

Champion—By Mr. W. T. Morgan, of Bellows Falls, Vt., was purchased of the Riverside Cocker Kennel, Charlestown, N. H., a liver and white field spaniel dog, whelped July 23, out of Champion Feather, by Champion Bragg.
Leah—By Mr. P. A. Dufferend, Lancaster, Pa., to the Congesta Kennel Club's (Lancaster, Pa.) imported black and tan setter bitch Leah (Ray)—Lily H. aged 2 years and 9 months.
Kate Dawson—By Mr. L. H. Smith, of Stratford, Ontario, to the Congesta Kennel Club's (Lancaster, Pa.) imported black and tan setter bitch Leah (Ray)—Lily H. aged 2 years and 9 months.
The Sun—By Mr. J. H. Smith, of Stratford, Ontario, Canada, to the Congesta Kennel Club's (Lancaster, Pa.) imported black and tan setter bitch Leah (Ray)—Lily H. aged 2 years and 9 months.
Lady Glen—By Mr. T. H. Allen, Brooklyn, N. Y., to Mr. K. H. Bielefeld, of the same city, his black and tan setter bitch Lady Glen (Athen's Glen)—Lily H. aged 2 years and 9 months.
Tribe—By Mr. J. A. Agar's (New York) imported bitch Daisy, whelped July 23, 1881, by Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Ray, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Toronto Bess—By Mr. W. B. Wells's (Orange, N. J.) imported pointer bitch, Bess, to Wm. E. Louden's (Reading, Mass.) girl, whelped July 23, 1881, to his imported Nelson (E. K. C. S. B. 943).
Clara—By Mr. J. A. Middlebrook, Bridgeport, Conn., for brown and white pointer dog, whelped June, 1880.
Ray—By Mr. L. Reynolds, New York City, for black, white and tan setter bitch, by Mr. H. H. Raymond's Guy Manning, out of same owner's girl.

Ayrshire Laddie—By Mr. J. Lindsay, Jersey City, N. J., to T. F. Durant, Esq., New York, a Scotch collie dog pup, 3 months old, out of Mooney, by Ayrshire Laddie.
Leicester—By Mr. J. W. Foster, of New York, to Mr. F. H. Andrews, Charlotte, N. C., the lemon and white Li-whell setter bitch Leila (Leicester)—Kitty in whelp to champion (Lancaster).
Heia—By Mr. J. H. Stromeberg's (Heia) Elcho—Lady Palmerston out of Mr. F. H. Herbert's (Howard county) Reckless (Elcho's Duke)—Lily H. aged 2 years and 9 months.
Sport—By Mr. W. H. Reede, of Lynn, Mass., has sold his black, white and tan beagle dog, Sport, to Mr. F. H. Stromeberg, of the same city.
Princess Fan—By Mr. J. H. Winslow, Baltimore, Md., to Mr. W. M. Boutwell, Chelsea, Mass., a red Irish setter bitch puppy, whelped June 23, 1881, by imported Max out of Fannie (Druck Hatterick's) Bridget Queen; also Mr. C. P. Wells, Boston, Mass., red Irish setter bitch, whelped June 23, 1881, same litter; also to Mr. George B. Walker, Chicago, Ill., red Irish setter dog, whelped June 23, 1881, same litter; also to Mr. H. J. Jones, Medford, Mass., red Irish setter dog, whelped June 23, 1881, same litter; and to Mr. H. Amers, Chittenden, Mass., red Irish setter bitch, whelped June 23, 1881, same litter.

DEATHS.

Billy—Dr. L. S. Nevill's imported black cocker spaniel Billy, Cause, after a long illness. Autopsy proved no lesion, nothing abnormal in any of the viscera or brain.

NAMES CHANGED.

Kate Dawson—By Mr. J. W. Foster, of New York, to Mr. F. H. Andrews, Charlotte, N. C., the lemon and white Li-whell setter bitch Leila (Leicester)—Kitty in whelp to champion (Lancaster).
Heia—By Mr. J. H. Stromeberg's (Heia) Elcho—Lady Palmerston out of Mr. F. H. Herbert's (Howard county) Reckless (Elcho's Duke)—Lily H. aged 2 years and 9 months.
Sport—By Mr. W. H. Reede, of Lynn, Mass., has sold his black, white and tan beagle dog, Sport, to Mr. F. H. Stromeberg, of the same city.
Princess Fan—By Mr. J. H. Winslow, Baltimore, Md., to Mr. W. M. Boutwell, Chelsea, Mass., a red Irish setter bitch puppy, whelped June 23, 1881, by imported Max out of Fannie (Druck Hatterick's) Bridget Queen; also Mr. C. P. Wells, Boston, Mass., red Irish setter bitch, whelped June 23, 1881, same litter; also to Mr. George B. Walker, Chicago, Ill., red Irish setter dog, whelped June 23, 1881, same litter; also to Mr. H. J. Jones, Medford, Mass., red Irish setter dog, whelped June 23, 1881, same litter; and to Mr. H. Amers, Chittenden, Mass., red Irish setter bitch, whelped June 23, 1881, same litter.

SOME OLD JOKE.—Under the caption "Fraternities" the Baltimore Sun records that "A party of Centerville sportsmen surrounded a flock of geese and shot three of them before they discovered them to be tame geese."

The New York Evening Express records that: "Are the squirrels very thick this year?" asked a New York man of a returned hunter. "Well, yes," said he, reflectively; "the one I got was very fat."

THE NONPAREIL SPORTING CLUB will hold a club shoot at 1 Fitzroy House's Half-Mile track, on Saturday the 16th day of December, 1881, 2 p. m.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MILITARY GALLERY SHOOTING.

NEW YORK, DEC. 2, 1881.

Editor Forest and Stream: I object when you say that a team of four to meet the Irish in a gallery match cannot be gotten together to shoot "off-hand." Now, am a member of Company B, 12th Regiment, N. G. S. N. Y., and have participated in both Forest and Stream tournaments, and shot off-hand in both. Now, I don't profess to be a duffer, but a fair off-hand shot, and I can bring six men (four are better) who can shoot as well as I can. They think I am a good shot, and I think I am. I believe in a match the four men can make 900 points in 1,000, maybe more. They are used to the globe and peep and six-pound pull. I forward condition of a match now being shot by us.

The range is 151 ft. from the target to the firing point; the target reduced from 300 Greenhead to 50 yds., 2 inch bull. The rules used are: 25 shots, 25 yds., 25 shots, 25 yds., 25 shots, 25 yds., and 6 yds. 10 in. Considering the light is not of the best, the scores of from 30 to 35, are very truly out of a no-shoot 25, are not bad. The majority of the company shoot off-hand. We are not ready for any company of the National Guard, with the Gallery rule.

Lottery Match.

To be shot every Friday evening on conclusion of company drill by members of Company B, 12th Regiment, N. G. S. N. Y., commencing October 1, and closing January 1, 1882. The conditions made the match open to all members of Company B, 12th Regiment, N. G. S. N. Y., who were present at the company drill on any Friday evening, and who were not permitted, but only the best score of any competitor for any night to count, but 5 best scores of 5 nights to form aggregate to pin handicap of the company. All who have since the first day of Oct., 1881, made the following score:

25 shots is handicapped 5 points.

24 in 1 shots or 25 in 5 shots is handicapped 4 points.

23 in 1 shots or 24 in 5 shots is handicapped 3 points.

22 in 1 shots or 23 in 5 shots is handicapped 2 points.

21 in 1 shots or 22 in 5 shots is handicapped 1 point.

20 in 1 shots or 21 in 5 shots is handicapped nothing.

19 in 1 shots or 18 in 5 shots is allowed 1 point.

18 in 1 shots or 17 in 5 shots is allowed 1 point.

17 in 1 shots or 16 in 5 shots is allowed 1 point.

16 in 1 shots or 15 in 5 shots is allowed 1 point.

15 in 1 shots or 14 in 5 shots is allowed 1 point.

14 in 1 shots or 13 in 5 shots is allowed 1 point.

13 in 1 shots or 12 in 5 shots is allowed 1 point.

12 in 1 shots or 11 in 5 shots is allowed 1 point.

11 in 1 shots or 10 in 5 shots is allowed 1 point.

10 in 1 shots or 9 in 5 shots is allowed 1 point.

9 in 1 shots or 8 in 5 shots is allowed 1 point.

8 in 1 shots or 7 in 5 shots is allowed 1 point.

7 in 1 shots or 6 in 5 shots is allowed 1 point.

6 in 1 shots or 5 in 5 shots is allowed 1 point.

5 in 1 shots or 4 in 5 shots is allowed 1 point.

4 in 1 shots or 3 in 5 shots is allowed 1 point.

3 in 1 shots or 2 in 5 shots is allowed 1 point.

2 in 1 shots or 1 in 5 shots is allowed 1 point.

1 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

0 in 1 shots or 0 in 5 shots is allowed 1 point.

taking plenty of water over the bows yet the crew, perched to windward, remained perfectly dry. In such weather a sloop would not only drown every one on it, but she could not begin to sail with her easier sister, and would soon give up an attempt to make a passage in disgust or from sheer inability to earn anything to windward.

MAKE IT TONS.

THE New York Yacht Club has the most rational measurement rule of any club in America or abroad. No exception can be taken to its basis, which is sound from a scientific point of view. The rule gives great satisfaction, and is now accepted as the best and most logical yet put into practice even by those who were inclined to be skeptical of its lasting qualities. We hear no complaints among the members about unfair workings of the "cubical contents" rule, and all seem satisfied to abide by the results of the club matches without believing them unfairly affected by allowances granted on differences of bulk. As is generally known, the club measures the actual size of its yachts to the outside of the skin, everything included, and expresses this bulk in cubic feet.

We now desire to call the club's attention to the advisability of adopting the ton as the unit instead. Theoretically it is the same thing: the sound basis is not touched by the alteration counseled, but much simplicity of expression is attained, serving to make the rule more popular in its scope, and therefore more acceptable in every day use.

It is next to impossible for any but the most studious to remember the cubical contents of a fleet when the figures run up into four places and thousands, hundreds, tens, etc., form an avalanche of numerals enough to make the casual observer quail at the attempt of ever obtaining the run of the sizes of yachts engaged in the matches or cruises. Most owners cannot swear to the contents of their own boats, and often consult the club pamphlet for information about competing flyers they have sailed a score of races with. As the rule now stands, the results lack sufficient tangibility to commend it for adoption by sister clubs as readily as its merits really warrant. To make the results of the measurer's work more clearly defined—to give quicker identity to the sizes obtained—the "ton" should be adopted as the unit. This can be easily done by dividing the number of cubic feet by 100, and counting fractions by quarters only. As an illustration, consider the *Gracie Mather*, Fanny, Hildegarde and the *Atlanta*. In cubic feet they rate 4,692, 3,252, 4,200, 3,836 and 3,568 respectively. In tons they would come to the start as simply 47, 32, 42, 38, 35 and 35, respectively. Not only are the latter easily committed to memory, but their relative magnitude is seen at a glance, while the first long-

winded string needs paper and pencil or a lightning calculator's head to perform the divisions leading to the same end. With tons as the standard a clearer conception of the merits of a race will force itself intuitively upon the chronic and the spectator, who now too often lose sight of difference in size because the figures in which it is put convey no distinct meaning without more effort of the brain than they care to bestow. From a sentimental point, also, preference should be given to the ton. It is a nautical unit, sanctified by the halo of ages, while cubical contents smacks of the landsman's laboratory or the youngster's class-room.

YACHTING NEWS.

PORT JEFFERSON.—We give below a complete list of the yachts now laid up in this port—Their names, tonnage, measurements, owner's name, the clubs to which they belong, and the names of their sailing-masters: *Sloop Rambler*, 137, H. W. Thomas, N. Y. Y. C. Geo. M. Dayton; *sloop Dreadnought*, 125, A. W. Nickerson, Eastern, John H. Smith; *sloop Fleeting*, 124, R. S. Elliot, N. Y. Y. C., J. R. Picher; *sloop Wanderer*, 91, E. D. Morgan, Jr., Atlantic, H. E. Vreney; *sloop Vega*, 92, H. C. Lea, Eastern, S. T. Davis; *sloop Albion*, 56, E. W. Humphreys, N. Y. Y. C., Geo. W. Dayton; *sloop Syria*, 55, Geo. H. Chase, no club, Chaucery Edwards; *sloop Tigra*, 28, J. F. Nickels, N. Y. Y. C., P. Klinger; *sloop Osprey*, C. A. Stevens, N. Y. Y. C., Jas. Horton; *cutter Vander*, 25, Arthur W. Blake, N. Y. and Eastern, S. H. Davis; *cutter Muriel*, 9, E. D. Morgan, Jr., N. Y. Y. C., H. Creve; *sloop Alice*, 33, Thos. G. Appleton, Eastern, Wm. Lockwood; *sloop Orion*, 22, Edward Cooper, N. Y. and Atlantic, C. W. Darling; *sloop Triant*, 24, F. C. Fleming, Larchmont, Jas. Darling; *sloop Weona*, 25, Jerome Silvers, Atlantic, R. J. Darling; *sloop Clurey*, 10, Oscar B. Smith, Larchmont, Chas. Rogers; *sloop Whirl*, 10, — Smith, C. Rogers; *sloop Syron*, 8, P. B. Hawkins; *steamer Promise*, 43, Daris Johnson, no club, John Hulst. It will be seen that the importance of this harbor as a place for winter quarters of this class of vessels is beginning to be understood and appreciated. Each winter increases the number brought here, as the advantages become more widely known. The increased depth of water in the entrance has enabled yachts drawing fourteen feet of water to enter with safety. Once inside, is a land-locked basin nearly two miles long by three-quarters of a mile wide, of excellent holding bottom, free from rocks and shoals, of ample depth, so that vessels may lie at anchor at all times of tide with no liability from collisions, and entirely free from running the gauntlet of the adverse winds and waves, and, by the way, the convenience for making repairs and fitting up in the spring. All

classes of artisans necessary to do the work are here, to be had at reasonable prices, so that the yachts may go from their anchorage in complete order for the use of their owners.—*Port Jefferson (N. Y.) Leader*.

BULK MEASUREMENT AND SKIMMING DISHES.—One argument against bulk measurement has been its supposed tendency to produce flat skimming dishes, the assumption having been that, bulk for bulk, such forms had been demonstrated to be much faster than any other. This assumption arose from the current belief that our wide and shoal American yachts were, as a class, faster than the deep and narrow boats of British origin. This presumption has ended in smoke, however, for the Mads have given us living proof that deep boats of proper form are every bit as fast as those of shoal hull, besides being invulnerable in other ways.

Bulk measurement need not be feared on this score. Deep, safe ships will flourish under a bulk rule for time allowance as soon as their merits are understood and appreciated.

ARE RICE LAKES OBSOLETE?—*Editor Forest and Stream*: The owners of Rice Lake boats are very glad to learn from your issue for Dec. 1 that the distinguished canoeist, "The Statesman," gives the public data whereby the popularity of canoe types may be judged. If, out of sixty canoes, twenty-one were Rice Lakers, and if this figure demonstrates that the type is "practically obsolete," I would like to know how many "Shadows" were present at Lake George, so that I may learn what percent represents unquestionable popularity for a canoe type. Probably a typographical error will be pleaded in extenuation, but that everybody knows is a lame excuse where personal interest comes in, as in the case of "The Statesman." Certainly two-thirds of the canoes present at a general Congress are tolerably fair showing for an "obsolete" type. THE COMMODORE.

PERSONAL.—Mr. John Harvey, of Harvey & Prior, London, England, has arrived in this city on a visit for his health. His partner, Mr. Prior, will attend to affairs during Mr. Harvey's stay in America. Mr. Harvey thinks Englishmen care too little about the America Cup to risk a match under our rules. In this we hope he is mistaken. It proves, however, the folly of tinkering with the deed, thereby producing a feeling about that a fair match cannot be obtained.

CUTTERS.—The New York *Herald* has followed up its first article on cutters by another excellent one last Monday. For a clear and impartial review of the question of type the *Herald's* article is worth a study by all its contemporaries.

CANOES.—WILL BE INTERESTED.—In the "Chapters from a Book" which are now running in the Sportsman Tourist columns of the *Forster and Straus*.

FINE HAND-MADE REELS.

All these reels are made with best quality screws, so that they can be taken apart if necessary. Any of these reels may have either clicks or drags added, or be nicked at 50 cents for each addition:

J. & W. TOLLEY,
Patentees and Manufacturers,
Pioneer Works, Birmingham, England.

We now offer a full line of ENOS JAMES & CO.'S Superb Breech-Loaders. What is the use of paying an absurd price for a gun made by some old maker when you can get a JAMES' Gun as good or better for half the money? Or what is the use of buying a gun bearing either a fictitious name or no name at all, when you can get one of ENOS JAMES & CO.'s guns with their name and guaranty for the same price?

We are sole agents at New York for the Colt Club Gun.

We offer a small JOB LOT of the famous Webley guns of all sorts at about half price.

Also a few choice Parker guns of latest style at special rates. Address
H. & D. FOLSOM,
P. O. Box 1,111. 30 WARREN ST., NEW YORK.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INSTRUCTION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the *FOREST AND STREAM* point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The *FOREST AND STREAM* will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "*Sportsman Tourist*," "*Game Bag and Gun*," and "*Sea and River Fishing*" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"*Natural History*" will be so conducted as to stimulate observation, investigation and research. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and ichthyology; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"*Fishculture*," edited by a practical and well-known fish culturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "*Kennel*" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "*Rifle and Trap Shooting*" will furnish reports of all important events in the shooting world. "*Yachting and Canoeing*" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the *FOREST AND STREAM* is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the *FOREST AND STREAM* a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the *FOREST AND STREAM* that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

BOUND VOLUMES.

The weekly issues of the *FOREST AND STREAM* form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.35) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. To clubs of three or more, \$3 each.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

III.—ADAPTED TO THE TASTES OF ALL.

Among the hundreds of correspondents of the *FOREST AND STREAM* are Business Men, Lawyers, Physicians, Clergymen, Army and Navy Officers, Naturalists, Pioneers, Trappers, Prospectors, College Professors, Tourists, Civil Engineers, Artists, Editors of other papers; young men who have not yet struck out for themselves, and old men who have retired; in short, members of every trade, profession, and occupation.

Farmers and Farmers' Boys constitute a large class of our readers. They will find the *FOREST AND STREAM* ever disposed to reconcile the seemingly conflicting but really identical interests of respectable sportsmen and reasonable land-owners.

IV.—INDEPENDENT.

The position of influence now occupied by the *FOREST AND STREAM* imposes upon the paper responsibilities which it has no wish to shirk. The organ of no clique, it will be perfectly free to criticize everything inimical to the interests of the highest and manliest sportsmanship. Its attitude on all important questions within its field is well understood. For the benefit of advertisers and readers alike, it will also, as in the past, expose and denounce all dangerous frauds. Advertisements of doubtful character will not be admitted to its columns on any terms.

V.—COURTEOUS.

The *FOREST AND STREAM* will have no room in its columns for personalities and bickerings. Its editors have neither taste nor time for "mud throwing." They do not share the opinion, held by some other journals, that blackguardisms and indecencies are essential characteristics of a sportsman's paper. Readers who want that sort of thing must look for it somewhere else than in the *FOREST AND STREAM*. *Verbum sap.*

VI.—BROAD IN SYMPATHY.

The *FOREST AND STREAM* will ask for, and strive to win, the continued support of readers in every part of the country. It never has been narrow in spirit; nor has it ever held itself up as the organ of any one "section." The paper is, and will be, *American*, in the broadest, highest and best meaning of that term. Every State, Territory and Province on the Continent, with many foreign countries beyond, are represented in our list of contributors and subscribers. The very wide geographical distribution of the friends and correspondents of the *FOREST AND STREAM* is a sufficient guarantee of the variety and excellence of its contents.

Literally and figuratively it is true that

Wanted.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE GRAYLING season begins May 1 and ends Sept. 1. The TROUT season opens June 1 and ends Nov. 1.

BLACK BASS, BLUE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1892 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at our dock.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide and handily illustrated book of 100 pages free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass' Agent,

Grand Rapids, Mich.

EAGLE HOTEL.

(Altitude, 2,350 feet.)

ASHEVILLE, WESTERN N. C.

L. L. BASSELL, PROPRIETOR.

Open the year round. Rooms with open fireplaces. Some few stoves. Finest scenery in the U. S. Average winter temperature, 37° below. No better climate in the world. Send for circular.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines extend CONTINUOUSLY FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Comp'y

also reach the best localities for

Gunning and Fishing

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the lowest rates to all the principal cities to KANE, RENOVIA, BEDFORD, CRESSON, RAEBURN, MINNEQUA, and other well-known centres for

Trout Fishing, Wing Shooting and Still Hunting.

Also to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER BIRN AND FEATHER.

L. P. FARMER, Gen'l. Asss. Agent.

FRANK THOMSON, Gen'l. Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, New York wild turkey, ducks, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.
 Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East; and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1891 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

B. W. FULLER,

G. F. & T. A., Richmond, Va.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S Gunpowder Mills, established in 1809, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels; gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle Fg.—"Sea-Shooting."—Ffg. and FFG. The Fg. for long-range rifle shooting; the FFG. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG. fine.

Dupont's Sporting, Mining, Shrapnel and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Violet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Perce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other powder of its kind as equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To clubs of three or more annual subscribers, \$3 each. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 15.

A DISGRACE TO JOURNALISM.—We have never felt called upon to notice the malicious attacks, which certain journals have from time to time made upon the FOREST AND STREAM, or upon individuals connected with the paper. This course has proved so satisfactory that we propose to continue it. We are impelled to make a single exception to it now by our indignation, which all who know the facts share with us, at the nature of certain articles, published as leading editorials, in a New York sporting paper. These articles have been onslaughts upon the character of one individual—he a sick man, on his dying bed. We make this simple statement, that the facts may be understood by the friends of the assailed man and by the public. There is no need of comment. If their own consciences have not already told them, we shall not attempt the unwelcome task of showing the authors of these gross attacks that their impotent attempts to blacken the reputation of a dying man have been outrageously indecent, as brutal as indecent, and as cowardly as brutal—a disgrace at once to journalism and to mankind.

AN ADDED INTEREST attaches to the story of the "Hinkley Hunt of 1818," given last week, from the fact that Garfield's birthplace was just eighteen miles east of the hunting ground; and at the time of his birth the country was still a howling wilderness.

THADDEUS CRANE BANKS.

AFTER a lingering illness, Thaddeus Crane Banks, Business Manager of this journal, died of consumption at his residence in Brooklyn, Wednesday morning, December 14.

It is with the profoundest sorrow and a sense of personal bereavement that we make this announcement. To all in this office, Mr. Banks was much more than a business associate; he was an intimate personal friend, for whom, during the years of our business connection with him, we had come to feel the warmest affection. This feeling had become deepened and intensified by our solicitude for him during the past weeks, after it had become only too evident that his death could not be long averted.

Thaddeus Crane Banks was born at Danbury, Conn., January 5, 1829; and was therefore at the time of his death almost fifty-three years of age. Like so many other successful newspaper men, he had, before entering the publishing world, already achieved a decided success in other fields of labor. He was by profession a dentist, and for more than twenty years held a very high place in his profession in this city. With the unremitting devotion to his work, which was characteristic of the man through all his life, he applied himself so closely that his over-taxed constitution gave way, and his failing health obliged him to surrender the place of distinction which he had attained, and to abandon for the time his office work. He removed to Wallingford, Conn., where he soon won the respect of his fellow-citizens by the public spirit which he displayed; and he was twice sent as representative of his district to the State Legislature.

In 1871 he undertook the business management of the *American Sportsman*, and began its publication at West Meriden, Conn., the editor being the late Wilbur F. Parker. Mr. Banks remained with the paper after its removal to New York, where it was published as the *ROD AND GUN*. In 1877 when the *ROD AND GUN* and the *FOREST AND STREAM* were combined, he continued in business control of the paper; and held the position up to the time of his death. He brought to the exacting demands of newspaper life great business energy, with an unwavering devotion and enthusiasm, which compelled success in whatever he undertook. It is very largely to the untiring labors and the business ability of T. C. Banks that the present position of the *FOREST AND STREAM* is due. His whole thought was given to the paper and its welfare. During the last months of his life, although wholly unfitted for any work, he came daily to the *FOREST AND STREAM* office, overcoming by his determined will-power the weakness of his condition, and through his interest in the paper keeping up his strength and courage. His patient face and silent, gentle bearing among us, touched the hearts of all who saw him, and prompted, almost unconsciously on our part, a feeling of tenderness for our friend.

Mr. Banks had traveled extensively over this country and abroad; and was widely known in newspaper circles, and among public men. He had hundreds of warm personal friends who will mourn his death.

The funeral will be held from his late residence, 453 Lafayette avenue, Brooklyn, next Sunday, Dec. 17, at 2 P. M.

THE CHILDREN'S AID SOCIETY (George J. Coe, treasurer, No. 123 Broadway) has issued its annual appeal for Christmas-time contributions. The appeal deserves, and we trust may receive, a hearty response.

DOG TRAINING.—The sixth chapter of the regular series of articles on this subject now running in our Kennel department is unavoidably deferred until next week.

THE FIELD TRIALS.

LAST week we gave our readers a synopsis of the running at Robbins' Island, from Wednesday morning to the finish. The weather was all that could be desired, and much better than the most sanguine dared to hope for. The attendance, while not so large as we had expected, was very fair, and composed of well known sportsmen from all parts of the country. The character of the work performed by the dogs was, in many instances, superior to anything of the kind that has ever been witnessed at Field Trials in this country. The handlers, with one or two exceptions, worked their dogs in an artistic, as well as sportsmanlike manner; in fact, to our eyes, they were ideal sportsmen, who appeared to be not only conscious of the faults as well as the merits of their own dogs, but who could also see, and were quick to acknowledge, superior merits when shown by their competitors. In very many instances the one who lost the heat would be the first to indorse the decision of the judges.

The Derby brought out a rare lot, and never before, in this country, were so many young dogs shown whose performances would show so high an average. The All-Aged Stakes had many starters who had before appeared in public, as well as a number of new aspirants for fame, and the quality of the work shown would in many instances compare favorably with that of any previous meeting. The judges were particularly fitted for the position, and more competent and fair minded gentlemen it has never been our good fortune to meet. Upon the whole, the meeting was a very successful one, and we congratulate the Eastern Field Trials Club upon the abundant success that has crowned their efforts. We were not a little disappointed that the Members Stake—which should have been the prominent feature of the meeting—did not bring out a larger number of competitors, and after witnessing the magnificent heat between Brock and Bessie, we were more than ever convinced that this event—if properly supported—would do more to popularize these Trials than all the other stakes combined, and we trust that the next meeting will show at least twenty-five starters to compete for the honor of winning the Members Stake.

Of the Louisiana Field Trials not so much can be said. It was the first meeting and the entries were but few in number, and the character of the work was as a whole by no means remarkable. With two or three notable exceptions, the dogs run failed to distinguish themselves. Gordon, however, owned by Mr. McGinnis, has since made for himself an honorable record as the National Trials, and there were other good dogs shown at Amite and Arcola.

The National Trials have brought out what we may call the very best canine talent in the country, and the work done at Grand Junction appears to have been in all respects worthy of praise. Dashing Novice, Boss and Shadow in the Derby, Peep o' Day, Nellie, Breckenridge and Lad in the All-Aged Stakes are all good ones. King Dash has not now to make his reputation as a field dog, nor has Belton III. The Pennsylvania Trials opened on Monday, and with every prospect of being successful. We refer our readers to our Kennel columns for details of the running, which is still in progress. Next week we shall give details of the heats throughout.

REAL OFF-HAND SHOOTING.—The letter from a Worcester rifleman, published last week, represents very fairly the opinion on this whole question of short cuts to high scores. There is too great an ambition to see high figures, and not enough care to see that these stand for excellent personal endeavor. The Englishman who shoots at 200 yards lying on the ground has no right to compare his score with those made on our rifle ranges, where the men stand erect; and so, in only a smaller degree, the score of a man who shoots with the left arm free of the body should take precedence over a record made with the hip-rest. We want a test of men in rifle shooting, and not a gauge of how far clever trickery has been made available.

THE EARL OF DUNRAVEN IN NOVA SCOTIA.—We have received from the Earl of Dunraven a communication in reference to his experience with the Nova Scotia game laws. The letter reaches us too late for insertion this week; it will be published in our next issue.

VICIOUS MILITARY PRACTICE.

IN his work of securing a team of American military shots to compete with the English volunteers at Wimbledon, General Wingate is meeting with some difficulty. It does not seem to be one of men nor of means, but of rifles. Under the delusion that big scores in matches meant good marksmanship, those who shoot military rifles have been gradually turning them into mere shooting machines. Chambers have been lengthened to admit cartridges with heavier charges of powder, special ammunition and special bullets have come into play; trigger pulls have been toned down to nearly the hair trigger point, and then to meet the trials of a balling wind, there have been fine foresights and wind gauges added, until the rough and ready military rifle has become admirably adapted to the production of big scores and as thoroughly unadapted to the wear and tear of a camping life. The men have found that the use of a wind gauge on a rifle was a ready way of receiving high scores, and now when they are brought face to face with the English regulations, which require an untampered military sight, there is a disposition to shuffle out of a match with the English Volunteers.

This is not a desirable position for an American rifleman to find himself in, for the proposed match with the Englishmen entirely out of the question, it shows that our system of practice is defective. Such practice as we have been having is of next to no value in giving our men the drill necessary to make them efficient in the varied circumstances of a soldier's life. Of what use is it to stop at the mere permission to alter the sights? Why not permit more weight in the gun? Why not extend the license of tampering into the fixing of telescopic sights? Pistol-grip, too, would help the piece, if the making of good target records were all that was to be required of it. In short, the weapon may be made such an excellent machine for manufacturing bulletseers as to be useless for any purpose in practical warfare. In how many cases would a soldier find himself so circumstanced as to be able to bring his wind gauge into use? The enemy is not a fixed iron slab at a known distance, and sighting shots cannot be had. Snap shooting is required, and unless the practice on the range leads to excellence in that style of marksmanship, it is little more than a sort of useless sport, very entertaining for those engaged in it, very valuable, but very aimless.

The British rifleman has been falling into short cuts to high scores, and the sight of a soldier standing and shooting from the shoulder is something of a rarity on Wimbledon Common; still there is more reason in this innovation on range practice than in our American failing of turning out big scores at the sacrifice of the very foundation purpose of all work before the butt—the making of men able to hit anything at any rifle range, and to do it on call too.

BYE-WAYS OF THE NORTHWEST.

NINTH PAPER.

NEAR the head of Jervis Inlet and hidden by lofty mountains, which on all sides wall it in, lies Princess Louise Inlet, the gem of all the beautiful inlet country. Bate is grand and majestic, Loughborough is picturesque and charming, and Jervis combines the beauties of both, but the scenery of Princess Louise surpasses that of any of the others. Its entrance is but a few yards in width, and, except at high and low water, the tide rushes along between the stern walls of granite in a rapid of great swiftness. The entrance passed, we caught a glimpse, on either side, of towering hills, and then plunged at once into a twilight, rendered more obscure by a thick white mist which hung low over the water. Out in the main inlet the sun had been shining bright and warm, but here we were in a gloom almost like that of night. Although we were passing along close under one of the banks of the inlet we could not see the trees, whose branches stretched out over the water above our heads, but moved blindly along almost within our length of the shore. The sun does not penetrate this narrow gorge until it is high in the heavens, and there was something very solemn in the darkness and utter silence of the place. The men seemed awed by the strangeness of the situation, and only occasionally spoke, and then in suppressed tones. No sound was to be heard except the regular dip of the paddles. For perhaps an hour we moved on through this mist, and at the end of this time a sudden brightening of the sky above us showed that the sun's rays were beginning to dissipate the gloom. The mist rose slowly, and there appeared, first, the trees on the beach, then, immediately back of them, the piled up rocks which formed the talus at the foot of the precipice, and at last, as the clouds of vapor rolled higher and higher, like a gigantic curtain, the black vertical cliffs and the snow-clad peaks of the mountains. Smooth as a polished mirror, and, like a mirror reflecting with unvarying fidelity the towering heights about it, the inlet was suddenly spread out before us, and its wonderful beauties, heightened by contrast with the recent obscurity, were unfolded to our appreciative eyes. No word was spoken for some little time. The Indians stolidly continued the movements of their paddles, but those of the white men were idle. Immediately before us was a wide basin, which we were entering from a channel less than a quarter of a mile in width. An unbroken line of snow, here close at hand and there miles away from us, patched toward its lower border with occasional masses of dark green or gray, surrounded us to the

north, south and east. Nearer the water's level were the sombre grays or browns of the mountain rock, dark and forbidding. Still further down the slope, the scanty and ill-nourished timber grew in scattering clumps, or by single trees, reaching to the verge of the sheer precipices that overhung the water's edge. To the south and to the east the hills rose sharply and continuously, there being no opening between them until the snow level was reached, but toward the north-east this wall had been broken down, and a wide, but precipitous, valley, the ancient bed of a tremendous glacier, stretched away for miles toward the snowy heights of the interior. Down this valley, among, over and under enormous rock masses, whose harsh and rugged outlines were softened by no appearance of verdure, poured, in a series of foaming falls, a large river, the course of which could be traced far back toward the heights. Here it became no more than a delicate white thread, and at length it was impossible to distinguish it from the snow drifts which were to be seen in every ravine. Still further toward the north, the mountains again become precipitous—overhanging precipices rise from the water's edge, and the rocky slopes which surmount them bear a few trees. Above, extensive snowfields stretch away toward Mount Albert, showing here and there through their whiteness the sky-blue color of some ice river slowly plowing its way down the slope. The rugged and massive peaks of Albert stand clearly out against the blue background of sky, and are flanked by others, not so high but equally impressive. A bare needle of granite rises to the east of the main peaks nearly to the same height which they attain, and still further to the east a towerlike mass, its turrets ornamented with dark green spruces, attains an almost equal altitude.

The enormous cliffs, under whose shadow the canoe passes, are patched with lichens of various colors, so that sometimes the granite looks as if it had been painted. One of a vivid canary yellow, seen on the lower side of the overhanging rocks, catches the reflection of the sun from the water, and brightens the rock to a likeness of hammered gold. Trickling from narrow crevices, the water has carried out from its solution, and given to the granite beautifully shaded tints of yellow, red and brown. Here and there a pale green fern has thrust its roots into a seam in the rock and has spread out its feathery frondage before the cold gray background. Mosses of rich brown, gold color, and velvety green grow wherever they can gain a foothold; the brilliantly-colored rock crevices clasp with its tiny rootlets the cold, hard stone, and the delicate *Campylopus*, undismayed by its arctic surroundings, waves its bells cheerily in the passing breeze. Just here at least there was no want of color. But as a whole the scene was one of forbidding harshness. The absence of any considerable masses of vegetation, the cold gray of the mountains, the presence everywhere of ice and snow, gave to the whole an unspeakable sombreness and gravity. Everything is cold, hard and repelling. There is no warmth, no brightness, and but little life—and yet I think Princess Louise Inlet the most beautiful spot in the world, in its own peculiar way.

The inlet is about four and one-half miles in length, by less than one-half in average width, being narrowest near its mouth and widest at its head. In general terms it may be said to resemble more nearly in its essential characters some of the Norwegian fiords than do any of the other inlets of the northwest coast which I have visited; yet it differs from the fiords of Norway in that from it you have constantly in sight snow and ice-covered mountains.

Like all the others, this inlet was formed by glacial action, and the traces of the ice river which cut this deep channel in the solid rock of the mountains are still plainly visible. During the ages which immediately followed the close of the Tertiary period the whole of northern North America was covered with an enormous ice sheet thousands of feet in thickness. The whole of British America, a considerable portion of the Rocky mountains, all New England and a very large portion of the middle States were for ages buried beneath this frozen mass. In the White mountains the upper surface of this stupendous glacier was at least 6,000 feet above the sea level, while still further to the northward, it is estimated that it was not less than 13,000 feet in thickness. This enormous mass had a general slow, but more or less constant, motion southward—a motion permitted by the now well-known plasticity of ice, and due to the constant pressure of the mass behind. The movement was to the southward, because there the ice was constantly melting and disappearing, while to the north it tended constantly to increase in thickness. To the north there was no escape, for its movement in this direction was blocked by an unyielding ice mass which became more and more thick and immovable as the Pole was approached. Urged on by this ever-increasing pressure, the ice sheet moved steadily southward, creeping up high mountain slopes, and then, when their summits were reached, overtopping them, and pushing its way down on the other side. No better illustration of the movement of such a body can be given than the one employed by Professor Dana, who says: "If stiff pitch be gradually dropped over a horizontal surface it will spread and continue so to do, so long as the supply is kept up; and if that surface rises at an angle in one direction, and there is no escape in any other, it will first fill the space to the level of the edge, and then drop over and continue onward its flow. So glaciers, if the accumulation is adequate, may go across valleys and over elevated ridges."

It has been clearly established that ice has a certain degree of plasticity. Thus, it can be made by simple pressure to copy a seal or mould, like wax. Dr. Kane speaks of a table of ice, eight feet thick and twenty wide, supported only at the sides, which in two months became so deeply bent that its centre was depressed five feet, and this while the temperature was constantly below the freezing point. It may also be made to take the shape of a long cylinder, by pressing it through a round hole. In such cases, even if the ice is broken by pressure, it unites into a clear mass by freezing along the fractures, when their sides are in contact. The glaciers of to-day are the remnants of the ancient ice sheet that once covered the northern portions of both continents. They are simply rivers of ice of varying thickness and extent, having their origin above the level of the perpetual snows, by which they are fed. The grandest glaciers of the temperate zone are those of Switzerland, but one must travel to arctic climes to behold the most stupendous exhibitions of these ice rivers. A glacier, in its origin, consists merely of compacted snow, but as it advances down the mountain side it is gradually changed by pressure into an ice-like mass, and as it reaches a point where there is alternate melting and freezing it becomes truly ice. Now, as we know that the glacier tends constantly to move in the direction of least resistance, and as the momentum of such an enormous mass is something almost inconceivably great, we can see that its course will be in a bed not unlike that of a river. A glacier is an enormous plow, which cuts a furrow both wide and deep. In its course it at once scrapes away all the surface soil and the loose stones, reaching down to the bed rock against which it continually grinds, and wears itself away. The glacier, in its course, takes up and carries with it gravel, pebbles and boulders of different sizes; and these, whether torn away from the sides of the bed, or dropping on to the ice from overhanging cliffs, soon sink through the ice to the bottom. Here they are rolled along, crushed beneath the weight of the superincumbent mass, against or into the rock over which it is passing. In this underlying rock long scratches and scorings are thus made, its irregularities of surface smoothed and planed off, and sometimes its surface highly polished. In glacier regions such surfaces are frequently seen, as well as the smoothly rounded knolls of rock, called *roches moutonnées*, or sheep-backs. The debris carried along in and beneath the glacier is constantly being ground up, like the wheat between two mill-stones, and the water of the stream formed by the melting ice, is charged with the pulverized rock. Such streams are, therefore, usually more or less milky in color, and can be recognized by this character far away from their source. The water of Bute Inlet, down to and beyond its mouth, has this peculiar character, and thus warned us of the glaciers near its head long before we came within sight of them. At the lower extremity of the glacier are vast heaps of earth and stone, deposited there by the melting ice. Such heaps are called terminal moraines. Some of the stones in these moraines are of great size, and very many of them bear the scars and scratches, which tell plainly the story of the hard knocks to which they have been subjected since they were first torn from their beds.

Everywhere along the cliffs of the inlets the marks of the erosive force of the old glaciers had been visible, but they were nowhere better seen than on Princess Louise and Jervis Inlets. High upon the rocks the deep scorings appeared: long continuous scratches, which told of the slow passage of some enormous mass of rock, held by the ice close to the wall-like side of the channel, and pressed against it with a force, of the magnitude of which we can form no conception; smooth rounded depressions showing where a mass of granite had been held, and slowly turned over and over until it had excavated a hemispherical cavity eight or ten feet wide, and nearly as deep; and down near the water's edge flattened rounded surfaces, smoothed and polished by the prolonged friction of the ice. At the mouth of Princess Louise is a low rock, rising ten or twelve feet above the water, on which are half a dozen parallel horizontal grooves, two feet or more in depth, and extending along its whole length. The cliffs on the north-west bank of Jervis Inlet, above the mouth of Princess Louise, are everywhere smoothed and ground away by the action of the ice. The scorings, which are constantly seen, are often of great length, and from four to six feet in height. Many of them curve very gradually, and they are often scimitar-shaped, and terminate in a rounded depression. Opposite Moorsam Bluffs is a long, low point, on which the ice markings are admirably shown. The rock rises from the water at rather a steep incline in a series of steps, showing the *roches moutonnées* on a gigantic scale. The granite is blackened with a growth of lichen, and from the crevices in it spring mosses undergrowth and some small pine timber. The enormous masses of rock look like the backs of so many sleeping elephants.

At the head of Jervis Inlet is a small camp of Hanehtchin, or Hanehtsin, Indians. The only man at the village was an old fellow whom we found mending his canoe on the beach with a stone hammer of most primitive type, and who could speak neither Chinook nor any other language at the command of the members of our party. We held animated dialogues with him, in which the burden of our speeches was an inquiry as to whether he had either potatoes or salmon to sell. What he replied will ever remain a mystery. Hanehtsin, who was the orator of the day on our side, would hopelessly reply, after hearing the old man through: "Wake nibe kumtun mika oahwah," (I don't understand your language).

At last, in despair, some one caught up a potato and threw it at the old fellow, and as he picked it up it was beautiful to see his perplexed expression clear away and the light of intelligence and satisfaction irradiate his countenance. He shouted a series of orders to the *Klutchmans* at the houses, and we soon had a lot of excellent vegetables at the cauc. I purchased here a two-pronged salmon spear, which I thought might prove useful later, as the fish were now running up into the fresh-water streams in considerable numbers. We camped a mile or two down the inlet, and as we were about to start next morning, we received a visit from the *Stivashes*, who brought some more potatoes and a lot of salmon just taken from the water. They also brought a *potlatch* of berries, presumably in return for a piece of tobacco that I had given the old fellow the evening before. From here two days run brought us to Twin Falls on Ithoam Sound, near the foot of which we camped. These falls are by measurement of the Professor's aneroid barometer 1,510 feet in height. They are much more impressive when viewed from the water at a distance of a mile or two than when seen from a point nearer at hand. The enormous timber obscures the view when the falls are approached too closely, and although you are deafened by their roar only an occasional glimpse of the water is to be had. The river which supplies them flows from a depression on the top of the mountain, and just as it leaps over the cliff is divided into two streams by a large island. A great body of water passes over the fall, the river being a very considerable stream. We estimated the first leap of the water at 500 feet clear, the succeeding ones being less high, perhaps from 300 down to 150 feet.

The next morning we made a late start, and before moving I spent an hour or two leaning over the side of the canoe and watching the occupations of the different marine animals which were moving about at the bottom of the shoal water near the shore. There were hundreds of little crabs, the largest about the size of a silver half dollar, clambering about like so many goats over the rocks, and apparently feeding on the vegetable matter that grew upon them. They walked slowly about plucking the food with their curiously swollen white claws, using the right and left alternately, so that while one was holding the food to the mouth, the other was gathering a fresh supply. They seemed wholly absorbed in what they were doing, their jaws moved continuously, and altogether they had a most business-like and methodical aspect. The largest of these animals were of a deep purple color, while the smaller ones seemed to be almost always of a dull grayish green, which corresponded very closely with the hue of the rocks on which they fed, and is no doubt in a measure protective. They seemed to get along very peacefully together, though, once in a while, if a small crab came too near a large one, the latter would make a threatening dash at his neighbor, which would at once retreat with many defensive demonstrations of its claws. Then there were the curved white tubes of the marine worms, fixed to the sides of many of the stones; some of them deserted and empty, while from the mouths of others protruded a cluster of deep, crimson tentacles, the whole looking like some beautiful white-stemmed flower. If the red cluster was cautiously approached and touched, it was instantly withdrawn, and the tube appeared empty. Five minutes later, perhaps, a small spot of red would slowly be noticed far down in the tube, the arms would gradually appear, and resume their flower-like appearance. The barnacles which covered the rocks above a certain line were not the least interesting of the living creatures which were to be seen here. At those stages of the tide when the water did not reach them, the shells remained closed and showed no signs of life; but as soon as they were fairly covered, each little pair of valves opened and the tiny arms were extended and swept through the water with a regular motion, which ceased only when they had grasped some morsel of food which was floating by. When this took place, the arms were quickly drawn into the shell, the valves closed and the animal remained quiescent for some little time. It was interesting, too, to watch the sea urchins or, as they are sometimes called, sea eggs, and the star-fishes as they moved about over the bottom. Both progress very slowly, the sea urchins, perhaps, the more so of the two. The latter advanced by a continuous motion of their long ambulacral spines, and can make journeys of considerable length, though apparently so ill-provided with organs of locomotion. If one be turned over on its back on a flat rock, it can readily right itself by means of the same gradual but continuous movement of the spines. If removed from the water they have a continuous motion of the mouth and soft under parts as though striving to obtain air. These sea urchins are eaten by the crows and ravens, which find them uncovered at low water, and, carrying them up into the trees, remove the soft body by breaking away the shell about the ventral aperture. These shells I have found thus broken on the ground in the forest, half a mile from the water's edge, and often covered with the long white Spanish moss. The star-fishes move much more rapidly than the sea urchins. They progress mainly by means of the suckers with which their arms are provided, but also to some extent by hooking their arms around the angles of the rocks and thus pulling themselves forward for short distances. These animals are found along this coast in great abundance and variety. I saw them black, brown, yellow, orange red and purple, and ranging in size from the diameter of a five-cent piece up to ten inches. They seemed to be most abundant just about low water mark, though by

no means confined to any particular depth. They are frequently seen clinging to the rocks where they have been left bare by the tide, and when a great cluster of the large red or purple ones are seen collected in an angle of the rock against the shining black mussels and the brown seaweed, the effect is very pretty. In Princess Louise Inlet we saw in the early morning great numbers of the smaller starfishes clinging by one or at most two arms to the rocks, it being then low water, and these, whether from cold, or whatever other cause, appeared to be half dead and were shrivelled up and stiff. When placed in water, however, they soon revived and became apparently as well as ever.

From our camp at Twin Falls our course for a few miles was southeast, and passing between Captain and Nelson Islands, we entered Agamemnon Channel, and early in the afternoon came out into Malaspina Straits. A fresh breeze was blowing and, as it was fair, we made sail and bowled swiftly along, camping at evening on the mainland a little beyond Merry Island. Our next camp was on Bowen Island, where we were nearly burned out. We had been looking vainly for a good spot to camp and, at last, in default of anything better, had pitched upon a little bay, full of driftwood, but where we could at least be certain of water. The rocks rose steeply from the water's edge and we were obliged to make up our beds on the beach, not feeling at all sure that the rising tide would not disturb us before morning. We found a little level spot where there was barely room enough for four to sleep, and spread our beds here, the camp fire being made against a large drift log near at hand, and as we were all pretty tired after our long day's pull we went to sleep soon after supper. How long afterward it was that I was awakened by the sound of rushing water I do not know, but when I looked out from under my blankets I saw the great log glowing like a furnace, and Charley, very lightly clad, dashing water over it at a great rate. It was soon extinguished and our only loss was some of the kitchen utensils, but had it burned a little longer our blankets would have been scorched and we ourselves would have been thoroughly warmed. Yo.

The Sportsman Tourist.

IN THE "MASH"—CONCLUDED.

WHEN the Captain awoke it was not yet daybreak, but the Hermit of the Marsh was already astir, and the fumes of hot coffee and bacon were borne to the Captain's olfactorys. After a hurried wash at the river the breakfast was dispatched, and preparations were made for a try at the ducks. The Captain found in the pen were shot with a "shot," to which was attached to a cord for anchoring them, and then placed in the bow of the duck-boat; the two men with the guns, accompanied by a single dog, embarked, and the light, shallow craft was pushed off.

"Here we are," said John, after they had poled through the marsh a short distance.

"But where is your blind?"

"I will show you when the stools are out. Put the big one on the outside, so—anchor. First. Now t'other, not so near, or they'll get tangled. Put the mallard drake in the corner and string the others well out. Now for the blind."

The blind was a marvel of architecture, built of marsh flag and large enough for the boat to be drawn within it. The opening at which the entrance was made was closed up by an ingeniously constructed mat of flag, plated together, so that the shooters were wholly concealed, while from without it presented a similar appearance to the surrounding morass.

"There comes a bunch of ducks," said the Captain, as the first gray streaks in the east made the surrounding region visible.

"Them's blue-bills," said the hermit; "they won't stool to live decoys. They alius fly before the other ducks do in the mornin'."

Soon a large flock of black-duck came working up the river. The stool ducks instantly set up a loud calling, and the flock in the air swerved from their course and swooped down to join their supposed friends. As they wheeled up wind to alight two reports came from the blind, and then two more, and seven fine birds floated helplessly in the water, while a cloud of feathers sailed off with the wind over the marsh.

"A lucky shot," said the Captain.

"Humph! ort to get more out o' that bunch. How much lead you shootin'?"

"An ounce and a quarter."

"Better put in half an ounce more. Them on your side carried off all you give 'em."

"But half an ounce more would kick me out of the boat."

"No business to have such a pop-gun, then. You can't shoot ducks with less than ten pound of iron, and no use to try."

Just then a solitary blue-bill skimmed by at a good sixty yards' distance, and the Captain, drawing a quick sight, pulled trigger, and, as if to disprove his companion's words, the duck fell to the water, stone dead.

"Humph!" growled the hermit; "accidents don't prove nothin'! I can drop ten twice that long by puttin' my shot into a linen rag and poundin' it home tight. But I can't do it every time, and the man don't live high Mosquito Pint that can."

Several more difficult shots were accomplished by the lighter gun, however, and the old man finally admitted that it was "a powerful good gun for a pop-gun." At length, with two dozen birds in the boat and several lying wounded among the grass, the latter being afterward brought to bag by the sagacity of the retriever, the Captain declared himself satisfied with the sport, and the boat was poled back to the shanty.

As several miles had to be paddled before a village could be reached where the Captain might ship the ducks to his friends at home, the Gypsy was soon made ready for the voyage, old John was supplied with sufficient tobacco to last him through the winter, a hasty good-bye was said and the canoe resumed its voyage. As he rounded a turn in the channel, the Cap-

tain looked back, and saw the Hermit of the Marsh wielding an axe as he cut the wood to prepare his noonday meal. The dogs sat on their haunches in silence near him, the wonderful pig lay in the mud near the shore and the ducks gabbled as they fought among themselves for a few kernels of corn. This was the last time the Captain was ever to look upon the old man, for before the ice left the river in the following spring he succumbed to the combined efforts of age, rheumatism and old age, and was laid beneath the ground. Kind-hearted, simple old John! May his spirit live forever in the happier land, where the dull vestments of an outer garb are not suffered to conceal the purity and goodness of the heart within.

The canoe now travelled through what was at one time the great hunting ground of the Senecas and Cayugas, situated on each side of the river known to them as *Thiashero*, "River of the Rushes." Many remains of Indian villages and forts are still to be seen, and the whole country around is rich in such relics as arrow-heads and spear-heads, stone tomahawks, kettles, pottery, etc. The branches of the Five Nations dwelling in this region were far advanced, comparatively, in agriculture and domestic arts, before the white man invaded their country. They cultivated maize in abundance, beans and some sort of peas, and their implements for hunting, fishing and cooking were of a superior kind to any used by other tribes. A few miles east of Howland's Island, near what are known as "Hickory Island Riffs," the remains of a well-built stone cel-weir could be seen a few years ago, before the steamer-drift was put at rest to enlarge the channel. This cel-weir was built so carefully and thoroughly that it had withstood the annual spring floods for ages, and its plan of construction was not at all behind that used by fishermen to-day.

Cross Lake (Indian *Te-an-gah-too*), which the Seneca River crosses near its southern end, has many circumstances of interest connected with it. Here have been found stone implements for turning up the ground, carved pottery and pipes, curious spear-heads and other relics in abundance. It was here, according to tradition, that the Indian deity who presided over fish and streams (*Ti-on-ya-wat-ha*) settled after he had relinquished his title of deity, and assumed the name of *Hi-a-wat-ha*, or Wise Mac. It was he who cleared the streams so that cones could pass through them, and he who taught the Hurons to cultivate corn and beans. It was he, too, who advised the union of the original five tribes into that powerful confederacy of the Five Nations, which the whites found so difficult to subdue. The tradition of the formation of this confederacy, as told by the Onondagas, is one of the most beautiful legends of history. Although never in print, to the writer's knowledge, it is well worth embalming in verse, and is a poem even as told in the rough gutturals of the Indian's broken English. Longfellow has taken the wise man of the Senecas for the hero of his well-known poem, "Hiawatha" (which is pronounced *Hee-a-wat-ha*, not, as elocutionists have it, *Hi-a-wat-ha*), but the poet's account of this character differs widely from that of the Indians' tradition, and the writer hopes in the future to publish in this paper to give the version of the latter as it was told to him.

All this has little to do with the voyage of the canoe, Gypsy, although the Captain's thoughts, as he paddled through this historic region, were all upon the traditions and lore of this ancient people, the Romans of the Western Hemisphere. With every dip of the varnished blade a new idea was brought to the mind. On that round hill was a Seneca or Cayuga village. On this eastern shore of Cross Lake, near the cold spring, is where the great Hi-a-wat-ha had his lodge, with his beautiful daughter and his white canoe. At this shallow "riff" the warriors of the confederacy forded the river to confront their enemies from the north, and perhaps even here was fought one of the bloodiest battles of their conflict.

Passing Cross Lake we shot down the rapids of "Jack's Riffs," and eight miles further reach the village of Baldwinsville. Here the voyage of the Gypsy is interrupted for a few days, while the Captain pays a visit to some hunting friends residing near by, and here we will leave the little canoe in the present, ready to resume the voyage, the chronicle of her renewed voyage down the Seneca and Oswego rivers to the Great Lake, and close around the shore of old Ontario to the St. Lawrence River and Canada. SENEOA.

CRUISE OF "THE NIPPER."

IN THREE PARTS—PART II.

THE NIPPER was up for a rather extended cruise, to start July 3. I quote a brief entry from my journal, under date of July 23: "Except later than usual, and on rising found my knapsack missing. The loss is regrettable. Spent the day paddling around the lakes, trying to trace it. It has gone to Blue Mountain in the duffel of Mr. Durant and his guide Moody—taken by mistake." The guides assured me it would come back by the first boat coming from Blue Mountain, or, perhaps, the Raquette. The mistake was a most natural one. The knapsack was of oiled ducking, black, not heary, and easily taken as a part of the oilcloth goods that hung on the same large nail. I was fain to wait with what patience I could.

Days passed, and the knapsack did not come back. I put the time in by climbing the hills—Bald Mountain especially; paddling, botanizing, digging blisters off the fir trees for the few drops of balsam contained in them, and fishing for lake and brook trout—with little success. I interviewed guides and tourists, studied maps of the Wilderness, and strove—in vain—to keep dry. To give an idea of just what the weather was, like at this time, I will give a few brief quotations from a journal kept faithfully on the spot:

14th. July. Gale and heavy rain. Frequent showers wind mainly from the north.

17th. Heavy wind and cold rain from the North, every one shivering with cold. Five people in the house with hard, chronic coughs. Bark, bark, all night.

18th. Rain, rain; blow, blow, from the north, as usual. Cough, cough. Five of us keep it up. Two will most likely never be better.

19th. Like the 18th, cold and rainy. Rained all night.

20th. Put on a gum coat, to k my little bathelet, and went for a walk. Made a mistake about the forest coat, and got nearly dry for—force. Still raining. Rains nearly all the time. "Tisn't the most favorable weather for lung diseases; not the healthiest region, I should say. Parties who come for health are every day going out, disgusted and sick. Still the camp is full.

21st. John D. Fraser visited us. He has been taking views of the scenery in Brown's Tract, and taking them well. But

AUTOBIOGRAPHICAL FRAGMENTS.—IV.

BEING EXTRACTS FROM AN EDITOR'S CORRESPONDENCE.

* * * I first saw the light in the ancient colony of King George, lying between the Potomac and Rappahannock rivers, Maryland. In this country is a variety of game, nourished by a good supply of food and protected by a splendid cover.

My fathers before me were lovers of the chase, and I presume that from them I inherited my predilections in that direction. Had I the time I might tell you how my great-grandfather, while struggling in the water, into which he had been drawn by an immense sturgeon which he had just hooked, opened a knife with his teeth, cut the line, and saved his life.

I could tell how my father killed wild ducks with a stone, when he was deprived of a gun by his father, who considered him too fond of hunting.

I could tell you how this same parent of mine begged forty foxes in one season with his faithful hounds, Sportsman, True Boy, Stormer and Countess. How he quizzed a greenhorn who undertook to point out to a disappointed hunting party the exact spot where a fox was to be found. The greenhorn, in fact, knew nothing about it, but the fox was found there, just where he had said it would be.

The gun with which my father performed many notable feats of marksmanship was an old flint-lock. It kicked so hard that it one day knocked out two of his front teeth. Of this untoward event I always had a lively recollection when charging the old piece, and how my heart would flutter when I was about to pull the trigger! Many a miss was due to the snapping of that clumsy flint-lock; and I will remember the wonder excited by my first sight of a percussion-lock.

Were I not admonished by these twinges of pain (for you know how I suffer from insomnia) I should love to relate for the FOREST AND STREAM some of the bright and dark days of my life as a sportsman. I could tell you how a companion once killed an elk at Mare's Island Navy Yard, Cal., with buttons torn from his vest at the moment. There used to be acres of geese and ducks in that same country; and once, at Mare's Island, I killed thirty-four sand-snipe at a shot. * *

Natural History.

THE RABBIT NUISANCE IN NEW ZEALAND.

THE common English rabbit (*Lepus cuniculus*) has for the last seven or eight years increased so alarmingly in certain parts of these islands, as to make the question of their future effect a serious one for the whole colony. Originally introduced by private individuals, and turned out here and there in small numbers, they now promise, unless effectually suppressed within a short time, to work some approaching ruin to the pastoral interest in localities where they have taken hold, if not over the whole country. The question was taken in hand by the Legislature in 1876, and since that time four statutes have been passed, each giving more extended powers to the officers appointed, enabling them to enter property owners to take steps to clear their land of the pest. Until this year, however, no provision was made for the clearance of the vast areas of unoccupied Crown lands and native reserves, which formed perfect hot beds for the propagation of rabbits, and rendered the efforts of adjacent owners and occupiers almost futile. The Rabbit Inspectors have now power to take such steps as they may deem necessary in respect of such land, and the expense is to be met by an annual vote of Parliament. In the case of all other lands, the Government is empowered to levy an annual rate of not more than a farthing an acre within all districts proclaimed under the provisions of the statute, which rates are recoverable in a court of law, and are to be expended in paying the officers appointed under the statute, and other necessary expenses. Owners and occupiers of land are compelled, under a penalty, to take efficient steps to clear their property of rabbits on receiving notice to that effect from the Inspector of their district; and continued neglect of such notices gives the Inspector right to take whatever steps he may deem necessary for the destruction of the rabbits, and to recover the cost summarily from the defaulting owner, in addition to the penalty.

The statute, moreover, exempts from taxation all dogs certified to by an Inspector as kept solely for the purpose of destroying rabbits; and imposes a penalty for the destruction or capture of ferrets, weasels or such other animals as may be officially proclaimed to be the natural enemies of the rabbit. With such a trenchant measure at his heels, we may fairly expect that the hitherto unobtrusive progress of this enterprising little rodent will receive a salutary check.

Various methods have from time to time been adopted for destroying rabbits wholesale. Small armies of men are still employed on many sheep-runs for no other purpose than this. Dogs, guns, and wheat or oats steeped in oil of rhodium and phosphorus, are the most effective means employed; the latter with but little injury to sheep, though a few are occasionally poisoned.

Some idea of the serious aspect which the rabbit question has assumed may be gained from the following particulars, which are taken from the evidence given before a select committee of the House of Representatives appointed for the purpose:

Three sheep runs in the middle island, of 50,000, 40,000 and 19,400 acres respectively, have been totally abandoned.

Ten other runs, with an aggregate area of about 490,000 acres, have been within the last year or two abandoned and since re-let at a gross rental of £219 per annum; whereas their original rental reached close on £2,590. Some of these are now so infested with rabbits that the number of sheep to be found on them. The effect on the sheep-growing capacity of the colony may be gathered from the statement in the official returns for 1878 and 1879, which show that in the latter year the colony possessed only 11,405,389 sheep, as against 13,069,338 for the previous year, being a deficit of 1,663,949. The departmental returns for 1880 and 1881 are not yet compiled; but it is estimated on good authority that the deficiency in numbers will have now reached 2,000,000, and that the loss to the exports of the colony may be calculated at £500,000 per annum. The same official return shows the number of rabbits skin exported from the colony during 1878, 1879, 1880 and the first quarter of 1881, to be 18,250,270, of the value of £159,110; and, as the evidence given before the committee seems to bear out the conclusion that not more than one rabbit is found for every ten killed, some idea may

be formed of the swarms of the little pest with which the colony is infested.

That New Zealand should, notwithstanding this heavy handicap on one of its main industries, continue to flourish and progress, is a striking proof of its natural advantages and resources, and of the energy and enterprise of its population. *Dunedin, N. Z., Nov. 3, 1881.* L. M.

HABITS OF WOODPECKERS.

HOOSIER HALL, Ind., Dec. 1, 1881.

Editor Forest and Stream:

In a communication touching upon the food, etc., etc., of squirrels, which appeared in the FOREST AND STREAM of November 10, I stated that the woodpeckers were busily laying up their winter's store of beechnuts, to which statement you put an interrogation point.

That woodpeckers—red-headed kind in particular—do not depend exclusively upon insect food for their subsistence, and that they do lay up stores of nuts in autumn for use in winter's bleak days, is a fact with which I have been familiar for many years, and considered it an accepted fact by all observers of the habits of these birds.

In the early summer time, when the cherries and various kinds of berries are ripe, no bird is found a more persistent frequenter of the trees and vines than the red-headed woodpecker. In the summer and fall, when the apples hang ripe and tempting in the orchards, the woodpecker allows the fat wood-worm to gnaw away beneath the tree-bark in peace and safety, while perched on an apple hanging to some slender bough, swinging in the mellow breezes, he gouges out mouthfuls of the juicy fruit.

Then in autumn, when the acorns, beech nuts and chestnuts ripen, this red-capped forager goes to work with a will, and from rosy morn till dusky eve busily gathers and hides away in holes and crevices in the trees generous stores of nut, on which he feeds during the dreary winter days.

A few days since I examined an old beech-snap or stump some forty feet long, with the sap-wood soft with decay and full of burrows and tunnels made by the wood-worm, which had recently been prostrated to the earth, and found *pints* of beech nuts stowed away in the holes and cracks. From one hole, originally made by a wood-worm, but enlarged by the woodpecker so that at the surface the hole barely admitted a nut, but deeper in widened out sufficiently large to chamber two or three, I extracted six plump nuts, and the circumference of the tree was perforated with hundreds of just such store-houses. In some of the holes I noticed the hull of the nut remaining, the bird having pecked away the seed and removed the sweet kernel. The treasures secreted in this old tree evidently belong to one bird, for, so far as my observations go, each bird selects a tree for its operations, and defends it bravely against all comers.

The cunning squirrel, who loves nuts better than the birds do worms, frequently while in search of provender discovers the hidden treasures of the woodpecker, and in attempting to secure the booty he soon discovers that he has a first-class fight on hand, and after the ferocious bird has rained down on his unprotected peak a shower of fiercely-delivered blows with its ivory-pointed beak, the squirrel suddenly remembers that he has important business elsewhere, and departs on the double quick. This very day I witnessed a fight between a red-headed and a golden-winged woodpecker, caused by the latter bird trying to steal some of his red-headed brother's treasures, and he was compelled to abandon his pillaging operations, and beat a hasty retreat, although much the larger bird of the two.

An inch auger-hole in a gate-post, standing near my house, was visited by an ambitious red-headed woodpecker as a likely place for storing away a few nuts for future reference, and after cramming the hole full of nuts the bird plugged it up with a piece of bark. Wishing to test his watchfulness I removed the bark and the nuts. On the following day the bird discovered his loss, and after considerable fussing and scolding, went to work again, and refilled the hole and sealed it up with a piece of tough bark.

When the beech-nut crop fails, few, if any, red-headed woodpeckers winter over in these parts, but when the crop is abundant, as it is this season, hundreds remain the winter through and brighten and cheer the desolation of the forests with their presence and voices. U. BECKE.

FERMUS, WIS.

I am surprised to learn that the red-headed woodpecker is a winter resident as far north as Lewis Co., N. Y. In all my winter tramps in the woods for the past thirty years I have never once seen him nor any woodpecker but the hairy and downy, which are common, and the pileated, which is not common. One day—since the first of this month—I thought I heard the peculiar tree-toad-like note of a red-headed, and I never before heard it so late in the season.

Thompson, in his "Vermont," puts this bird down as a migrant, and as concerns this State, he certainly is not a winter resident. R. E. R.

VICKSBURG, MISS.

Information is asked for by your correspondent, "Ned Buntline," as to the habits of the red-headed woodpecker. This bird is migratory in its habits; makes its appearance in this section early in the spring, stays the summer and fall months, and disappears in cold weather. Some, however, spend the winter with us, and are seldom seen, as they repair to the dense forest for protection from the cold. Their appearance in the spring needs no herald to introduce them to your notice. The first intimation of their coming will be signalled by a grand hammering on the top of some dead tree, and if the male bird can find a shivered piece of timber to vibrate to his hammering, he is in the height of his glory. This is the season for mating, and there can be witnessed a pantomime of love-making not surpassed on the stage. Should the male bird be successful in winning a companion, they busily engage themselves in building a house for their future abode. In this they never make a mistake; no architect is consulted, no plan is agreed on, no alteration is made in any building they undertake, each being by nature a perfect architect. They raise two to three broods of young a year and generally about five young in each brood. They are great insect feeders, but have a wonderful appetite for fruits, nuts and corn. The first fruit that ripens is the native black mulberry, of which they are exceedingly fond. They are also fond of raspberries, grapes, peaches and apples. As soon as the Indian corn is ripening, and they take to the fields and feed on it. In the fall months they eat black-gum berries, hackberries, beechnuts and acorns. The beech-nuts and acorns they gather and store away for future consumption. Faithfully do they apply themselves to the task of pecking every nook, crack and hole with these fruits, and

when driven from their homes to seek a temporary shelter in a warmer land, they know by instinct that they will still be in store for them on their return. But the blue-jay stays behind, and when the woodpecker is far off in his sunny home, steals from the larder of a more provident bird. The woodpecker, the provider; the peacher, the jay. And often have I, when listening to the receding notes of a pack in full cry, or when listening to the faint strid of a distant gobbler, been vexed by the incessant hammering of these little birds. But yet, "Ned," I love them still. I love them because they are so affectionate to their mates. I love them because they are so kind to their young. I love them because they rid my premises of insect pests. I love them because their incessant noise relieves the monotony of a bachelor's life. LOWNDES.

STANLEY, NEW JERSEY, Dec. 6, 1881.

When returning from school the other day, I noticed a young red-headed woodpecker (*Melanerpes erythrocephalus*) on a post, busily pecking at something. He allowed me to approach quite close to him without flying. When I went up to the post I found that he had been eating acorns. He had excavated a small hole in the top of the post, in which he placed the acorns, so they would not slip when he cracked them. There was a crack in the post, in which he had put another acorn. It must have been his habit to eat his food there daily, for the ground was strewn with shells.

HARRY PAGE.

THE COLORING OF RUFFED GROUSE.

NEW YORK, Dec. 9.

Editor Forest and Stream:

In your issue of Dec. 8, "Stanstead" gives "Eight Rules for Treating Grouse." It seems to me that if a person who had hunted grouse in any part of the country, except Northern Vermont and Canada, should try to make a set of hints according to the eight rules, he would meet with very poor success. I have hunted grouse more than any other bird, and, as a naturalist, have studied their habits very closely, but should not dare to give any set of rules, because each individual bird is liable to change his mind after he starts, and only a thorough knowledge of the ground, and of the habits of the grouse, will enable one to find birds successfully.

Although "Stanstead's" rules are undoubtedly very good for his locality, they would not answer for Connecticut, where it is a rare thing for a grouse to alight in a tree; nor in parts of Maine where I have hunted, and where it was the exception for a bird to alight on the ground. Most of my shooting has been in New York and Pennsylvania, in localities where grouse were so plentiful that it was not worth while following one up, nor trying to find him if he went into a tree; but "Stanstead's" rule 1st is exactly reversed in these two States. He says: "When this bird has been flushed on level ground, should be by swift and low out of sight, he will usually swing to the left, and alight on the ground." Now, according to my experience, a bird that flies low always alights in a tree at the end of his flight, but a bird that flies high alights on the ground.

Every hunter who has enjoyed a thorough experience with the ruffed grouse knows how the habits of the bird vary in different localities. But now let us bring up a new subject in regard to local variations, and that is the variation in color of ruffed grouse from different sections of the country. This is a subject that I tried to have discussed in the FOREST AND STREAM several years ago, but no one seemed disposed to answer.

In New England I have found the prevailing color of the grouse to be of an ashy gray. In Pennsylvania the color is tawny, almost approaching a red in some specimens. In eastern New York both red and gray birds are found, but gray is the principal color. In western New York this is reversed, and a gray bird is the exception. If we draw a line on the map, then, from New York to Pittsburgh, we will find the ruffed grouse of the Eastern end to be of a decided gray. As the line passes through New York the gray will merge into the tawny type, and at the Pittsburgh end of the line we shall not find any grouse that are not red.

I have not had an opportunity to examine large quantities of grouse from other States than those mentioned, but have examined hundreds of specimens from the States in question. Neither age nor sex seems to have any influence in this color distinction, any more than they have in determining the color of the mottled owl (*Scopio asio*). If correspondents will take up this matter of color in the ruffed grouse, they will find that the tail of the bird displays the type better than any of the other feathers; and if they will carefully notice the birds in their respective sections of the country, and not speak from memory, we shall have contributions on the subject that will be valuable to the naturalist and interesting to the rest of hunting mankind. MARK WEST.

AN EAGLE'S FEAT WITH GEES.—Our correspondent, Jacobshoff, last week related an experience with an eagle, which we supplement here with an extract from the Little Rock, Ark., correspondence of the St. Louis *Globe-Democrat* of Nov. 23. He says: "A gentleman from Stone county gives the particulars of a remarkable incident which he witnessed while cro-ssing White River on the ferry just above the mouth of Sycamore Creek. When nearly half way across the stream an enormous eagle swooped down on a flock of geese which were swimming in the river some eighty rods below the boat. The birds were flying in a single line, and were approaching instinctively dived under the water just as the bird struck the waves. Battered in the first assault, the eagle flew slowly upward, and when the geese came to the surface darted downward again, and burying its talons in one of them attempted to bear it away. The geese struggled violently, while its companions swam around it uttering shrill cries, and the persons on the ferryboat watched the strange scene with keen interest. Once the eagle lifted its prey clear out of the water, and seemed on the point of carrying it to the mountain cliff that rose grandly in the air on the other side of the stream, but the struggles of the geese forced the eagle downward. When water was again reached the geese made a supreme effort and plunged below the surface, dragging the eagle after it, and causing the latter to loosen its hold and rise upward with a fierce scream. The eagle next attacked another goose, but with the same result, being compelled to relinquish its hold when its intended victim plunged beneath the waves. The eagle then came lastly to the thirty minutes, at the end of which time the eagle gave up the fight, and, rising, soared away to the mountain westward, while the flock of geese swam further down the stream. None of the flock were killed, but the water in the vicinity was dyed with blood, and the surface of the stream was covered with feathers for a considerable distance."

GARIBOLDI KILLED WITH A 32-CALIBRE REVOLVER.—Buffalo, Dec. 4.—*Editor Forest and Stream:* The *Quebec Daily Telegraph*, under date of November 18, contains a sworn affidavit by Francis Kennedy and Elias McRae, of Douglastown, Province of Quebec, wherein they certify to the killing by a Smith & Wesson 32 calibre revolver, at a distance of forty-two yards, of a caribou of 175 pounds weight after being dressed. The caribou was shot through the heart to the great astonishment of the hunters, who probably never dreamed of the great power of the revolvers of that calibre. The scene of the occurrence was in the most beautiful and fertile of the extensive hunting grounds for caribou, and the country about Gaspe is an immense and almost impenetrable wilderness.—CHARLES J. LINDEN.

REDUCING EXPANDED SHELLS.

SOME time since I had an English breech-loading 12-gauge gun, in which I used paper shells. Being desirous of using brass ones, I got 45 nickel-plated ones, and after firing them in the gun they came out with difficulty; and after closely examining them I found they were not in perfect shape, and upon looking at the chambers of the gun noticed for the first time that they were not bored true. I disposed of this gun and kept the shells; and shortly after bought a "factory-made" American gun, of which the chambers were bored true; but I found these shells would not enter this gun, although I tried in many ways, by dressing down with emery, and subjecting them to the action of acids, but to no purpose, and I found that I had a piece of steel bar, 3-inch thick, put in the face-chuck of a lathe, and a very slightly tapered and polished hole put through the bar of such size that a new shell which had never been fired, would, after being oiled, enter the larger end of the hole about half an inch if introduced with considerable force and with a boring motion. Then, taking the shells and smearing them with oil and driving them in at the larger end of the hole with a mallet of wood up to the flange, I extracted them with a wooden plug (of slightly less diameter than the inside of the shell), in which was bored a 1-inch hole so that it would not strike the arvil seat. I put this in the shell and drive the shell out, using the wooden mallet. Shells which are treated in this way are reduced to their original dimensions. It often happens that a person using brass shells in his gun has allowed them to be fired in another gun, and upon attempting to use them again has found them to be expanded so as to be useless; to all such this communication may have some little value. I would state that the charge made for making this "cure" was twenty-five cents; and as labor is cheaper over on your side it could probably be done for less.

COYOTE.

THE MOBILE GUN CLUB DINNER.

MOBILE, Ala., Dec. 1, 1891.

Editor Forest and Stream:
The first annual side-hunt of the Mobile Gun Club, Nos. 27 and 28, resulted in a tie, each side scoring 476 points. The dinner was, therefore, a joint affair. The editor of the *Register* has described it so well that I will let him tell the story for me.—J. F. S.
The report inclosed is as follows: Last Wednesday night the spacious and elegant dining-room at the Battle House presented a memorable and not soon-to-be forgotten appearance. On each side and across the head of the room forming three sides of a hollow square, were long lines of tables laden with every variety of game in profusion and served and prepared by masters in the art of gastronomy. There were seats for one hundred and twenty participants, the Gulf City Gun Club and invited guests.
At 9 o'clock sharp, the doors were opened and the seats quickly filled. Attention was first paid to the tempting display spread before them and the manner in which the edibles were served, a memorable and not soon-to-be forgotten appearance. The wants of the inner man having been satisfied, the talking was commenced by Mr. H. P. Vass, whose remarks were noticeable for their exceeding brevity. Judge Semmes came next and roused the first hearty laugh of the evening. Capt. W. J. Brainerd was the next brief speaker, after which Lieut. R. B. Owen spoke in deserved praise of the club and its object in furthering that most important condition, "a sound mind in a sound body." W. B. Holt was next called on, but not being ready, gave place to Dr. T. S. Seales, who spoke in commendable and not soon-to-be forgotten manner, the gratifying success of the scheme of a gun club of which he was one of the originators, who had believed in its ultimate success from the start. He was proud of the Gun Club, and now that its success was an assured fact, he hoped its future would continue as bright and prosperous. He concluded by calling on one of the invited guests, General James Gordon, of Pontotoc, Mississippi. General Gordon responded in eulogistic terms of the members of the Gun Club and the magnificent spread that was served at the first annual hunt, and some incident of reminiscences he called on another invited guest, Mr. Fontaine, of the New Orleans Gun Club. This speaker alluded to the time when some of the members of his club met those of the Gulf City Gun Club, and handsomely acknowledged that they found their foemen worthy of their steel. One of this gentleman's allusions brought up C. J. Semmes, who made a very neat point, and then called on one of the members of the Club, General J. W. Burke, who gave a very interesting description of his last hunt after wild geese and his remarkable success. Some allusion was made to that modern Nimrod, Mr. Joseph Sten, but he bore his blushing honors very meekly, and could not be persuaded to talk. Captain Billy Brainerd took the witness stand, and in glowing words described the adventure of his party on the Spray, how they embarked at 6:30 on Saturday night, bound for Hickory Ridge, and how every hour after that so nothing happened. Near half the night had gone before they reached the bridge, and still they sailed. Next morning, a little before daylight, they were still in the red light, and the vessel was about to avert collision from the coming steamboat. To their great surprise and delight (?) they were at the railroad bridge. Having ailed up the river, turned around and came back again, without knowing it. Then they burst their water gauge, ran the Spray full head on a big sand bank, and still they had not reached that promised land, Hickory Ridge. This was a very sensational narrative and it was greatly appreciated. One of Captain Brainerd's moving allusions brought up Captain Rachenstein, sometimes known as Old Hook, who asked for information on some incident of the trip. Captain H. P. Vass called upon the representative of the *Register*, but that representative was fortunate in securing the assistance of Dr. Seales, who, after a few remarks, called on Mr. Dreisbach for an account of his trip after game and his party, and the trouble they had with a magnificent freight conductor. Mr. Dreisbach narrated their troubles and showed that they had gone further, hunted harder and had more trouble than ever before, all for the glory of the side. Judge Semmes had some questions to ask, and then Dave Leger, gentlemanly caller for. Not heeding the suggestion to "get up and sing," Dave deliberately perpetrated a succession of puns which brought down the house and successfully retarded the cover of the smoke of the explosion. Then Recorder Owen had some questions to ask the tax collector, which were decidedly personal, and which brought Major Sheffield bull p standing. He also narrated some of their troubles

and aggravations in the State of Baldwin. He finally alluded to a game man who was with them, all game, and wanted to hear from Mr. D. H. Lay, who gave another chapter in the adventures of their party and what was done on that memorable occasion. And then allusions were made to the telegraph man and what he did, and this brought up Mr. C. A. Holt, who gave an outline of their trip after game down toward Fort Morgan, of the sand banks down there, and any duck ought to be shot who was fool enough to try to live there. He expressed, confidently, a belief that he would not go in that direction at the next annual hunt. Capt. Wm. H. Williamson was the next speaker, and he spoke of the predicament of the hunters getting where there were signs of game, only to be stopped because there was a church within four miles. And then that march in the swamp, the sight of a bird, the first shot for twenty-three years and the safe escape of the would-be victim.

Under the inspiring influence of the Recorder the talk became more general, and Mr. E. Carr, Captain Williamson, Dr. Seales (who told how Vass shot his deer), H. P. Vass, Judge Semmes, T. H. Dorman, L. H. Kemmerly and Dorman all took part. The entertaining description of Mr. Fontaine's fox hunt, by that gentleman, was one of the most entertaining things of the whole evening, and brought out enthusiastic roars of applause. He certainly deserved to score 500 points for that.

The three hours' session was then adjourned over sincere wishes for many happy returns of the annual hunt of the Gulf City Gun Club.

MENU.

Gum Chik Gumbo.
Tenderloin of Flounder, en Cartouche.
Vol au Vent, a la Mousse.
Roast Wild Turkey, with Water Cresses; Mallard Ducks, stuffed with Olives; Saddle of Venison, Currant Jelly Sauce.
Broiled Squirrel, a la Maitre d'Hotel; Gray Ducks, Poivrade Sauce.
Mashed Potatoes, Baked, a la Villars; Timbale of Macaroni, a la Romaine.
Supreme of Canvas-back Ducks, a la Chevraino.
Partridge en Chausfroid, a la Vert Pres.
Rote of Tenderloin of Black Duck.
Civet of Squirrel, Hunter Style.
Beefsteak of Venison, on Solid.
Prime of Venison, a la Polonoise.
Leg of Duck, a la Colbert.
Duck Liver Pate. Loins Sausage.
Hens and Sausage, Country Omelette.
Lady Fingers, Macaroni, Pound Cake, Fruits, Nuts, Coffee.
Hau-Senternes. Chat. Leoville.
Recorder Carte Blanche.

MORE ABOUT TURKEY CALLING.

WILLIS, Texas, Nov. 18, 1891.

Editor Forest and Stream:
I am in camp now in the woods, have a good staunch cabin "hy the lake," probably for the winter. We feast daily on venison, ducks, squirrels and fish. So far I am happy, but I see that your correspondent "Keouk" is not, and he calls on me to help him call his turkey.
In the first place he must make a "caller," or "call," such as I will describe presently; then he must go to school (a turkey school) with the young turkeys, as I did, and grow up with them, and learn to call, otherwise he will not succeed. If he has a lot of tame turkeys about his house let him get up at daybreak and go and sit down a short distance from their roost and watch them. Let him notice everything they do, and he will be much interested, if not edified, with their performances. Wild ones act in precisely the same way.
In the fall and winter, when turkeys are in flocks, they usually roost in the same tree, or in several trees close by. At the dawn of day you will hear them begin by occasional "clucks," then, shortly afterward, frequent yelpings before they fly down. Sometimes the old hen first, and at other times a young one or two, will begin first. This you cannot always tell, for the notes from either are not always the same; however, experience will teach you. But if you will learn the "cluck" note, and begin when they do, it will attract their attention to you, and if kept up more frequently than they do, they will be more apt to pitch down near you, when they come down off the roost. You must "cluck" and yelp, too, at intervals, and at the same time.
The "cluck," when made, is an excellent call note, accompanied with the "yelp," and if you make both well (as I do), and use proper judgment at same time, you cannot fail to meet with success in getting all the turkey roasts you wish.
Some will tell you to yelp once or twice or thrice, but I tell you to yelp and cluck as often as you please, or as loud or low as you like, it makes no difference as to number of times so you do it well, not almost like a turkey, but just like a turkey.
If it be in the spring of the year, in gobbling season, then you have to use the best turkey lore. You must put in your best skill, and if you use good yelping, clucking and plenty of patience, you will out-general the cunningest old gobbler that ever came from an egg.
Use a rifle to shoot him with, a 38 cal. Wesson or Remington or Ballard—all good. Don't shoot an old gobbler with a shot gun. If I thought you would I would not tell you a word about calling him up.
The turkey call, I think, the best turkey call that was ever made. I am, in part, the inventor of the instrument myself, and if you will practice it right and take notice what you want to produce with it, you can soon become expert in the art.
I take the smaller bone of the second joint of the wing of the turkey hen. Cut it off square and smoothly at each end. I use a file in cutting off and in squaring and smoothing the ends. Clean out the inside and outside nicely. Then get a seasoned or dry cane or reed joint, that the round end of the bone will fit over and enter. Push the round end of the cane into three quarters of an inch and wedge it in snugly with white pine wedges, but not tight enough to split the cane. Let this piece of reed be about two inches long, which must then be inserted into another piece of reed just large enough for it to enter. Then begin back from the joint three-quarters of an inch and pare down sipping toward the bone, both joints alike, and wrap nicely with a waxed thread. Let each section of reed be one and a half or two inches long. Then wrap with reed the joined parts strong with air-tight, which is essential to making clear notes. When completed the instrument should be six or seven inches long.
Now if "Keouk" does not understand, then write to me at once and let him give me his name and address and I will make and send him one.

Now, when the call is made after this method, try to yelp and cluck with it. Place the bone end in your lips and "pucker"—and—goodness! I don't know how to tell you to do with the reed, but go to yelping, that's all. Practice as you would a flute or fiddle until you have learned, then you will never forget it. The following is a rough penciling of the "call" as best I can draw it in the woods where I am. It

gives the desired, and it seems that any one could make it. In order to "cluck," place the tip of the tongue on the end of the bone mouth-piece, and by a quick suck and jerk of the tongue you can learn the cluck. I make any note that the turkey does with the use of this instrument. I call like old hen or young hen, young gobbler or old; cluck like either as a call note, or "put" like either as an alarm note. I have used every contrivance that I ever heard of, but I have yet to find anything but the real turkey that can equal this call, and I have yet to find an old gobbler that I cannot bring with it. I will put myself on one side of an old gobbler and let another man with all the "fixes" he ever saw, put himself on the other side, with a live turkey hen to boot, and if the old chap is an hour or two in making up his mind which to go to, I will give my gun if I don't get him. I made one of these things for a friend in Mississippi once and taught him how to use it, and have been sorry ever since. The first spring after I made it he killed nine old gobblers with it, and has been making havoc among them ever since. He broke up my "roostin' ground," so I left the country; but I did the same service for my brother out there, and he is now a stand-off for the other man, and even beats him a little, for my brother can gobble just like a turkey, and Smith, the other fellow, can't—that's all. C. L. JORDAN.

A MISSISSIPPI CAMP HUNT.

Editor Forest and Stream:

Thinking, perhaps, that some of your many readers might like to hear from this section of the country, I shall try and drop you a few lines which may fall in a fertile spot or land in the waste. A party of some eight or nine of us left on the 13th for our annual camp hunt, and only one who has participated in these jaunts can appreciate the pleasure that each one anticipates, except the commissary, who is the draught-horse of the trip; and unluckily this has fallen to the writer's lot twice in succession.
A merrier or happier party never entered a forest than ours as into the sombre woods we defile, and with blowing of horns and the deep baying of hounds we plod our weary way along, till, near night, we draw up to a deep bayou, where we select a camp ground. After a refreshing night's rest, ere the golden orb of day has begun to tinge the eastern horizon, we rise up, and after a cup of coffee and a few crackers, we are saddled and off. After a short ride through some cane we enter the hunting grounds. Scarce had we debouched ere the thrilling notes of our noble hounds reached far through the stilling aisles, and the heart of many a timid deer beat responsive to its sweet and stirring sounds. Only a few minutes after three or four shots are fired, and we have a beautiful doe stranded on the brown and sere grass. But we have no time to tarry. On we go to a regular fusillade, to find two boys with the buck axe, worse frightened than the noble monarch that they had endeavored to bring down. With the dogs all gone, we try it breasting; and after a little while we see a monster black bear, too fat to run fast, and our bear hunter on horse-back in hot pursuit. After a spirited run of fifteen minutes and after several shots the bear finally succumbs to the inevitable, and lies prostrate and lifeless. He weighed six hundred pounds gross and cut four inches of fat. Some of the boys return to camp with him, while the rest go on. After a ride of an hour we are satisfied to return to camp having bagged three large deer, which were killed like rabbits, jumping from their beds in just twenty minutes after the first break. Not a bad Monday's work.
Tuesday morning breaks upon us, beautiful, calm and cold; and after a hasty breakfast we are off again, and during a most enjoyable day we bag three large bucks and one fine gobbler. On our return at 4 p. m. we find our chief cook, Stephen, "a cullud gemman," ready with dinner. It was undoubtedly, under the circumstances, the best dinner that I ever sat down to. Our menu was as follows:
Bear Steak. Bear Liver Fried.
Venison Steaks. Venison Cakes Breaded.
Venison Croquettes.
Desserts, Corn Cakes. Coffee.
Our dinners and breakfasts were just about the same, with the addition of fried and broiled squirrels and fried turkey. Wednesday, Thursday and Friday passed in much the same way as the above, and after a most pleasant week we had bagged the small number of thirteen deer, two bears, three turkeys, one otter and forty-seven squirrels. We kept an account of game that we saw. There were seen fifty-three deer, five bears and nineteen droves of wild turkeys, with smaller game not counted. We arrived home safe and sound, tired and dirty on Saturday, the 19th. J. R. W.
Como, Miss., Nov. 23, 1891.

TEXAS GAME NOTES.—Nashville, Dec. 4.—Now is the time that the *Forest and Stream* should have chosen to venture the "possum question, as there never were more of them than this winter and of a finer quality. William Hobbs, the champion "possum hunter of this section, gave one to Col. Geo. F. Akers last week which weighed eight and three-quarter pounds dressed. To-morrow he will be served to a select few of our old pencil drivers. Charley Hollester's noted chef, "Rinks Mullens," has been entrusted with the parbillion, pepper, salt and baking of it. The chief reason of the *Amateur* has been fasting for ten days on bread and water in preparation of the savory dish. The tail of the beast was manipulated with a view of making a dog-whistle of it for J. C. Clarke or Jack Darily, whichever succeeds in killing the first bird on the wing. Col. R. M. Edwards lives in a few days for the mountains of East Tennessee in quest of bear and panther. The colonel says that quail shooting is too tame sport for him. All my reports from Redfoot Lake state that ducks and geese are more abundant than ever known; but ducks are scarce in much the same way as the above, I have seen a number of fine, fat deer in market lately, but they come from a gentleman's preserve a few miles from town. Yesterday in the market house was a fine display of quail, squirrels, rabbits, possums and a few wild turkeys. I regret to say that the majority of the quail brought here for sale have been trapped or netted.

MORE ABOUT THOSE RUST SPOTS.

WESTERN RESERVE.

Editor Forest and Stream:

That these rust spots do occur in very many guns is a well known fact, but what occasions them is the question. I have always attributed it to lack of proper care, but possibly it is not wholly owing to that. I only know they do not occur in my guns. I never hesitate to use water in cleaning the barrels after a day's shooting. In fact, that has been my practice for something like thirty years, and for the last twenty years I have used a jointed wiper, both points and head of which are of brass. My armory now contains two Parker's of highest grade, one Greener hammerless of first quality, and one Remington rifle. One of the Parker's I have had for about five years, and it has seen "a sight" of service. The other guns are later purchases, though they have seen a good deal of service. As a rule, in prime condition and still retain the original high polish through the entire length so pleasing to the eye of the sportsman. My mode of cleaning gun barrels is to set the muzzle in a bucket partly filled with warm water and wash thoroughly, using patches of Canton flannel, say two and a half inches square, which, when forced into the barrels by the head of the wiper, fold over the head and so are held in place. A few seconds churning in each barrel will do the business. I then remove the wiper and pour a dipper of hot water through the barrels, thus cleaning and warming them up well. Then I wipe the wiper and the barrels outside, after which I force dry patches of Canton flannel through the barrels till thoroughly dried, using scratch brush to remove lead in case barrels are at all leaded. Lastly, I run a patch slightly oiled with Belmont oil or rust preventive up and down a few times through each barrel, using outside chamois skin, slightly oiled with same also on stock except over the wood. I then slide the gun into sack and hang up in dry place, away from all steam of pots and kettles. I make a practice of cleaning my guns every week or so—whether in use or not—to see that they are all right. I have no lasting faith in any rust preventive during damp weather. I use very little oil on my guns, not enough to soil a kid glove, but all that I deem necessary. I use Hazards duck shooting powder No. 3 and 4, latter size in ten-bore, and have for five years past.

FAIR SHOT.

Andover, Mass.—*Editor Forest and Stream:* This plague has, ever since the introduction of the breech-loader, been the source of much annoyance to almost every owner of a fine gun. I claim that the spots are common rust. For proof I will ask the question, "Is it not a perfectly clean piece of white cloth to the cleaning rod and wipe out the barrels after the gun has been put away a few days, then examine the cloth." 2d. I claim that in ninety-nine times out of one hundred the gun is not "cleaned perfectly clean," as is claimed. For proof I will again ask for an application of the clean white cloth, always using enough cloth to fill the bore of the gun and make the rod draw pretty hard, when the gun has been "cleaned perfectly clean" with the gun oil, etc., and a drop of water, then moisten the cloth with warm water (it will not hurt any gun), put it on the rod and try the familiar old push and pull a few times, when, if your swab does not show any dirt, you certainly must be the one out of the hundred. Any one can convince themselves of the truth of the above by trial; and seeing a thing once is better than all the argument about it in the world. Try it. If the gun is not clean the question is, How can it be made so? And if it is rust that makes the spots, how can it be prevented? If a gun rusts there must be a cause for it, and that cause must be removed before we can effect a permanent cure. Now, in my opinion, the principal cause is to be found in the gun not being properly cleaned, and the moisture, usually called "cold sweat," which is sure to collect on cold metal, glass, crockery, etc. To remove this cause is much easier said than done. If we use water to clean with, some moisture is liable to remain about the workings of the extractor, etc., where it is next to impossible to wipe dry, and to clean after a few days hard shooting, and to clean without water is also no easy matter, and requires a large quantity of clean white cloth of whatever kind it may be. I have tried about every way of cleaning, and I think that water will do the business better than anything else, and by putting the muzzles in a dish of water and using the swab carefully from the breech-end, the water can be drawn up to the chamber without wetting about the extractor at all. The gun should always be immediately wiped dry and oiled with good oil. Our good old muzzle-loaders were almost always cleaned with water and carefully wiped out afterward, and knives, razors, etc., are now cleaned with water without any injury. We should not harm the modern breech-loader? This "cold sweat" or moisture is not so easy to cope with. The best thing I have found to keep it away is to cover two wooden rods with flannel so they will slide inside the barrels and fit closely the whole length, chamber and all, and keep them inside the barrels, after cleaning thoroughly with water and wiping perfectly dry and oiling. In regard to the "brass trimmings" on the cleaning rods, and the various makes of gunpowder, I use a rod made from a piece of hickory, without any metal joints, trimmings, or furnishings whatever, and my gun would show rust in forty-eight hours if put away without being plugged as described. And although I have used about every brand of powder, including the ones named by some of your correspondents as not rusting the gun, I have not found any that would not rust my gun.—E.

Worthington, Mass.—*Editor Forest and Stream:* I have a double-barreled gun, of which one barrel is rust-spotted very badly, while the other is as bright as when it came from the shop. Now, I have shot a rifle for years, and it never had a spot, so I think it is not in the cleaning. I shot this gun over one year with Hazard's powder and no spots came until I was induced to change my powder, and I used Orange F. F. G. in one and Hazard's duck No. 4 in the other, as before; and the one I used the Orange powder in began to rust, while the cleaning was the same in both. Was it the powder?—Fox.

Newark, N. J.—*Editor Forest and Stream:* In your issue of Nov. 24 I notice an article on rust in guns, barrels, and any metal joints, trimmings, or furnishings whatever, and I told him that his rule works tip-top in the case of my gun. I have a tolerably good breech-loader, that is used by two or three of us at the store. It hangs exposed to the air in all seasons, and never needs a mouthful of water to keep it right inside. We let the old powder stick in, until the gun is needed again. Then we whip out the inside with dry rags on a good stout rod. For the outside of a gun I can

think of nothing better than castor oil. This sticks closer than a brother, even unto the going down of the sun, when it can be renewed again at small expense and with some muss. I have often thought country boys' muzzle-loaders would rot out in a few years, if burned powder left in the barrels would do it.—H. E. W.

Houston, Texas, Nov. 23.—*Editor Forest and Stream:* I have been experimenting for the past year with two guns, treating each in a different way, and my experience leads me to think the best way for this climate is to put them away uncleaned (the inside I mean) till you wish to use them, and then to clean them; and you have bright barrels free from spots. In paper of 17th inst. Marks says water and brass-tipped cleaning rods are the cause. I have never used one drop of water, nor any rod, but a plain hickory, one with notches cut in one end to the rags on, and the gun I cleaned every time after using had the rust spots still; but the gun that was laid away uncleaned till wanted, and then cleaned, looked like new one, and by looking through it you could not tell whether it had ever been shot or not. This climate is bad on all kinds of steel or iron tools. In summer it is hot and causes them to sweat, and in winter to be cool and damp, and powder never becomes dry and caked that is left in a gun. Spots are a nuisance to any man who prides himself on a clean gun, but I do not find them to mar the shooting quality in the least. If we could have seen the inside of our old muzzle-loaders we would have been tempted to throw them away.—WANDERER.

Editor Forest and Stream: A sportsman, living on Chesapeake Bay, tells me he always allows the burned powder to remain in his gun from season to season, and he is never troubled with rust.—TING.

THE HIGH POINT HOTEL.—*Editor Forest and Stream:* In your columns of Dec. 1 appeared a letter bearing the signature "W. E. C. M.," bitterly complaining of my rapacity, and giving what appears to be a statement of my hotel charges; but as truth and fair play have always characterized your efforts in giving information, I venture to hand you all particulars in relation to the persons who visited my hotel for the purpose of shooting quail. First—birds are very plentiful, and farmers and land-owners pleased to see those who are courteous toward them; but birds require sportsmen to kill them, and gentlemen who are really sportsmen may be assured that they should try High Point Hotel. They will find game in abundance. My publicly announced rates of charges are \$2 to \$3 per day, according to location of rooms. My clerk assigned these gentlemen a room at \$2.50 per day, thinking this price would be in keeping with their appearance. They remained 43 days, making nine days for the two, which at \$2.50 per day gives \$22.50, which amount they were charged, plus 43 days board for three dogs at 33¢ cents per day each—\$14.50. These dogs, by particular request, were fed an extra 8 cents per pound; clean straw and good kennels also were furnished, and a man supplied for washing them with carbolic soap. The charge of 43 days firing, \$2—about 45 cents per day—is correctly stated. And now about the lunches. They ordered a special breakfast to be cooked for them at daylight, and an extra-strong luncheon to be cooked each day for three, which included their driver. As they went out three days, this made nine lunches at 50 cents per head—total, \$4.50. The dinner hour in my hotel is from one to three o'clock. They ordered a special dinner cooked for them at six o'clock, and neither for their special dinner nor breakfast were they charged one cent. Before paying their bill they expressed themselves much pleased with the appointments and service of this hotel. They were charged 50 cents per bottle corkage, not 75 cents. I have yet to learn this to be an unusual charge for corkage on champagne. I beg to say I am not a New Jersey man, but an Englishman. For the information of those who are good sportsmen, and who may desire cheap accommodations, I may say that there are other hotels in this town at which board can be obtained at \$1 per day, but I do not seek such patronage, and as I am neither ashamed of my name nor country I beg to subscribe myself in full, yours truly, R. BARNARD, proprietor of the Bellevue Hotel, High Point, N. C.

A SQUIRREL SHOOTING SCORE.—Port Royal, Tenn.—Not long since a writer in the FOREST AND STREAM suggested that sportsmen keep a record of shots fired in the field and send them to FOREST AND STREAM for publication. I have had my royal sport this fall squirrel shooting, and I carried along my score book and kept a correct account of every shot fired. This is the score I made yesterday squirrel shooting: 1 1 1 0 1 1 0 1 0 1 0 1 0. The eighth shot was fired at a ruffed grouse that rose before me in a dense forest, and scored a clean miss; but I followed rapidly in its wake, and when it rose I cut it down in fine style, and it was a magnificent bird. The above, I know, is a very poor score; but remember I was shooting in a dense forest and tall timber. I find by reference to my score book 46 kills out of 79 shots fired. I still hunt them and use a 7 pound 13 gauge double gun. Yesterday I used 2½ drams powder and ¾ of an ounce No. 4 shot. I can make a better score with smaller shot—5's, 6's, or even 7's. I used to look on large shot—1's and 2's for squirrels, and 7's and 8's for quail. Let me put it down in FOREST AND STREAM that large shot and heavy charges of powder and shot, for small game, are a lump. To me squirrel hunting is very fascinating sport—it beats anything except quail shooting as trout fishing. I did not hunt near all day—can bag 18 or 20 in a whole day's hunt.—BRND.

VELOCITIES OF RIFLE BULLET AND SOUND.—Stevens Institute, Hoboken, N. J., Dec. 10.—*Editor Forest and Stream:* In the article on "Velocities of Rifle Bullet and of Sound," is an error which, though evident to the reader, may as well be corrected. The number of grains of the weights of bullet and powder in the U. S. Government cartridge were transposed. So, instead of "a ball weighing 70 grains, with 405 grains of powder," read, "a ball weighing 405 grains, with 70 grains of powder. And so, for the above charge of 405 grains of powder, read, "a ball weighing 70 grains." In the article referred to above we took as the velocities of the rifle balls their initial velocities. The average velocities of the balls over the ranges of 500 and 1,000 yards will be less than those we have given, and thus bring near to equality the velocities of the balls and of sound. But even with these corrections we do not think that the differences in velocities can ever be so great as to allow of a marker time to hear the discharge of the rifle, and then expose himself to its shot.—A. M. MAYBER.

THE ILLINOIS WOODCOCK BAYLES A NOVICE.—Some time ago, while after squirrels, a friend, who was new, was flushed a woodcock close by the side of the creek. I heard the twitter and saw the bird just as he settled within fair shooting distance and in good view. I failed to shoot, as it required several seconds for me to realize that the bird was a woodcock, I having seen only three before this one. Being a close reader of your paper I had well mastered the art of shooting these birds; therefore my gun was in position for action on short notice, and I moving cautiously forward. Twitter, witter, witter, he went away behind a tree, without giving me the ghost of a chance to shoot. I looked sharp to see him pitch, in which act I again got sight of him some thirty yards ahead. I moved from the place, where I watched him, with teeth set and the determination to shoot the next time, even should he start off behind that five foot standing sycamore, which was not very plainly visible on account of intervening brush, limbs and weeds. Up starts the bird, and I am positive that I shot, but where the charge went is something about which I am in uncertainty. My friend again sees him settle on the edge of a clearing, and after I am on the track I begin to force my way through the thicket once more. Suddenly I hear a fresh start the cock is taking, and catch a glimpse of him the moment he passes behind a standing tree. This time I purposely keep from shooting, because he has taken a direction which will bring him across an opening in the thicket where I think I can get at him. That woodcock must have taken a different course after getting behind the tree, as he never crossed the opening on which I relied.—SUCKER.

TENNESSEE NOTES.—Port Royal, Tenn., Dec. 7, 1881.—We are having lovely weather in this part of the South, and we anglers and shooters are having a glorious time. Yesterday the boys were out among the quail, and the booming of their guns could be heard often. Myself and a party bagged forty quail recently in a day's hunt. We had royal sport, I tell you. I arranged to-day with a friend to give the squirrels a round to-morrow, and arranged to give the quail a trial Saturday. A hunting party from Nashville is expected here next Friday. Several fishing parties from Kentucky paid us a visit this fall. I have had some sport this fall trout and jack snail fishing, some of the finest specimens of the jack snail family I ever saw. Recently learned of the whereabouts of two covets of ruffed grouse. A darkey proposed to guide me to them. He has killed three of them. He says: "I tells you whar da is; but I don't want de white folks to know whar da is." I make a point to treat all classes courteously, and I am repaid by learning where the game is.—BUDCO.

QUAIL IN VIRGINIA.—Washington, D. C., Dec. 10.—In order to arrive at a satisfactory conclusion regarding the quail in Virginia this autumn, I called on Mr. A. J. Bidler, of this city, who is in the commission business, and has correspondents from all parts of the State, who are in the habit of consigning to him their market produce, etc. I learn that in Gage, Warren, Berkeley, Frederick, Shenandoah, Rockingham, Rappahannock and other counties, the local sportsmen are not shooting quail at all owing to their scarcity, preferring to leave uncollected what few birds remain for the purpose of furnishing a stock for next year's supply. This is very remarkable when it is known there is a great demand in Washington for game just now, when the city is crowded and hotels are thronged with officials who are fond of quail on toast. Mr. Bidler has many calls for them, and has written to his correspondents, asking for birds. As I have stated, he can get but very few.—C. S. WADSWORTH.

HOW TO KILL WOUNDED WILDFOWL.—*Editor Forest and Stream:* In the experience of those who have done much sportsman's gunning, it is quite often that a bird struck in the head will lie gasping and struggling with death for many minutes after being shot. When shot in the body they may be quickly put out of misery by a sharp blow on the head; but when wounded in the head they will stand any amount of knocking and still struggle. It is suggested that a knife-blade thrust in at the base of the skull will answer, and many advise twisting or biting the neck. I have seen all of the above tried, but with very indifferent success. Will some of your many readers advise how to put a quick end to the sufferings of the poor thing without spoiling their appearance or unduly mutilating them?—BAY HOOK.

A NEW AIR GUN has been invented by Mr. W. T. Chamberlain, of Norwich, Conn. The gun is described as "of very simple construction, and has no air pump, or pump, or any other complicated parts. Any amount of pressure, from one pound to one thousand pounds, can be used instantly. The peculiar construction of the gun is such that there can be no leakage or loss of the air pressure. The invention can be attached to all kinds of firearms, such as shot-guns, rifles, pistols, revolvers and naval ordnance. It can also be used as a repeating gun, firing any number of desired shots."

MASSACHUSETTS FOX HUNTING.—Worcester.—Foxes are unusually plentiful in this vicinity the present season. The sport, by agreement, begins Oct. 1, and closes with the last day of February. The local hunters are boasting of the following record: John A. Slocum, 11; Nathan S. Harrington and William S. Perry, each 6; Leonard Rand, M. P. Balcom and H. L. Jones, each 5; John C. Thayer, E. H. Smith and A. F. Kenney, each 4; of securing one fox.

REFRIGERATE GROUSE.—A recent shooting the birds, a correspondent says: "Tell me in confidence whether these one-out-of-two ruffed grouse chaps tell the truth? I have always let drive at them on sight, as 'Mark West' directs, but honesty compels me to confess that most of them keep going just as if nothing had happened. And I can't tell why I miss, whether by shooting ahead (which is not a common fault), or behind, or above, or below."

TEXAS, Devil's River, Dec. 3.—Game is abundant here, such as bear, Virginia and black-tail deer, turkey, Messina, scaly and Bob White Quail. Fine black bass fishing in Devil's River. This country will be open to sportsmen from San Antonio and the East next spring, by the completion of the Houston, Harrisburg, and San Antonio R. R.—G. W. POLK.

QUAIL FOR EUROPE.—Boston, Dec. 9.—A small lot of live Western quail was shipped from Boston to-day for Liverpool for acclimatization in Yorkshire, England.

THE MICHIGAN FOREST FIRES are said to have driven many deer over the river St. Clair into Western Ontario.

KANSAS.—Manhattan, Nov. 25.—Game abundant around here.—A. B. J.

THERE is a wild pigeon roost in Benton Co., Tenn., four miles square.

From Grady county came the following:

"Nudeen yar koo I kum mit mine vany p' Denuesee, and m'ner p'ary koo' d'at vere vas p' Nishitai somebody vot is got Cherman gerry far zell, so Hlesee, but run elee too p'ic vellers, by a pok m'ntwot is in, and zond it here on der express gombaino, and I will buy de brico on it."

One applicant, designated, as a citizen of the State, a supply of fish for the creek, I told him that the water was dead and clear, the bottom a solid rock, with sides of flint and gravel, and if not supplied at once would, at the reassembling of Congress, report the Commissioner through his representative to Col. Baird, of the Fish Department.

Two countymen came to the Colonels', and, finding that there were some trifling charges to pay before getting the fish, one of them remarked:

"Til be dog-goned if I'd give a nickel for the cursed things; they can't count, no how. Why, Bill, that's a million jacks like 'em in the creek close to home, and this is nothin' but a put up job on us poor fellows, no how."

The other party was not of the same opinion, however; took his ten pairs and went off rejoicing.

"If you have any carp eggs," writes a party from Sevier county, "send me by express about a pint of them, with full particulars as to how to hatch them out and raise them afterwards."

Only one colored person applied for fish. He said, "Kurnul, if you got 'bout a hundred of 'em, I'll give you a dollar. I'll bound my ole woman, 'Phillis' 'I'll raise millions of 'em. She's de best and at chickens 'n' sich like I eber see; an' ef she do git on 'em, den I see got for say is, kum den and she'll do de best she kin to let 'em equal other dat kat she stewed for you de time she was de best fish in de water."

The last person supplied was one whose orthography caused the Colonel to break through his stereotyped rule of compelling each applicant to call in person or send an authorized agent for the fish. This remarkable postal card reads as follows:

COOKIN CO.

"DEER KUNNEL,

thar ar yoos looking i mites hev a thew of them Phyne carrp. I am out of munney but i am in a Darlin of that is a hie chee an' got 'bout a hundred of 'em, I'll give you a dollar. I'll bound my ole woman, 'Phillis' 'I'll raise millions of 'em. She's de best and at chickens 'n' sich like I eber see; an' ef she do git on 'em, den I see got for say is, kum den and she'll do de best she kin to let 'em equal other dat kat she stewed for you de time she was de best fish in de water."

As a matter of course, the bucket was purchased, the fish put in it, and "Aze" started for home, saying as soon as the fish got there he would get Sam to write to the *American* to notify the United States Fish Commission.

Over forty persons have received carp since the last distribution, and many more have applied and would have been supplied, but Col. Aker could not send the fish, buy buckets and take the chances of loss, hence he only gave to those who called in person. Those who failed to get their fish were disappointed, but much disappointed, as there are thousands of them in several ponds around Nashville, when the Commissioner can dispose of as soon as the winter is over, then every one can get a carp. If the Legislature, when they meet on the 7th proximo, will only supply the fish, and let the Commissioner take care of the distribution, the Commissioner can then send fish and accommodate the citizens of the State in a manner which cannot be expected of them now.

THE RAINBOW TROUT OF CALIFORNIA.

Salmo iriden.

ROCHESTER, N. Y., Dec. 1.

Editor Forest and Stream:

In the year 1875 I succeeded in obtaining from a Mr. Newell, of San Francisco, about five hundred eggs of the California mountain trout, which had been lying for some time previous to procure a quantity of the eggs of the species, but was not successful until the year above mentioned.

From the 300 spawn thus obtained, we succeeded in raising 275 fish to the age of three years, at which time they commenced to spawn, and in the spring of 1876 we raised 100 eggs, and distributed all but 17,000 young fry, which we retained as breeders at the New York State Hatchery.

In the spring of 1879 there were of the old fish 260, and on account of their being older and larger, they produced 95,000 eggs; and in the spring of 1880 they produced 100,000 eggs. In the spring of 1880 there remained 250 five-year-olds, from which we obtained 92,000 spawn, and distributed 63,400 young fry.

In the spring of 1881 the 17,000 which we commenced to raise in 1875 were three years old, and there remained of them about 16,000, from which we succeeded in distributing in the waters of New York State over one million two hundred thousand young fry. This season they will be four years old, and the supply will undoubtedly be much larger than last.

The New York State Fish Commission were the first to introduce this fish in the West, and they have proved to be a valuable addition to our better class of food fishes. They are very hardy and gamy, and will thrive in a higher temperature of water than the brook trout, and will also do well in the same waters with them. I am an enthusiast of the rainbow trout, and I can say that I am also of the opinion that they will thrive in our pure water inland lakes, provided they have small spring streams flowing into them, in which to place the young fry.

I am in receipt of the most encouraging reports from the waters in which they have been deposited, and they seem to become easily acclimated to our waters and the percentage that have lived is large, showing that the food and water in this section is wholly adapted to them. They commence spawning about March 1, and continue until about May 15. The eggs are about thirty to thirty-five days in hatching and the fish grow to weigh from two to four pounds.

Taking into consideration the small number of eggs with which we started, I consider this one of the greatest successes in artificial fish-culture.

SETH GREEN.

CARP IN MILL-PONDS.—WENONA, N. J.—In your editorial comments upon my communication in your issue of Dec. 1, you refer to gold-fish, live-bait, etc., and say that the carp is the best. I am in your communication (lastly written) immediately after the words "my fernace." I should have added the words, "so far as profit is concerned." I am fully aware that carp, if not destroyed by predatory fish or other enemies, will live for years, and even to old age, and I am sure that the U. S. Fish Commission is not yet furnishing them for the purpose of stocking such waters, for the reason that paying returns from such sources are impossible, if not impossible. In one-half the instances which come under my notice, however, the young carp might as well be consigned to such waters as to place them in a reservoir. Would-be carp culturists who do not engage in the business systematically, will not attain success, but will bring the promising new industry (here) into disrepute.—MILTON P. PIERCE.

Worcester, Mass., Dec. 2.—The sporting news in this vicinity is at a standstill; the supposed interest awakened by the consolidation of the two clubs has not brought forth much fruit. Individuals have occasionally come to the front with a string of fish, but any general practice has not been announced. Some of the sportsmen in this vicinity have made a raid on the fox, especially to the south and south-east of the city. John M. White, of Millbury, reports ten, while a Grafton man tells of equally as good luck.

At West-grove the Sportsmen's Club had their annual shoot Thanksgiving Day. The two squads were commanded by Capt. Jackson and Winslow. The result was a game supper at which some fifty were present. The veteran fox-hunter, Mr. A. Davenport, was present as a guest.—E.

THE NATIONAL FIELD TRIALS.

THE DERRY.

FIFTY-FIVE of the forty-eight nominations put in an appearance, and were drawn in run in the following order:

Dashing, Novice, black, white and tan English setter bitch whelped July, 1889, by Dash II, out of Novel, owned by Mr. Clarence K. Drake and handled by Mr. D. C. Sanborn, Dowling, Mich., and Met Laverack, black and white Laverack setter bitch whelped April 2, 1890, by Thunder out of Peers, owned by Mr. J. J. Snelbourn, D. and handled by H. H. Short.

London, blue Belton setter dog whelped July 22, 1889, by Gladstone out of Clip, owned by P. H. Bryson, of Memphis, Tenn., and Lady Friend, red Irish setter bitch whelped May 7, 1889, by Bob out of Fripp, owned by Mr. F. E. Stoddard, of Memphis, Tenn.

Black and white setter bitch whelped May 24, 1889, by Dash III, out of Countess II, owned by Harvard Kennel Club and Glida, blue Belton setter bitch whelped April 7, 1889, by Gladstone out of Floy, owned and handled by Mr. J. H. Dew, of Columbia, Tenn.

Shadow, black, white and tan setter bitch whelped Sept. 11, 1889, by Lincoln out of Daisy Dean, owned by Mr. Ed. J. Carr and Lu Laverack, lemon Belton setter bitch whelped April 2, 1889, by Thunder out of Peers, owned by Mr. Jos. J. Snellenburg and handled by H. H. Short.

Clair, black and white setter dog whelped May 15, 1889, by Dash III, out of Diana, owned by Mr. Edward J. Hardy and Adair, black and white setter bitch whelped July 1, 1889, by Pride of the South out of Cammie, owned by Captain Patrick Henry.

Black Laverack, black and white setter dog whelped April 2, 1889, by Thunder out of Peers, owned by Mr. David McK. Lloyd and Bessie T., black, white and tan setter bitch whelped April 7, 1889, by Gladstone out of Floy, owned by Mr. D. Bryson, Memphis, Tenn.

Gertrude, black, white and tan setter bitch whelped June 4, 1889, by Gladstone out of Nellie, owned by Mr. D. C. Sanborn, Dowling, Mich., and Hector, formerly Tom Paine, white, black and ticked setter dog whelped June 4, 1889, by Gladstone out of Sanborn's Nellie, owned by Mr. D. Bryson, Memphis, Tenn.

Polux, black and white setter dog whelped May 15, 1889, by Dash III, out of Diana, owned by Mr. E. E. Hardy, a bye.

MONDAY.

Monday was a beautiful day—clear and calm. A heavy white frost—the first of the season—covered the ground; the scent appeared to be very good after the frost disappeared, and we enjoyed a day of royal sport. At 8 o'clock the dogs were drawn, and at 8:20 a start was made for the ground marked out for the day.

DASHING NOVICE AND PET LAVERACK.

Walking up the railroad about a mile, Dashing Novice and Pet Laverack were cast off at 8:55 in a cotton field to the east of the railroad and worked toward the south a short distance, when they swung round and beat toward the north-west. Both quattered and ranged very well up to the fence, when Novice ran into and flushed a bird. Novice moved on, and Pet followed her. Pet, who had the wind, some of them went only a short distance into a cornfield the other side of the fence, where Novice soon pointed nicely. Pet, brought up to back, dropped on point also. The birds were flushed to order, but not at all, and both dogs were forced to wing. Striking into the timber, Novice again indicated and Pet backed. Sanborn flushed to order a single bird and killed, and Novice retrieved very nicely. Somehow, the dogs failed to find the other birds, although they were seen to go down, and only one more was started, and that one by Mr. Bryson, who was behind. The dogs were now worked back through the corn and cotton fields into another cornfield, where Novice ran into four or five birds and flushed them. Pet, at the same time, dropped to a handsome point 100 yards to the right. Short flushed to order, and missed with both barrels. The birds were now led round, and judges and reporters, as well as many spectators, mounted. Passing through some timber, both dogs challenged near the edge, but nothing was found: then out into a cotton field, where Novice did some fine ranging and quattering, showing the most speed. Some birds had been marked down, and Novice worked very carefully. Sanborn flushed one in the edge, and a little further on both dogs pointed grandly, Novice a trifle sooner than Pet. The birds were flushed to order and both handlers shot, killing one bird, which Pet retrieved. The dogs were then out on the heat awarded to Dashing Novice. Dogs that one hour.

LONDON AND LADY FRIEND.

Lady Friend and London were at once put down, London was the fastest, and worked very well, but carried his tail a little low. Friend was evidently scared at the crowd, and did not appear to be hunting, and was withdrawn by her handler after being down 15 minutes. This was the worst of the day, and the birds were taken transiently injured by keeping her down longer while so excited.

BESS AND GLIDA.

Bess and Glida were cast off at 10:15. Glida at once ran into a hare, which skurried away in plain sight, but she remained perfectly steady. Bess soon found a good berry, which she pointed very nicely. Glida, with her head high in the air, backed in grand style. The birds were not shot at, and Bess, with her head well up, went straight to where they struck and came to a point, but the birds had evidently flown again, as they could not be found. Striking round the point, Bess backed. Down Glida went, and Glida made a very nice point, which Bess backed. They held their positions a long time before the birds were flushed. Mr. Dew shot to order, but failed to kill. This point and back was very fine. A little further on Glida swung round and doubled back, and Bess backed. Dew called to order and both dogs were steady. When sent to retrieve the bird led them a lively chase, but was soon caught by Bess. Moving on north, both dogs came to a point, but the handlers, in going to them, flushed the birds. A little further on Glida dropped a point and Bess backed; the birds were flushed. Moving on, Glida, going down wind, scored a flush. Bess moved very carefully, and rounded up to a point, but Nesbitt got a little too close to her and the birds flushed. She then swung to the west and made a nice point. Glida, at the same time, made a good point, and Bess backed. Bess flushed to order, and the dogs were ordered up and Bess awarded the heat. Down forty minutes. This was a rattling good pair, and showed some grand work. Glida showed a little the most style, but Bess has a grumpy way of feeling for her birds that is very taking.

SHADOW AND LU LAVERACK.

Shadow and Lu Laverack were put down at 11 o'clock in a cornfield. Both ranged well, but we fancied Shadow a little the best. While the dogs were going for water a single bird was flushed, and Shadow, who was on the point, was driven back by the water. The rest of the day. Both challenged, and we thought that Shadow had then, but Dew called her and the bird was flushed between them, Shadow dropping on point just as the bird started. Moving on, Lu made a false point, which Shadow backed. A little further on some miles started a boy, and Shadow dropped on point where

they had been. On a little further Shadow dropped on point and Lu dropped to order, but, catching sight of Shadow, backed. Shadow jumped once or twice when the bird was flushed, but at once dropped to order. On again, two birds flushed near Lu, who pointed at the same instant, whether to scent or wing we could not tell. Both dogs steady to wing. A little further on Lu dropped on a false point, and Shadow was dropped to order, swinging round. Shadow made a nice point on the heat, and Bess was ordered up, and Shadow awarded the heat at 12 o'clock. Down one hour.

CLAIR AND ADAIR.

Clair and Adair were at once cast off, and worked in the weeds along the timber. The spectators started a levy, and while the dogs were working back, another large levy was flushed by the judges. Adair swung to the south and challenged, and did not like to leave when called, and after working clear around the crowd, she went back and ranged very fast and wide trying to work them out, but Capt. Henry went after her, and starting her toward the birds, fired his gun to steady her. She flushed a hard in the trees, and soon after another one got up near her. She then pointed, but soon rounded on and two more flushed close by. Clair then pointed and rounded nicely, but nothing was found and he recoiled false point. On order, Adair pointed in thick briars, and birds were flushed beyond her, but she remained staunch until Capt. Henry flushed another one in front of her. She again pointed under a tree top, and two or three birds flushed all around her. The dogs were soon after taken up and Adair awarded the heat. Down 45 minutes. Both dogs were steady, and will make a good one, as she is very speedy and has a good nose.

MACK LAVERACK AND BESSIE T.

After lunch Mack Laverack and Bessie T. were put down at 1:30. Both dogs moved very nicely. We liked the motion of Bessie the best, but she soon chased a hare in great style clear out of sight, and shortly after she chased a quail and the heat was given to Mack Laverack at 2:15. Down 45 minutes.

GERTRUDE AND HECTOR.

Gertrude and Hector (formerly Tom Paine) were at once cast off. Gertrude went very well. Hector moved rather lazy, and after three-quarters of an hour he was withdrawn, and Gertrude was awarded the heat with a flush and a point as her score. This ended the first series of heats.

SECOND SERIES.

DASHING NOVICE AND POLUX.

Polux, who had the benefit of a bye, and Dashing Novice were cast off at 3 o'clock. Polux challenged in the cornfield, where he was shot to order. The starting gun was fired, and Dashing Novice challenged and rounded up to a levy of birds in some briars, and pointed nicely. Two or three of them flushed wild, but she held the rest handsomely. Polux also pointed on the trail of the same birds, some of them flushed wild, but she held the rest. Polux, who had the wind, some of them went only a short distance into a cornfield the other side of the fence, where Novice soon pointed nicely. Polux, brought up to back, dropped on point also. The birds were flushed to order, but not at all, and both dogs were forced to wing. Striking into the timber, Novice again indicated and Polux backed. Sanborn flushed to order a single bird and killed, and Novice retrieved very nicely. Somehow, the dogs failed to find the other birds, although they were seen to go down, and only one more was started, and that one by Mr. Bryson, who was behind. The dogs were now worked back through the corn and cotton fields into another cornfield, where Novice ran into four or five birds and flushed them. Polux, at the same time, dropped to a handsome point 100 yards to the right. Short flushed to order, and missed with both barrels. The birds were now led round, and judges and reporters, as well as many spectators, mounted. Passing through some timber, both dogs challenged near the edge, but nothing was found: then out into a cotton field, where Novice did some fine ranging and quattering, showing the most speed. Some birds had been marked down, and Novice worked very carefully. Sanborn flushed one in the edge, and a little further on both dogs pointed grandly, Novice a trifle sooner than Polux. The birds were flushed to order and both handlers shot, killing one bird, which Polux retrieved. The dogs were then out on the heat awarded to Dashing Novice. Dogs that one hour.

BESS AND LONDON.

Bess and London were now put down in a cotton field, and worked south. Both went well, but Bess was a little inclined to follow the other dog. Moving on through alternate fields of sedge and corn, Bess challenged, and London dropped to order. Then across the road, London dropped to order, and Bess challenged some distance, apparently catching scent, but nothing was found. They were then sent north to where a large berry had been marked down. Bess dropped on point, but nothing was found, as the birds were running to roost. Hector, who was used, here to roost, and made a good point, which Bess backed. While Polux and Novice were brought up to back, which they both did in grand style. Moving on, Bess dropped on point in a ditch and London backed. Nesbitt killed to order. The spectators were then sent to the south, and Bess and London were ordered up and Bess awarded the heat. Down 45 minutes. Both dogs were steady, and will make a good one, as she is very speedy and has a good nose.

TUESDAY.

Tuesday morning the dogs in the All-Aged Stakes were drawn and a start was made from the hotel at 8:30.

SHADOW AND ADAIR.

After a ride of about a mile, to the north-east, Shadow and Adair were put down in a cornfield, and worked through to a large berry. Shadow was the fastest, and worked very well, but carried his tail a little low. Adair was evidently scared at the crowd, and did not appear to be hunting, and was withdrawn by her handler after being down 15 minutes. This was the worst of the day, and the birds were taken transiently injured by keeping her down longer while so excited.

GERTRUDE AND MACK LAVERACK.

Gertrude and Mack Laverack were cast off in a large field of weeds at 9:10. Gertrude ranged and quattered in capital style; Mack worked busily, but not very fast until he had taken down a while, when he let out a link, and ranged wide and well. Working across the road, Gertrude pointed a berry which was flushed by Sanborn. Taking a turn north and then swinging round back, Gertrude half pointed near a hedge, and Mack, a little to her left, came to a nice point. Gertrude moved up and backed and then, the birds were flushed. Gertrude pointed, and Mack backed. Working on up the hill, Gertrude pointed and Mack backed, when she moved on and flushed the bird. She soon pointed again and Mack backed up in good style. The bird was flushed to order, but the gun missed fire. Two more rose and shot, and Mack backed. Gertrude pointed, and Mack backed. Gertrude awarded the heat. Down 45 minutes.

THIRD SERIES.

DASHING NOVICE AND BESS.

This ended the second series, and Dashing Novice and Bess were cast off to run the first heat of the third series at 10 o'clock. Working through some sedge and into a large berry, Novice challenged, and Bess dropped to order. The starting gun was fired, and Dashing Novice challenged and rounded up to a levy of birds in some briars, and pointed nicely. Two or three of them flushed wild, but she held the rest handsomely. Polux also pointed on the trail of the same birds, some of them flushed wild, but she held the rest. Polux, who had the wind, some of them went only a short distance into a cornfield the other side of the fence, where Novice soon pointed nicely. Polux, brought up to back, dropped on point also. The birds were flushed to order, but not at all, and both dogs were forced to wing. Striking into the timber, Novice again indicated and Polux backed. Sanborn flushed to order a single bird and killed, and Novice retrieved very nicely. Somehow, the dogs failed to find the other birds, although they were seen to go down, and only one more was started, and that one by Mr. Bryson, who was behind. The dogs were now worked back through the corn and cotton fields into another cornfield, where Novice ran into four or five birds and flushed them. Polux, at the same time, dropped to a handsome point 100 yards to the right. Short flushed to order, and missed with both barrels. The birds were now led round, and judges and reporters, as well as many spectators, mounted. Passing through some timber, both dogs challenged near the edge, but nothing was found: then out into a cotton field, where Novice did some fine ranging and quattering, showing the most speed. Some birds had been marked down, and Novice worked very carefully. Sanborn flushed one in the edge, and a little further on both dogs pointed grandly, Novice a trifle sooner than Polux. The birds were flushed to order and both handlers shot, killing one bird, which Polux retrieved. The dogs were then out on the heat awarded to Dashing Novice. Dogs that one hour.

IT WAS--A Northbridge, Mass., correspondent, "H. T. W." says: "To clear out the fleas from a dog's kennel, go to a cigar-box manufactory and get the cedar shavings and put some in the dog's kennel; it will drive every flea away. My pointer for three years was covered, and Persian Insect Powder, carlinic soap, etc., was fully and thoroughly applied, and in a few days the dog would be again covered; but the odor of the shavings is too much for the fleas. "They git,"

In a match of the nature now contemplated—viz., of simple skill in marksmanship—the tiresome feat of breaking 10,000 glass balls would be out of place and not legitimately compatible with the purport of the occasion, also unworthy of the enormous prolongation of time consumed in its essay. As you have introduced the horse as

NEW NONPAREIL.—Mr. Clapham is to send a 34 ft. nonpareil boat to England, probably for experimental purposes.

GRACIE.—Is to have more lead. At last the so-called practical reason is given to adhesion to the value of weight—something they should have understood long ago. The light-displacement fallacy is well nigh established.

HULL YACHT CLUB.—Has now 150 members and 68 yachts, and last year, for the September matches, distributed \$102 in cash prizes. A new club house is to be erected unless consolidation with the Dorchester Y. C. is effected, which at present does not seem likely. Corinthian ideas are to be encouraged in every way.

SOUTH.—Sloop Pantha has been sold to Mr. Morris Ketchum, Jr., and will hereafter hold the Southern burgee. Rumor has it that Will. Elsworth is clapping out a block for a new schooner for Mr. Pringle; also one for Mr. Lowell, or the Atlantic Y. C.

MAINE.—A new circular has been issued by this well-known and popular yacht agency, giving a long list of yachts of all kinds now in the market. It will be hard to please any one who cannot find in the list just what suits his fancy and his pocket. Send to him for a copy.

TYPE.—The battle of type has got across to France, and it has even been proposed to exclude the French from races altogether. The French yachts, built in imitation of our American boats, have been so roundly beaten by British cutters that French armor in favor of the light-draft machine is cooling off.

EASTERN YACHT CLUB.—The membership is growing fast; the rolls now show 650 names. The club promises are long to become the largest in America. Its clubhouse at Marblehead has proven a great success. Schooner Silvio, steamer Adelfa, sloops Viking and Commodore, and cutter Vantage, have been added to the list since publication of the last club pamphlet.

BOUL.—This is the name of Mr. S. A. Wood's new schooner, now fitting out for 23rd street, South. She is from a new set of plans by Mr. A. Cary Smith. The hull is 42.5 water line, 16 ft. beam and 8 ft. deep, 10 ft. draft. Mast, up to cap, 4-30 ft. topmast, 25 ft.; boom, 14 ft.; jib, 30 ft.; bowsprit, extended, 25 ft.; topmast yard, 35 ft. The length of the gun is noticeable, and, in our opinion, a great advance on the old-fashioned narrow head sails copied from cheaply-placed snuffs.

NEW RIG.—The schooner Dream, of Boston, will come out as a sloop next year, for which purpose the hull has been forwarded by Mr. A. Cary Smith. The hull is 42.5 water line, 16 ft. beam and 8 ft. deep, 10 ft. draft. Mast, up to cap, 4-30 ft. topmast, 25 ft.; boom, 14 ft.; jib, 30 ft.; bowsprit, extended, 25 ft.; topmast yard, 35 ft. The length of the gun is noticeable, and, in our opinion, a great advance on the old-fashioned narrow head sails copied from cheaply-placed snuffs.

SCHOONERS.—Commodore W. A. W. Stewart, S. Y. C., will hoist his broad pennant aboard the schooner Nokomis, which she has purchased from Mr. Fiddickford. Under the latter's ownership she was a topsail schooner, and in due course to the southward last season. Formerly, Mr. Fiddickford, Rev. Mr. Hewitson did some extensive cruising in her to the Labrador coast, and told his story in his book "Starboard and Port." The schooner is 85 ft. over all, 23 ft. on the line, 22 ft. in beam, 5 ft. 6 in. draft and 9 ft. water, as she is a keel boat.

TELEGRAPH POLES AND WILD ANIMALS.

—Some interesting facts are brought out in a paper by M. C. Nielsen, of Christiania, on the impression produced upon animals by the resonance of the vibration of telegraph wires. It is found that the black and green woodpeckers, for example, which hunt for insects in the bark and in the heart of decaying trees, often peck inside the circular holes made transversely through telegraph posts, generally near the top. The phenomenon is attributed to the resonance produced in the post by the vibration of the wire, which the bird mistakes as the result of the operations of worms and insects in the interior of the post. Every one knows the fondness of bears for honey. It has been noticed that in mountain districts they seem to mistake the vibratory sound of telegraph wires for the grateful humming of bees, and, rushing to the post, look about for the hive. Not finding it on the post, they scatter the stones at its base which help to support it, and, disappointed in their search, give the post a parting pat with their paw, thus showing their determination at least to kill any bees that might be about it. Indisputable traces of bears about telegraph posts and scattered stones prove that this really happens. With regard to wolves, again, M. Nielsen states that when a vote was asked at the time for the first great telegraph lines, a member of the Storting said that although his district had no direct interest in the line proposed, he would give his vote in its favor, because he knew the lines would drive the wolves from the districts through which they passed. It is well known that to keep off the ravages of hungry wolves in winter the farmers in Norway set up poles connected together by a line or rope, under which the wolves would not dare to pass. "And it is a fact," M. Nielsen states, "that when, twenty or more years ago, telegraph lines were carried over the mountains and along the valleys, the wolves totally disappeared, and a specimen is now a rarity." Whether the two circumstances are casually connected, M. Nielsen does not venture to say.—*Nature*.

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue.

Rates promptly furnished on application.

YOUR MONCRAM.

On receipt of \$3.00 we will forward to any address, free of charge, 50 delicious cigarettes, in a beautiful tin associated with monogram or name, manufactured from Van Fair tobacco. Also, a small size, with or without monogram, expressly for ladies. Please be careful in giving shipping directions. Address: L. LUCIERNE & CO., 216 and 215 West Seventh st., Cincinnati, O.

FOREST AND STREAM.

DECEMBER 15, 1881

NEW SCHOONER.—Alonso Smith is under way with a fine beamer for Col. Josiah Porter, of New York. She is 31 ft. on deck, 21 ft. beam and 6 ft. hold, with 7 ft. 6 in. water. Smith has produced some of our best yachts, and the Hildage is one of his notably fast ones. His boats are characterized by more depth and body than customary, which we consider a good point. Yachts from his yard are well put together and built in a stronger fashion than about the city waterfront, where the art of both modeling and building was never at a lower ebb than now.

ALL THE GO.—The board is nearly dead. The Boston yachts Rosetta and Titania will shed their flags and come out with deep backbones and low weights. Wobber will do the job. Rhode and Herald are to receive long overhauls by Smith, of South Boston. Schooner Little Thorn is to have the benefit of an iron keel, and will masthead the yellow and black diagonal cross of the Hull Y. C. next season having become the property of Mr. Theo. Phillips. Commodore Mansfield, Washington Village Y. C., is to have a new 22 ft. cat, with a keel, of course.

THAT CUTTER.—In the words of the immortal hero, whose name just at this juncture I fail to recall, "We have met the enemy and they are ours." The blasted Britishers have sent one of their non-sensical lead-mules over to New York—and beaten us. Their sending the cutter Madge over was enough, but their beating us was adding insult to injury. I am metaphorically clad in sackcloth, and diamond-dusted with ashes; but, like Beau Brummell, who consoled himself with the reflection that his wife had at least paid him the compliment in desiring him to do so for the handsomest man in London, so I console myself with the thought that they sent us over the best they have, at any rate.—*Correspondence San Francisco Olympian*.

OBITUARY.—In the death of Col. H. G. Stebbins, which took place Dec. 14, the yachting community loses one of its foremost men, and we an old family friend. Col. Stebbins was born in 1811, and after launching into business for himself at an early age, assumed a leading position among New York's best citizens. From 1866 to 1870 he was Commodore of the New York Y. C., an office which he filled with credit to himself and the club. After experience in a number of small craft, he held his first aboard George Steers' famous rig, and rigged her as a schooner, after her return from British waters, where she had been badly beaten by English cutters while yet rigged as a sloop. In 1865 he transferred his colors to the new schooner Phantom, one of Joe Van Dusen's best, and in her won a number of prominent races. In later years he retired from active sailing, but maintained a lively interest in the sport.

NEW YACHTS.—They are not slow in San Francisco to appreciate good depth, deadrise and an easy bidge. Successive yachts laid down by California builders are improvements upon their predecessors in this respect. Geo. Farmer, of Oakland, has a nobby 40 ft. schooner planned. Light topsides and low ballast are better understood on the Pacific coast than in New York. This new schooner has a bent oak frame and plenty of through fastening, making the hull light and strong. She has much deadrise and a slow bidge, which will insure good rough water qualities. Wm. Stone, "olden's favorite builder,"

has also a nice little two-sticker of 42 ft. length well along. She is built "on spec," but is pretty certain to find a purchaser. San Francisco is fortunate in being too far away to purchase discarded New York rattlers for the sake of the low figures at which they are offered. Commodore Harrison proposes to keep his yawl. Frolic in commission all the year round.

CANOE PHOTOS.—Mr. S. R. Stoddard, of Glens Falls, N. Y., sends us fine photographs of canoe photos. They are a record of the most some specimens of the art and as preserving some important events in canoeing history. One of the photos is a fine broadside view of the original Shadow, with her originator, Commodore W. L. Alden standing by her side. The Shadow is now the most popular model in America, and in a few short years has been spread all over the country, strictly on her merits. Commodore Alden will receive the gratitude of future generations for the fortunate way in which the most desirable points wanted in a canoe for general service have been incorporated in the now universal Shadow pattern. There is also an excellent photo of the venerable canoe Kittywake, showing her hauled out on the beach, tent erected, and her owner, Col. Norton, snugly reclining inside, holding a pleasant canoeing letter to Forest and Stream. Another photo of the coup and shore, with innumerable canoes of all styles and sorts, some with their rigs ready for a breeze, gives an excellent idea to strangers of the great meet on Lake George last year, and the free and easy fun the canoeists may partake to the benefit of mind and body.

CUTTERS.—The Olympian believes in progress, and it is really glad to see that the New York skimmers have been beaten by a deeper type of boat. The New York skimmer is utterly worthless in any place where there are rough seas and strong breezes. They have never been successful here in San Francisco Bay. Here we have to build deeper and abler boats. On every occasion where the light-draft New York type has been pitted against a California built boat, in a breeze, the New York type has gone to the wall. We here do not believe in the New York type. We need all seaworthy boats. All of our boats are given some considerable deadrise and good draught. Boats are not wanted here which have to do everything and let go the post when a 25 mile breeze comes on. We have to stand worse winds than that eight days out of ten in summer in the channel. We are glad to see our worthy and esteemed contemporary, Forest and Stream, come out plainly and admit that Madge is not the type which should be built against a California built boat, in a breeze, the New York type has gone to the wall. We here do not believe in the New York type. We need all seaworthy boats. All of our boats are given some considerable deadrise and good draught. Boats are not wanted here which have to do everything and let go the post when a 25 mile breeze comes on. We have to stand worse winds than that eight days out of ten in summer in the channel. We are glad to see our worthy and esteemed contemporary, Forest and Stream, come out plainly and admit that Madge is not the type which should be built against a California built boat, in a breeze, the New York type has gone to the wall. We here do not believe in the New York type. We need all seaworthy boats. All of our boats are given some considerable deadrise and good draught. Boats are not wanted here which have to do everything and let go the post when a 25 mile breeze comes on. We have to stand worse winds than that eight days out of ten in summer in the channel. We are glad to see our worthy and esteemed contemporary, Forest and Stream, come out plainly and admit that Madge is not the type which should be built against a California built boat, in a breeze, the New York type has gone to the wall. 1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
FISHING AND LAKES OF

THE FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed,
if equaled, in the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and the
famous AMERICAN GRAYLING is found only in
these waters.

THE TROUT season begins May 1 and ends Sept. 1.
THE GRAYLING season begins June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCA-
LONGUE, also abound in large numbers in the many
lakes and bays of this territory. The Sportsman
can readily send trophies of his skill to his
friends or "club" at home, as fish for packing fish
can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The
scenery of the North Woods and Lakes is very
beautiful. The air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will
be largely increased in time for the season of 1882
by new buildings and additions.

During the season ROUND TRIP EXCURSION
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owner's risk.

Let us aim to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 160 pages sent free. Time Cards,
Folders and further information, address

A. B. LEST, Gen'l Pass' Agent,
Grand Rapids, Mich.

NOTICE TO SPORTSMEN.

SHOOTING IN CURRICKS SOUND,
NORTH CAROLINA.

A daily line of conveyances is established by Mr.
M. H. Snowden between Snowdon, Eliza-
beth City, and Norfolk Railroad at Currituck
Court House on the Sound, leaving Snowdon on
arrival of Norfolk train connecting with Baltimore
steamers and returning in time to connect with
same train for all raven Baltimore steamer. Time
between New York and Currituck Court House,
via Snowdon, twenty hours; north-bound, twenty-
four hours. M. E. KING,
Gen. Manager Elizabeth City & Norfolk R. R. Co.

Hotels and Resorts for Sportsmen

TO SPORTSMEN:
The Pennsylvania R. R. Co.

Respectfully invite attention to the
SUPERIOR FACILITIES

afforded by their lines for reaching most of the
PROTECTED PARKS AND GAME RESERVES in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT POINTS, avoid the dis-
comforts and dangers of rough and tumble ex-
tent cars which run over the smooth steel tracks
enable STOCK TO BE TRANSPORTED without
failure or injury.

THE LINES OF
Pennsylvania Railroad Compy

also reach the best localities for

Gunning and Fishing

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, RENOV, BED-
FORD, GREENSBORO, RALEIGH, MINNEQUA, and
other well-known centres for

Trout Fishing, Wing Shooting and Still
Hunting.

Also to
TUCKERTON, BEACH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST
renowned for SALT WATER SPORT AFRICK PIN
AND FEATHER.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
Dupont's Gunpowder Mills, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. cans.

Dupont's Eagle Licking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cans. Tens Lint 6½ and 12½ lb. kegs.

Dupont's Choice Bore.—Specially adapted
for "Choice Bore" Guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 1 and No. 5,
No. 1 being the coarsest. Packed in ½ lb. kegs and
1 lb. cans.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. cans and ½ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."
Fg. and FFG. The Fg. for long-range rifle shooting,
the FFG. and FFG. for general use, burning
strong and moist. Packed in ½ lb., 1 lb. and 5 lb.
cans, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG.
fine.

Dupont's Sporting, Mining, Sniping and Blasting
Powders of all sizes and descriptions. **Special
Grades for Export.** Also Rifle, Cartridge, Musket,
Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.
N. B.—Use none but DUPONT'S Fg. or FFG. for
long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square cans
of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. cans and
½ lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. cans
and ½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" Fg. in kegs of
25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also
packed in 1 and ½ lb. cans. Burns slowly and very
clean. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" Fg. is the
standard Rifle Powder of the country.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To clubs of three or more annual subscribers, \$3 each. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsvendors throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Sm. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 22.

IF YOU HAVE A FRIEND who sometimes goes fishing or shooting, or "would go if he only had the time," show him a specimen copy of the FOREST AND STREAM. Any issue of the paper will do for this. Some publishers make tremendous exertions to get up specially attractive numbers at this season, and then spread them broadcast over the land as "specimens" of the regular all-the-year-around issues. That is not our plan. We try to turn out a tip-top paper just fifty-two times every year. That is the fair, honest way, and it pays. If you file your papers, and do not wish to break the file, send us the name of your friend and we will furnish him with a copy.

THE EARL OF DUNRAVEN, in a communication published in another column, explains that his recent misadventure in Nova Scotia was due wholly to a natural misconception by him of the requirements of the statute, and that instead of having intentionally disregarded the law, he had, as he thought, fully complied with it.

We had a pleasant call last Tuesday from Mr. Edmund Orgill, who had just returned from a shooting trip in the South.

THE THIRD CHAPTER of the "Cruise of The Nipper" is unavoidably postponed until next week.

A MERRY CHRISTMAS!

THE spicy odor of mountain spruce boughs greets us. Christmas-tide is at hand! THE FOREST AND STREAM joins in the universal salutation of good cheer. A Merry Christmas to you all!

This is the festival that has the strongest hold on the hearts of civilized men, and the widest acceptance among them. It is the season when charity scatters its gifts with most lavish hand, when kindly sentiments move every heart, enmities are forgotten, and good feeling is universal. At this time does the message of peace and good-will, first breathed nearly two thousand years ago, beneath the quiet starlight over the sleeping hills of Bethlehem, seem to have a real force, which is binding on each one of us. At this time we are shown the tenderest, the most loving aspect of human nature.

And it is now, at Christmas, that we remember, though perhaps unconsciously, that our forefathers were dwellers in the forest. Their lives were spent beneath the green woods and the open sky, and their camps were pitched by the running brooks or the peaceful lakes. To-day we recall that time by going forth into the woodland and bringing thence sweet-smelling branches, green leaves and bright berries to adorn our homes at this, our greatest festival.

Fragrant are these evergreen boughs, with tender memories of the past. Their woodland perfume pervades the house and brings fast-rushing recollections of the Christmas circles of other days. Again, in the early morning light do we see the dear familiar faces from which we parted long ago, and hear again the well loved voices now stilled for ever. Beneath the outward merriment of the day these deeper influences prevail; happy is he who yielding to them finds new courage and a manlier heart for the struggles of the year to come.

To each one of our readers this Christmas will bring the memories of happy anniversaries past and others hoped for; and to each one we offer our heartiest good wishes and a

MERRY CHRISTMAS.

THE FIELD TRIALS.

THE last of our report of the National Trials at Grand Junction, as well as a complete description of the Pennsylvania State Trials, will be found in our Kennel department this week.

The National Trials were the most successful that have ever been run in this country, and will compare favorably with anything that the world has ever seen. We heartily congratulate the members of the National American Kennel Club upon the abundant success that has crowned their efforts. Much of this success is due to the indefatigable labor of the President of the association, Mr. P. H. Bryson, who has expended much time and labor in arranging the details, both before and during the meeting. There was no lack of birds, and the grounds are extremely well adapted for the holding of the Trials. Many prominent sportsmen from all parts of the country were present, and the utmost good feeling was manifest throughout the meeting, and all appeared to thoroughly enjoy the occasion. A large number of the most noted dogs in the country competed for the very valuable prizes offered, and the laurels there won were well earned and we warrant will be proudly worn.

The Pennsylvania Trials were very successful so far as the number of entries and quality of the dogs were concerned, but coming as they did immediately after the National Trials there was not so large an attendance as there would have been had more time intervened. Great praise is due the energetic members of the Association for planning and so successfully carrying through this important meeting.

The judges, without exception, were well qualified to perform their duties, and, although we could not quite agree with one or two of their decisions, we believe them to be thoroughly honest and to have impartially awarded the honors without fear or favor. The wide-awake proprietors of the Stonewall House, Messrs. Peeples and Branum, were equal to the occasion, and the hungry crowd were provided with well cooked and well served food.

We should, perhaps, state that our report of the Trials is

not compiled from the decisions of the judges, nor from hearsay, but that we carefully watched the different phases of each heat, and noted at the time the performance of each dog just as we saw it, seeking to chronicle the history of the running simply as history, extenuating nor criticising aught save as our instinct as a sportsman prompted. To those of our readers who have never attended a Field Trial the many false points and flushes will perhaps seem to indicate that the quality of the work done was not of a very high order; and they may perhaps be led to think that had they been there, with their own Dash or Sport, quite a different record would have been shown. While not in the least disparaging the good qualities of the many Dash's and Sport's scattered throughout the country, we are free to confess that, although we once entertained the same belief, we have seen reasons to change it, and among the many really good dogs that we have seen afield we fail to recall one that we should deem it safe to back as a winner at a Field Trial. Not perhaps that in an ordinary day's shooting Dash and Sport might not acquit themselves as well or better than the first prize winner, but this is not a Field Trial by any means, and when we take into consideration the accessories that are inseparable from these public trials, we can only wonder that the record reads so fair. In reading our report and criticising the work therein described, there are many things that should be taken into consideration. Perhaps the most prominent of these, and for which great allowance should be made, is the high strung, nervous temperament of our canine pets, which is subjected to a far greater strain than when they are quietly taken out for an ordinary day's shooting; for the noise of the crowd, and the presence of many other dogs exercises anything but a steady influence upon their excitable nerves. The tramping and talking of the spectators also scares the birds, making them wild and less likely to lie to the dogs. This will account for many of the false points, which are undoubtedly often made to the scent of a frightened bird, who has just taken flight unseen. Many of the flushes would not be scored, were it not for the noise which puts the birds upon the alert, and causes them to rise before the dog has a chance to locate them. Then again the handlers are not always quite so cool and collected as they should be, and we have ever found that there is nothing more conducive to unsteadiness in a dog than to have his master go to pieces. Let us then give due credit to the dogs which pass through this very trying ordeal and acquit themselves fairly well; for the chances are that away from the excitement attending a public trial, they would prove themselves to be excellent animals. As we have before mentioned not the least of the benefits derived from the Trials is the greatly improved manner in which the dogs are handled, and the consequent lesson that the spectators are quick to learn and apply, to the manifest improvement of their own style. This, in itself, were nothing else accomplished, would stamp the Trials as a wonderful success. But a still greater good has been wrought in the vast improvement of the quality of the companions of our sports. Gentlemen who attended the Trials go home with more exalted ideas and broader views of matters pertaining to the sports of the field, and are no longer satisfied with the mediocre performances of the animals who have heretofore shared their outings, but at once institute radical changes and rest not until they achieve something approaching Field Trial form. Thus our Field Trials are accomplishing their mission, and the whole-souled sportsmen who so generously support and sustain them are reaping their reward, as with a pardonable pride they rejoice at the abundant success and brilliant future of our American Field Trials.

CANOE AND CAMERA.—A most timely book for the holiday season is Mr. T. Ledgwick Steele's "Canoe and Camera," the third edition of which has just come from the press. This is the most artistically and elaborately illustrated volume of the kind published in this country. The present edition contains a large map of the Northern Main regions, including the canoeing routes of the Main, St. John's, the Aroostook, and the East and West Branches of the Penobscot. Mr. Steele has been engaged several years in the preparation of this map, and sportsmen tourists owe him a debt of gratitude for his thorough work.

MAGAZINE RIFLES FOR THE ARMY.

AN important duty devolves upon the Board and officers now in session at Governors' Island, who have been charged by Gen. Sherman with the recommendation of a magazine gun for the use of the U. S. Army. It is not intended to make any sweeping change in the armament of our soldiers until the whole subject of repeating weapons has been more thoroughly worked up by our inventors; any change or step in the arming of the troop must be of a tentative character. That the magazine gun is the coming piece for the ordinary soldier is regarded as a foregone conclusion by the leading military authorities of every Commonwealth possessing an armed force. A dozen commissions are now face to face with the problem of selection. It is a sort of competition between the nations as well as between the arms, and the verdict of the representatives of one nation is eagerly looked to by the examining boards of other nations. Especially will this be the case with the report of the Board now in session here. America has gained the front rank in the making of small arms, and the rifle championship, now resting with the American team, shows that she can shoot as well as invent. Nations desiring to buy a supply of these weapons come to America as the readiest and best market. The "rain of lead" at Plevna was fired from rifles made in Connecticut, and from the same State hundreds of thousands of stands of arms have gone to other nations of Europe, to the States of South America, and even to far away Japan. The leading magazine model, pushed for adoption before the German authorities to supplant the breech-loading Mauser, is a pirated copy of a gun invented by a Lieutenant of the U. S. Army. It was displayed at the Centennial Exhibition, and there a German Jew of a mechanical turn of mind saw it, and stole the idea for reproduction at home.

The modern rifle has had a marked effect in modifying the art of war. The skirmish line has taken the place of the old movement in force, and the necessity for accuracy of marksmanship on the part of every soldier is every day becoming more imperative. The rising problem, too, is one of supply. The breech-loader gave the men an opportunity of rapid firing, and this they improved to such an extent as to make the supply of ammunition to the fighting line an important question. With magazine guns the consumption of ammunition runs up to alarming proportions, and to meet this difficulty the German Army authorities are adopting the "firing discipline." In this the fighting unit is represented by a skirmish line of a dozen men under an officer. Instead of random firing, as now under an engagement, the men shoot only on special orders of their officer. The intention is to prevent the men from falling into the error of an excited fusillade. The same object as this novelty in discipline is aimed at in the requirement that all arms shall be adapted to use as single breech-loaders as well as magazine guns. In that way the use of the reservoir for shots can be delayed until the supreme moment, when a dozen shots in as many seconds is an element of victory.

FLYING SQUIRRELS.—English misconceptions of American geography are proverbially gross and frequent. We are always pleased, then, when an English paper really does display familiarity with the subject, as is the case with an esteemed London contemporary. Speaking of the animal plagues of Winnipeg, which our readers will remember is up in Manitoba, *Land and Water* tells us that in the autumn, "the time when the [Winnipeg] cotton and corn seeds were ripening and maturing, myriads of squirrels left the woods and attacked the cotton and cornfields; they tore open the balls of the cotton plants, ate all the seed, and scattered the cotton on the ground; they devoured the kernels of the corn and then scampered off to Mississippi and Tennessee, where they met with a warm reception, and were shot down by hundreds." Now, from Winnipeg to Mississippi, the distance is, as the crow flies and the squirrel scampers, only a trifle over 1,200 miles, and to an American squirrel, as any man who has ever hunted them knows, a little "scamper" of 1,200 miles is the merest play. He can go very fast and very far, when he once makes up his mind to travel away from a man with a rifle. Indeed, we have seen squirrels that in going from Manitoba to Mississippi would take in Mount Washington and Pike's Peak on the way, and then not get up friction enough to set the Michigan woods on fire.

DEATH OF A FISHCULTURAL PIONEER.—We regret to chronicle the death of Mr. Aaron S. Vail, of Smithtown, Long Island. Mr. Vail owned a fine trout stream; and he entertained many prominent men in days past. Danie Webster and Henry Clay fished in his stream and partook of the hospitalities of his table. Mr. Vail engaged in trout-breeding when he first heard of it, about 1866, and his ponds are mentioned in Norris' "American Fish Culture," published in 1878, as among those of the early trout culturists.

MICHIGAN SPORTSMEN'S ASSOCIATION.—The seventh annual session of the Michigan Sportsmen's Association, for the protection of Fish, Game and Birds, will be held at East Saginaw, commencing Tuesday, January 17, 1892, at 10 o'clock A. M. Every sportsman's and game protection club in the State is earnestly requested to send five delegates, and in localities where no club has been formed sportsmen are cordially invited to attend. One of the results of the last session was the present game law.

The Sportsman Tourist.

THE BIG BEAR OF HERMOSA.

IT was evening, and our late dinner was over. Pipes, and a tin-cup full of mild grog soothed the fatigues of a ten hours' hunt, and steeped our souls in blissful balm. The day's sport had been good—two elk and five deer the net result—and we felt that we had a right "to loaf and refresh our souls." The day was dying, a peaceful death, and behind us the gray cliffs of Waluta were slowly darkening in the fading light. Out of the valley below we heard the voice of the Hermosa, as it bubbled to the spruces which leaned above it, or clafed at the cold rocks which barred its passage. It was one of those hours when the hunter, if he be anything more than a purveyor of meat, or a killer of deer, feels as if he stood within the very presence of the great Mother herself, and knows the radiance of "that light which never was on sea nor land." Half unconsciously, I repeated the drowsy words of the Lotos-Eaters:

"The charmed sunset lingers low adown
In the red West; there mountains curl, the dale
We see far inland; and the winding vale
And meadow, set with slender galigale.

And here are cool mosses deep,
And thro' the moss the ivies creep,
And in the stream the long-leaved flowers weep,
And from the craggy ledge the poppy hangs in sleep."

Roused by the murmur of the words, Ignotus took his pipe from between his teeth long enough to languidly remark, "Somebody coming down the trail."

"How do you know?"

"Heer 'em."

"Foot or horseback?"

"Horseback."

"White or red?"

"White; horses shod."

"Know who they are?"

"The May boys, I reckon. Camp over on the Larriweep. Hunting. Taking meat down to the ranches."

As he spoke, a horse's head came around the shoulder of the bluff, a quarter of a mile above, and in a few minutes, three horsemen stopped on the trail, while we sauntered slowly down to them.

"How?"

"How?"

"Which way?"

"Down to Trippie's with meat. What luck?"

"Pretty fair. And you?"

"So so. Deer gettin' scarce. Cussed Utes burnin' off the woods. Say, you boys want some fun?"

"Depends. What kind?"

"Well, Slippery Dick's back, up here at the head of Hermosa. Crossed his trail just this side of Batteries Spring. There's a chance for ye, Tenderfoot, if you want sport. Reck on he'll give ye enough of it. So long. Got to be goin'. Give ye a dollar for his skin, when ye get it. Vamos! Pis-a-a!" and they clattered down the trail.

"Slippery Dick? Who the mischief's he, Ignotus?"

"He's a she."

"A she? What kind of a she?"

"A she-bear, and a big one, too, if all accounts are true," and he went on to tell me, how, for several years, hunters had reported that they had found, now and then, the trail of a bear, so large as to be phenomenal—how she would be found one day on El Conquistador, and the next on Dos Hermanas, fifty miles away—how she seemed to bear a charmed life, minding a 44 bullet no more than a flea-bite—how, at uncertain intervals, some unlucky prospector, pale-faced and knock-kneed, would stumble into camp with incoherent jabber of "the damndest biggest bear I ever see; bigger'n all out doors, and savafer'n I be!"—and how Pat O'Brien, who had killed more bears in Nevada than ever Grizzly Adams himself, swore, after being treed by her for a day and a night, "that the hind of her was as big as a flour barrel, and the claws of her laye raping hooks, an' whin she rached fur me, as I climb the tray, be jabers, she made the bark fly, fifteen fut from the ground, sor."

Making all due allowance for exaggeration, Ignotus was inclined to believe that there was a monstrous bear which had its haunt in that section of country—that she was an exceedingly cunning old beast, as well as fierce and dangerous—that to kill her would be a feather in the cap of any hunter—and finally, warming with the subject, that, if I said so, we'd move camp up to the head of Hermosa, and see if we might not "be lucky enough to get a crack at her."

As I would have gone to the mouth of the pit, or even further, with Ignotus, and as, besides, I "thought no small bear of myself" as a bear-hunter, having actually slaughtered two or three small cubs by my own unassisted prowess, I gladly agreed to the proposal.

"Ever see any of those explosive bullets?" asked Ignotus after a pause.

"Yes, why?"

"Wish we had some of them; they'd come in mighty handy, if we should happen to have a sec-anc' with the old lady."

After cogitating a while—"Got your loading outfit with you?"

"Yes."

"Let me see your bullet moulds."

These produced and inspected.

"Got any of those .32 cartridges you use in your grouse rifle?"

"Why? What do you want with them?"

"Make our own bum-shells, by thunder!"

"How?"

"Get 'em out, and I'll show you."

And show he did, in a way I will endeavor to explain. My moulds were of the Sharps pattern, .44 calibre, conical bullet, lead pointed in front, small end. Covering butt of bullet, a plate which unscrews. So much explanatory—now for detail. Taking a .32 rim-fire cartridge, he cut off the bullet, flush with the shell, then, finding a nail, he filed it down, leaving on the head, (til it was just the size and length of his prepared cartridge. Inserting this into the lead-hole in the moulds he unscrewed the butt-plate, poured in his melted lead, shook out the bullet, extracted the nail, inserted his .32 cartridge, and lo! an explosive bullet. Trial proved them to be a grand success. If a bone were struck, they never failed to explode, and a second shot was seldom needed. By a lucky chance, I once dropped one into the shoulder of a large cinnamon bear, at three hundred and fifteen

yards, and he dropped as if struck by a flash of lightning. The bear sat for a clear or else, as they spoil so much of the meat, but for Ursus they are just the thing.

Early dawn sees us tilling up the rocky trail which leads to the head of Hermosa. Nodded though I have been for the greater part of my life, I cannot leave a place where I have comfortably settled down for even a day, without feeling a slight touch of regret.

The camp-fire becomes a sacred hearth, and one does not take away with him in the morning all that he brought the night before. Somewhat he leaves behind—invisible, intangible, but none the less real. A part of his true self, of the "inner me," as Emerson would term it, is caught and retained by the branches of the tree under which his bed has been made, by the boughs on which he has lain, by the air which he has breathed, and by the sky which has arched above him. As we rode along, there came into my mind some verses which the Rhymer had read me a few days before, and which expressed so well my present mildly regretful feelings, that I offer no further apology for presenting them here.

Ah! happy he
Who 'neath the greenwood tree,
Doth loom his mind from every carking care;
Dull gross exuvia, every from him fall away,
And leave revealed his better self, divinely fair!

Green forest boughs,
Under a fir-tree house,
Bring sweet sleep (than Sybaritic couch);
And simple hunter's fare, with wait of spicy air,
Exalts all Cupans rears Lucullus dare avouch.

Each baser thought
From crowded cities brought
Upon these breezy heights doth pale and die.
The dull and puzzled brain grows clear and strong again;
The ailing, purblind soul sees Truth with clearer eye.

Ah! blessed school
Where Wisdom plays the fool,
And Nature grants perpetual holiday!
Where volunee lore is none, save tree and brook, and stone,
And he doth win the highest prize, who spends his time in play.

Each charmed spot
Where it hath been my lot
To pitch white tent, and take nonant
Some tender memory hath, some bourn-eyed aftermath
Of sweetly fragrant thoughts that blow o'er in my breast.

A balanced good—
Here in the piney wood
New thoughts, new hope, and newer life I find;
And yet, O ticks heart! when comes the time to part,
Somewhat of thought, of hope, of life, is left behind.

A paradox
At which the dullard mocks!
Who reads my rhyme, him I hail as wise.
That which I spend, I have, and what I leave, I have:
If mine the Sybil's tongue, be yours the Seer's eyes.

At the very head of the canyon was a little circular park of perhaps ten acres, where bubbled up the spring which fed the head waters of the Hermosa, and here we pitched our tent.

The remainder of the day was devoted to reconnoitering, and after supper we developed our plan of battle. Half a mile below us was an extensive patch of wild pampas, and here our friend Richard had left his sign manual in profusion, the night before. We felt certain he would return to-night, as the wild pampas is to a bear, what Cherry-stones or Saddle-rocks are to a New York Alderman. From this ursine supper-room there were but three passes leading to the rocky fastnesses, where, we felt assured, he had his lair. Of these, only one was the canyon itself, and that was blocked by our tent and camp-fire; the others led respectively, to the crests of Waluta on our right, and El Conquistador on the left. We would occupy one of these, and it would go hard, if one or the other did not succeed in intercepting the prey, as he wended his way homeward in the morning twilight.

The jewels that sparkle in the sword-belt of Orion had not yet lost their lustre, when I was snugly ensconced in my chosen ambush. Joseph Cook would have pronounced the position "rudely selected, and ineffectually strategic." Backed by a cliff a hundred feet in height—my flanks defended by perpendicular escarpments of rocks—in front, the vertical banks of the gulch which was the only outlet on that side, from the canyon below—I was equally well situated for attack or defense. From my eyrie, I had a clean sweep of the gulch for a thousand yards below, while screened from observation by the boulders which left convenient peep-holes between. The only access to my mountain fortress was by a narrow path from above, so steep, that, having with difficulty descended, I had serious doubts as to whether I should ever be able to return. Strong in the possession of explosive bullets and an impregnable position, I felt that I was equal to twenty bears, even should they all attack me at once. I hoped that Slippery Dick, like myself, loved the sterner side of Nature, and would therefore choose the path to Conquistador with all its gloom and grandeur, rather than the softer approaches to Waluta, where Ignotus had posted himself. Besides, the death of one bear, though he were the largest in all the San Juan, would add but little to his fame, while to me it would furnish a blast, with which "to fill the sounding trumpet of fame," for many a year. (In justice to Ignotus I must say, that when he found that all the signs pointed to our enemy's having his den on Conquistador, he insisted on my taking that stand for my own.)

Wrapped in my blanket, and propped comfortably against the rock, I prepared myself for the due observance of a hunter's vigil. The air was keen and frosty, with just sting enough in it to stir the sluggish blood, and redolent with those woody odors that only the trackers of the wilderness discerned. I had the balsamic odor of the spruce, giving a tingling flip to every vibrating nerve—the aromatic fragrance of the wild celery, like a faint aroma from the Spice Islands, and the far off Celebes—the quiet, domestic smell of the lavender grass, recalling tender memories of Eastern homes, and the opening of ancient bureau drawers, from which are brought, by loving hands, the old-fashioned garments of those who now wear the shining robes of Light—and, reinforcing and at times overpowering all, wafts of the cloying sweetness of the wild buck-wheat, stirred by wings of ever-buzzing bees. Ever down the valley, a thousand feet below, phantom curves of mist marked the line of the hurrying brook, and, faintly audible from those lower depths, came, like the stir of a mighty congregation, that in

describable sussurus which precedes the thrill of a waking world.

The stars were losing their fiery lustre, and now shone with a pale glow, like the "brightening" on the surface of molten silver. Slowly they faded, one by one, slipping out quietly, like lesser beauties from a ball room, till only Venus, Mars and Sirius were left. These still shone on in resolute defiance till they too, yielding to a power greater than their own, scornfully yet gracefully withdrew from the unequal contest, overpowered but not subdued—as the dauntless Maria Theresa turned her back upon the Magyar Diet. Over beyond Waluta, the olive of the sky changed to a steely gray—then to a faint pink, such as tints the petals of the wild sweet-brier, and then to a roseate bluish which climbed higher and higher, till the whole Eastern firmament glowed with Tyrian splendor.

"Over grass came that strange flush, and over lign and heather, Over hill and over dale, and over gulches brown: And each scattered cloudlet, crossing, drifted like a scarlet feather From the folded wings of clouds, before they settled down."

On the rock-side opposite, the conies came out to greet the dawn—a yellow butterfly floated past on noiseless wing—in the spruce woods below, a Canada Jay pitched the note for a raucous chorus which split the silence of the hills—and the night, with its sweet silence, was gone, and "jocund Day stood tiptoe on the misty mountain-tops."

Taking my glasses from their case, I swept the hill-side opposite, and saw a mail-sail on the flies—three, for the prowling fox. No sign of life among the rocks, unless—the circling glass is arrested for a moment, and—yes, that brown spot in the lee of yonder porphyry boulder, proves to be Ignotus, keeping faithful watch. But what has become of our expected prey? He surely must have quit his banquet of succulent roots ere this, for the Sun god's chariot has fairly left the gates of Aurora, and his couriers are stretching away, in the full burst of their speed, toward their Hesperian goal.

"Infound Slippery Dick, anyway! He's fooled us, as usual, and when the flutter of a white handkerchief from across the canyon, signals that the watch is over, I rise from my rocky lair, and, stiff, cold, hungry and cross, join Ignotus in the valley below. By mutual consent, we turn our steps toward the parnip bed, to see if Dick has breakfasted. Yes; the trampled stems, the debris of rejected tubers, and the freshly trenched soil, steaming in the morning sun, proclaim his recent presence. Gone, but where? We give it up, as an unguessable conundrum, and start to camp, for breakfast and nap."

"Brisk walk for ten minutes brings us in sight of the clump of trees where camp is pitched, but where is the tent?"

A hundred yards further, and from Ignotus' lips breathes forth softly, the half sun question—"Who's been here, since I've been gone?" The tent is down and torn to ribbons—the flour sacks rent from top to bottom and their contents strewn upon the ground—the mess-chest overturned—sugar and bacon missing—and a wild conglomerate of canned goods, plates, cups, knives and forks, blankets, spare socks and slippers, coffee pots and frying pans, and a hundred odds and ends of camp impedimenta scattered about in every direction. This a nitro-glycerine factory exploded here, or an East Indian typhoon dropped down upon us?

A single word breaks from my comrade, but it is as expressive as all of Garcilasso's seven hundred and twenty-nine volumes. It is simply the name of that place which Bob Ingersoll and the Revised Version both ignore, but the Anathema Mananatha of Holy Church conveys not more weight of obprobrium with it, than that one monosyllable. "Fanny," I see him gazing intently at something on the borders of the stream, and, joining him, I recognize, at a glance, the cause of his outburst. There it lies, in the marshy ground before us; a track, huge, uncouth, grotesquely human, broad as the two hands, and as long as from the ulnar condyle to the metacarpus. A glance telegraphs from brain to brain—"Slippery Dick!" Another telegram and answer flash to and fro—

"I shall follow him!"

"And I lead on!"

A few seconds later, gathered from the wreck which strews the canyon, and we press on up the canyon. Ignotus' blood is up—the old Berserker spirit within him—his tenderest feelings have been outraged, and heart's blood alone will wash out the stain upon his honor. "Wrath in his port, and vengeance in his eye," he leads the way, sure-footed as the chamois, untiring as the gray wolf—and as stern and fatal as the wool-shed Nemesis. Woe to the dastard who hath heaped such foul scorn upon a freeman's head! By the thunderbolts of Jove, dearly shall he pay for his morning's pastime! "We him, not enough," O Eusebe Richard! that by the spear of the gods, we shivered for three long hours, in futile ambush for her, but that thou must needs "flutter the dove-cotes of Coriolis," when the Volscians were absent? "Better that a mill-stone were tied around thy neck, and thou wert cast into the uttermost depths of the sea," than to have violated the sanctity of our tabernacle.

Up, still up, till the head of the gulch is reached, and we stand among the splintered crags and wind-swept tors that mark the crest of Hermosa pass. Here it behooves us to move cautiously, for fierce with vengeance though we are, we do not care, upon this broken ground, to come too close to a savage grizzly. Silently we work our way over and between the shattered rock-masses, until we look down into the Canon del Christo upon the other side. Ha! what is that brown mass, a thousand feet below? By the spear of the great Nimrod, we have him at last!

"Try him," whispered Ignotus, unselfish, even at this supreme moment.

It is a long shot, and I rest my heavy Sharps upon a jutting point, elevate the sights, and fire. A jet of white dust, twenty yards the other side, tells me I have overshot. At the crack of the gun, he turns, catches sight of the smoke, and, with a "woot!" of snarling rage, charges straight for us. Another cartridge is slipped in, the rifle pitched to the shoulder, when Ignotus knocks up the barrel.

"Hold on! What till he gets abreast of that rock there"—about twenty yards away—and then aim steady, and we'll both take him between the eyes. Steady, I tell you—if we don't fetch him, first pop, one of us will have to go home alone!

His coolness is contagious, and I drop my gun to the hollow of my arm, and watch our enemy as he comes shambling up the pass. His red eyes gleam with savage hate, as he plunges onward, his sickle-like claws ringing against the porphyry rocks, every hair bristling with rage, and that vengeful "woof! woof!" tearing the air at every step. Every second he grows in size. Now he's as large as a year-

ling steer—now, as a log school-house, and now, as he comes abreast of the designated rock, he looms up as large as the "Tribune" building.

"Ready!" whispers Ignotus, and the rifle barrels drop to an aim.

"Fire!" and the reports are simultaneous.

There hardly comes to our ears that indescribable "thud!" which tells us that the bullets have struck flesh, before the bear rears to his full height, stands one moment clear cut against a blue background of sky, then crashes prone upon the ringing rocks. A long-drawn yell—the Dakota war-whoop—puls from the throat of Ignotus, and the death-song of the "Big Bear of Hermosa" shrills from peak to peak, and startles the slow-winged eagle hovering above our heads.

There it lies, a huge, uncouth, inert mass of gray fur, gleaming teeth, and savage brawn and muscle. Over the fiery eye creeps the gray film of death—from the cavernous mouth loils up the red tongue, flaked with foam—while the white slaver dripping from the massive jaws, relieves the scarlet of the blood that splashes slowly down upon the rocks. From the gaping wound in the centre of the low forehead, a thin stream of blue smoke tells that the explosive bullets have done their deadly work. The fierce man-slayer, the terror of the Indian camps, the incarnation of brute ferocity and savage hate, has succumbed to the superior knowledge and deadlier skill of his biped cousins, and another victory is scored in the never-ending warfare of Mind vs. Force. Animal cunning against human skill—the instinct of the beast against the reason of man—thews and sinews arrayed against explosive bullets—fangs and claws opposed to breech-loading rifles—what chance has Ursus as against Homo? It is the old story of the oxen and the steel rapier—the green turban and Cœur de Lion's battle-axe—of Montezuma against Cortez, and of Caliban against Prospero. The contest is unequal, and the contest is a contest of triumph is over, there comes the sh me-faced feeling of having, in the expressive words of my whilom acquaintance, Monte Jim, "stocked the keords on the cuss, and dealt him four ace sign a royal flush."

I shall not say how much our victim weighed—what was the girth of his mighty fore-arm, or the length of the ivory scimitars that armed his huge splay feet. Enough, that Ignotus, who had killed more than one bear since '49, after looking upon the vast proportions spread out before him, expressed himself in the words of Holy Writ, "Lord! now let that thy servant depart in peace."

Some envious souls there were in Argentum, "Jerd fellows of the baser sort," who declared that it was not Slippery Dick at all, though they magnanimously admitted "he wur a pretty far-sized bar, fur a tenderfoot to help to kill."

Be that as it may, that night we slept the sleep of the just, having avenged our ravaged camp, and wiped out the stain upon our honor; and thenceforth Slippery Dick has been missing from his accustomed haunts, and no more does the picturesque prospector start in dread as the lawless rabbit hops across his path, taking each rustle in the leaves for the tread of "The Big Bear of Hermosa." I. P. U.

A RIVERSIDE ROMANCE.

LEAVES FROM A LOG-BOOK—VI.

A KINGFISHER darted from the limb of a dead tree with a downward swoop, chattering noisily as it flew. A muskrat rolled lazily off the bank into the river, and made a hundred bubbles rise where it sank. And Barry Newton sat upright in his canoe with a start, recovering from the dreamy reverie that the warm, still summer day had cast over him, and plied the double-bladed paddle with more vigor. A muskrat, without his fish arms, they were too, feathered the spruce blades with such a neat turn, and the whole figure was not one whit behind them in development; while the ruddy skin and clear, blue eye told of the out-of-door exercise that this young man had always enjoyed.

"It can't be many miles further to John's," mused he, as he turned a bend in the river and peered anxiously ahead. "John wrote that after I reached Pleasantville I would pass under four bridges, and would then be abreast of his domain, with the mansion to the west of the river. And now, I have passed under four—no, three bridges, and the other's not in sight; and it's getting late, and I'll soon have to look out for an inn to spend the night. I wonder what sort of a place John has got. Old and sombre, probably, like himself. And he married! I'd sooner thought of old Prexy's marble bust marrying than John Sanders. Such a staid, awkward old 'dig' he was when he used to preach to me about my sophomoric escapades. I don't think I shall fancy his wife. Some sedate, blue-stocking, with eye-glasses and a dismal countenance, knowing all about the difficulties of the export trade, and weighing quantities that she does about—" Hello! what's that. Something in the water. It's a dog—no, by Jove, it's a girl, and she can't get out," and the paddle flew like lightning, as the canoe was turned toward the struggling object. With a few quick strokes he was brought alongside, and the light drapery was grasped by one strong hand, while with the other the canoe was pushed ashore. Stepping out upon the bank Barry Newton laid his burden, now insensible, upon the grass.

"Well, it's a go. Nice looking girl, half drowned; no house in sight; getting towards dusk. Wonder what I'd better do. If she's drowned I ought to—let's see—roll her on a barrel, I think. But the water there surely isn't deep enough to drown any one. She must have been walking close to the river, and the bank caved in. More scared than hurt, I guess."

Just then the girl opened a pair of large brown eyes and fixed them on the young man. For a moment she hesitated, as if collecting her thoughts, and then, trying to rise, she sank with a blue and half-life. "I was awfully frightened in the water, and—you must have fished me out."

"I did that service for you, miss; and now, if you will tell me in which direction we can soonest find a house, I will wrap you up in a blanket from my boat and carry you there."

"My own house is just across the field, and can be seen after passing the grove of cedars; but I am quite able to walk if you will aid me with your arm, and I would not ask that if the fall had not quite taken away my breath, and I still tremble from the fright. I am not a bit brave, as you see."

"Your trembling is from cold more than fright, I imagine. But you must let me get you a wrap from my boat," with which Barry Newton made a hasty trip to the canoe, took a warm blanket from its recesses, and hastened back to wrap it around the young girl's shoulders.

"There, now, I fancy you will be a little more comfortable. But let us hasten, for standing in wet garments is not conducive to health."

"Dear me, I don't know what my mother will say at my latest adventure," laughingly said his companion, as they hurried across the field, "and I know I deserve a sound railing for being so careless. But I was so wrapt in watching your pretty boat that I did not notice how frail a support was beneath me. My absurd fright was utterly inexcusable, considering that the water was not deep enough to drown me. It must have afforded you great amusement."

The eyes that glanced up at the young man, as he emphatically repudiated the idea of being amused at her misfortune, were certainly the most bewitching eyes he had ever seen. And he noted, too, that his companion was not the immature girl he had at first thought her to be, but a young woman of at least eighteen, of short stature, but of a rounded figure, beautiful in its symmetry, that lost none of its charm by being so faithfully depicted in the damp and clinging garments.

"Here we are at last," said the little lady, as they approached a neat stone mansion, nestled among some shady oaks, "and there is mamma watching for me."

A middle-aged lady, with a pleasant face surrounded by waving hair slightly tinged with gray, stood on the porch, looking with some astonishment at the approaching couple, evidently at a loss to comprehend the meaning of the Indian blanket of the one, and the blue flannel costume of the other.

"For mercy's sake, Fanny, what has happened?"

"Only another of my ridiculous adventures, dear mamma. You see, my love for the water led me too close to the river, and the bank gave way and I went. And this gentleman was good enough to fish me out."

"Bless me, child, you are in a frightful state. Run to your room at once. And you, sir, I dare say my daughter hasn't so much to thank you for your kindness,—she is such a household slave. Pray come in and let me offer you some refreshment. Are you from Pleasantville?"

"My name is Newton, madam," replied Barry, "and I am traveling alone upon the river in a canoe. I hoped to reach the house of a friend to-night, but fear I shall not. I am grateful for your kind invitation, but beg of you to excuse me, as I must hasten on to find an inn before dark where can lodge to-night."

I beg you not to think of such a thing, Mr. Newton. Our home is at your service for a lodging to-night, the inn at the next village, and a shabby place, and not to be thought of, and Fanny would never forgive me if I let you go without giving her a chance to thank you for 'fishing her out,' as she calls it."

"But—"

"But me no buts, sir," pleasantly said the lady, "I insist."

"Well, I agree, on one condition: that my canoe be given a place also. The stable will do for it."

"Your canoe shall be sheltered, of course. Michael, help Mr. Newton to carry his boat from the river. I shall expect you directly, sir."

Half an hour later found Barry Newton in a room in the house, gazing ruefully at the reflection of his sunburnt face and grim costume in the glass. After performing a hasty toilet and giving himself as presentable an appearance as he was able, he descended to the drawing room, where he was so kindly greeted by Mrs. Gardiner and her daughter that he was soon at his ease, and forgot his boating togethery in the free, informal and home-like hospitality accorded him.

By the time tea was over Barry Newton felt himself completely at home, and thanked his lucky star that he had been led to the pleasant country house. The daughter played and sang divinely, and Barry's old college songs, sung in a low tone, were very agreeably appreciated; so that the evening passed very quickly, and it was quite late when bedtime was announced. Barry found it quite impossible to address the daughter as "Miss Gardiner," for her small figure, merry laughter, and naive, child-like manners made that appellation sound too stilted. In introducing her Mrs. Gardiner had merely called her "Fanny," so Barry easily dropped into "Miss Fanny," and as it did not seem disagreeable he continued thus to address her.

Not at all a common girl," thought the young man, as he lay that night on the soft couch in his room, listening to the rain that had begun falling in a measured "rat-tat" on the roof. "In fact, quite an uncommon girl. She's just like a child in her ways, but she's a clever, pretty little thing, and she's got a—something, I don't know what, that's just deucedly captivating. I wonder if she knows many men. Of course she don't, though, in this out-of-the-way place. The mother spoke of 'my son,' who seems to be away at present, and Miss Fanny said she wished 'John' were at home. This 'John' must be her brother."

Next morning the rain had not ceased, but came down in a steady pour, that showed no sign of abating. The Gardiners would not listen to Barry's proposal to depart in the storm, and insisted so strongly on his remaining that he could not refuse. It must be confessed, too, that the prospect of spending a day in the delightful society of Miss Fanny was very agreeable to contemplate. During the morning, while Mrs. Gardiner was busy directing the household affairs, Barry and Miss Fanny were discussing the canoe trip, and the farmer was relating some amusing incidents that had occurred to him.

"And who is this friend that you are on your way to visit, if it be not impertinent to ask?"

"His name is John Sanders," said Barry; and then he continued, without noticing the start which the mention of the name had caused Miss Fanny, "he is an old college chum, and the best fellow in the world, but he's an odd sort of stick, so old-fashioned and precise in his ways, and an interesting a specimen of humanity to those who do not know him well, as would be met in a week's journey. At college he was always the butt for our practical jokes, being ready to credit our most extravagant tales. He has lately been married, and to some said creature like himself, I imagine,—probably some old maid that no one else would think of choosing."

The little lady's face was now blood-red, and her eyes sparkled strangely. But she coughed a little, and replied composedly, "I believe I have heard of him; and, if I am not mistaken, his residence is not a great way from here." Then, with an excuse, she hurriedly retired to her room. The day passed very pleasantly, notwithstanding the storm without, and at its close Barry was still more enchanted than before with the vivacious Fanny. When, therefore, the next morning showed the storm still at its height, it was without great difficulty that he was persuaded to remain yet another day.

"But to-morrow will be Sunday," said he, and I must

surely join my friend before then. I can perhaps get a wagon to transport my canoe overland to his house, and with my waterproofs I can walk the distance without inconvenience."

"I beg you will not leave during such weather," said Mrs. Gardiner. "It may be further than you think to your friend's house, and this steady pour has doubtless caused a flood that may have carried away bridges and inundated roads, as is often the case in this low country. Believe me, you had better stay."

Barry wondered not a little at such urging to him, and a stranger up to a day or two before. Had he noticed the suppressed smile of his mother, and the mischief dancing in the eyes of the daughter, it might have set him thinking perhaps. But our young gentleman had quite an allowance of vanity in his composition, and with the simple thought that any one ought to be pleased with the company of so agreeable a person as Mr. Barry Newton, he dismissed all further consideration of the matter.

Toward night the wind changed and the storm subsided; and the next day (Sunday) the sun shone pleasantly. The country person was in "camp meeting" that week, and there was no service in the little church, so toward noon-time Mamma Gardiner dropped into a quiet drive to the great armchair, and Miss Fanny and Barry went out for a walk by the river. The more Barry saw of the little lady the stronger grew his attachment for her, and he suspected, too, that he was not by any means disagreeable to her. Sundry little actions and half-suppressed advances, while of little moment in themselves, seemed to indicate a growing tenderness for him that was highly flattering. A sudden sparkle of mischief in the speaking blue eyes, however, often confused him in his attempts to guess the feelings that agitated the heart of the young woman, and he became more and more entangled in the meshes of her unfathomable ways.

They walked a long way that delightful Sunday by the river, and through the cedar grove; and at last sat down to rest on a grassy hillock, beneath a huge oak, whose branches were festooned with the twinkling shoots of a wild grape-vine. Barry had fastened a rude chaplet of wild roses and oak leaves, bound with tendrils from the vine above them, with which he insisted upon crowning the jet locks of the pretty round head beside him. Very charming was the blush that diffused itself over the little lady's face as the young man knelt over her, his lips almost touching her forehead as he bent to rote the contrast between the green of the leaves and the huc black of the splendid hair.

"Is it becoming?" asked she.

"It is lovely," answered the young man, looking, not at the garland, but straight at the eyes beneath, and with an ardent expression in his gaze that could not be mistaken.

"It is late, and mamma will expect us," said Miss Fanny, suddenly rising. And the two wended their way toward the stone mansion.

"One thing is plain," soliloquized Barry that night, "I must either leave to-morrow, or else—" the young man pulled his blonde whiskers without completing his sentence. "I think the little creature loves me—perhaps without knowing it, she is so innocent and child-like—and I ought not to remain here to entrap her young heart. She is a dear little thing, though, and I might as well look a deal further and not—Hang it! I don't believe I know my own feelings. To-morrow—well, we will see."

The morrow dawned pleasantly, and promised a glorious day. Barry said nothing of leaving until alone with Fanny after breakfast, when he announced his intention of taking steps for an immediate departure.

"But you surely won't cheat me of my promised canoe ride?"

"Are you in earnest about wishing to try my canoe?"

"Of course."

"It is late," thought Barry, as he assented to the lady's wishes.

The little canoe had never been intended for more than one passenger, but by a little maneuvering Miss Fanny was found a place in the "well," facing her instructor, and the lesson in paddling was begun. After much splashing and sprinkling of water, and a good deal of laughter, the fair pupil declared herself proficient in the art, and to prove it she agreed to guide the canoe alone. Success did not attend her efforts, however, for she lost her head in such a zig-zag course that it finally ran under an arch formed by the overhanging boughs of a large willow growing on the bank, and its tiny flag-pole became entangled in the branches.

"You have made yourself a prisoner," laughed Barry.

"And a willing one for a time," said the lady; "for the sun cannot look through this leafy shelter, let him try ever so hard."

"I trust he will restrain his wrath to-morrow, when I am on my journey."

"Are you quite sure you will resume your journey to-morrow, Mr. Newton?" asked Fanny, with just the faintest twinkle of mischief in the brown eyes.

"I surely must be," answered the unsuspecting Barry.

"You must be very anxious to see your old-fashioned friend and his old-maidish wife, that nobody else would have ever thought of marrying."

"I fear I shall find their company very dull after the delightful days I have spent here."

"I hope that your visit to them will prove just as delightful as your short stay with us," said Fanny, with an incredulous smile.

"That would be impossible," said Barry, earnestly. "Miss Fanny, believe me when I tell you that these few days that I have passed in your company have been the happiest, the sweetest of my whole life. In this short time I have learned to appreciate one little, simple, innocent heart at its full worth. Fanny" continued the young man, not noting the look of utter amazement depicted in his companion's face. "I have learned what it is to love. And, dear Fanny, my heart tells me that you—"

At that moment a sudden step was heard on the bank over their heads, and Miss Fanny, looking up, cried out joyously, "John! oh John!"

"Hello! here you are at last," and a tall figure came bounding down the slope, and wading knee-deep into the river, lifted the little woman out of the canoe, and administered one, two, three loving kisses on the rosy mouth. "And you, my Barry, my Mother Gardiner told me I would find you and my wife sailing on the river somewhere. How do you like my country-pleasure, old chum?"

"My wife!" John Sanders' wife! Barry was too dumb-founded to reply.

"What's the matter, my boy? Haven't lost your voice, have you? I told you smoking cigarettes would ruin your lungs."

"John," said the little woman, "we have played a shame-

ful trick on Mr. Newton. But, really, I couldn't help it when he told me how often he had made you the subject of practical jokes at college. And he had the effrontery, John, to say that your wife must be an 'old maid, that no one but you would ever have thought of choosing.' and the little lady broke out in a peal of silvery laughter.

Explanations followed, and Barry gradually recovered from the shock the unexpected denouement had caused him. His hearty good nature enabled him to take kindly a practical joke played on himself, and he appeared to laugh and chat with his old college chum as if the occurrence were an everyday affair, already forgotten. One thing only concerned him; the fear that Fanny would tell her husband of his confession of love for herself. That would make him appear ridiculous in John Sanders' eyes. That night Barry met her alone in the hall.

"Mrs. Sanders," said he, "can you keep a secret?"

"I can, and will," said the little woman. And that ended it.

SENSE.

A TALE OF WACCAWAM LAKE.

ON the line of the railroad leading from Wilmington, N. C., to Columbia, and just thirty-four miles from the former, there is a lake covering about twenty-five square miles, which is a favorite resort of the anglers of that section of country. It is nowhere more than fifteen feet deep, and generally its waters are as placid as the features of a sleeping beauty. Black bass, chinquepin-perch, warmouth, white perch, bream, grindles and other fish common to that latitude, abound in the lake and its tributary.

The water has often had rare sport taking most of these varieties, and in enjoying them upon the shore after they had had the culinary attention of his old friend Kinchen K.—one of the salt of the earth—whose art in fishing was only excelled by his capacity for preparing the fruits of his line for the delectation of his palate.

Artificial flies and jointed rods and reels, were, in my time, unknown to the simple people who lived near the lake, and the common red worm, the grub, a hair line and a long light rod of native red answered fully all their wants. Of course a "dog-out" or canoe made of cypress was a necessary addition to the equipment. In the open water among the bays and grass, which grew upon the margin, and in the little creeks which discharge their waters into the lovely lake, the disciples of "the gentle art" whiled away many a pleasant hour drawing the fish from the dark water, and looking forward to the time when they should return home.

"The expectant we things loddin' stacher tho' to meet the fisher-folk, and the water is Lake Waccawam, pronounced *Wak-a-man*, and at Flemington, a station about five hundred yards from its northern bank, is a well-kept hotel presided over by Mrs. Nick Carroll, who succeeded her mother, Mrs. Brothers, well-known to the traveling public as the keeper of one of the best eating-houses in the South. Here ample accommodations can be had, and Nick himself is often willing to pilot his friends around and show them the best places in which to fish.

A few miles northeast of the Lake there lived, several years ago, a fisherman named John Aways, who had the happy faculty of narrating his piscatorial exploits by giving full flow to a vivid imagination, and who sometimes indulged in such extravagant tales, that the falsity of them was patent on the face of the statement. He had a brother named George who was his equal in these peculiarities, and when the two set their heads, they could invent stories of their sport in Waccawam Lake which required the most thorough credulity to believe them. That man was indeed unfortunate who so wanted to describe his remarkable success with the fishing-rod when either was present, for he soon had to hang his head in very shame. A clerical friend of the writer was on one occasion, several years ago, the unhappy victim who was immolated upon the sharp racks of John Aways' satire, when, in sincere joy, he was telling of the great number of fish he had taken a few days before in the dark but clear waters of Lake Waccawam and its feeders. But to our tale.

The clergyman, whose name was Duffrey, lived about eighty miles from the Lake, and being fond of fishing (and what good man is not? Old Iszak Walton said that the Lord had never made a b-tter or more innocent diversion) had visited it, and indulged in the quiet and contemplative pastime. He had been quite successful, and loved to tell of the joyful sport he had found. He may have followed, sometimes, the angler's liberty, and given a rosyate hue to his performances; but he was full of the pleasures he had had, and loved to sing his joys aloud. On his way home he had to travel a few miles by steam to Cape Fear River, and while sitting in the cabin dilating on the glories of Waccawam, the aforesaid John Aways happened to be one of his auditors. Old Kinchen K. was present also, and being a man of much humor, and desiring to see what John could say, he quietly whispered to him and told him who our hero was, requesting that as soon as there was a hiatus, he would tell the preacher something that he had seen and done at the Lake. The idea "jumped with the humor" of John, and he watched for an opportunity to enter into the conversation.

Our clerical friend had to stop momentarily to get rid of an accumulation of tobacco juice, and John lost no time in availing himself of the chance. With a drawing voice he said:

"And you've been to the Lake, stranger, has ye?"

"Was there yesterday," said the preacher.

"And did ye catch many?" said John.

This started the preacher again, and he had proceeded for several minutes in his descriptions of the charms of the lake when he ventured to ask John if he had ever been there.

"Mecers, I was there; John; why, stranger, I helped make that Lake, and the old narry square foot in it that I haven't wet my line in."

This whooper somewhat took our preacher off his high horse, and he thereafter became only a questioner, John having the right to the floor.

"What fish do you like the best, Mr. Aways?"

"Wall, for fryin', when they are a leetle corned, give me the blackfish (grindles), but for biling I'd rather have the trout."

"What do you think of the white perch?"

"Wall, they're toleble good, if you could just get 'em to the pan soon enough, but they're rotten before you can get 'em off the hook."

"Are there any large trout in the Lake, Mr. Aways?"

"Large trout, did you say? Why, stranger, what do you live?"

"I live in Stoningham."

"And do you know Sam McGethan?" (Old Sam once

lived on the banks of the Lake, where he was well known. He had removed years before to the vicinity of Stoning-ham.)

"I have seen him but have little acquaintance with him."

"Wall, I saved his life once."

"You did. How did that happen?"

"Has ye ever been at the Big Creek, just about where it runs in the Lake?"

"Yes, I was there yesterday."

"Wall, it happened this way. Brother George and me, we heered that there was some famous big blackfish in thar, thar was a breaking folk's hooks and lines; so we was in Wilmington and got the blacksmith Polley to make us a hook 'bout the size of your finger, and we bought from Dawson some plow lines and a bar or two of lead for a sinker. We got some four tupo-gum roots for coriks, and as we had just killed a mutton, we took some of that for bait. A'ter we got thar, we cut a black-gum saplin' for a pole, and cut some forks to hold it up. About a hundred yards from the mouth we flung the hook in and I staid thar a watchin' while brother George went fuder up to McGethan's house. A'ter a little while I begun to see a nibble, and 'twas't long before the cork went under. I just let him have it long enough to get it full in his mouth, when I got hold of the pole and fotch a fillop when the hook stuck. I tugged and tugged, but couldn't budge it. I hollered to brother George to come to me, for I had ketchid the great-grand-daddy of all the blackfish. When he come and cotch hold w' me, it began to give a little, and atter a while as we backed out on the shore, hit come to the top of the water w'ith its mouth open. And I saw, I seed two big loas sticking out, and by 'em I knowed it was Sam McGethan. We drag the fish out as quick as we could, and I told brother George to gut his knife, for old Sam was in a bad fix. He ripped the fish open, and shore enough out come old Sam a-smilin', and sayin' he was much obleeged to us, for he was pretty near gone. He told us he slipped off a log about a hour before, and something swallowed him. Says I, 'Brother George, old Sam's mighty good bait, spouse we try him again?' So we hooked him on, and in an hour or so we had ketchid two cart loads of the biggest blackfish and trout you ever seed. Now, stranger, didn't I save his life?"

By this time the audience was in a yell and our poor preacher found a man who could best him at the game of big talk and give him a long start. He has never been known since to volunteer any stories in regard to Waccawam Lake in the section of country where John Aways' yarn has been heard.

The news of his discomfiture reached Stoningham a few days after the arrival of our hero, and just as he had finished a glowing account of his trip, a gentleman who was listening turned to another and said: "And do you know Sam McGethan?" When our hero heard that fatal inquiry, he dropped his head, and timidly asked, "Where did you hear that big lie?" At this a shot of laughter went up from all who had heard of the steamboat disaster, and our friend had business in another locality.

And so endeth this chapter.

BONE

SPORT AS BRAIN FOOD—I.

ONE but those who turn to forest and stream for relief from the monotonous cares of life in the business world can find not only the physical strength, but renewed by sports and field, but the reinvigoration of an exhausted, weary brain.

In 1858, '59 and '60, weary of city life, work, temptation and the dissipation a man with many friends must face in the great metropolises of our nation, I bought a tract of wild land in the Adirondacks, built me a rude hunter's home and until the civil strife of 1861 called me to the defence of the flag and Union, under which and in the service of which, I gained my education, such as it is, I lived there happy as a forest king.

The nearest house to me was Wood's, on the Raquette—nine miles off—the nearest settlement worth the name, twenty-eight miles, and my stores were hauled in eighty-four miles from Glens Falls, then not more than one-third its present size.

Game and fish, speckled and salmon trout so abundant that one man could have fed a hundred, if skilled in the art of hunting and fishing, for a good hunter and a good handler of the blunt rod, blanketed in that line.

When I went into that wilderness I felt that my brain was giving way. To write had become a distasteful labor. Before I had spent three months there, living almost solely on the proceeds of my rod and gun, I felt physically and mentally like a new man. Sweet rest at night, a constant appetite for three square, hearty meals a day, showed that physically I was a gainer in the life I led. As to the brain, it was never before more fresh and strong, my very soul seemed to beat in the poetry of the grand panorama of Nature about me.

It was then I wrote the words, set to music by my friend and guest Wm. H. Dutton, and published by Col. Wm. A. Pond, in New York, entitled

MY HOME.

Where the silvery gleam of the rushing stream
Is so brightly seen o'er the rocks' dark green,
Where the white pink grows by the wild red rose,
And the bluebird sings till the welkin rings.

There is my home—my wild-wood home.

Where the red-deer leaps and the panther creeps
And the eagles scream over lake and stream,
Where the lilies bow their crests of snow,
And the hemlocks tall throw a shade o'er all—

There is my home—my wild-wood home.

Where the rolling rust laves the emerald turf,
Where the trout leaps high for the hovering fly,
Where the sportsman's black-crowns the sage green lawn,
Where the crow's shrill cry betrays a tempest nigh,

There is my home—my wild-wood home.

Where no sound intrudes in the dense, dark woods,
Where no step is heard but of breeze and birds,
Where the world's foul sun will not ever come,
Where friends are so few that all are true,

There is my home—my wild-wood home.

I do not offer this as much of a specimen of brain work—it was only one of many such ebullitions boiling over, effervescing all the time. If this paper should be considered readable, in another yet more descriptive of sport there, and embodying a panther hunt, I will give the only link of verses from my pen that I ever felt really proud of—a short poem called "My Maple."

In the years I have named I had lost licks close around

my clearing which I never allowed to be disturbed, because I loved myself to see and to show visiting friends, sometimes as many as eighteen and twenty deer in sight from my porch at once. They seemed to know they would not be harmed near the house, for I never shot any within a mile, in any direction, from the house.

I had six men engaged to trap fur for me in the winter of 1880. And in the month of October alone of that year, with my double-barreled rifle, made by Lewis, of Troy, I shot sixty-three deer, hanging the venison up frozen in my meat house to use as we wanted, smoking and drying many hams, to use on the trapping lines, several of which were over forty miles long, the men carrying provisions to last out and back as they ran over their route.

When I wanted grouse, all I had to do was to walk to a birch or beech ridge and find them in flocks. A dozen or more would rise at once, and by keeping up a jolly whistling, I have held their attention until a half dozen heads had been decapitated with my rifle. I never used a shot gun while in that region, yet scarce a day passed, when I felt like it, that I did not have pleasant or duck on the table.

The old guides and hunters in that section still talk of my rifle-shooting, which, with my well-known modesty, I acknowledge, was not bad, considering my almost daily practice, year in and year out.

But this paper is long enough.

NED BUSTLINE.

A CRITICAL EVENT.

A JEWELLED young man came down from the North

On a sleepy autumn day;
His sandals shod with silver wool,
His hilted sword was sunbeam proof,
While high at his back he carried a sack
Full of brushes and tints of the morning.

He grasped a brush of a dery hue
And swept it along the vales;
But the critical trees all quivered and sild,
With a breeze of contempt, "It is red, brick red!"
As he gave to his wrist a singular twist,
The broad leaves shook adorning.

Nothing daunted he seized a different tint,
With an artist's eye to his work;
But the trees complained that 'twas all dun gold,
And made them yellow, sere and old;
So he started, a-lack! on a different track,
Their acres of wisdom scorning.

For his sack disappeared, and his pencil turned
To a lance of polished ice;
And he smote each leaf of the difficult trees
A death blow straight through the "silver-de-freeze"
Of their earping eyes, and to Paradise
He carried their robes with the dawning.

J. P. T.

A DECEMBER DAY.

AND now the bleak December day
Frowns grizzly on the landscape gray
The rosy clouds that flush'd erewhile
The vaulted air-fields with their smile,
And cast their soft reneted shade
O'er upland heights and bowery glade,
Have faded, and a sombre veil
Shrouds the horizon, cold and pale.

The woods that late I lov'd to tread
When spring-time blooms were o'er them shed;
When earliest leaves would clap their hand
Responsive to the wind's command;
When, wak'd from their drowsy sleep,
The first wood-violets would peep,
And a faint, tremulous tint of green,
Would quiver o'er the vernal scene;
And later, when the summer woods
Were dense through all their solitudes,
And scarce a chequer'd ray might fall
Athwart the forest's leafy wall—
Those grand old woods, now brown and bare,
Stand shivering in the bitter air,
Despoil'd of all their garlands brown,
Or flowing robe, of royal crown,
Drooping, discolor'd, all grandeur dead,
Like kings dethroned, like monarchs dead!
Each knotty bole of oak and elm
Wears cuirass bright and icy helm,
Ensheath'd in armor, sleekly bright,
Like plated mail on harness'd knight;
And on each crystal sprig and spray,
They, jewels of the frost display.

The brook that late in laughter stray'd
With dimpl'd pool or full cascade,
Where late the angel's footstep trod,
The flower-enamell'd, mossy sod,
Now pallid, lifeless, mute and cold,
Lies corpse-like in the icy fold.
The river, border'd by fair trees,
That leant to catch their images,
Lies solid ice from shore to shore,
Where fly the wild-fowl flocks no more.

Yet merry is the winter day
With jingling bells and joyous sleigh;
With skater's laughter, and the bright
Gay carols of the Christmas night.

Shelter Island, Dec. 1.

ISAAC McLELLAN.

A WALKING CLUB has been organized in the Nassau Boat Club, for the purpose of making pedestrian excursions into the suburbs on stated days, weather permitting. The second autumn walk took place on Sunday, 11th inst., from the rendezvous at One Hundred and Thirty-first street and Fourth avenue, the following named gentlemen taking part: C. E. Goodhue (acting as scout in the absence of Capt. W. A. Lentillon), A. P. Gould, Charles Badgley, John Jewitt, Seymour Hall and G. W. Scott. The course led them to New Rochelle, where a hearty dinner was partaken of at the Huguenot House, and thence to West Farms station, from which place a train conveyed them to this city. A bowling class has also been formed, limited to twenty-five members, fourteen gentlemen having thus far joined. Alleys have been secured at 74 Third Avenue. It is the intention of the club to engage the use of a gymnasium for the winter months.—H. W. LIVINGSTON.

Natural History.

THE ENEMIES OF GAME BIRDS.

RUTLAND, VT., Dec. 10, 1881.

Editor Forest and Stream:

I have been greatly entertained by reading the various communications brought out in your columns in response to my inquiry some weeks since, as to what had become of the ruffed grouse. Your suggestion of ticks seemed to me, on the whole, the most rational, and I have been investigating it as I have had opportunity. Not having bagged a bird since November 4, I have had no opportunity for a personal examination; but from conversation and correspondence with sportsmen in various parts of the country I am growing to believe that that is the real secret of the trouble, although the authorities are not agreed. An old Adirondack friend, a guide of long experience, writes me that he has never seen a tick on a grouse, although he has found them on owls, hawks and eagles. Others tell me that they have often observed them on old birds, but never found the young de birds under such circumstances as to warrant an indictment against the tick. One gentleman told me that he shot a bird only this season that was so emaciated that he made examination for the cause and found the sides of the head and neck infested with burrowing insects, which I suppose must have been the insects in question. Others have told me that they had often observed them, but never before suspected them of being destructive to either old or young birds.

The various theories that have been advanced seem to me to be not well sustained. Hawks, owls, skunks, weasles and squirrels have all much more abundant a year ago than now. If they, or any of them, are the destroyers, the grouse ought to be more plenty now, for their natural enemies are well high exterminated, in this country at least.

The theory of your Ferrisburg correspondent that they were, to some extent, migratory in their habits, and have gone to the back-lying towns and to the mountains, is not, I fear, tenable. They are not, I think, migratory birds in any sense, and so far as their being abundant in the mountain towns is concerned, you will recollect that my first letter on this subject was brought out by the fact that an expedition to a mountain town where they were said to be in great numbers, and where they are certainly not hunted to any extent, was entirely barren of results. It is easy to hear of a place where they are plenty, but let your correspondent verify the reports and tell us about it on his return.

A fact of great interest to us here has just transpired. A large berry of quail is known to exist in the town of Sunderland—some fifty miles south of this place. Whether the birds came naturally to that place and bred there, or whether they were brought there, is not certainly known as yet. I suspect the latter, however. Still, we hope that it may prove that they are working their way northward, and that they may become naturalized among us.

By the way, it is difficult to keep quail in confinement over winter? I have a place for importing some hundred or two, and liberating them in the spring; not with any great idea that they will winter here, but in the hope that they will breed here and give us a little shooting in the autumn, after the woodcocks are gone. I wish some of your correspondents who have had experience in keeping them in confinement would give us the benefit of their experience and some hints how to treat them.

VERDE MONTZ.

AMESBURY, MASS., Dec. 1881.—Editor Forest and Stream: Present indications this season so far point favorably for a mild and open winter; snow buntings and shrikes have not put in their appearance yet. Within a week I have seen a flock of robins numbering sixty or seventy, and to-day I saw two. Several flocks of quail have been started here this fall, but very few have been shot. The disappearing of the ruffed grouse within the last three years so rapidly, without any apparent cause more than that of past years, is something that should interest every sportsman; and I have been pleased very much to see the notes bearing on it in your journal. Five years ago ruffed grouse were plenty compared to what they are now; and a crack shot could bag fifty in a season's shooting. This season the number can be counted on the fingers. During my rambles the past three seasons I discovered three nests of the ruffed grouse, containing respectively eight, ten and eleven eggs, within five hundred yards of my home; and I had the pleasure of seeing that they all hatched and left a nest of shells. Now the question to me is, where did all of these young grouse disappear to? Did they die before they matured, or were they captured by some animal or bird of prey? In my opinion two animals most destructive to the feathered tribe are the mink and the weasel. Their work is so silent, their range of territory so large, and their eagerness of search so complete, that I believe that they destroy more game around those parts than all the hawks, owls and foxes put together.—JNO. O'LE.

RANGELY, M.—Editor Forest and Stream: Of the grouse brought in here fully ninety per cent are old crows. If the red squirrel theory is correct, this preponderance can be accounted for, as the female while nesting would be most subject to attack. While hunting last spring in York county, New Brunswick, the woods fairly swarmed with red squirrels. Late in the fall I received letters from there mentioning great scarcity of ruffed grouse.—WALFELD.

THE COLORING OF RUFFED GROUSE.—Williamson, Ct., Dec. 18.—In your issue of the 15th I noticed an article by "Mark West" referring to the different coloring of the ruffed grouse in different localities. My observations are that it is owing entirely to the absence or presence of sun-light. In the spruce and hemlock forests of Maine you will find this bird of a very dark grayish color when seen at a distance, but on examination you will find its color to be the richest blending of brown, gray and black, shaded and tinted in a most exquisite manner, the colors being remarkably bright and clear; but in the hard-wood districts, where the bird is more exposed to the sun, you will find its color faded and bleached. This is true particularly of Pennsylvania and Virginia, where the bird is of a little closer cover and much more sunlight. This bird is bleached and faded in color to such an extent as to destroy all the delicate shades and tints above referred to.

In Virginia, where I have shot many a one, they are so nearly the color of oak leaves as to make it almost impossible to see them when sitting among the leaves.—CLIFFORD.

INQUIRIES ABOUT THE SNOW GROUSE.

NEW YORK, Dec. 17, 1881.

Editor Forest and Stream: Permit me to thank "Homo" through the columns of your valued paper for his detailed answer in this week's Forest and Stream to a note of inquiry I recently sent him relative to snow geese (*Anser hyperboreus*) on the Delaware.

In the early part of October I received from Wm. Lane, Good Ground, L. I., a very fine specimen of the snowgoose, and immediately became interested in the species, owing to the diversity of opinion regarding it.

The older authorities generally, I think, make the snow (*A. hyperboreus*) and the blue goose (*A. carolinensis*) one species, while the later authorities seem inclined to separate them. I should like to know whether any of the readers of the Forest and Stream have ever had a blue goose in captivity until it changed its plumage to that of a snow goose. I have one such record from a very responsible source. I shrank like also to get its Atlantic coast distribution. We hear it in great numbers at Chincoteague and Currituck, but on Long Island it is extremely rare.

Any facts on either of the above points will be appreciated, whether received through the columns of the Forest and Stream, or direct.

WILLIAM DETONISH.

Member Linnean Society of New York.

320 Broadway, N. Y.

HORSE HAIR SNAKES.—I would not bother you with this note but to help disabuse the "popular mind"—certainly no scientific mind ever entertained it—as to the theory that horse hairs turn into snakes, as referred to by Mr. Vennor in your issue of Dec. 8. He asks if any one ever saw the miraculous transformation, and, of course, he will never get an affirmative answer. In the fall of 1875, S. L. Wilkinson, Esq., postmaster here, put two so-called hair snakes in a fruit jar, and placed them in a window exposed to the sun. He thought nothing of them for several days, but, on examining them again, found the jar literally alive with little "serpents" about three-quarters of an inch long, no larger than a fine human hair, and pure white in color. There were literally thousands of them present, and there were several knots of them in the bottom of the jar. As hundreds saw the parents and baby snakes, it would be difficult to make the old story go down in this place.—J. J. STRANAHAN.

Chagrin Falls, O., Dec. 10, 1881.
[The supposed "little serpents" seen by Mr. Wilkinson were probably broken fragments of the egg chain, and not young at all. The individual eggs are very minute, and the newly hatched young would scarcely be visible to the naked eye. On the other hand, the chain of eggs exactly resembles what our correspondent describes above.]

HOW TO CATCH A TARANTULA.—Three years ago as I was starting off on a camping trip to Mt. Diablo, Cal., I met a Mr. Perkins, who was deeply interested in natural history, and especially in spiders. Knowing that tarantulas were numerous in that locality, he, in a half-joking way, asked me to bring him back one. As I could locate him the very next day I saw a large tarantula sunning himself on the hot sand of the road. How to catch him puzzled me for some time. I cut a long twig and poked him with it. He clawed and bit at it furiously. This gave me an idea, and tying a piece of twine to the twig and making a noose at the other end, I managed to slip it over Mr. Tarantula, gave it a jerk, and had him fast. The way he doubled himself up and kicked was very ludicrous; but knowing that his bite was as deadly as a rattlesnake's, I took good care to keep him at arm's length. On reaching camp, I put him in a box, twine and all, and a few days later delivered him to my friend alive and in perfect condition. He had managed, however, to free himself from the twine. He was a monster in size, and with legs extended would cover a dinner-plate. I heard from him a year ago; he was still alive and seemingly contented in captivity.—JAMES P.

Boston, Dec. 11, 1881.

THE SPARROW CURSE IN AUSTRALIA.

It is not so very long since the question of the usefulness or injuriousness of the English sparrow was discussed at length in the columns of Forest and Stream. The importance of the question fully warranted the ample space that was given to it, and the testimony offered on the opposing side was very full, and came from a number of all classes and professions. Agriculturists and ornithologists alike presented their views, and many of our leading scientific men pre-ented the results of their observations on the habits of the bird in America.

The evidence presented made it quite clear that on this continent the sparrow, which was imported for a certain specific purpose, has not fulfilled the expectations that were indulged in about him when he was first brought to these shores. It had been supposed that he would be of the very greatest service to us, as a destroyer of insects. It was shown that he lives almost entirely on grain, seeds, buds and fruit. Dissections of many individuals, made during the late summer and early autumn, failed to show any considerable amount of insect food in the birds' crops. Moreover, from the testimony of farmers and fruit-growers, it appears that the sparrows do a great amount of damage to fruit-trees, as well by feeding on the buds in early spring as by eating the ripening fruit later in the season. Ornithologists and observers generally, with but few exceptions, agreed in stating that the sparrow is quarrelsome to the last degree, and that by its pugnacity and its numbers it drives away from the localities, where it abounds, our native birds which are more beautiful, sweeter-voiced, more useful, and in all respects more desirable than the sparrow. North America is not the only foreign country into which this bird has been introduced.

Imported into Australia, they have so increased and multiplied, as to have proved such a curse to the farmers, that the Government has been obliged to take active measures against their destruction. To this end, a commission was appointed in August last by His Excellency Sir William Jervois, "to inquire into and report upon the alleged injuries caused to fruit-growers, gardeners, farmers and others by sparrows, and to consider the desirability of taking steps for their destruction, and to report upon the best means to be employed therefor." The Commission was also instructed: "Without delay to report to me (the Governor) the result of your (their) investigations in the matters aforesaid."

The progress report of this commission, issued in September last, shows a terrible state of affairs brought about by these wretched little birds. An analysis of the testimony taken is as follows, and shows:

First.—I. That the sparrow is established over an area of the colony comprising Adelaide and its suburbs from the sea-coast eastward well up into the hills; southwards to Happy Valley, Comandante Valley and Willunga; northwards to Allendale, and for on—though we hope as yet detached—at Decatur, near Wirralura. In the south-east, M. and J. are the centre of the colony.

II. That the victims of sufferings within the foregoing area cry for relief from sparrow depredations as if from a pest; and with reason on the following statements, as examples may show: From Mr. John Chambers, of South Richmond: "The short crop of fruit and the loss of the fruit of a few and a half of grapes. They stripped all the figs of five trees. They kept lost fifteen acres of income during summer." From Mr. E. J. Dunn, of Salisbury: "This season they (the sparrows) took £300 worth of fruit," and from Mr. Wilcox, of Lower Mitcham: "Has three acres this season lost pear, and they have each time been destroyed by sparrows."

III. That the species of sparrow dwelling in South Australia damages or consumes fruits, cereals and vegetables. Its fecundity is astonishing. A few to-day, are thousands next season. Its work is done on a magnitude depriving to the cultivator, and under conditions he cannot control; for the seed is taken out of the ground, the fruit-laid off the tree, the sprouting vegetable as fast as it grows, and the fruit once it is ripe, and, therefore, before it can be housed and stored.

IV. That the cultivations attacked by sparrows, are as follows: Of Fruits—Apples, cherries, figs, apples, grapes, peaches, plums, pears, nectarines, loquats and olives. Of Cereals—Wheat and barley. Of Vegetables—Peas, cabbages, cauliflowers, and garden asparagus.

V. That the means of defence tried against sparrow depredations have been scarecrows, traps, netting, shooting, poison of phosphorus, arsenic, and strychnine applied through grain, bread, and bran with sugar. The results are generally as follows: The means are inefficient, which may be due to the mode of administration rather than to defects in the materials employed.

VI. To the above expedients the following are suggested by our correspondents, namely:—The tender of rewards for sparrows eggs and heads, the use of traps for the sparrows, and the use of poisoned water in summer. It is further declared that the united action of all property holders, including the Government, in infested districts, is essential to effective results.

Second.—Without reference to other measures, which may be suggested by the Committee, we have no root, their object in tendering this Progress Report is to submit for the approval of your Excellency the propriety of at once setting to work on useful means applicable to the breeding season now commencing, namely: A system of rewards for sparrows' eggs and heads, through responsible agents readily accessible in the various sparrow districts; and we suggest, as a trial, that the rate of payment should be 6d. per dozen for sparrows' heads, delivered; and 2s. 6d. per 100 for sparrows' eggs, delivered.

Third. We have thought proof of his insectivorous habits, but a yet with little result.

Signed by the Committee.

The testimony of the individuals who were examined by the Commission is unanimous in condemning the bird as most destructive to vegetation. One man speaks of them as "fifty times worse than rabbits." No good word is said for the birds. To give some idea of its character we append some extracts from the testimony:

Joseph Bernier, says: "Great damage done to fruits—apples, grapes, figs and plums."

Mr. John Chambers, South Richmond, testifies: Sparrows have thoroughly established themselves in his orchard and orchard. Calculates that he grows annually one and a half tons of grapes, and last season the sparrows took all away from the vines. They also took nearly all the figs from five trees, and nearly all the plums. Had cabbages growing under the plum trees which were infected with aphid, but the sparrows never went near them. In November he sowed a parcel of peas, but the sparrows took them before they were fed down during the summer. They have also destroyed a bed of peas as soon as they appeared above ground, and is quite sure that if they are not destroyed it will be no use attempting to grow anything. Has tried poisoned bait, but the sparrows do not take it, and he has some suspicion from Main & Meyer's; but, like crows, sparrows soon smell powder. United action should be enforced to destroy them.

Mr. C. J. Coates, North Adelaide, states that having heard that the sparrows destroyed poisonous insects, he had made a careful examination of the crop of wheat and barley in his garden every month in the year, but their crops had never shown any insects; they were generally filled with fruit or grain. Last October his roses were covered with aphid, other shrubs with the mealy bug, and his pear tree with *Phylloxera*, but the sparrows were not there. Sparrows attacked the fruit of the pear tree, which was poisoned with phosphorus and strychnine, but the birds have refused to take it. Suggests the levying of a sparrow tax to pay for sparrow heads and eggs.

August Davies, Beaumont: Sparrows are in thousands in his locality, and destroy cherries, apricots, figs, American plums, olives, pears, grapes, and also eat small patches of grain which have been left to ripen. As to destroying grubs, etc., he says the damage done by grubs last year in his garden was greater than that done by sparrows. The sparrows have been tried with arsenic, and have been poisoned with arsenic and strychnine, and also poisoned water, but the birds soon get knowing and avoid it. Traps and scarecrows have been tried, but are useless. Suggests poisoning, and also a repeal of the Gun License Act. In case if they are allowed to increase unchecked, they will become a regular curse, and the crops will suffer enormously.

C. L. Dunlop, Lindum: Sparrows are in his neighborhood by tens of thousands. They destroyed his large crop—say two tons per acre—and other fruit in proportion. They fight shy of poisoned wheat, and he proposes trying one of them in winter time. His neighbor informs him that they have destroyed all his cauliflowers and cabbages—attaching the little shoots as they spring up. Has not seen them take aphid, for he had some cauliflowers covered with aphid, which the sparrows never tried. Thinks the sparrow-hawk should be introduced, and the small predatory birds should be protected and fostered.

Thos. Gill, Glen Osmond: Strongly urges immediate action to destroy sparrows during the present breeding season. The injuries caused by sparrows and their eggs have been tried with traps, by eating grain at sowing and harvest time, it being estimated that fully one-third has been lost; to vigorous, by eating grapes wholesale; to gardeners, by eating off peas directly they appear above ground; and to the community, by driving the frightening away the insectivorous birds. Thinks poisoned grain is the quickest and most effective method of destroying them.

S. A. Mills, Drummer: Year by year sparrows are becoming more numerous, and are now seen in droves. They live in hedges, and make a rain of their eggs, and have been tried with traps, which he had seen for seed. The sparrows took the corn; he only had the straw. They have done extensive damage in the garden, destroying the stone fruits wholesale, more especially grapes. They have driven away smaller insectivorous birds which were to be of great service in the garden, and he thinks the most effective means of destroying them, and hopes active measures will be taken to get rid of them.

Henry A. Price, Mount Gambier: Sparrows have thoroughly established themselves in his neighborhood. It means no account growing fruit in the garden, and the sparrows have been tried with traps, destroying his cherries, plums and apricots before they were ripe, and garden seeds are scattered up and eaten as soon as planted. Last season, planted one particularly seed four times before he could get the plants to grow, and the sparrows have been tried with feathers tied to thread. They pull up young plants and beat the heads off young and tender shoots. At present they are about the farms in thousands, living principally on grain, and must reduce the yield of crops. No systematic steps have been taken to destroy them. Has tried with arsenic, which he has been told would be for a few days, after which the sparrows would not touch the pois-

oned grain. Then tried traps, but they soon got too knowing for these. Thinks united action is absolutely necessary to keep them down, and is also of opinion that destroying the eggs and netting the old birds by every landowner at breeding time would greatly diminish them. When in flocks a considerable number may be shot.

James T. Ralph, Marion, Sturt: Sparrows have established themselves in his neighborhood for years, and the district is now infested with them. He has a fruit garden of four and a half acres, the produce of which was nearly all eaten by sparrows. From one and a half acres of land he did not have more than 15 lbs. of grapes. Cherries, apricots, peaches, pears, figs and plums were also destroyed by these birds. Had a paddock of seven acres, surrounded by a prickly hedge, which proved a good harbor for sparrows, and for ten feet from the hedge the corn sown was taken by the sparrows, even when wheat plants were packed up and the seed taken from them. The only means taken to destroy them has been shooting by himself and neighbors; but this has little effect. He suggests the distribution of poisoned wheat before the fruit season sets in, and also the destruction of their nests. He states that many persons who are dependent on rain water are very much inconvenienced by the pollution of the water by sparrows, which build in the spouts and gutters.

The extracts from the testimony of the forty-two witnesses examined by the Commission during the first four weeks of its existence, will give a general idea of the fair idea of the way in which practical horticulturists look upon the sparrow in Australia. The testimony given was unanimous that the sparrows did not destroy insects when other food was accessible.

Game Bag and Gun.

TWO COLD DAYS AT THE CLUB HOUSE.

THE THANKSGIVING DAY bloomed at the usual hour; and we turned out of our snug beds to find the thermometer showing about eighteen above, and the wind half a gale from the westward. Six members gathered at the breakfast table, and after some discussion decided to carry luncheons and have the Thanksgiving dinner after the day's shoot. (I his boded ill for turkey—think of six men sitting down to turkey after a long day's work in the cold.)

Breakfast dispatched, there was bustling and bundling, ears must be covered, cardigan jackets under the heavy shooting coat, guns and traps, and hats, and the men in overcoats, skin jackets, etc., transform us into an odd looking party, together with the variously costumed punters, make a party that would astonish our uninitiated city friends. Brats laden with decoys, blinds, ammunition pails, guns and other needfuls, complete the picture—six boats only from the hundred that fill the capacious boat house.

Nearly an inch of ice covered the shallow waters of the marsh and bay, so our shooting must be confined to the open waters of the river, down which we pull some three miles. This is an easy task as the "wintry blast" is full in our favor. We indulged a hope that it would lull or change before night. We did not envy those who took punters; for the exercise being a complete countercheck to the piercing winds. Some of the party were stationed under the lee of the high grass along the shore, avoiding the wind. Not so fortunate we; our blind was in an open space, with water on one side and ice on the other, where the wind had full sweep, but by pulling out often to retrieve we managed to keep comfortable, except the feet, which although covered with two pairs of woolen socks and hip boots, ached with the cold.

Only twenty decoys were used, and these became nearly useless on account of the ice which accumulated on the heads, and the great winds of ice on the sides, causing some to turn wrong side up and all to have anything but a natural appearance. If you have never handled decoys in such weather it will be useless to try to convey an idea of the work it is, in the almost irresistible wind and with icy fingers, notwithstanding rubber gloves, the long anchor lines to wind, and I would say to the beginner don't stop to wind up each line, but drop several of the decoys into the boat quickly, leaving the anchors to hang over the gunwale until you have pulled into shallow water, where you can hang on to an oar stuck into the mud or to your blind, wind the cords at your leisure and warm your hands for a new start.

Shooting was not as good as we had hoped, several holes being still open (unfrozen) in places inaccessible to beings without wings. The blind had been shot out of for many days, and the ducks were shy of it. The bag to one gun was only forty-four in two days, composed of red-heads, mallards, dusky ducks, pintails, shorelarks, wigwags, blue-bills, butter-balls and ruddy ducks. These were got by "sky-scraping" and some water-scraping, shooting probably one hundred and fifty shells. Many chances were lost by pulling out after ducks rather than letting them drift away down against the edge of the ice, where the wind had kicked up a little sea, making it unpleasant and not wholly safe to work a small skiff, for the water would be rising, in freezing to windward and sometimes finding the oars in the locks. This is one of the objections to fancy rigging. A good plain car that can be feathered and pulled quickly inboard, being as good as anything. Outriggers are also unhandy when pulling in and out of a blind often.

During part of the first day we took pains to drop ducks on the ice; this was a mistake, the ice being heavier than we had thought, taking nearly an hour to break a channel around the dead bird.

On the second occasion to try coarse shot, 2's, 3's and some B's; but were only confirmed in our long-bird and opinion that 5's are, day in and day out, (after September), the shot for ducks. When a duck is crippled and within forty yards, we prefer 7's or 8's, which are very likely to puncture the head. Mem.—Two charges of 3's were fired at a winged duck, at, perhaps, forty yards; both lifted him off the ice; he laid his head down to a charge of 7's.

A blue-bill swung in within twenty-five feet of the blind; the thought was, while pressing the trigger, he will be blown all to pieces, saving a tip of his bill, and catch his head." Not so. He turned tail at the first barrel, and a clean miss was scored with both. Speaking again of shot—if one could always tell what his next chance would be, or had always time to change shells, the 1's or B's would add materially to the bag, but taken all in all but few of these sizes should be carried, and used as the exception rather than the rule. No 4's are, to me, an abomination. I have no confidence in them, and find that several of my friends have the same feeling.

The second day was even colder and more windy than the first, and pulling up the river each night was a terror. Shooting half a dozen quails, over Sancho, in the morning, and the journey home consumed the third day. A day or two, and

accumulated business is worked off; cold and fatigue are forgotten and the desire to go again is as strong upon us as ever.

By the way, we had a discussion upon the subject of guns. A gun of American make—of long standing—received the very highest praise for shooting qualities. One gentleman, who has an extended shooting acquaintance, affirmed that nine-tenths of the guns used by clubs in this country were of this make, and although he was then shooting his fine English gun, he preferred his American gun by long odds, except in the matter of plungers. "If it only had solid head plungers," he would ask for no other gun. In confirmation of this idea, plungers were broken in two of these guns that day.

ME-HIT-ABIE.

INDIAN METHOD OF CATCHING MUSKRATS.

New Westminster, British Columbia, Nov. 1881.

A MOST ingenious and successful method of catching muskrats (*Fiber laticauda*) is practiced by the Indians in the interior of British Columbia; and as I believe the particular mode is one that is peculiar to them alone, I thought it worthy of being communicated to your paper so that a more extended knowledge of it might be obtained.

When the lakes are frozen up, the Indians repair to one that contains muskrat houses. They go with as large numbers as they can muster; the more people the larger the catch, as the necessary operations cannot be successfully carried on by a few. The boys and girls, as well as the quaws, play an important part in these hunts. Say a lake contains a hundred houses and the number of hunters and "hantresses" is fifty. About forty of the houses are broken open, and there is a comparatively easy matter. The muskrats leave these houses, and taking to the water under the ice, swim away to the other houses, which, of course for the time being, are tenanted by nearly double the usual number of muskrats. The Indians being provided with sufficient of the downy substance that envelopes the seed vessels of the flag, known as the cat-tail (*Typha latifolia*), which resembles in a high degree the pulch of commerce, strew it on top of the water in the bottom of the broken houses. Then a person is stationed at each broken house, armed with a stick or spear as the case may be, and the remaining ten Indians proceed to break open the other sixty houses as rapidly as they can and with as much noise as possible. The poor rats, by this time thoroughly frightened at this new invasion, desert their new quarters and, accompanied with those with whom they formerly resided, repair to the broken house, and the down of the cat-tail on the surface of the water prevents them from seeing the Indian stationed there, and they pop up into the openings in the ice that lead to their former homes; and, blinded for the moment by the down which adheres to them, they are completely at the mercy (?) of Mr. Mrs. Master or Miss Lo, who either spears them or knocks them on the head, throws them out on the ice and gets ready for the next.

If the colony is not too large almost all the animals will in this manner be secured, the only individuals escaping being those that take refuge in the underground burrows in the banks of the lake.

Thus it is that the plant [the roots, leaves and stalks of the cat's tail form the greater part of the materials of which the muskrat houses are built] that affords the muskrat the material for shelter from the rigor and inclemency of the weather, at the same time supplies the medium to the genus *homo* to insure its destruction.

Believed to be the thing that we have supposed and believed to be our best friend proves to be our greatest enemy.

MOWITCH.

A TRUE TALE OF A DUCK PASS.

St. Patl, Minn., Dec. 10, 1881.

WINTER has again settled down upon us, and we can but gossip of the happy days and bright evenings of the shooting season. Sometimes I think it is even better so, for our enforced confinement sends us out when the season again opens, with bright hopes and new determination to enjoy more fully the gallant sport we so delight in. And after all, is not the retrospect one of the greatest enjoyments of the sportsman. All the dangers, annoyances and fatigues are forgotten, and there only remains the memory of the lucky day, the happy shot, the well-aimed shot, the great bird, the light of anticipated repelition; and then the savor of those merry nights, just tired enough to enjoy a rest, the sparkling story, and the jolly laugh re-echoed round the circle. Ah! better sportsmen, could not each of you fill a volume and yet leave the half untold?

But to the gossip. Here in our fair city are to be found a band of sportsmen, than whom none more enjoy and appreciate the forest, stream and prairie, and who, in kindly, hearty feeling, cannot be excelled. And in the late fall months their principal and best sport is duck and goose shooting, their attention is largely directed to that class of game, and I think we could fairly stand our ground on a "pass" with any like number of duck shots in the country. Notable among those *Commer d'Acad* are the Island Pass Club, who include some of our best men and shots, and who own a most "happy hunting ground" at Rice Lakes, the ducking ground, "pat excellence," nearest to our city. A comfortable and commodious house, with excellent attendance, is not the least attraction of the Island Pass Club; and most of the members have been constant visitors to it for the last fifteen years, some for more. Ah! the memories of this and "other days."

Oh! for a collection of the "tales of the duck pass" told within those walls on those merry nights; they are worthy of the pen and genius of Mark Twain. But this is not gossip, and so for a true tale of a duck pass.

Among the most recent, yet kindest and brightest, members of the club is the Rev. R. W. Matthews, called by the members, as usual, "Pious Ike." A retired clergyman, who is rather an devoted to field sports, and who, therefore, gives his well-earned leisure to the hunting field, finding, no doubt, "sermons in stones and books in running brooks." Now, unfortunately, our dominion's practice on the pass had not equalled his precepts, nor indeed his own opinion of his shooting abilities, and, as a result, while his theory was perfect his game bag was light, and his elegant imported retriever was rapidly forgetting how a dead duck looked; indeed, our friend had become somewhat disheartened himself, and the eyes of the eyes from over-study, said that he would give up shooting and retire from the club. But this would never do, he was too much of a *bon comrade* to lose, even if he could not bring down his bird; so some of the club spirits of the club got together and it was

arranged that Mr. H. E. Thompson, one of the best shots, should invite our friend to a quiet afternoon on the pass. Now "Bob" shoots a light 12-gauge with 4 drs. of powder and 1 oz. of shot. Thompson draws a number 8 with 7 drs. far more enjoyable. The reader can now see how easy it was to put the scheme in execution. T. stationed himself quite close to the shot. "Bob" and I, and duck after duck appeared would manage to shoot almost if not precisely at the same time, and would then gravely inform the astonished dominion that he, "Bob," had killed the bird, which almost invariably fell upon the discharge. T would, of course, once in a while, shoot a bird in an opposite direction, or make a double, in which case he would claim one of the birds. The sport went on, until the light ceased, when a count was had. Rev. Matthews' pile counted thirty-nine, Thompson's eleven. A more astonished and delighted clergyman never existed. The secret would have been well kept but that night, in arguing the capacity to hit a bird on the wing, the author, and not as tired, our friend cited his large bag of that day, and admitted that whenever he fired he closed his eyes, saying, however, that, "before closing them, he carefully determined the exact locality of the bird." Respect for the cloth saved him from the wine sinner penalty, but not from the laughter which followed the discovery. He now devotes himself to a pet deer, kept at the lodge, to whom he has taught many tricks, their joint gambols bring a source of much amusement to the members. MARK MORRIS.

THE EARL OF DUNRAVEN IN NOVA SCOTIA.

HALIFAX, N. S., Dec. 8, 1881.

Editor Forest and Stream:

I see in the Halifax Morning Chronicle of this date an extract containing a letter headed, "Lord Dunraven and Nova Scotia Game Laws," and signed, "A Member of the Nova Scotia Game Protection Society," together with some editorial remarks thereon. I should have preferred to leave such a letter unnoticed, but, as it may mislead some of my brother sportsmen in the States, I think it better to make one or two remarks concerning it.

Your correspondent asserts that I am perfectly well-posted in the Nova Scotia Game Laws, and on a former occasion had to pay a fine for their breach. The squitter that because a man is fined for the breach of a law, he must, therefore, be well acquainted with it, is somewhat peculiar. The letter is headed, "Our system of game laws is a very simple one, and easily understood by those who wish to do so." In proof of the simplicity of the system, and of the ease with which it can be understood, "A Member of the Nova Scotia Game Protection Society" immediately falls into a serious error, and, strangely enough, makes precisely the same mistake that I did. He says: "Game licenses are granted to persons not having their domiciles in Nova Scotia, who may wish to hunt therein, for which a fee of thirty dollars is charged for one year; this is a general license for the whole province (the italics are the writer's) and they are issued in Halifax." This statement is entirely incorrect. On the back of my license, I find the following: "Extract from Chap. 24, Statutes of 1879: No person not having his domicile in the province of Nova Scotia shall be allowed to kill, or pursue with intent to kill any of the animals or birds included in the term game as defined in this act without having first obtained a license for the purpose signed by the provincial Secretary and chief Game Commissioner from the Clerk of the peace of any county in the district where the same is to be used and where the laws are of the incorporated counties, from any Clerk of municipalities with such district."

"(The italics are mine.) It appears, therefore, that it is necessary that a license should be taken out, in the district in which it is to be used. In consequence of my ignorance of this peculiarity of the law, an ignorance shared, I am consoled to see, by a member of the Game Society of Nova Scotia, I got into difficulties. In common with him, I entertained the belief that a general license for the whole province could be obtained in Halifax, and acted on that belief. I entered Nova Scotia from St. John, New Brunswick, by way of Annapolis. I telegraphed from St. John to Mr. James Scott, of this city, to send stores to Caledonia, and to obtain and send with them licenses for myself, and my friend, Mr. Jennings. I received a reply from him to the effect that the stores would be sent next morning by express, and that the licenses would follow by mail. Acting on this advice, I went into the woods in the full belief that my license had been obtained. On former occasions, on which I had adopted this course, had received the licenses in Halifax, and I was unaware that the license had been made in the law, and the license applied for in Halifax, a fact which the authorities must have known, for the warden who took out the warrant against me told me he was aware of it. The money was tendered, but it could not be issued for the reasons mentioned in the above quotation from the act of 1879. Of this fact I received no notification whatever.

Your correspondent is also in error in stating that if the bearer of a license shall not kill the prescribed number of animals in any one district, he can do so in any other, upon making affidavit before the Game Commissioner of the number he previously shot. The affidavit must be made before a Clerk of the peace. "A Member of the Nova Scotia Game Society" credits me with superhuman attributes, and declares that on my return I gave Halifax a wide berth. How a man can return to a place, and at the same time give it a wide berth, is difficult to understand. At any rate, I did not perform that complicated manoeuvre, for I went straight to Halifax from Queen's county, where the arrest took place. The respondent, however, peculiarly views your correspondent, he looks upon it as a mere pardonable blunder. He would probably consider it merely a blunder on the part of a sheriff to hang a man without waiting for the ordinary formalities of trial, conviction and sentence. Such loose views as to individual liberty are not accepted by Englishmen in general. I do not know how far familiarity with the process of being arrested might breed contempt for it, but as far as I am concerned, the experience was novel and disagreeable. I entertain the strongest objection to being arrested for a fine before a fine is imposed. Whatever peculiar views your correspondent may entertain as to the courtesy due from man to man, I think he must allow that even "a live lion" has a right to be treated in a legal manner.

The explanation which your correspondent gives of the motives of the Game Preservation Society is totally uncalled for. No one supposes that their object is to make money out of strangers. No one can regret more than I do that their efforts to preserve the game of Nova Scotia from threatened destruction have not met with greater success. The explanation is inadequate for the purpose, and is inadequately administered. I believe one or two convictions

have been obtained against inhabitants for killing large quantities of moose out of season by illegal means; but as a rule the law is a dead letter as far as the natives of the province are concerned. More especially is this the case in respect of the number of moose and caribou that may be killed. The rule is openly broken in all directions. It is considered only to refer to strangers, and is absolutely and avowedly inoperative against natives. In such cases strangers and residents ought to be on an equal footing; as regards licenses the case is different.

I have heard Nova Scotians call in question the wisdom of a policy of taxing the importation of foreign capital by demanding license fees from strangers, who spend a good deal of money among the poorer classes at a time of year when labor is difficult to obtain. They think that it tends to deter sportsmen from visiting the country, and it is not likely that any money will come to the country from the sale of game or the States to spend an autumn holiday would object to paying for the privilege of shooting, and as money is required for the purposes of the game societies, I think a system of licenses affords a legitimate means of doing so. Whether it should be restricted to strangers only is a matter for consideration.

Should you or any of your acquaintances be going into the woods you would do well to take with you a copy of the game laws, the printed copy contained therein would beguile the long hours of the winter's nights. For instance, a man must take out his license in the county or municipal district in which he proposes to pursue moose; but, if he pursues his moose into another county or district he is liable to a fine if he does not get his license indorsed. The county lines are not very clearly defined in the primal forest; it would not much mend matters, however, if they were. A man might pursue a moose and wound him in one district and be compelled to follow it into another to kill it. The proper course, I presume, for him to adopt on arriving at the county line would be to camp, pack up his traps, and go out to settlements, which might take a couple of days or so. He should then proceed to the residence of the Clerk of the peace, which would take a day, and having got his indorsement on the license should return to look for the moose, which would occupy several days more. But by this time the moose would be dead and the meat spoiled, and for allowing it to spoil the hunter is liable to a heavy fine. It may be said that such a case would involve a mere technical breach of the letter of the law. That is true, but it would not be so if the technicality were not there. It appears, moreover, by the act that if a game warden, who would get half the fine, should choose to take action in such a case, the magistrates would have no option.

I leave it to you, sir, to judge whether the game laws are remarkable for the extreme simplicity claimed for them, and whether you are quite correct in stating, that, in the letter of "A Member of the Game Protection Society," you were "publishing from a responsible source a true statement of the case."

DUNRAVEN.

A NEBRASKA DEER HUNT.

O'NEILL CITY, NEB., Dec. 1, 1881.

Editor Forest and Stream:

Nebraska sportsmen evidently do not appreciate your valuable journal as they ought; at least, they do not make use of your columns to tell of one of the best game countries in the west. One of the most interesting and popular features of any paper is the correspondence. This is particularly the case in the Forest and Stream, and it is a pity that the editors, by their reflections on the ability of its corps of editorial writers, but simply because the lover of true sport likes to read of the exploits of his brethren, even though he himself is hundreds of miles from the scene of action. This being the case I will tell of a week's hunt just made in the sand hills of Northern Nebraska by Mr. Ed. S. Kinch, an old hunter, recently of Edinburgh, Pa. Mr. Charles Shepard, a jolly railroad contractor on the S. C. & P. R. R., Mr. Merritt, a disciple of Blackstone, located at Penibus, this State, and the writer, who, being a frontier newspaper man, knows how to fully enjoy a good hunting trip.

Well, the party left O'Neill, which is the county seat of Holt county, on the night of Thanksgiving, going by rail to Long Pine, the present terminus of the S. C. & P. Long Pine is 75 miles west of O'Neill in the unorganized territory, is only about two months' old, and is an ideal frontier town, where saloons, railroad men, and the festive and much-lid-about cowboy take the prominent parts in the theatre of life. It is, indeed, a red-hot place, getting hotter every day. There is a large crowd of antelope near Long Pine, and several times they have visited the town, and at each visit several have been killed, the citizens grabbing their guns and revolvers, and banging away with great recklessness and indiscriminate.

From Long Pine we took a livery, and a twenty-mile ride over the beautiful rolling prairie brought us to Plum Creek, a fine stream of pure, soft water, running in a very deep gulf, either bank being lined with pine, cedar, oak, and cottonwood, and a favorite resort for both white and black-tailed deer. Just now, however, they are very scarce along the creek, the railroad graders and settlers having driven them back into the sand-hills. It was necessary to get back into the hills, and so Shepard rigged up his wagon with cover, and loading an ample supply of grub, blankets, cooking utensils, etc., the party pulled out. Reaching the head waters of the Plum, the boys took a tramp in the adjacent hills, and when night came and all had returned, it was found that Shepard had bagged a fine black-tailed buck fawn. This was encouraging, and was taken in for the night, dried, and served up for breakfast. The coyotes make a terrible racket, but we managed to get a good night's sleep just the same. Bright and early all hands turned out, and, after bracing up with coffee and bread, the boys struck out full of hope. At noon all had returned. Kinch was the only one that smiled. "Boys, fetch up the mules; I have some work for you." And he did. About two miles from camp he had struck a bunch of five deer, two bucks, two fawns and a doe, and he had done some of the best shooting on record. He killed every one of them firing his shot from his Winchester. This was the total for the day, but it was enough to make us all happy, though perhaps a trifle envious of the lucky Pennsylvanian. The afternoon and evening was devoted to dressing the game. It was estimated one of the bucks (a black-tail) would dress over 200 lbs.

The next morning early we pulled staves and headed southwest to the Sand Hill Lakes. Three of us struck out on foot. In a couple of hours the report of a double-barreled shot-gun was heard, and in a few moments the figure of a man appeared on the point of a high hill gesticulating in a frantic manner. It was the newspaper man. As it was

not far, Shepherd headed the mules that way, and soon all hands were gazing in admiration on a magnificent buck and doe, both having succumbed to the call of the 12 lb. Scott breech-loader. If an editor was ever proud it was this one, and don't you forget it. We load our shells for deer hunting with 6 drams of powder, and 12 buck-shot encased in a portion of No. 12 paper shell. This will carry 100 yards before breaking and with the accuracy of a rifle ball.

During the afternoon Merritt got a shot at a doe and broke one of the forelegs. After considerable chasing he was again shot and brought down.

That night we camped by one of the several lakes about twenty miles southwest of Plum Creek. The next forenoon Shepard got another fawn and a doe. The rest of us had no luck. Kinch's five, it seemed, was his allotment. Although we hunted here two days we failed to make another shot, and time being up we started homeward. We had got about half way when the keen eyes of the lawyer detected a bunch of deer feeding on the side of a hill about a mile distant. Hurriedly unbiting the mules we proceeded to surprise the unsuspecting enemy. Three of us made a circle so as to get on the side favorable to the wind, and one struck out straight toward them. The sequel we are all ashamed of, and will make it brief. There were eight deer and although we had all fair shots, not one was successful. The buck forever sagged badly. The writer fired at his shot, but he did not get the yardage distant, and never raised a hair. He had eyes for the game, not for the sights of his gun. We all returned to the wagon—disgusted, each one cursing his neighbor for his own ill luck.

We now pulled straight for the Plum, where we arrived in due time, from there returned to Long Pine and took the cars for home. Everything considered, it was an enjoyable trip and we are determined to repeat it in the near future.

W. D. MATTHEWS.

P. S.—Hancock, in the *Greenleaf*, says that black-tail deer are rarely found in the thick brush on the Pacific coast, and that they are not good eating. We differ with him. Here we find black-tail in the sand-hills, far away from timber, and they are, if anything, superior to the white-tail as an article of food.

[This is not the true black tail, but the mule-deer, which is one of the most delicious of the Cervidae.]

DEER IN THE ADIRONDACKS.

Editor Forest and Stream:

In the "Cruise of the Nipper," published in your last issue, mention is made of a dinner given at Dunsin's Camp, on Fourth Lake, Fulton Chain, in July last, and that State Game Protector Dodge was one of the guests. The "glum looks" of the officer, as he tasted the gamy flavor of the "mutton" (?) mentioned by "Nessumk," must have meant something, for mutton was brought against Dunsin for having venison in possession during the close season. Others, who thought it a good joke on Dodge to invite him to eat "crooked meat," have also had an opportunity to tell what they know about eating venison in July. The gentlemen mentioned by "Nessumk" are royal good fellows, and entertained their company grandly on the occasion spoken of; but they were setting a bad example by putting venison on their bill of fare at that time, and had the State officer allowed it to pass unnoticed, it would have established a bad precedent, for no matter how flagrant a violation might have occurred, after that he would have been powerless to enforce the law. The majority of the guides on the Fulton Chain are anxious to have the laws for the protection of fish and game enforced. They realize that to perpetuate their occupation the close season must be respected, and that class of guides were glad to see the case mentioned above prosecuted.

Protectors may be flattered and flattered into shutting their eyes to open violations, but that is not the record of the officer referred to in this article. Wherever he has found a case he has prosecuted it, no matter whether it hit a friend or foe, but always, too, with the best of feeling, with no ill-will or malice on his part, but simply a performance of his duty. During the last year he has brought, or caused to be brought, between twenty-five and thirty cases for violations of the different sections of the game laws, and his work is having quite a visible effect. Although the violations probably can never be wholly stopped, any more than violation of all other laws, yet it is already evident that there begins to be a general feeling that the laws are going to be enforced, and the open high-handed disregard of the law we have been accustomed to see in the Adirondacks already begins to be a thing of the past. I hope that the good work may continue, and that the State force may be reorganized, so that it will be still more efficient. ZACK.

NEW YORK, Dec. 12.

Editor Forest and Stream:

The suggestions made by your correspondent "Mussit" in regard to the laws for protecting deer are most excellent. I judge him to be a man of great experience and thoroughly acquainted with the habits of deer.

We want laws for better protection of deer in the Adirondacks, adjacent territory, and other regions of wilderness of this State, and laws that will provide for an increase of the deer supply instead of otherwise. Considerable correspondence was elicited through the publications of "communications" to your valuable paper last year and good information obtained. Sufficient, however, has been the experience of the best hunters of this State and the regions referred to above to make them suggest some for fringing laws on the subject, and practical value. I do not claim the enviable position as one of them, but, without egotism, freely say I recognize the necessities of limiting still further the bounding of deer. Go to Long Island and Pennsylvania for examples of necessity for protecting deer that they may increase. The scarcity arose from bounding; it is undeniable. Although to me there is "music" in the method of hunting with bounds, I would cheerfully forego all pleasure of the kind for the sake of having deer better protected and preserved. Perhaps we do not give enough attention given to the propagation of deer as we do for their preservation. Thoroughly attend to the latter and the former will take care of itself. The records of results of bounding deer during the past two years, if published, would sadden the most obdurate hunter.

I see "S. N. S." comes to the front with anxiety, in a letter published Nov. 3. Perhaps he would be too exacting; but that some changes should be made is very evident to all who feel an interest in prolonging sports. The deer is a creature like to know of the sale of venison is to be permitted this winter in our markets, as it was last, in open violation of the law. If so, there will be a necessity for more

such patroling as "Musit" speaks of, than the private purses of individuals will be able to care for or the State protectors possibly attend to. Although the illegal killing of deer can better be prevented by them than it is now or has been attended to in the past by anybody. Duties of our fish and game protectors in attending to fish protection must become as important at a season when deer need the most looking after, owing to the lateness of the season and a great deal of fishing with nets being stopped by fresh water freezing over. Should our laws receive attention this winter, it is to be hoped that provisions will be made for the State protectors to have more adequate means for thoroughly attending to the protection of game, and especially of deer. The number of officers and snare net, enough money is provided for their use, and not severe enough punishment meted out to violators. In my opinion imprisonment should be connected with flogging.

Withdraw the privilege of hounding certainly during August and October, if it cannot be stopped entirely, that the deer may get some rest. A deer driven in August, even if not killed, is, without doubt, very much injured, for there seems then to be almost no limit to his powers for going. Consequently great heat is induced, to be followed by a shock upon plunging into water, which in itself is very injurious to the health of any animal. No sensible man would compel or allow his horse to plunge into cold water after a fifteen-mile fast drive, and then allow him to lie down, without expecting permanent injury. It is quite as bad for deer; they will always go to water and plunge in, their instinct telling them there is no other way to get rid of the hound after which they seek some secluded spot and lie down. A guide told me last summer, he found in the middle of a lake a dead deer, without wound anywhere. No doubt death was consequent upon taking to water before hounds. A comparison might be made in the hounding of deer in warm water to driving a beef creature a long distance just before killing it, the meat in either instance is very poor food.

It is getting to be a recognized fact that the chances are very much against capturing deer by their "taking to water" before hounds during warm weather at specially good runways, and sportsmen are more inclined to stay out of the woods with hounds until cool weather sets in, and the deer are fat enough to give a short race, then the destruction that takes place is enormous. Some men get ashamed of killing deer, and others never do, but pursue them as long as their time holds out. Consequently, as a matter of benefit to the preservation of deer, I hope the warm-weather driving will be stopped, and the time for driving in cold weather be very much shortened.

It is my opinion that those who are strong advocates of driving will admit that hounding tends to completely exterminate deer, and that the only method of killing them, and I believe they will heartily uphold a law that will, without doubt, tend to the preserving, and the increase of our most noble game.

WOLLAT.

THE DUCK RIOT AT GUNPOWDER BRIDGE.

BALTIMORE, Md., Dec. 8, 1891.

Editor Forest and Stream:

On yesterday I visited Gunpowder Bridge on the line of the P. W. & B. R. R., for foot shooting. I took the 7:15 A. M. train and reached the Bridge about 8 o'clock. As I got on the Bridge and saw, to my surprise, about sixty or seventy gunners, I picked out a position about 200 yards from the bridge. A pair of coots came up, and without exaggeration, about twenty shots were fired at the two birds, one of which I think is a happy coot yet, and the other one, not so fortunate, was killed. About a dozen different men claimed it. The language and wrangling of the parties concerned would, to my notion, become anybody but brother sportsmen. I patiently sat a half-hour or so before I got a shot. Finally, there came along a single black mallard, when taking out one of the shells loaded with No. 6 and putting in No. 4 shot I put it on him, and it was, I think, a pretty long shot for a No. 10 gun. Down he came as dead as a rat. Soon I had another shot at a coot, which I killed with both barrels. I had good shooting for a while, my ducks being gathered for me by a man in a bateau, whom I had engaged for the purpose.

By the time I had been there—about one or two hours—I noticed five or six gunners inching up to me, and at last they were close to me. There was one man, who belonged to the ducking shore in the Hollandslow, sat himself down about thirty feet from me. He had a man by the name of John in a skiff waiting on him. Presently a coot came over to me to the right, when I killed him; and on looking for my duck this man yelled out at the top of his voice: "That's my duck; get him, John!" This thing happened regularly five or six times in succession. I finally made up my mind to move away; but I tell you, sir, everywhere one would go the words of "My ducks" would ring out above all others. I noticed three men from Baltimore. They had ninety-two coots, and I was told by them that they had shot away 500 shells and had killed ninety-two coots. I think that there is about one duck killed for every twenty shots fired; and if the thing is not stopped the shooting on Gunpowder will be one of the things passed by.

I got eleven coots and one mallard, and the man with his man John on coming in had seventy-seven coots, about two-thirds of which had been killed by other parties, but claimed and gathered by him. I tell you, a good claimer is better than a good hunter. The thing is going on, and the shooting on the Bridge is a fair representation of a battle field. There are great many good ducks in the river—canas-backs, red-heads and black heads; also a great many maras-ducks at the head of the river. I think that when I go down again to get ducks at the Bridge I will have a man John, and do more claiming and less shooting.

CHES. A. PEAKE.

BALTIMORE, Md., Dec. 12, 1891.

Editor Forest and Stream:

Do not let yourselves be deluded by Ches. A. Peake's letter in a late issue about duck-shooting on the Gunpowder Bridge. The danger attending the sport is great, and the most successful gunner is the object of envy on the part of those who, although they do not know how to shoot ducks, nevertheless take their stand in close proximity to a first-class shot, and then put in their modest demands every time a duck falls. The passing trains of cars, the slippery timbers of the bridge, forty or fifty guns, many of them in very inexperienced hands, and the fact that the birds are being shot by the gunners—all these strike me as very decided impediments to amusement. Some time since a man was caught between two trains on the bridge and so jammed and battered that he may be an invalid for life. Another one had a shot put through his hat.

There have been several sportsmen par excellence on the bridge this season. The leading one was formerly a member of the Carroll's Island Ducking Club, where he was considered one of the best overhead shots on the Island. He generally shoots a No. 12 or No. 10 at coots, and a No. 8 gun at larger fowl. He is now a member of a club composed of gentlemen who formerly shot with him at Carroll's Island. Ches. A. Peake's vision is evidently bad, and his information worse. I advise him, as he does not understand duck-shooting, not to take the part of a bad-tempered critic, but to possess his soul in patience until experience may come to his aid.—J. S.

LONG ISLAND WILDFOWL.

GREENPORT, L. I., Dec. 11.

Editor Forest and Stream:

There are plenty of coots and old squaws in Peconic and Gardiner's bay, and off Montauk and Napeague Bay, and on Ram Island shoals. Captain Bill Ross, the experienced skipper of the best yacht out of Greenport, has just called in at my room, after a recent cruise with a party of gunners from New York and Massachusetts, and says they killed a good many fowl by sailing on them, but that the water and weather were too rough to set batteries or use decoys. The better sort of fowl, such as black-ducks, whistlers, widgeon and broad bills are more plentiful in these waters, especially round Gardiner's Island, than they have been for years. This is owing, it is thought, to the fact of the Great Pond at Montauk being now filled with grass, the chosen feed of duck and geese. When the fowl find plenty of good feed in that once favorite pond they are numerous in all this region, and so much seems to be the case now. A large house for the accommodation of sportsmen and others is about to be erected at Montauk, near the Great Pond, and the building of several cottages is to take place in early spring; at least such is the report here. As the fowling, fishing, and snipe and grouse shooting have been always so excellent there, it will be a great resort for gunners, who have neglected the place for the last few years.

ISAAC McLELLAN.

NEWS FROM RICHMOND.

RICHMOND, Va., Dec. 3, 1891.

Editor Forest and Stream:

We are now in the midst of the open season for hunting quail and most of the other kinds of game in this State, and the season will continue in the Eastern counties, embraced in the "wide water" until the first of February; but the past month, open in law and open in weather, may be considered the height of the season. From this city many parties have gone out on little excursions for a day, or for several days, in all directions in the country around, seeking recreation and pleasure—not to speak of the profit—in the most manly, noble and agreeable of sports that a gentleman can engage in, viz., shooting quail, or partridges as they are commonly called in this State. On one train one bright morning we saw three separate parties, numbering two or three persons in each, and each with their own guns and bright English twists, and highly bred and highly trained setters and pointers, made the writer regret that a different mission was taking him from the city. These parties all got off at different stations short of thirty miles from the city, and each of them, doubtless, had a fine day's sport, for, on inquiry as to their luck on our return, we found that one gentleman bagged twenty partridges that day, but he was an exceptionally fine shot.

Altogether, there was a dry summer, and thus the conditions favorable for breeding and raising from all the information we gather from several quarters, and from our own experience in the field, we find that birds are scarce. This is the greatest obstacle to the huntsman's sport; and while it affords delight, not offered by any pastime or diversion that can be named, to drop a partridge as it goes with "winged swiftness," following the likeness of lightning through the air, when that pleasure is to be attained at the expense of weariness of the flesh, hunger and seven leagues of booted land, the amateur is much disposed to answer his friend who presses him to go on such a pastime as did the Frenchman his English host, who thought to entertain him by proposing a fox hunt, "Ah, Monsieur," said he "I have been."

Whether an increase of this feathered tribe will be promoted by stricter man-protective laws, or by traps and snares set to catch the hawks, foxes and such enemies as they have ever present with them; or by both means, are questions for discussion. Our own opinion is that nine months out of twelve give them sufficient "protection," with a law of no killing or taking of birds, but we think that premiums should be placed upon hawks, bids and foxes' scalps.

There are many devotees of the gun and dog here, and they are of a character for gentility and sterling business qualifications that makes it thoroughly respectable; and as to dogs, great interest has been manifested within the past few years, and, with the requisite training, many are owned that would doubtless make their mark at national benches or trials. By the way, we dropped in to see Mr. T. F. Taylor to-day. He was just back from the Eastern Field Trials at Robbins Island, where he had spent a delightful, though laborious, week, acting as one of the judges. We are glad to observe the high commendation so universally bestowed upon the decisions of the judges at this Trial, and it is very gratifying to Mr. Taylor's friends, considering how difficult a matter it is to give anything like satisfaction to all; but we who know him—how high-minded and conscientious he is, and how intimately versed he is in dog lore—feel that it must needs have been so.

CYCLOS.

KANSAS LARGE GAME—Cimarron House, Cimarron, Gray Co., Kan., Dec. 13.—This place is on the Atchison, Topeka and Santa Fe R. R., nineteen miles west of Dodge City, on the north bank of the Arkansas River. With a field glass almost every day antelope can be seen from the hotel porch coming in to water on the south side of the river. There are so plenty that I can buy carcasses at two dollars a piece, and can kill one or more any day at the cost only of getting tired. I saw forty in a day's hunt within ten miles of town last week. I killed only one. I use a Winchester rifle—model of '70—calibre .45, 60 grains of powder, straight shell. It is the best antelope gun I ever owned. Twelve buffalo were seen within the forty-miles limit on Dec. 3, but the aggregating things will get a little outside at times. They can be seen in winter on the banks of the Arkansas, 90 miles out, kill mustangs occasionally to feed their dogs. There are more than 1,000 wild horses within seventy-five miles of Cimarron. Hunting buffalo is hard work and involves camping out several nights on bare prairie, but you can hunt antelope and camp at the hotel.—W. J. D.

ON THE CHOICE OF A GUN.

IT is a great mistake to believe that in buying from a first-class maker you are paying a fancy price for mere name. You are really not doing so. The money represents the actual value of the gun, the prime cost of which leaves, at the low prices of the present time, compared with those of fifty or sixty years ago, a very unremunerative return. One reason why some sportsmen fancy that fine guns are inordinately dear, is the supposition that they are, or can be, made in unlimited numbers. A high-class gunmaker can no more turn out an unlimited number of guns, than an artist can of pictures. The moment he tries to increase his business by undue means, down goes the quality. For a year or two he flourishes and makes large profits; but Nemesis is at his heels. His former reputation goes down with accelerating speed. I write from facts occurring from year to year, and am not drawing a fanciful picture. Guns are simple things to look at, but are far from being so in reality. Give ten men the same materials and they will produce ten different guns in quality, style, mount, apparent weight (?), and shooting powers. I quote from a remarkably talented monograph on breech-loaders by "Glean." "It is no economy to buy a low-priced gun, because it will soon become useless. . . . On the question of price I have some very decided opinions. To my mind, there should be something higher to a sportsman in his gun than a mere tool, wherewith he works. A fine gun is the work of an artist. . . . I advise the sportsman as to the purchase of his gun—'Let it be as costly as thy purse can buy.'"

Sportsmen art apt to fancy that gun-making is a free and easy "sporting" kind of affair. It is, on the contrary, one of the most exhausting and responsible of professions, many gunsmiths breaking down in health in middle life in consequence.—From Douglas's "Shooting: Its Appliances, Practice, and Purpose."

A MINISTERIAL GAME DEALER.—The Rev. Halsey W. Knapp, of the Light Street Baptist Church, has resigned his pastorate. The members are anxious that he should continue, and have not yet accepted his resignation. Mr. Knapp is a very remarkable man. Like Paul, he labors with his own hands, but his occupation is not like that of the apostle. Mr. Knapp is a butcher and is to be found every morning at his stand in Washington Market. No better purveyor of meats is there. What he does not know about turkeys and beef is not worth knowing. In the afternoon he is doing pastoral work or studying in his large and handsome library at home. He is a good speaker and magis than both callings.—New York Observer.

A SMALL GUN—Bergen Point, N. J., Dec. 15.—This piece is a double-barreled breech-loading pin-fire shot-gun, 30 bore. The barrels, which are 24 inches long, are the finest laminated steel. The stock is of rosewood, rather short and very handsomely carved. The locks are also very finely engraved, as is the action, which is the original Lefaucheur. This gun formerly belonged to Prince Murat, of Bourbonnais, who gave it to Dr. Coleman, of Trenton. It is now in the possession of Mr. B. T. Kissam, who claims that it is one of the oldest breech-loaders in America.—C. N. D.

A PRACTICAL SUGGESTION—Perth Amboy, N. J., Dec. 1891.—Editor Forest and Stream: In the interests of game preservation in this State allow me to suggest, through your columns, that if those who have occasion to drive over country roads at this season would carry a gun, they might kill the large hawks, which are the quail's worst enemies. Hawks do not seem to fear a horse and wagon, and may be easily approached and shot from a vehicle. The death of one hawk means the life of several coveys.—A SPORTSMAN.

VELOCITIES OF RIFLE BULLET AND OF SOUND—Bethlehem, Pa., Dec. 10.—Editor Forest and Stream: I notice in your last edition a letter from Prof. A. M. Mayer, concerning the velocities of rifle bullets. Allow me to add my experience. In 1878 I did some marking at long ranges, and noticed that the bullet got to the target a trifle ahead of the sound, at 800 yards, just with it at 900 yards and at 1,000 there was less than one-half second difference between them, the sound being ahead.—J. S. D.

HOW TO KILL WOUNDED WILDFOWL.—In answer to the inquiry of your correspondent "Bay Ridge," the best way to kill wildfowl wounded in the head is to take the bird in the left hand, placing the thumb and fore-finger under the wings, just back of where they join the body, and bringing a strong, steady pressure on the body. This will cause death in a very short time, without ruffling a feather.—EARLYBIRD.

BRINGING DOWN THE GRIZZLIES.—Bozeman, Montana, Dec. 7.—Have just come in from my annual hunt. I spent a very enjoyable summer and fall. Killed twenty-four grizzlies, nineteen of them in a little over one month. I killed what mountain bison, elk and mountain sheep were required for meat and baits. I always prefer to tackle bear alone, as one man is as much as I care taking care of and the above does not include any killed by my men.—P.

MALDEN GUN CLUB—Malden, Mass., Dec. 11, 1891.—At the annual meeting of the Malden Gun Club, Dec. 5, 1891, the following officers were elected for the ensuing year. President, F. T. Noble; vice-president, J. Buffum; secretary, C. H. Laneragan; treasurer, A. H. Jones. The club numbers some forty-five members, and is in a flourishing condition.—C. H. L.

"I KNOW," said a little girl to her eldest sister's young man at the supper-table, "that you will join our society for the protection of little birds, because mamma says you are very fond of larks." Then there was a silence, and the Linburger cheese might have been heard scrambling around in its tin-box on the cupboard-shelf.—Norristown Herald.

IN ISSUE DEC. 28th in article "Shooting Grouse on the Wing," "once in a while I would kill one when an open straightaway shot offered," was incorrectly printed "and in a while;" "4 1/2 grains Orange Lightning powder," was incorrectly put "charge Lightning."

CURRIETOCK—Warrenton, Va., Dec. 10.—Have returned from Currietock with nineteen other disgusted sportsmen. Didn't average one duck a day a piece. Expenses \$5 a day. Query, does duck shooting pay?—CHASBROOK.

FLORIDA PARTY.—Companions for a Florida trip are desired by a Philadelphia gentlemen, whose advertisement appears elsewhere.

THE FUR MARKET QUOTATIONS are given on page 416.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides*
and *M. dolomieu*.
Mascoagone, *Esox nigrum*.
Pickereel, *Esox lucius*.
Pike or Pickerel, *Esox lucius*.
Pike-perch (wall-eyed pike)
Stizostedion americanum, *S. gireum*, etc.

SALT WATER.

Smelt, *Osmerus mordax*.
Sea Bass, *Centropristis striata*.
Striped Bass or Rockfish, *Morone americana*.
White Perch, *Morone americana*.

But he that shall consider the variety of baits for all seasons, and pretty devices which our anglers have invented (peculiar lines, false flies, several slights, etc.), will say that it deserves like commendation, requires like study and perspicacity as the rest, and is to be preferred before many of them.—BUTLER, *Anatomy of Melancholy*.

ANGLING IN IDAHO.

BELEVUE, Wood River, Idaho Territory.

IN your late lists of fish in season in September, you should have had, to make it complete, what are called trout in this region, which are now in their prime. I am told that they have been successfully crossed with the speckled trout of the Adirondacks, which they resemble in all but the bright colored spots. There seems to be three distinct varieties, differing in form and color of meat.

The largest variety weighing from one to five pounds, sometimes six. I now mind of one this season, murdered with giant powder, that weighed nearly eight. It looks in every respect, except the bright colored spots, like those caught in the dead waters of the Adirondacks, very short in proportion to its weight; very dark in the back; changing to redish-brown on the sides. The flesh when cooked is a deep flesh color.

The second, which are called silver trout here, do not, in this river at least, seem to grow to weigh over one-half to three-fourths of a pound, the most of them less than six ounces. They are long and slim, with hardly any spots on their sides; dark on the back, with bright silvery sides; flesh as white as the purest snow, and when first caught are of the most delicate flavor imaginable. They take a fly readily, and when hooked spring clear from the water and try to shake themselves loose, as I often have seen bass when trolling in Eastern waters.

The last variety, called here "mountain trout" and found in the spring brooks, are from four to six inches long; dark in the back with yellowish sides, and having, in addition to the dark spots, a dark band about one-fourth of an inch wide and half to three-fourths of an inch apart, running about two-thirds the way up their sides, and are equal to the regular speckled beauties of the East.

None of these trout have the white tips to pectoral fins, and all have very true scales. The first two named species spawn in the spring. I am inclined to think that the latter do also, as in those caught now there are no signs of eggs.

This, the Wood River country, was the Eden of the Banocks. Its rivers swimming with trout; elk, deer and antelope were abundant; bears more than plenty, mostly cinnamon and bald face, with occasionally a grizzly to make it interesting; and other, beaver and mink are found on all the streams. In another season the scream of the "iron-horse" will waken the echoes of these valleys and send the game into the impetuous mountains to be secure for a while from the ever-onward march of the white man.

Notwithstanding the stringent game laws enacted by the Territorial Government, the use of giant powder early in the season has, in one season, cut off more than half the supply of the trout in this valley, and another such slaughter next spring will destroy the fishing almost entirely.

I found accidentally this last week that there are plenty of small fish in this river which were mentioned in a late article in your paper, "Do you Remember Snakes At Fish?" They are perfectly identical with those of mountain streams in New England and your own State, and I have often used them very successfully two or three times since. G. B. F.

SHAKESPEARE AND THE CARP.

SOEKNROTADY, N. Y., Dec. 19.

Editor Forest and Stream:

I was much interested in the quotations from Shakespeare on fly-fishing, from Mr. S. C. Clarke, in your last issue. I now send you the following from the *Antiquary*:

Among fresh-water fishes the carp was held in high esteem in Shakespeare's time as a fish easy to rear and keep in preserved fish-ponds, and so readily available for the table. He mentions it twice:

1. *Clown*.—Here is a pair of fortune's, Sir, or of fortune's cat (but not a truck-cat), that has fallen into the unclean fish-pond of her displeasure, and, as he says, is muddled withal. Pray you, Sir, use the carp as you may.—*It's that Ends Well*, Act II., Scene 2.

2. *Polonius*.—See you now?

Your bait of falsehood takes the carp of truth.—*Hamlet*, Act II., Scene 1.

There is a peculiar fitness in Polonius's comparison of his own worldly-wise deceit to the craft required for catching a carp—for the carp was proverbially the most cunning of fishes. "The carp is a devious fysshe, but there be few in Engleland, and therefore I wryte the lasse of hym. He is an evyll fysshe to take." "The carp is the queen of rivers," says Walton; "a stately, a good, and a very subtle fish." And it is the fact that the brain of the carp is six times as large as the average brain of other fishes.

SACRED FISH.—In Northcote's "Account of the Roman Catacombs," it is stated that: "In the Catacombs at Rome the fish is the most sacred symbol." The most important perhaps of all, and certainly as ancient as the others, is the carp, which is figuratively called "The Fish." "The little fishes," says Tertullian, "are born in water, after the example of Jesus Christ, our fish." The fish was the recognized conventional sign for Christ. Hence we find a multitude of little fishes in crystal, ivory, mother-of-pearl, in the graves of the Catacombs—some of them with holes drilled through the head, to be worn round the neck."

SWEDISH POPULAR BELIEFS.

The teeth of large fish should be burnt, in order to be lucky in fishing.

One ought to tell no one when one goes out to fish, and not mention whether one has caught many or few.

Nor should any stranger see how many fish one has taken. When one rows out from land to fish, one must not turn the boat against the sun.

Thus found in a church and made into fish hooks catch the best.

If a woman passes over the rod, no fish will bite.

Stolen fishing tackle is lucky, but to the person robbed loses his luck.—*Thorpe's Northern Mythology*.

AMERICAN BROOK TROUT IN GERMANY.

IN a recent letter from Mr. H. Haack, the celebrated fish culturist in charge of the Government hatchery at Huningen, he tells us that he has had poor success in obtaining impregnated spawn from the *fontinalis* this year, for the reason that among all his fish he had not one male. He says: "Salmo fontinalis is not an American trout, but an American char." I have found that out by making hybrids with our German trout, *Salmo fario*, using a female of the former and a male of the latter species. The result was nearly nothing. The *fontinalis* is a river char, and not a sea char, more beautiful than our trout."

Mr. Haack is right in calling our fish a char, although the popular name is too well fixed and endeared to Americans to ever be changed. The dentition separates it from the true trouts. It is for this reason that in the revision of the *Monomidae* by Gill and Jordan new genera were made for both our Eastern brook and lake trout. The genus is changed from *Salmo* to *Salvelinus* for sea brook trout, and to *Cristomus* for the lakelers. Therefore, if the new nomenclature is accepted they become *Salvelinus fontinalis* and *Cristomus namaycush*. The common brook trout of Europe is *Salmo fario*.

THE ANGLE IN MISSOURI.

St. Louis, Mo., Dec. 13.

Editor Forest and Stream:

Years ago there was excellent fishing, for such fish as our State was blessed with, but now the sport is almost a forgotten one with many who formerly enjoyed it. The nets have skinned our streams for season after season, and the lack of law, or of its enforcement is the main cause of the present barrenness of our waters. True, there have been fishing-clubs, but they have lacked influence because they have contented themselves with their own enjoyment, and lacked the public spirit necessary to carry on a fight with the violators of the law.

It was hoped that the appointment of Fish Commissioners would either remedy or at least alleviate the evil, but it has not done so. The Fish Commission, propagate, but do not protect. They do good enough work in their way but are powerless to stop the wholesale depletion of the waters which has been going on for years, until those who do it look upon it as interfering with their vested rights to forbid them to use nets at all times and in all places where fish may be found.

Murdoch Lake, about thirty miles south of this city, is a splendid sheet of water, and fishing is tolerably fair there. The same may be said of King's Lake. Both these lakes have their fish clubs, and their waters are protected partly by the clubs and partly by the stump laws, etc., which make it impossible to haul a net in some parts of them. Murdoch Lake is probably the best of the two. These clubs do little or nothing in the way of propagating, or of enlisting the Fish Commission in the work, but simply fish. It contains black bass which are as gamey as those of any waters, dogfish, catfish and croppies. This last is a fine little fellow, and well worth cultivating. E. B.

ANGLING FOR ALBATROSS.—In January, 1879, when off Cape Horn, on the ship Twilight, we were becalmed for some hours. A great many albatross had been following and circling round the ship, and "The Rime of the Ancient Mariner" having no effect on our non-superstitious minds, we determined to secure one of them. "Chips" immediately rigged up a hook and line, baited it with a piece of pork attached a float about a foot from the hook, and threw it over. After fishing (would you call it fishing?) for some time without success, the hook being very large and pulling out of the birds' mouths, we gave it up as a bad job and went to dinner, leaving the line hanging over the stern. Hardly were we seated at the table when we heard a shout from the man at the wheel. We rushed on deck and found that an albatross had taken the bait and the exception of some pink markings on the throat. There are also some gray streaks on the wings. That night a heavy gale began, which lasted until the next afternoon. Killing an albatross and storms have always been associated, regardless of the fact that the albatross is only found in stormy latitudes. In the "Encyclopedia Britannica," (9th edition—subject, Albatross) it is said that these birds sometimes measure 17 feet from tip to tip. This hardly appears possible, and I think it must be a mistake, as mine is only half that size and is as large as any I have seen.—JAMES P. Boston, Dec. 13.

THE COMING TROUT.—At the recent meeting of the New York Association for the Protection of Game, President R. B. Roosevelt said of the rainbow trout of California (*Salmo iriden*) that they are twice as strong as our Eastern brook trout, and twice as rapid growers, often reaching a weight of eight to ten pounds in California, while in our waters they grow to four and five, while the *S. fontinalis* is growing to less than half that weight. The complete answer, then, said Mr. Roosevelt, is that they are too gamey—they smash light tackle with their tremendous rushes, and the angler must be especially prepared for them. They can be easily introduced into our trout streams, will live where our trout will, and in some places where they will not. "They are the coming trout! They are perfect!"

THE MANUFACTURE AND CARE OF GUT.

REDDITCH, Engleland.

Editor Forest and Stream:

In your issue of Nov. 17 I notice the correspondence respecting silkworm gut. I have for the last thirty-five years purchased and sold large quantities, and always have at my works an extensive stock, which has had my personal supervision, my firm having in Murcia, Spain, a manufactory of silkworm gut. I have been in Murcia superintending the manufacturing and have discovered two causes which make gut brittle, and have instructed our manager in Murcia to see all the processes of the gut and impress upon them the importance of keeping the gut out of the sun.

The great evil is this: After the worm has been drawn out it is put in the sun to dry, and the great heat of the sun takes the moisture out of the gut and makes it brittle. I also discovered another danger in the manufacture of it. In bleaching it, if the bleaching-oven is too hot, and the gut is too long in the oven, it makes the gut brittle. If gut is made without an excess of heat it will be more pliable; consequently, more strong. I have never found gut get brittle by keeping. The best way to keep it is in wash-leather. If large stocks, in drawers or rooms which are not over-heated. Some tackle dealers will expose gut, gut leaders, etc., in their windows. The sun gets on it and consequently takes the nature out of it and it becomes hard and brittle.

The cause of flat gut is disease in the worms. Healthy worms produce round gut. The manufacture of gut is very simple. The gut from the worms is bought from the small country people who breed the worms in their houses. The first process in making is to put the gut in a furnace with water, a little soda and soap. After boiling a short time the outer skin comes off it. It is put in yellow and comes out white, after it is put in the bleaching ovens. Then girls rub it straight with wash-leather, holding one end in their teeth. The next process is to sort out the different strengths. It is then rubbed again; sorted into bunches of one hundred, then a man puts in the red jute on each bunch, and then ties it in bundles of one thousand.

This may interest your readers and prevent gut being spoiled by exposure to the sun. S. ALCOCK.

A CARD FROM MR. MURPHY.—Newark, N. J., Dec. 16.—*Editor Forest and Stream*: I wish to use your columns to correct some errors and exaggerations which have appeared in the newspapers as having come from me, knowing that in this way the sportsmen of America will see the retraction and that they will not hold me guilty of such absurd exaggeration, or of attempting to cast a slur upon a brother sportsman who has long been dead. It is now some six weeks ago since a reporter from the Newark *Sunday Call* visited me and held a long conversation on shooting and fishing in the olden time. He took no notes, but relied on his memory for facts concerning the old anglers and fishermen; and his memory must have distorted my conversation wonderfully. I gave him merely a plain statement of facts, showing how much more plentiful fish and game were in the early days than at present; and as for Mr. Herbert (Frank Forester) I merely said that I knew him well. I was surprised at the way the interview appeared in the *Call* under the heading of "Reminiscences of an Old Sportsman." Perhaps I would not have thought it worth while to refute the article and not the New York *Times*, of Newark, December 11, published substantially the same article with the additions and omissions, under the head of "Fish Poles and Fishing." I now wish to say that all the statements in the *Call* in regard to the quantity of game and fish formerly taken in and around what is now the city of Newark were grossly exaggerated, and those in the *Times* were still more so. Also that the account of my exploits with the rod and gun in company with Mr. Herbert, or "Frank Forester," as he was called, were an entire fabrication. I never hunted nor fished with him in my life, nor did I ever tell any person that I had done so. The remarks concerning the character and habits of Mr. Herbert, which followed in the account of the interview, were pure fabrications. I hope that I would be the last man to attempt to traduce a man so well known as "Frank Forester," especially after his death.—CHARLES F. MURPHY.

LET THE ICHTHYOPHAGI LOOK TO THEIR LACRES.—The famous Ichthyophagus Club, of this city, has a rival across the sea. Food and Health says: "If ever a small but heroic federation of philanthropic enthusiasts was fairly entitled to the epithet of civic-minded men, that body is the New York Committee of the Westphalian Provincial Association. From its recently published report upon 'Measures taken by the committee during the past year for the development of humanity's costliest resources,' we gather that the associates have carried out a series of experiments in the eating line which are probably unprecedented in the annals of investigation. They have partaken of stewed bear and badger, both roasted and hashed, with sweet sauce, and found them delicious. Baked crane, stuffed with chestnuts and plums they proved wise to be superior to any edible goose that ever waddled over the sea. In their opinion frog-soup, which they recommended to epicures by the tempting designation of 'batrachian caviare,' is an absolutely first-class delicacy, infinitely superior in flavor to the roe of the sturgeon. The concluding paragraph of this amazing report is as follows: 'During the Munster Exhibition of tortoises, snakes, alligators etc., a venerable crocodile, aged about one hundred and fifty, breathed its last. Two days after its scaly hide had been removed the meat round the root of its tail presented so appetizing an appearance that the chairman and secretary of the committee determined to prepare a piece of it, weighing four pounds, in the manner of turtle soup. After simmering for three hours or so, a soup was served to them of such vigorous aspect and seductive power that all their guests called loudly for plates, and in a few seconds the tureen was emptied.' If any of the members of the American club with the horrible name go to Florida this winter let them act on this and try the alligator."

THE FISHLESS PASSAIC.—The Passaic River, New Jersey, formerly contained many valuable fish. It was especially famous for shad, smelt, striped bass and white perch. Since it has been used as a sewer for the city of Newark the fish have left it, and now a dam is to be built, which a New York newspaper thinks may improve the fishing. The *Call* says: A score of years ago the project of building a dam across the river at Bellevue would have met with the stoutest resistance from all Newark anglers and fishermen. Now scarcely a word will be heard in remonstrance. Gas-tr, lime and various chemicals flowing from our sewers have been thorough in the

work of destroying the bass and snad fishing in the Passaic, and it is scarcely worth while for net-owners or anglers to speak against the project of building the dam. On the other hand, the fishing above the dam may be greatly improved. Black bass and other strictly fresh water fish will thrive in the clear water and afford even better sport than the striped bass did in their best days, and the shad will still have a chance of pug up just if they will consent to hang around the gates until low tide.

INFORMATION ON SALMON FISHING.—I want some information about the salmon fishing of Newfoundland and Labrador. If you have a reader who is familiar with these sections I should be greatly obliged if he would give me some information whether there are salmon in the rivers of those countries, and if so, whether they rise to the fly, and if so how to reach the ground and all about it. I have been so unfortunate as not to secure any fishing in the Canadian waters, and he good streams have all been taken up, so I am informed.

VERDE MONTE.

MORON-BUILDING FISHERS.—In our issue of June 23, 1881, we published a communication from our valued correspondent, D. H. B. Syracuse, N. Y., on stone-lugging fish. He gave an account of a large cod fish of ten or twelve inches in length, which was seen to carry stones in its mouth and heap them up. This, no doubt, had some connection with an increase of its species, and could hardly have been for the purpose of a monument to its ancestors, nor to erect a mound to preserve the archives of the great family *Cypripidae*. In our remarks we hinted that the fish might be either *Senolius corporalis* or *S. bullaris*. A specimen was sent, and we inclined to consider it the latter species. It was sent to Prof. G. Brown Goode for further identification and he decides that it is *butleri*. The fish is a truly game fish and is the largest of our Eastern cypripinoids, often reaching fifteen or eighteen inches in length. It rises to the fly, as does its congener the "corporal," but does not occur in sufficient numbers to be angled for especially. It is popularly known as "fall-fish," "club," "dice," and sometimes "roach." It is a beautiful fish, with large shining scales, and, in the breeding season, has bright red fins. Its habit of stone-toting was new to us, and on looking up its written history, we find no mention of it.

GRAYLING FISHING.—Jesse, in his "Angle's Rambles," in speaking of grayling fishing, says: "You will always see any person who is a stranger to grayling fishing, and I may add, many who have fished for them all their lives, when the stream is low and very clear, betake themselves to the streams and curfs, from the idea that their fish will see their line in the water. Let them do so; they will, perhaps, catch a few trout and some such grayling. But go yourself to a deep, dark part of the river—never mind if there is no wind, and the sun is hot—use the finest gut you can procure (even if you have to give a guinea a knot for it), and two flies, and, when you have thrown your line as light as a gossamer, let it sink eight or ten inches. You will not see a rise, but a slight curl in the water, which, by a little practice, you will understand quite as well; and, when you strike, you will have the pleasure of finding a pounder, or more, tugging away at the end of your line."

KILLING FISH WHEN CAUGHT.—Caledonia, N. Y., Dec. 16.—Much has been said upon the subject of killing fish when first caught, but only a few anglers practice it. Of all the persons who visit my trout ponds and fish in the creek here, not one in ten do it, although most of them will admit that fish are better for the table, and keep better, by being killed instead of suffocating in the air. There are differences of opinion as to the best method of killing fish when on the stream. I think the best and quickest is to take the fish in the right hand and strike the back of the head a quick, sharp blow on the but of your rod. If you are on the shore, strike the head before removing the fly or hook from its mouth. When you break the trout's neck, it spoils the fish for a nice show on the table, as the head will in some cases come off when you dress them, but will always do so when cooking.—J. ANNIN, JR.

NIGHT FISHING.—Baltimore, Md.—A friend and myself have on several occasions, during the past summer, chosen dark nights and taken the late train to Bush River, Harford county, this State. Our preparations consisted of lowering an ordinary railroad canteen from the bridge to a height of one foot above the water. Our lines contained a spreader, two hooks, and a cork about ten inches above the hook. Our bait was shrimp. We cast our lines in eight feet of water, the corks floating on the edge of the canteen's light reflection. The fish, attracted by the light, came around, and we were kept busy from 10 until 4 o'clock in the morning, when by actual count we had bagged 359 fine white perch, some measuring between 10 and 15 inches. I have found in night fishing for perch the luck is as good, and sometimes better, than fishing by day.—JAN.

THE RAINBOW TROUT.—We are permitted to publish the following: Danville, N. Y., Dec. 12.—To Seth Green, Esq., Superintendent Fishery Commission: During the past season we have taken special pains to protect the California Mountain trout, protected by our laws during the past three years. The young trout were received from the State Hatching House at Caledonia. It has been understood that none should be killed by members of clubs. The fish are doing splendidly and are taken three miles above where they were planted, weighing over one pound each. A friend took one in Canebranch Creek, last July, that weighed, after being out of the water eight hours, eighteen and one-half ounces. He did not know what it was until I told him. There is no doubt about their being the trout to take the place of our old natives.

JOHN HYLAND.

CLARK'S HATCHERY.—At the hatchery of Mr. Frank N. Clark, assistant to the U. S. Fish Commission, at Northville, Michigan, there are 220,000 whitebait, 55,000 eggs of lake trout, and 50,000 eggs of the lake trout. He will soon make some shipments to Germany.

A CHALLENGE ACCEPTED.—Marlboro', Mass., Dec. 19, 1881.—Editor *Forest and Stream*: At a meeting of the Marlboro' Sportsmen's Club held the 16th inst., it was voted to accept the offer of the Fall River Gun Club, published in a late issue of the *FOREST AND STREAM*, to shoot a team match at glass balls. In accordance with that vote I have to transmit to you our acceptance of that offer. Teams to consist of from eight to fifteen men each, at the option of the Fall River Club, and match to be shot upon our grounds in this place, at such a time as they may designate. We also voted to accept the challenge of the Worcester Sportsmen's Club to be shot at this place, Jan. 13th next.—HEMAN S. FAY, Secretary Marlboro' Sportsmen's Club.

Fishculture.

GROWTH OF TROUT IN WISCONSIN.

IRON, WIS., Dec. 9.

Editor *Forest and Stream*:

I send you the following history of my experiment for the purpose of demonstrating the ease and facility with which barren or depleted streams may be stocked with these beautiful fish.

About four miles south-east of the city of Ripon are two large springs, which carry the Iron River. The stream runs through the city and, after supplying power to several mills, empties into Green Lake, about four miles west of the city, running by the stream, about fifteen miles. In the spring of 1880 I proposed to stock the stream with brook trout, but met with much discouragement from the wise ones of this locality. One said that the water was hard and trout would not live there. Another claimed that the drain of the basins into the stream would kill them in twenty-four hours. Others, again, were certain that the deer and club would devour every one of the fry, and that I was fooling away time and money in putting trout in there.

Notwithstanding all this, in April, 1880, I procured from the State hatchery, at Madison, 20,000 brook trout fry, and planted them in the springs and left them to live or die, to fight the battle of life and forage for themselves. In the summer of 1881 I inquired of those living on the stream about the trout. Nobody had seen them. Some said there was not a trout in the stream: others slowly shook their wooden noddies and said, "We told you so; any fry you put, but you could have taken our advice." I felt that things looked rather blue. I felt worse than a sucking calf that had lost its mother. What was to be done? To give up now involved not only a loss of time, money and wind in procuring the fry, but also a pretty good share of self-esteem, and shattered my faith in Prof. Baird and other ichthyologists. That would never do; so I resolved to brace up and keep a stiff upper lip. I told the doubtful Thomases to keep their shirts on and wait until November and we would see what we would see.

On the 28th of November, 1880, I made a visit to the spring where the fry were planted. I found a very old man was stationed there. I expected to find some trout there about eight inches long, and there, within four feet of me, were great, magnificent fellows fourteen inches long that would weigh over a pound each. The spring was a large one, and the trout were from ten to twelve inches long, and in their brilliant costume, got up regardless of cost; all busily engaged in preparing their spawning beds. I looked about me, almost expecting to see the ghost of old Izak Walton cavorting around me and offering his kingdom for a fish joke. Had the Governor called for them, they could have been planted where should have asked him boot. I had cast my bread upon the waters and it had returned to me after many days. The most surprising feature of the case is their rapid growth. They were barely twenty months old, and many of them would weigh a pound each. They were not big, but they were good.

It demonstrates beyond question that our waters are admirably adapted to the trout, and if our too ardent fishermen can be restrained for another year Silver Creek will be fully stocked with those beautiful and delicious fish.

A. COWLEY,
Fish Warden Green Lake Dist.

CARP.

WASHINGTON, D. C., Dec. 8, 1881.

Editor *Forest and Stream*:

I came to this city on a business trip a few days since and found Dr. Hassel, superintendent of the carp ponds near Ripon's Island, west of Babcock Lake, was draining off the water by direction of Prof. Baird, of the Smithsonian Institute. It was found that the carp ponds had been very great during the past season. It is estimated that fully as many have hatched as were discovered in Babcock Lake when it was drawn off, and the number is estimated to be upward of 100,000.

Prof. Baird is sending these young fish off daily to all parts of the country, except the Southern States, where the temperature of the water is higher and more uniform, and they consequently grow faster. Dr. Carey, State Fish Commissioner of Georgia, was present at the drawing off of the pond. He takes much interest in the breeding of the carp in his State, and says it has been in his mind to import some from this country.

Superintendent Hassel is making some great improvements in and about Ripon's Island and through his work Prof. Baird will be able to distribute more carp yearly, as many old fish will be added each season, and as the young were lost when the ponds last spring, owing to a freshet, and many were washed into the Potomac River. Capt. Knight, a well-known fisherman on the river, was present and stated that carp are now frequently caught about the river flats among the grasses and that they are delicious food for the table.

Two car loads of carp were shipped last Monday night for New York and New Jersey for stocking the ponds of numerous gentlemen of those States.

I met while there Mr. H. J. Fenton, of Windsor, Conn. He is the proprietor of the Connecticut State Fish Hatcheries, and was on his way homeward with carp for his State. He has already distributed 1,000 and gets altogether 1,500. Distribution was made in lots of 30 to applicants all over Conn. In the autumn of 1880 he sent out 800 about 3 inches long. Some of these fish are now 10 inches.

At the Conn. Hatchery, at Fenton, there are now 450,000 trout eggs, 300,000 Penobscot salmon eggs, and of land-locked salmon fully 275,000 ready for State purposes at Twin lakes. Mr. Fenton tells me a land-locked salmon was lately taken of the planting of 1875—that weighed 4 lbs. 2 ozs.

Mr. F. and myself attended the Guiteau trial together, but I assure you the fish question interested us much more than the gabbling of the cranky assassin.

Why do not the Pennsylvania men who wish to try the experiment of growing the carp make application for a few fish before they are gone?

HOMO.

THE GERMAN FISHERY ASSOCIATION.—We have circular No. 6 of the Deutsche Fischerei Verein for November, 1881. From it we take the following notes: Mr. Schuster reports having taken 23,000 eggs from four-year-old California salmon which he reared, and which had never left the ponds of his breeding establishment at Lake Superior. The eggs were sent to the German society, writes that they received eggs of the quinnat salmon, *Oncorhynchus clonius*; the land-locked salmon, *Salmo salar*; the brook trout, *Salvelinus fontinalis*, and the whitefish, *Coregonus nasus*, from America the past year. With the exception of the brook trout, all came in good order. Some from Mr. Annin had endured exposure and met with considerable loss; others from Mr. Stone arrived safely. The use of seawater as a packing material for eggs is not approved. When it is fresh it is inclined to heat, and thereby was considered to be a hindrance to the eggs of the quinnat salmon from Geestendam. Carp fry at Walmschen, were fed with blood at first and then with bread, and on the 12th of July were from five to six centimeters long. At Sommeren they were fed with bread; at Kalmun with ground meal (behe-mel) and potatoes; at Lennich with young grass, and also with "water-peel" (a water plant of some kind). At Deseen the old carp are fed with ants' eggs, bread, barley, potatoes, blood and refuse meat. Carp, goldfish and the golden teleost are particularly fond of oil-cake, and large pieces can be thrown to them. I have not seen any getting as rapid growth in carp in a small space with artificial food as in larger waters where there is more range and plenty of food.

EGGS FOR GERMANY.—Several lots of eggs are either on the way or are to be sent to Germany. On the 17th of July the North German Lloyd steamer Mail took out 20,000 eggs of the lake trout, *Cristiomer namaygush*, from Prof. Baird to the Deutsche Fischerei Verein. They came from the hatchery of Frank N. Clark, Northville, Mich., and were re-packed by Mr. Maier, of *FOREST AND STREAM*.

On the 24th the Oster, of the same line, will take out 300,000 eggs of white fish, *Coregonus albus*, from Prof. Baird, to the same destination, also from Mr. Clark.

The Oster will also take 20,000 eggs of brook trout, *Salvelinus fontinalis*, from Mr. Livingston Stone, Charleston, N. H., for the Deutsche Fischerei Verein, and an equal number for Mr. Eberich, Geestendam.

QUINNAT SALMON IN GERMANY.—In a private letter Mr. von Dehr, President of the Deutsche Fischerei Verein, writes that the California salmon, from eggs sent by Prof. Baird this year, are doing capitally. He says that Mr. Schuster knows how to deal with all the fry, which his tanks are swarming until he deposits them in the Danube.

FOOD OF CARP.—Those of our readers who are interested in carp culture will read with interest the report on feeding them in Germany. Under the head of "The German Fishery Association" we give a translation of Mr. von dem Borne's report of the management of this fish in different parts of that country.

The Kennel.

THE NATIONAL FIELD TRIALS—CONTINUED.

BELTON III. AND NELLIE.

Wednesday morning a start was made at half-past seven, and fifteen minutes later Belton III. and Nellie were put down, just as the fortifications were being towed, to run the open. Belton III. was the fastest. He was in the lead, and when he was flushed he led. Belton did not commence very well, as he soon ran into a small bevy and flushed them. Following them into some sprouts, Nellie made a point, which Belton backed indifferently. The bird was flushed to order, and missed. Nellie soon found another bird, which she pointed nicely. Belton again backed poorly. She tried, to order, winged a bird that Nellie failed to find. She again pointed, and Belton backed, a little better this time. Short, to order, killed, and Nellie retrieved nicely. Out in the open, Belton pointed, and Nellie backed. Belton was in the lead, and when he was flushed he led. Belton pointed, and Nellie, coming up in the tail again, also came to a point. Short flushed to order, and his gun missed fire. Belton again flushed, and the dogs were ordered up and Nellie awarded the heat. Down altogether one hour.

BIZ AND COUNT NOBLE.

Biz, handled by Mr. McIntosh, and Count Noble, handled by Sanborn, were at once set off. Great interest was felt by all in the result of this heat, as Biz is considered one of the crack dogs of Pennsylvania, and the Count is well known as a good one. In fact, many who had seen his work confidently expected him to come to the front. Both dogs went at a good rate of speed, but Biz was the fastest. He was in the lead, and when he was flushed he led. Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time, which Sanborn valued very much. Count, who finally came and backed in good style. A large bevy was flushed, which was followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spitz was now taken in the open, where all could see the dogs, and compare their merits as they ranged. Biz kept on increasing his speed, and clearly led the legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east, Biz pointed, and then roared very carefully. Count took up the same scent a little to his left. Both roading on, Count finally established his point, and Biz was in the lead, and when he was flushed he led. Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time, which Sanborn valued very much. Count, who finally came and backed in good style. A large bevy was flushed, which was followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spitz was now taken in the open, where all could see the dogs, and compare their merits as they ranged. Biz kept on increasing his speed, and clearly led the legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east, Biz pointed, and then roared very carefully. Count took up the same scent a little to his left. Both roading on, Count finally established his point, and Biz was in the lead, and when he was flushed he led. Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time, which Sanborn valued very much. Count, who finally came and backed in good style. A large bevy was flushed, which was followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spitz was now taken in the open, where all could see the dogs, and compare their merits as they ranged. Biz kept on increasing his speed, and clearly led the legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east, Biz pointed, and then roared very carefully. Count took up the same scent a little to his left. Both roading on, Count finally established his point, and Biz was in the lead, and when he was flushed he led. Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time, which Sanborn valued very much. Count, who finally came and backed in good style. A large bevy was flushed, which was followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spitz was now taken in the open, where all could see the dogs, and compare their merits as they ranged. Biz kept on increasing his speed, and clearly led the legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east, Biz pointed, and then roared very carefully. Count took up the same scent a little to his left. Both roading on, Count finally established his point, and Biz was in the lead, and when he was flushed he led. Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time, which Sanborn valued very much. Count, who finally came and backed in good style. A large bevy was flushed, which was followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spitz was now taken in the open, where all could see the dogs, and compare their merits as they ranged. Biz kept on increasing his speed, and clearly led the legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east,

back, but swung for the scent and also pointed in good style. Tallman, to order, flushed the birds, and killed one. Both dogs remained steady. The hunter, to order, killed very nicely, and Grouse found first and made another grand point, while Don either backed or pointed, we could not tell which, but were inclined to believe the latter. Tallman, to order, killed very nicely, and Grouse retrieved nicely. This was most excellent work. Turning back through the sprouts both challenged, but moved on to some timber, when some birds flushed wild. Turning down wind Grouse did a very fine piece of work. He roaded a short distance, and made a high grand style, displaying good judgment. Tallman, moving up, flushed the bird. Swinging round to get the wind, and working back Don scored a good point, also down wind. The birds were flushed to order by the handler and missed. Grouse soon pointed again, but the bird flushed almost at the same time. He soon pointed again, but this time the bird flushed. The birds had evidently run, as he roaded on them. A little further on Don pointed, and Grouse moved up to him and also pointed. Some very fine roading was now done by both dogs, but to the left he got wind of a large bevy, and drew to a stumped point just over a ditch. Grouse meantime roading them out, but before he got up to them they had gone, and with them his chance of victory, as they were now ordered up and Don declared the birds were down altogether in two hours and five minutes. This was a grand beat, and was about to finish the performances of the dogs were watched with abiding interest.

PEEP 'O' DAY AND DASHING ROVER.

Peep 'O' Day, handled by Wallace, and Dashing Rover, handled by A. Winter, were put down in a cornfield in a valley at 3:30. Peep started off at a slashing rate, ranging well and moving very gracefully. Rover is actually a very good moving dog, but was clearly a little behind. He soon dropped a point some distance from a large bevy, and Rover brought up to back, refused and moved on ahead for several yards, and came to a beautiful point, which he soon broke and going on scored a bad flush. Winter shot and missed and Rover broke back, but stopped after a few jumps. Following the birds, Peep dropped on point, and Rover brought up to back, backed out and went away a few steps, where he stood still, but his tail was moving. Wallace winged a bird, but as it could fly a little, Peep was ordered to retrieve it. Rover was ordered to back down. Peep declared the winner at 3:55. Down twenty-five minutes.

MAXWELL AND TRIX.

Maxwell, handled by Short, had not run, as his competitor, Countess May, had been withdrawn, and he was cast off with Trix, who had a bye. She was handled by Winter. At the word Maxwell was off like a rocket straight away and soon lost to sight. He was located after a short time, and was ordered to back down. He ran over a knoll out of the sight of the judges, and flushed a bevy. He then settled down and went much better. On the hill-side he made a false point which Trix refused to back. Then a turn was made and we started toward home, but nothing was made and the dogs were ordered to back down. Reaching the hotel, Trix was withdrawn and Maxwell declared the winner of the heat.

This ended the first series of heats with the following result, as published last week.

FIRST SERIES—ALL-AGED STAKES.

- Bessie beat Gordon.
- Reckonridge beat Dash III.
- Maxwell beat Countess May (withdrawn.)
- Breckenridge beat Kinnikinnick.
- Maud W. beat Dashing Monarch.
- Lad beat Phindoe.
- Nellie beat Minerva.
- Nellie beat Belton III.
- Biz beat Count Noble.
- King Dash beat Rush.
- Peep beat Grouse.
- Peep 'O' Day beat Dashing Rover.
- Maxwell beat Trix (withdrawn.)

SECOND SERIES ALL-AGED STAKES.

BESS AND MAY LAVERACK.

Friday morning the same route was taken as on the first day, and Jess and May Laverack were cast off at 8:05 in the cotton field. Both went very well, but Jess appeared to be in the best form and made an excellent heat. The dogs were ordered to back down. On Dashing Rover on Tuesday we cannot but think that the result would have been different. Working through the cotton and cornfield, in search of the bevy previously found here, the dogs did not swing quite far enough to the north, and the birds were starting to fly. The dogs were ordered to back down. On the sprouts, and the rest flew east into the woods. Swinging round into the edge of the sprouts, both dogs pointed just as the birds flushed. May being a little ahead. Moving on May challenged, and Jess backed, then both dogs were ordered to back down. May established a point, which Jess backed nicely, and two birds were flushed, but not shot at. A little further on, May pointed false, and Jess backed. Working east, Jess made a beautiful point. May called up, went round her, and we thought, pointed instead of back. Moving on to the woods, May pointed, and Jess backed. Heading on May scored a false. Turning south, Jess made a grand point, while May was stopped to order, but moving on she scored another flush, two or three birds getting up all around her. Jess remained steady. They were now ordered up, and the heat awarded to Jess. Down thirty-five minutes.

BRECKENRIDGE AND MAUD W.

Breckenridge and Maud W. were at once put down in a field of cedar and cypress, and were ordered to back down. A beautiful point, Breck called up to back, passed by without coming her, but as he turned back, he caught sight of her, and backed nicely. Dr. Ware killed to order, and Maud retrieved fairly. This was a very pretty performance. A little further and Breck dropped, and Maud backed very gracefully. Capt. Henry flushed the birds, but missed. Maud came to a point soon after, and Breck came up and half pointed, but both handlers moved close to the dogs, and Maud became a little uneasy and flushed four or five birds. We thought the handlers' business was to get the dogs away from the woods, and made a capital point on a fresh bevy. Breck came around behind, and dropped also on point. This was good work. Capt. Henry flushed to order and missed with both barrels. A little further on, Breck pointed a running bird, and Maud being long the trail he swung round and landed it nicely. Maud backed the first point, but went on to order, where Breck moved, and passed by the bird, which was flushed to order in front of Breck. Maud, now ranging at speed, dashed a bird that she should have pointed, and the judges, after comparing notes, awarded the heat to Breck. Down thirty-five minutes.

LITA AND LAD.

Lita and Lad were now cast off in the cedar and woods, and after a short spin, were sent into the corn, where Lad, glancing at speed, struck the scent of a large bevy and dropped, as if shot, on a point, which he held until Lita was brought up to back, which she did fairly. The birds were flushed to order, and one killed, which Lad retrieved very well. Following the birds, Lad challenged, and moved on, when Lita made a good point, which Lad backed. The bird was killed, and Lita sent to retrieve, but not finding it readily, Lad moved up and came to a point, just as a bird got up. Both dogs sent to back down, and moved toward the left, where three more birds were flushed. Lad backed, and a moment later Lad did the same. Lita now traded nicely a short distance, and dropped on the point. Lad backed, but nothing was found, and they were ordered up, and Lad awarded the heat. Down twenty-five minutes.

NELLIE AND BIZ.

Nellie and Biz were at once put down. Both ranged and quartered in grand style. Biz soon swung to the left, and made

a very handsome croning point, which he held some time for Nellie to come up, but as she did not come Mr. McIntosh flushed to order and killed, Biz dropping nicely to wing. The bird was only winged, and the heat was not retrieved. Then crossing the railroad, Nellie challenged and roaded up to a bevy that were feeding, and pointed in grand style. Biz went around her and the birds, but showed no sign. Nellie again pointed, while Biz roaded to her left and half pointed, but no bird was found before him while one was flushed to order by Nellie. Biz now pointed in a patch of plum trees, and Nellie to his left pointed at the end of the same patch. Sanborn flushed to order and killed, and the bird fell close to Biz who retrieved it nicely. Both then roaded running birds, one of which got up before Biz, while Nellie passed by a bird that was flushed behind her. She roaded grandly into the woods, and established a point, but the dry leaves were too much for Biz, who roaded too close and flushed two or three times, while Nellie remained staunch. He was at last brought up to her, but failed to back her, and the bird, which was flushed to order a few yards in front of her. The heat was then awarded to Nellie. Down forty-five minutes.

KING DASH AND DON.

King Dash and Don were put down at 10:40. Across the gully both challenged, but nothing came of it. After a long time, Don again challenged in some edge and roaded a short distance, when the birds were flushed and caught it again in grand style, but the ground was bare, and no point was made. The birds were flushed, but he had fairly located them. This was a good piece of work, as he stuck to them and found very well indeed. Dash crossed the trail in front of him two or three times, but paid no attention to it. Following on King Dash pointed, but the bird flushed before he could get up. Don soon got another good point, which Dash backed nicely. Mr. Vandervoort flushed to order and missed. Swinging round by the railroad and up a swale, both challenged, and Don roaded in the style up to a bevy and was backed by Dash. The birds were flushed to order, and short killed. This was good work, as the birds were down wind, and Don showed excellent judgment in handling them. Going on, Don scored a flush, but soon came to a point, and Dash dropped very nicely to back. The bird was flushed to order, and short killed. Don sent to retrieve, failed to find it readily as it had run, and when it started on, he ran into the bird, and retrieved it unharmed. Across the gully, Dash made a splendid point at the edge of some brush, and Don backed him, but as short moved up, Dash upset his chances by making a wild point. They were now ordered up, and the heat awarded to Don. Dash a little more than an hour. We now went to lurch which was waiting us at the cotton gin.

PEEP 'O' DAY AND MAXWELL.

At 1:05 Peep 'O' Day and Maxwell were put down at the head of the gully to the east. When near the fence, Peep pointed false. The spectators flushed a bevy on top of the hill, which flew into the woods. Peep then moved toward them, and pointed on a tree-top. The birds were flushed to order, and short killed. On the right side, and made a beautiful point, and Max backed in good style. Wallace flushed to order and missed, both dogs remaining steady. Then over the hills and through the fields, Peep showed the best place and made the best style, across the railroad, Peep drew to a nice point on a large bevy. Biz was flushed, and then went in ahead. He was a little uneasy, but finally pointed. The birds were flushed to order, and one was killed. Following on, Max made a good point at a tree-top, when a bird flushed wild, but he remained staunch until the bird was flushed to order. This was a very good. Peep flushed a bird soon after at the same place, and a bird was thrown up and shot at for Peep to retrieve, which she did well. They were then ordered up, and the heat awarded to Peep 'O' Day. Down nearly an hour.

SUMMARY SECOND SERIES OF HEATS.

- Bessie beat May Laverack.
- Breckenridge beat Maud W.
- Lad beat Lita.
- Nellie beat Biz.
- Don beat King Dash.
- Peep 'O' Day beat Maxwell.

THIRD SERIES.

BRECKENRIDGE AND HISS.

This ended the second series, and Breckenridge and Hiss were put down at 2 o'clock. The dogs were ordered to back down. Some weeds. Running along the fence, Hiss flushed a bevy, and the dogs flushed a bevy. Hiss dropped to wing nicely, and Breck was fairly steady. Swinging round to get the wind, Hiss challenged at a tree-top, while Breck tumbled off a log on a stannish point, the scent being a very pretty one. Capt. Henry flushed to order and killed very neatly, and Breck retrieved well. Then across the railroad Breck dropped on a point, which Hiss backed. Roading a short distance, he dropped again. The bird then got up, moving back into the woods both pointed false, and then out into the open, where a large bevy was flushed. Both dogs pointed to the bird, which was sent to run ahead. Hiss, ordered on, scored a flush, and both dogs dropped to wing. They were then taken up, and Breckenridge awarded the heat. Down an hour and a half.

LAD AND NELLIE.

Lad and Nellie were at once put down and worked across the open field. Lad pointed at a bunch of brush, where Nellie took a snuff and went on, and Lad, discovering his error, backed also. Nellie quartered very wide across the wind to the left, and pointed a nice bevy, which she held until we came up, when Sanborn flushed the birds to order. Meantime Lad found and pointed the birds, and was backed by Hiss. Bew, who killed one, when Lad broke shot, but at once dropped to back. Lad called up to back, but did not see her, and crossed in front and dropped on point as if shot. Bew flushed to order, and made a very neat double. Nellie being long a short bird was flushed, but did not find the other. Going on in the thick brush, Nellie flushed a single bird, then swinging back the judges compared notes and awarded Nellie the heat. Down one hour.

PEEP 'O' DAY AND DON.

Peep 'O' Day and Don were put down at 3:30. Working through the woods into a large field of weeds, Don challenged and roaded to a point, which Peep backed. The birds were flushed, and he could not see which pointed first, but thought that Peep had the best of it. The birds were flushed to order by Wallace, who killed, and Peep retrieved nicely. Moving on south, both challenged, and being called toward a bevy that flushed wild. He appeared to be all right, but he was not. Peep dropped to back, and Don on which he should have backed. Then Peep flushed one in the briars. Don now made a blunder by reading a trail the wrong way in a cornfield. The judges flushed the bevy behind him, and Peep pointed in the briars, and held her birds for Don to be called up to back, which he did very well. A few yards further on Peep flushed. Don then scored a false point, which Peep backed. He then pointed a hare, and Peep again backed. They were now ordered up, and the heat awarded to Peep 'O' Day. Down one hour.

SUMMARY THIRD SERIES OF HEATS.

- Breckenridge beat Bessie.
- Nellie beat Lad.
- Peep 'O' Day beat Don.

FOURTH SERIES.

This concluded the third series, and Nellie and Breckenridge were cast off at 4:30 for the first heat of the fourth series. Biz at once scored a false point, and Nellie, a few minutes later, did the same thing, and Breck backed. Nellie then swung round, and flushed a single bird, which he flushed very well. A moment later, Nellie and her birds, which were now flushed to order, and Capt. Henry killed one, which Nellie retrieved. She then made a grand point, which Breck backed, and the bird—a cripple—was caught. Breck then flushed a single bird in the swale, and Nellie was

awarded the heat at 5 o'clock. Down half an hour. This left Nellie and Peep 'O' Day the only ones in to compete for the first prize.

NELLIE AND PEEP 'O' DAY.

Saturday morning they were put down at 8 o'clock in a field of weeds east of the old farm, where the challenge was made. Both were evidently been feeding, but the recent work was good enough to work out. A little further east they again struck what we thought the trail of the same bevy. Nellie, a little ahead, roaded on, and Peep swung around her and dropped it, Nellie freezing stiff at the same time. Both then roaded to a grand style, and if they had been alone would undoubtedly have located the birds, but the handlers crowded ahead, and a flush was the result. Swinging to the left Nellie was lost, but soon found, flat on her belly. Peep came up and backed nicely, and three or four birds were, to order, flushed, but they were not in grand style, and if they had been alone, a hollow Nellie ran up a single bird. Nothing more was found here, and the dogs were worked east through a large field of weeds and sedge, which was drawn blank. Then turning north both dogs challenged, and Nellie turning to the while, ran into a large bevy and ordered them. This was a little to the right, and partly behind the judges, who had the sun in their eyes, and as larks had been getting up all around, they did not notice that these were quail. We had only a glimpse of them, and also saw a few birds, but just then we obtained a view of Sanborn's face, and all was as plain as day, and we at once scored her a flush, and the judges as plain as a lark. Following these to the east, across a gully, Nellie went up the bank and a single bird flushed in front of her. She at once stopped and remained steady, Peep came up and backed her, and two more birds were, to order, behind her. She undoubtedly thought that more birds were close by when the first one got up, and showed good judgment by remaining quiet. Down the gully Nellie challenged at what proved to be the trail of a large bevy. While roading them out one bird jumped and flew a few feet, and soon after a straggler flushed and flew back over the crowd, but she stuck to them, and finally established a grand point, which Peep backed nicely. Sanborn flushed the bevy, to order, which settled in some weeds and sedge beside a gully. Peep here made a bad flush, putting up several birds, and a few steps further a single bird got up before her and flew a short distance across the gully. She did not chase, but followed the bird, and as she went up the bank the bird again flushed. Working on up the gully, Peep made a magnificent point, which he refused to back, and as he stood there, the birds were flushed, to order, and both dogs were steady to wing. They were now ordered up and the heat awarded to Peep 'O' Day, who was declared the winner of the first prize, at 9:10. Down one hour and half. The handler, who had ledged in the early part of the heat by agreeing to divide the stakes, no matter which won.

DON AND MAXWELL.

Dashing Rover having been withdrawn, Don and Maxwell were the only ones remaining who had been beaten by Peep, and they were at once cast off to decide which one should compete with Peep for the second prize. The circle was made, and the dogs were ordered to back down. The birds were flushed, to order, and both dogs were steady to wing. They were now ordered up and the heat awarded to Peep 'O' Day, who was declared the winner of the first prize, at 9:10. Down one hour and half. The handler, who had ledged in the early part of the heat by agreeing to divide the stakes, no matter which won.

NELLIE AND MAXWELL.

Nellie and Maxwell were put down at 12:15 to compete for second prize, but after running ten minutes Maxwell was withdrawn and Nellie given the heat and declared winner of the second prize. We now went to lunch, and Lad and Breckenridge, who were the last two dogs beaten by Nellie, divided the third prize.

SUMMARY FOURTH SERIES OF HEATS.

- Nellie beat Breckenridge.
- Peep 'O' Day beat Nellie.
- Peep 'O' Day wins first, Nellie second, and Breckenridge and Lad divide third.

BRACE STAKES.

NELLIE AND COUNT NOBLE.

This ended the All-Aged stakes, and immediately after lunch the Brace stakes were commenced by Sanborn's Nellie and Count Noble, who were cast off at just past one. The dogs were ordered to back down. The brace was to run a short time, in order that Mr. Burghumthal, who was obliged to leave on the train, might mark on the range, quartering, style and speed of each brace which could be put down. It was necessary for the judges to see the three score on birds. Count and Nellie were worked through the woods, which was a considerable work was done. Both were nearly perfect in quartering, turning to the whistle and obeying signal of hand very well. Both showed fair speed. Across the road, Nellie flushed a single bird, and a single point, which Count backed. Count dropped to back when near her, but she moved on and flushed the birds. The bevy, which she should have pointed, as she had the wind. Then on over a rise both disappeared, and when we came up were pointing, but nothing was found. Nellie now points once or twice and Count backed, but they moved on each time. Count made one or two jumps for a lark, but stopped to order. Count then made a capital point, which Nellie backed. The bird was flushed to order, but the gun missed fire. Count was not quite steady, but dropped the bird, and soon made another point, but nothing was found, though when the dog was ordered to back, Count had pointed a single bird and flushed, and they were ordered up.

GROUSE DALE AND DASHING MONARCH.

Grouse Dale and Dashing Monarch were at once put down. Working through the weeds to the open field, the dogs were flushed, and ranged and quartered fairly. Then a swale of bushes challenged and Monarch backed in grand style, and on a little further Grouse made a magnificent point, which Monarch backed to fly. The handlers moved on, and Monarch backed to fly. Here the handlers and judges were well away. A moment later, the trail, which, we have no doubt, they would have tracked out, as the spectators, coming up, flushed a large bevy close by, which flew into the woods ahead, where Grouse soon found them and made a grand point, which Monarch backed to fly. The birds were flushed to order by Tallman and missed. The bird then flushed a bird down wind and dropped to wing. Ordered on, another got up close by. Monarch pointed close to the fence, and Grouse backed him fairly. Tallman flushed to order and killed. They were then taken up, and the heat awarded to Grouse Dale. Both dogs were ordered to back down, and worked through to the large field to the north. Both dropped that almost as soon as they were started, but nothing was found. Out in the open both showed up very speedy, ranging very wide and quartering well. Nothing was found for some time, but they were going down the trail, and the dogs were ordered up. Following the birds into the woods nothing could be done with them, as they got up wild. Turning back, Belton pointed a nice bevy in a bushy corner and King backed. Short flushed to order and killed. They were then taken up, and the heat awarded to Grouse Dale and Dashing Monarch third. This ended the N. A. K. C. F. T. of 1891.

The following is a complete list of the winners in the National Trials:

SUMMARY BERRY WINNERS.

- 1st, Dashing Novice.
2d, Bees.
3d, Shulow. } Divided.
4th, Glida.

The 4th prize was a very handsome silver cup presented by Mr. Geo. H. Wild, of Red Bank, N. J., as a Consolation Cup.

SUMMARY ALL-AGED STATE WINNERS.

- 1st, Peep o' Day.
2d, Nellie.
3d, Breckinridge.
4th, Lad. } Divided.

RIVAGE STAKE.

- 1st, King Dash and Belton III.
2d, Count Noble and Nellie.
3d, Dashing Monarch and Grouse Dale.

PENNSYLVANIA STATE ASSOCIATION FIELD TRIALS.

GRAND JUNCTION, TENN.

WEDNESDAY, STAKE.

The Pennsylvania State Association Field Trials commenced on Monday, Dec. 12, at Grand Junction, Tenn., on the grounds where the National Trials had been so successfully run the week before. The Members' Stake was the first event on the card and closed with seven entries, of which six put in appearance to contest for the valuable prizes offered by the Association:

Capt. A. E. Woodson, Mr. Jas. H. Dow and Mr. Wm. Tallman acted as judges.

May Laverack (Thunder-Spot), lemon Belton setter bitch, whelped May 11, 1879. Owned by Mr. J. J. Snellenburg, New Brighton, Pa.

Pet Laverack (Thunder-Pepper), blue Belton setter bitch, whelped April 2, 1880. Same owner.

King Dash, (Belton-Stayton's) liver and white setter dog, whelped June 5, 1878. Owned by Mr. J. R. Hendricks, Pittsburg, Pa.

Belton III, (Belton-Stayton's) Floss, black, white and tan setter dog, whelped June 5, 1878. Owned by Mr. J. R. Stayton, Pittsburg, Pa.

Ship (Dog Whip-Daisy Dane), black, white and tan setter dog. Owned by Mr. J. R. Hendricks, Pittsburg, Pa.

They were drawn to the order: May Laverack and Ship, Pet Laverack and Belton III., King Dash and Biz.

MAY LAVERACK AND SHIP

were put down for the first heat at 9:15. May is a sweet moving little bitch and catches her points in a very taking way. She swung ahead in the sprints and got the first point, which Ship lacked, but was a little uneasy. Both dropped to order. A little further on Ship made a false point, which May lacked rather indifferently. Ship was then withdrawn and May declared the winner of the heat after being down only fifteen minutes.

PET LAVERACK AND BELTON III.

were then cast off. Pet very soon dropped on a point and was handsomely backed by Belton, but nothing was found and Pet scored a false point. It was half hour before anything else was done, when Belton pointed a very and pointed them in good style. Pet dropping flat to back as soon as she saw him. The birds were flushed to order, and one was killed by Mr. Snellenburg, while Mr. Stayton missed. Pet retrieved the bird fairly. Belton was soon pointing again, but Pet was not satisfied when Belton broke and rushed to order and killed neatly with his second barrel. This was very pretty although Belton was not quite steady to wing, but at once became quiet to order. When ordered to retrieve he failed to find and flushed a bird while searching for it; and when the handlers, moving on, just up a bark and killed it, Belton retrieved it, but not in first-class style. They were then ordered up and the heat awarded to Belton. Down one hour and a half.

BIZ AND KING DASH

were now put down; and Dash after a few jumps dropped on point, but nothing was found and he scored false point. Moving on he again pointed and Biz joined him, when both moved on. Biz swung around to get up a bark and pointed a beautiful point on a bevy just as a single bird started. Dash was close by and both remained steady while the birds flushed a little wild. Going on, Biz challenged on trail of a single bird but got it the wrong way, and roared to the end; but he was satisfied when Belton broke and ran into the bird and scored a flush. They were then taken up for lunch, and again put down; but the scent was very poor, as the dry wind was very unfavorable, especially in the middle of the day, and it was a long time between birds. Dash was the first to find, and Dash was not far from the bird, which he retrieved. Intoxicated one of them but missed him as neatly as any of the professionals could have done. Biz now scored a good point, which Dash backed in grand style. Mr. McIntosh flushed it to order and graded it in capital form. The dogs were then ordered up and the heat awarded to Biz. Down three and one-half hours. This ended the first series of heats.

FIRST SERIES OF HEATS.

MAY LAVERACK BEST SHIP.

BELTON III, BEST PET LAVERACK.

SHIP BEST KING DASH.

MAY LAVERACK AND BELTON III.

were put down at 3:45 to run the first heat of the second series. Belton at once flushed a single bird. He then dropped to point on a bevy, and May backed him. The bird was flushed to order and shot at when Belton broke shot. May then scored a flush and Belton again made a magnificent point, which May lacked to order. Mr. Stayton flushed the bird to order and missed; he soon put up another, which when Belton again broke shot and retrieved it. Belton, a little further on, made another flush. May now pointed nicely and dropped to shot, and Belton remained steady. They were then ordered up and the heat awarded to May Laverack. Down one hour. Mr. Stayton then withdrew Dash, as he had never handled him before and could not control him. Mr. Snellenburg and Mr. McIntosh then divided first, and second was awarded to King Dash. This was perhaps the best way, as it was nearly dark, and if run out in the morning it would prolong the meeting beyond the time that the judges could devote to it.

ALL-AGED STAKES.

ENTRIES IN ALL-AGED STAKES.

Bob, red setter dog, 3 years old (Champion Bob-Gregg's) Nellie, entered by Edward Gregg, Pittsburg, Pa.

May Laverack, Thunder-Spot, entered by Mr. J. J. Snellenburg, New Brighton, Pa.

Ship o' Day, Gladiator, entered by Mr. Jas. J. Snellenburg, New Brighton, Pa.

Count Noble, Count Winden-Norah, entered by Mr. D. C. Sanborn.

King Dash, Belton-Floss, entered by Mr. J. R. Hendricks.

May Laverack, lemon Belton setter bitch, whelped April 2, 1880, Thunder-Pepper, entered by Mr. David McK. Lloyd.

Belton III, Belton-Floss, entered by Mr. I. R. Stayton.

Biz, Dash-Florence, entered by Mr. McIntosh.

Dog, Bang-Peg, entered by Mr. R. T. Vandepoort.

Peep o' Day, Gladiator, entered by Mr. D. Bryson.

Maxwell, Luke-Rena, entered by Mr. L. L. Martin.

Gordon, Rupert-Whip, entered by Mr. C. B. McGinnis.

Kinnickmeek, Reed's Druid-Besse Lee, entered by Mr. Knowles.

Dashing Monarch, Jewellville's Dash II-Countess Moll, entered by Mr. J. C. Higgins.

Grouse Dale, Waters' Grouse-Daisy Dale, entered by Mr. Tallman.

Dash, light red setter, 4 years (unknown), entered by Mr. S. S. Brown, Pittsburg, Pa.

Warwick, orange and white setter dog, 3 years old (Leicester-Petre), entered by Messrs. Tallman and Martin.

Ollie, black, white and tan setter bitch, 5 years (Dan-Petre), entered by Messrs. Tallman and Martin.

TUESDAY.

Tuesday morning the All-Aged stakes were commenced at 8:15 by casting off.

DASHING MONARCH AND GORDON

just east of the old fort, near the pines. Monarch was handled by Martin and Gordon by Titus. Both dogs appeared to be feeling well, Monarch especially, showing by his more animated movements that he was feeling better and that he was more himself than he had previously shown either here or at Robbins' Island. Gordon was also going well, and was the first to find. Swinging into the thick scrub oaks he dropped on a capital point to a bevy. Monarch at once backed him in his own grand style. The birds flushed wild and were at once followed. One was seen to flush wild, and Monarch pointed where he rather a trying situation, and located a half dozen birds, which he pointed magnificently and Gordon backed him very gracefully. Martin flushed the birds to order but did not shoot. Swinging into the pines, Monarch again pointed, but did not shoot. Titus then put up a single bird and Gordon dropped to wing, though he had been shot. Working down into a ravine, Gordon dropped suddenly on point to a single bird and remained steady a few moments, although the bird ran away down wind between the corn rows in plain sight of him. Titus then put up a single bird and speaks well for his training, as just then Monarch swung round below him and, catching the scent, made one of his magnificent points, which Gordon honored by partly rising and backing him handsomely. This grand work, but a little too easily, for a setter. He had very gamy look and carries himself in a jaunty way that is very taking. Short strained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a bevy at nearly the same instant. The birds were flushed to order. Martin killed one, while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steadied by Short, when he again pointed and Ollie backed him. Nothing was found, however, and he scored a false point. Soon after, Ollie ordered to retrieve, and he was steady. Ollie pointed a bevy, which was down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down one hour and forty minutes.

OLLIE AND DASH.

Ollie, a litter sister to the celebrated Gladstone, handled by Martin, and Mr. Brown's Dash, handled by Short, were at once cast off close to the pines and worked east. Ollie is said to be a capital field dog, and a very gamy look, but a little too easily, for a setter. He had very gamy look and carries himself in a jaunty way that is very taking. Short strained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a bevy at nearly the same instant. The birds were flushed to order. Martin killed one, while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steadied by Short, when he again pointed and Ollie backed him. Nothing was found, however, and he scored a false point. Soon after, Ollie ordered to retrieve, and he was steady. Ollie pointed a bevy, which was down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down one hour and forty minutes.

COUNT NOBLE AND MAXWELL.

Count Noble, handled by D. C. Sanborn, and Maxwell, handled by Short, were then put down and the scattered bevy, and between the dogs, handlers, judges and reporters, the birds were put up all around. At each rise the dogs would drop to wing, but they failed to locate any of the birds, for which they could not be blamed. This was a very gamy look, but a little too easily, for a setter. He had very gamy look and carries himself in a jaunty way that is very taking. Short strained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a bevy at nearly the same instant. The birds were flushed to order. Martin killed one, while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steadied by Short, when he again pointed and Ollie backed him. Nothing was found, however, and he scored a false point. Soon after, Ollie ordered to retrieve, and he was steady. Ollie pointed a bevy, which was down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down one hour and forty minutes.

NED AND GROUSE DALE.

At 2:10 Ned, handled by Morgan, and Grouse Dale, handled by Tallman, were turned loose and worked west. Ned showed good speed and ranged very well, but was quite uneasy and did not make for it in the best manner. He was the first to find but he waited for the bevy and scored a flush. Both handlers shot and a bird was killed, which Ned retrieved fairly. Working on Grouse Dale scored a false point, which was not backed. It was a very gamy look, but a little too easily, for a setter. He had very gamy look and carries himself in a jaunty way that is very taking. Short strained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a bevy at nearly the same instant. The birds were flushed to order. Martin killed one, while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steadied by Short, when he again pointed and Ollie backed him. Nothing was found, however, and he scored a false point. Soon after, Ollie ordered to retrieve, and he was steady. Ollie pointed a bevy, which was down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down two hours. A move was then made for lunch.

NELLIE AND BELTON III.

Nellie, handled by Sanborn, and Belton III, handled by Short, were at once cast off in the woods. Belton challenged, but soon moved on. Working through into a cotton field, Nellie dropped very easily to a single bird, and Belton dropped to order. Sanborn worked on a bevy, which he pointed magnificently, as also did the bird. Nellie again pointed, and Belton, refusing to back, drew ahead of her. She then roared on and scored a flush. Sanborn again scored a miss and the bird dropped close to their heels. They were then ordered up and the heat awarded to Nellie at 4:40. Down twenty-five minutes.

WARWICK AND MACK LAVERACK.

Warwick, handled by Martin, and Mack Laverack handled by Short, were at once put down. Warwick was quite uneasy and did not make for it in the best manner. He was the first to find but he waited for the bevy and scored a flush. Both handlers shot and a bird was killed, which Ned retrieved fairly. Working on Grouse Dale scored a false point, which was not backed. It was a very gamy look, but a little too easily, for a setter. He had very gamy look and carries himself in a jaunty way that is very taking. Short strained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a bevy at nearly the same instant. The birds were flushed to order. Martin killed one, while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steadied by Short, when he again pointed and Ollie backed him. Nothing was found, however, and he scored a false point. Soon after, Ollie ordered to retrieve, and he was steady. Ollie pointed a bevy, which was down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down two hours. A move was then made for lunch.

FIRST SERIES ALL-AGED STAKES.

DASHING MONARCH BEST GORDON.

OLLIE BEST DASH.

COUNT NOBLE BEST MAXWELL.

GROUSE DALE BEST NED.

NELLIE BEST BELTON III.

WARWICK BEST MACK LAVERACK.

RING DASH A BYE.

KING DASH AND DASHING MONARCH.

King Dash who had a bye, handled by Short, and Dashing Monarch were put down at 4:45 to run the first heat of the second series. Both started off in grand style, Dash getting over the ground at good speed, while Monarch ranged very wide with his head well up, more than that he had shown him this season. Except a slight challenge by King nothing was done; and they were taken up at five o'clock to go down again in the morning.

WEDNESDAY.

Wednesday morning was cold, damp and cheerless, with every indication of rain. In fact the dense mist was quite as wet as rain would have been, but a start was made, and at 9:30 Dashing Monarch and King Dash were again drawn to the ground to complete their unfinished heat. Monarch was still "a coming" and let himself out with that abandon which so captivated all who saw him at Robbins' Island last year. Dash also went well and some fine ranging and quartering was done in the open fields. Working on through some woods, Monarch swung round and straightened out on one of his magnificent points. Dash passing between him and the birds, caught the scent and dropped on a beautiful point, flushing the birds to order, but both handlers graced the affair the pleasure of the bird hunters. Monarch swung round. Working on over the hill and through some woods a single bird flushed a little wild just ahead of Monarch, which at once crunched and then pointed another, while Dash backed him in good style. Martin put up the bird to order and scored a kill. Both dogs dropped to shot, and Monarch retrieved beautifully. Then the point, but Dash drew a trifle too close and got a flush. Swinging to the north, Monarch forged ahead into a swale and made a grand point to a large bevy which was flushed to order, and shot at. The dogs were then ordered up, and the heat awarded to King Dash at 10:30. Down one hour, altogether one hour and fifteen minutes.

This heat from start to finish was about as near perfection as possible, and both dogs covered themselves with glory, and achieved honors worth striving for.

COUNT NOBLE AND OLLIE

were now ordered down and cast off at 10:50. They worked over the hill, where some birds had been marked down. Count found first and dropped to a single bird, Ollie backing him very gracefully. Sanborn flushed to order and missed. Count straightened up and instantly dropped on another point. When this bird got up he made a jump or two, but at each drop to order. Working on to a swale Count, while going at speed, carefully flushed a bird, and soon after scored a false point, which Ollie backed. Swinging to the east some fine ranging was done by both dogs, Count showing the most speed and ranging the side of the hill, where some woods. Mr. Dew saw a hawk alight on a tree and requested Martin to shoot it. At the report of the gun a bevy of birds were heard to fly. Upon looking in their direction both dogs were seen pointing. Soon after they were taken up and the heat awarded to Count Noble at 11:30. Down one hour.

GROUSE DALE AND NELLIE

were at once cast off in the same woods. Nellie led off by flushing a single bird, and shortly after Grouse Dale, swinging into a swale, followed suit, working up the swale and crossing the railroad into a cotton-field, Nellie pointed and Grouse, twenty yards away, backed her in grand style. Nellie drew on and a couple of larks put up a bevy, which she pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed, and Tallman wiped his eye very neatly. The bird was retrieved by Nellie in good style. Grouse then pointed and Nellie backed him. Tallman, to order, flushed a bevy, which he pointed magnificently, as she moved on and flushed the bevy, which Tallman shot at but missed. Then turning toward lunch, they were taken up at 12:15 and an hour devoted to the lunch, when they were again put down and worked toward the birds that Nellie had flushed. Swinging into a cotton field, Grouse Dale pointed a bevy, which Grouse Dale grandly. Sanborn flushed to order and missed,

of second place were equally divided between Grouse Dale and Warwick, Martin and Tallman taking the Parker. The third was awarded by King Dash and Belton. This division was, perhaps, as equitable as could have been made, but we would have preferred to have seen the dogs in the field, shooting day and night, and undoubtedly we should have seen some excellent work; but the handlers had got tired and wanted to see the end of it and go home.

THE DERBY.

ENTRIES IN THE DERBY.

Pet Laverack, 1st, Dashing Novice, Mack Laverack, Bessie T., London, Hector (formerly Tom Paine), Gertrude, Kinkinnick. The pedigrees and owners of these have already been given. Christmas Bill, lemon and white pointer dog, whelped June 9, 1880 (Lack of Edenhall-Ready Money), entered by Mr. R. T. Vandervort, Pittsburgh, Pa. Ned, Red Setter, whelped April 14, 1880 (Con-Nan), entered by Mr. R. H. Bailey, Canton, Ohio. Notimah, Gordon setter dog, 11 months' old, Malcolm-Dream III., entered by H. Cossack, Baltimore, Md. Foreman, black and white setter, whelped July 26, 1880 (Dashing Monarch-Fay III.), entered by Mr. H. B. Harrison, Tiltonburg, Ont. Lug, black, white and tan setter, whelped May, 1880 (Shaffo—) Jora Laverack, black and white setter, Young Laverack-Petrel II., entered by Mr. J. H. Honrick, Pittsburgh, Pa. By mutual agreement of the handlers, the rules were waived and the judges—Capt. E. A. Woodson and Mr. Jas. H. Dew—were requested to select the winners after seeing the dogs down long enough to see their merits. Starting from the hole at 9 o'clock, the dogs were put down at 9 o'clock, but Laverack having been withdrawn.

GERTRUDE AND LUG.

Gertrude, handled by Sanborn, and Lug, handled by the first brace to run. They were cast off in a patch of scrub and worked through there and the pines, and a field of weeds east to the hole to decide upon their merits. Starting from the hole at 9 o'clock, and roared a little way, and then swung south. Gertrude then made a point, but soon moved, and was steered by Sanborn, who saw the birds in front of her. She then held her point in fine style, while Lug backed rather indifferently. A large bevy was flushed to order, and both hunters advanced when the shot was fired, neither of which was found, although a long time was expended in looking for them. Then the bevy was followed. Lug pointed a hare, and a little further on Gertrude ran into a portion of the bevy and flushed them, although she was the winner and close. Lug was not much to blame, as she was a little behind. Swinging into the sprouts Lug pointed, but Gertrude moved up a little too close and put up the bird, and soon after flushed another one. They were then taken up at 9:50. Later in the day a bird was taken in the air, and a gun fired for them to show their quality as retrievers. Both acquitted themselves very well.

FOREMAN AND MACK LAVERACK.

Foreman, handled by Stafford, and Mack Laverack, handled by Short, were then put down. Both are very stylish, good moving dogs, and are possessed of a fine turn of speed, and will, undoubtedly, be successful in the field. Working through a large field of weeds, Foreman started a hare, which at once gave chase to Mack, who was ahead and going at speed, but the hare had the legs of him and soon passed him. Both dogs were perfectly steady through this very trying order. A little further on both dogs challenged where birds had been feeding. Mack swung the rig t way, and catching the scent instantly stopped on a grand point with his head high in the air. Foreman, brought round to back caught sight of him and crouched, but at that instant he winded the bird, and side turning his head in their direction, he pointed in capital form. This was splendid and the beautiful attitudes of the dogs were greatly admired. Flushing the birds to order, Stafford scored a killed and Short a miss. Foreman retrieving the bird fairly. Moving on, Short made one thick flush, one of which he killed, but it fell a long distance away and was not found. Working through some thick woods, Foreman put up a bevy which flew into a gully where they were followed, but not much was done and the dogs were ordered up after being down an hour, and a bird thrown for Mack to retrieve, which he did.

NOTIMAH AND PET LAVERACK.

Notimah, handled by Titus, and Pet Laverack, handled by Short, were now put down among the scattered birds. Both moved very careful, and Pet challenged once or twice, and then dropped on a beautiful point. Short flushed to order and missed. Moving on very carefully, Pet again dropped almost on top of a bird, which was again flushed by Notimah, and the dog was again working the gully but without result. In going through a bare field Notimah put up a single bird, and soon after another one rose. Both dogs were steady to wing. A bird was then thrown for each dog, and both retrieved very well. They were then ordered up after being down forty minutes, and the next brace called.

KINKINNICK AND RED NED.

Kinkinnick, handled by Stafford, and Red Ned, handled by Morgan, were cast off at 11:30, and worked north. Both showed good speed, but Ned, we thought, a little the fastest. Kin showed challenged and roared a short distance, but the spectators flushed the birds which were rather shy. Ned refused to back and the bird was flushed to order, but not shot at. Ned again flushed and soon repeated the offense. Working down the ravine, Kin got a grand point on a nice bevy. Ned dropped to order, and the birds were then flushed to order and missed. Capt. Woodson deserves the credit for finding this bevy, as the dogs had been over the ground, but he insisted upon closer work and sent them in again, when the birds were found. A bird was now thrown, and both retrieved well. Kin very well indeed. They were now ordered up after being down thirty five minutes, and the last brace were put down at 12:15.

DASHING MONARCH AND XMAS BILL.

Dashing Novice, handled by Sanborn, and Mr. R. T. Vandervort's imported lemon and white pointer dog, Xmas Bill, eighteen months old, by Lack of Edenhall out of Ready Money, whelped by Morgan, and Ned scored a fine, while Kin showed a fine single bird in a ploughed field, and a little further on in the same field, the redeemed herself by nicely pointing another one on the bare ground; Bill backed her and Sanborn put up the bird to order and winged it. Some time later, when the birds were in the air, and the dogs were ordered up, when Novice swung round on a beautiful point, which Bill backed very nicely. Novice then moved on, and picking up the lost bird, retrieved it unharmed. We then went to lunch, after which they were again put down and worked through a large field into a cotton-field where both challenged, and Novice taking a cast along the fence, struck the scent and dropping to a sitting-posture, pointed a bevy that were in the next field, Bill backing her. Morgan flushed to order and killed a bird, which Bill retrieved fairly. They were now ordered up, and the judges decided that

DASHING NOVICE AND KINKINNICK.

were the best two, and ordered them down to run for first and second places. They were at once cast off and worked toward where a bird had been marked down, but they passed by it and it was put up by Mr. Dew; then turning east into some sprouts where a bird was, Kin a fine line and the bird was ordered up, and Novice, which was flushed to order but not shot at. Novice then pointed and Kin backed nicely. Sanborn put up the bird to order

but did not shoot. Bosting through the aprons, Kin pointed a single bird in the open just at the edge. When the judges rode up a bird got up out in the field, and Stafford, thinking that it was the bird that his dog was pointing, moved up and flushed a bird right under the dogs nose, when several others got up all around. This was an exhibition of first-class work, both animals showing off to great advantage. The judges decided that Dashing Novice was fairly entitled to the first prize and Kinkinnick to the second, and ordered Mack Laverack and Pet Laverack as the next best two to run for third place, but Short, who handled them both, divided the honors equally between them at 2:40 and 1, thus ended the Field Trials of 1881.

The following is a list of the winners in the Pennsylvania State Trials.

MEMBERS' STAKE.
1st, Diz and May Laverack divided.
2d, King Dash.
ALL-AGED STAKE.
1st, Count Noble, Dashing Monarch and Nellie divided.
2d, Grouse Dale and Warwick divided.
3d, King Dash and Belton III. divided.

DERBY.
1st, Dashing Novice.
2d, Kinkinnick.
3d, Mack Laverack and Pet Laverack divided.

ATLANTA DOG SHOW.

ATLANTA, Ga., Dec. 16, 1881.

ON reaching here it was most difficult to find accommodation, the "Kimball House" being full to overflowing, and cots in requisition every night. This, of course, was owing to the vast multitudes from all parts of the States visiting the Exposition, which, as the time draws near for closing, appears to attract more and more interest. The dog show was given up by the managers of the Exposition, but at the eleventh hour taken hold of by a few energetic gentlemen, lovers of field sports, who, with the aid of Mr. Lincoln, knew no such word as fail, and through downright energy and pluck they succeeded in drawing together, for their numbers, a most creditable collection. Mr. Berke, Capt. Heyward, Col. Howe and others were indefatigable in their exertions to make it a success, and Major Taylor being selected to occupy the position of Judge, with assistance from the immediate vicinity, gave the utmost consideration to exhibit that the best dog would win. Among prominent admirers we noticed Professor Legare, of Wall-halla, S. C.; Mr. Orgill, of your city; Mr. Vandervort, of Pittsburgh, Pa.; Mr. Vance, of Chattanooga, Tenn. (the last three gentlemen having been at the Grand Junction Field Trials); Judge Hopkins, of Thomsville, Ga.; the Messrs. Foster, of Madison, Ga.; Dr. Holmes, of Rome, Ga.; Mr. Willard, of Jonesborough, Ill., and many others.

Class 1—English Setter Dogs.—Brought out five entries, Mr. Taylor, of Richmond, Va., taking first, with his recent importation, Dashing Rover. This dog, under the care of Mr. Winter, was directly from the Grand Junction Field Trials, and was thus out of show form; still his good points brought him to the front. The second prize went to Ben, Jr., owned by Mr. Woodward, and he was closely pressed by Mr. Ven's Mountain Dew, etc.

Class 2—English Setter Bitches.—Brought the same number of entries into the ring, a very nice class, too. Mr. Legare's entry, Yea, a beautiful little bitch, of splendid black, white and tan markings, or it might be called mottled, and of high on to perfect form, took the judges' eye for first. She is of the Jewellin Strain. The second was awarded to Dr. T. B. Legare for his Vidua, who was also a beautiful animal, Kate Claxton and Duchess of Devonshire, each gaining a v h c, well merited the mention, as did also Opa, gaining a h c.

Classes 3, 4—English setter dog and bitch puppies contained but two entries in the former and none in the latter. Class 5—Irish Setter Dogs.—The only entry Captain, owned by Mr. J. C. Vance, was awarded first prize. Captain is a good specimen of the Irish setter.

Class 6—Irish Setter Bitches.—Three entries; all good. We thought at first that Tris, owned by Mr. Green, of Boston, would carry off the blue ribbon, and were surprised to see Major Taylor give her a v h c only, and award first to Gypsy Queen, belonging to Mr. Vance, of Chattanooga, and the second to Mr. Chapman's Pink. On close examination we could not indorse the judges' decision, finding Tris both long and weak in the neck.

Class 7—Irish Setter Dog Puppies.—Two entries, the prize being awarded to Mr. Vance's Comanche.

Class 8—Irish Setter Bitch Puppies.—Three entries, and prize awarded to a promising youngster belonging to Mr. Edmundson, of Washington, Ga., named Daisy.

Class 9—Gordon Setter Dogs.—Five entries, and all dogs of considerable merit. The first was awarded to Judge Hopkins, of Thomsville, Ga., for his Scott, a dog of unusual quality and power, having such a back and loin as we have not seen in many a day. As Judge Hopkins proposes to send Scott to the next N. Y. Show, he will be again heard from. The Messrs. Willard captured second prize with a young Grouse dog named Lang, and a v h c was given to the Gordon Kennel Club, of Locust Valley, N. Y., for Rake.

Class 10—Gordon Setter Bitches.—But two entries. The first prize was awarded Messrs. Willard Bros. for Toot, a nice specimen. Second money to Gordon Kennel Club for Mab II.

Classes 11, 12—For Gordon Setter Puppies.—No entries.

Class 13—Georgia Setters.—This class was for the best setter dog bred and owned in the State. Two entries. Prize awarded to Capt. Heyward for his Sport, a very strong, useful dog.

Class 14—Georgia Setter Bitches.—Three entries and prize awarded to Mr. C. Fairbanks' Sadie.

Class 15—Georgia Setter Puppies.—Prize was awarded to Lee, owned by Mr. Anne Dixon.

Class 16—Pointer Dogs over 55 lbs.—Five entries, and probably the best and most closely contested class of the show. The first premium was finally awarded to Prof. W. Legare's lemon and white Rab; the second to Mr. Vandervort's liver and white Don (who recently distinguished himself at the Grand Junction Trials); v h c to Mr. Orgill's lemon and white Riot; v h c to Mr. H. B. McComb's St. George, who was afterward called at catalogue price.

Class 17—Pointer Bitches over 55 lbs.—One entry. Belton, a beautiful lemon and white bitch, belonging to Prof. W. Legare, was awarded the premium.

h c to Mr. Fambro's, of Atlanta. Chance, and Judge H. W. Hopkins for Nip. Mr. Berke's Ralph was commended.

Class 18—Pointer Bitches under 50 lbs.—Four entries and all good ones. The first prize was awarded to Mr. Orgill's Rue; for second place it was a squeeze between Judge Hopkins' Peggy and Mr. Vandervort's Luck, the former, however, secured second honors, and Luck took v h c. Luck, which with heat in second money, is a very handsome little bitch.

Class 20—Point r Puppy Dogs.—This was a walkover for Mr. C. B. Hargrove's Sency.

Class 21—Pointer Puppy Bitches.—Prof. W. W. Legare's brace were the only ones to compete.

Class 22—Water Spaniels.—No entries.

Class 23—Field Spaniels (dogs or bitches).—The Hornells-ville Kennel Club had no competitor against Beedick, who took the premium.

Col. Frank E. Howe, of Boston, showed (not for competition) his beautiful large sized black spaniel Jet. Jet is a rare specimen, whose satin coat showed the best of care, and one cannot be surprised at the Colonel being so fond and proud of him.

Class 24, 25—Small Cockers and Puppies.—No entries. Class 26—Foxhounds.—Seven entries, and among them some grand dogs. The first prize was given to Mr. A. W. Foster's Jim Skinner, a splendid specimen, showing more points for speed than any hound we have seen. In conversation with Mr. Foster he remarked that he kept an impired "greyhound" to cross in with his hounds occasionally, as they would not give a pin for dogs that had not plenty of go in them. 2d prize was awarded to Forrester, owned by Mr. Smith, of Atlanta; h c to Lead, owned by Mr. Perkerson, and c to Hop, owned by Mr. Echols, of Rome, Ga.

Class 27—Foxhound Puppies.—No entries.

Class 28—Beagles, Dogs.—Two entries; both very fine; belonging to Judge Hopkins. First prize was awarded to Ned.

Class 29—Beagles, Bitches.—Crook, owned by Judge Hopkins, was the only entry and was well worthy of the first prize.

Class 30—Foxterriers, Dogs.—One entry. Prize awarded to Nipper, owned by Mr. W. Graham, of Rome.

Class 31—Foxterriers, Bitches.—No entries.

Class 32—Greyhounds.—Prize awarded to Mr. L. H. Foster's Jim, a fine dog and only entry.

Class 33—Scottish Deerhounds.—None.

Class 34—Collies, Dogs.—Five entries.

Class 35—Collies, Bitches.—Two entries. The first prize given to Turk, owned by W. R. Smith, of Atlanta, and it is seldom that a finer specimen of this noble breed is put on exhibition anywhere. Lady, owned by same party, scoring second.

SPECIAL PRIZES.—Professor Legar took the premium for the best setter in show with his beautiful Llewellyn Vic.

For the best pointer, it was divided between Rush and Rue, both owned by Edmund Orgill, who also took the special for the best brace of dogs in the show with Rush and Random.

SUMMARY.

The prizes were principally \$25 for the first and \$10 for the second, below are the awards:

- Class 1—English setter dogs.—First, Dashing Rover, T F Taylor; second, Ben, Jr., Butler Woodward, owner, Red Clay, Ga.; commended, Mountain Dew, J. Sam Val, Rome, Ga.
- Class 2—English setter bitches.—First, Yea, W. W. Legare, Wall-halla, S. C.; second, Vidua, T B Legare, owner, Camden, S. C.; commended, Opa, Butler Woodward; Kate Claxton, R I Hampton, owner; Rome, Ga.; Duchess of Devonshire, J. C. Vance, Madison, Ga.
- Class 3—Irish setter dogs.—First, Captain, J C Vance, Chattanooga, Ga.
- Class 4—Irish setter bitches.—First, Gypsy Queen, J C Vance, Chattanooga; second, Pink, John P Chapman, Tlix, J O Green, owner, Boston.
- Class 5—Irish setter dog puppies.—First, Comanche, J C Vance, Chattanooga.
- Class 6—Irish setter bitch pups.—First, Daisy, W L Edmundson, Washington, Ga.
- Class 7—Irish setter dogs.—First, Scott, H W Hopkins, Thomsville, Ga.; second, Mab, Gordon Kennel Club, Jonesboro, Ga.; Rake, Gordon Kennel Club, owners.
- Class 10—Gordon setter bitches.—First, Toot, Willard Bros., Jonesborough, N. C.; second, Tris, owned by Mr. Green, of Boston.
- Class 13—Georgia raised setters.—First, Sport, W I Heyward, Atlanta, Ga.
- Class 14—Georgia raised setter bitches.—First, Sadie, C F Fairbanks, Atlanta.
- Class 15—Georgia setter dogs.—First, Lee, Anne Dixon, Atlanta; second, Opa, J. Sam Val, Rome, Ga.; third, Rab, W W Legare, Wall-halla, S. C.; second, Dan, R T Vandervort, Pittsburgh; third, H. C. Orgill, New York; St. George, H B McComb, Memphis.
- Class 17—Pointer bitches over 55 pounds.—First, Beltona, W W Legare.
- Class 18—Pointer dogs over 55 pounds.—First, Rush, Edmund O Hopkins, second, H. W. Legare, third, Ben, Jr., Butler Woodward, Baltimore; Chance, I W Fambro, Atlanta; and Nip, H W Hopkins, Thomsville; Ralph, J Berke, owner, Atlanta.
- Class 19—Pointer bitches under 50 lbs.—First, Rue, Edmund O Hopkins, Thomsville; Luck, R T Vandervort, Pittsburgh; second, Peggy, H W Hopkins, Thomsville; second, Jim Skinner, A W Foster, owner, Atlanta.
- Class 20—Pointer dog pups.—First, Sency, C B Hargrove, Rome.
- Class 23—Field spaniels.—First, Benedict, Hornell spaniel Club, Hornellsville, N. Y.
- Class 26—Foxhounds.—First, Jim Skinner, A W Foster, Madison, Ga.; second, Forrester, David Smith, Atlanta; Lead, A M Perkerson, Atlanta; Hop, Walter Echols, Rome.
- Class 28—Beagle dogs.—First, Ned, H W Hopkins, Thomsville, Ga.
- Class 29—Beagle bitches.—First, Crook, H W Hopkins, Thomsville.
- Class 30—Foxhounds.—First, Jim, H H Foster, Madison, Ga.
- Class 34—Collies.—First, Robe, William Jones, Atlanta; second, Fritz, W C Sparks, Atlanta.
- Class 35—Massifs.—Turk and Lady, both owned by R W Smith, Atlanta.
- Class 37—Newfoundlands.—First C Edmund's dog.
- Class 47—Miscellaneous.—W C Sparks' bitch Lucy, and J M Elliott's Steerian bloodhound.

PENNSYLVANIA ASSOCIATION.—At the annual meeting of the Pennsylvania State Field Trial Association, held at the Stonevale House, Grand Junction, Tenn., Dec. 12, the following gentlemen of Pittsburg were met officers for the ensuing year: President, J. Palmer O'Neil, first Vice-president, Wm. A. McIntosh; second Vice-president, J. R. Honicks; Treasurer, D. McK. Lloyd; Secretary, I. R. Stayton. Executive committee: B. F. Wilson, Edward Gregg, R. T. Vandervort, Howard Hartley, J. W. Orth, W. C. Beringer.

PITTSBURG BENCH SHOW.—There will be a bench show at Pittsburg, Pa., commencing March 7, 1882. Chas. Lincoln will superintend, and liberal premiums will be given. We hope to be able to give all particulars next week.

KENNEL NOTES crowded out to next week.

HOLIDAY PRESENTS.—Skates, Finest Quality Cutlery, Fine Opera Glasses, Parlor Kites, Air Guns, Air Pistols, Sprayer's Outfurn, and other novelties, at low prices. Also, a large stock of the best makers, with latest improvements, at lowest prices.—Ad.

MISSIS. BOCHER Fils & Co., of 37 Beaver street, this city, are preparing some very choice champagne, and will be ready for the holidays. The firm's wines have earned a high reputation, and their brands are favorites.

Editor Forest and Strawn:
Now that the Commodore and Cook have assured us of their eternal devotion to the Rice Lake, they will not tell us whether they are still using the same name and if not, what it is. In what essential points the revised Rice Lake, with deck, sheer and keel of the Nautilus or Shadow, is superior to the latter. As the Rice Lake models are fitted with two very effective chine strips on a full cruising line, while the others carried the ridiculous lip so long in vogue of a mainmast of about 25 ft., with small driver and jib 30-40 feet in all, one-third of which was of little use, and were greatly handicapped, it is nothing wonderful in their outgrowing their smaller competitors.

NATHAN

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishcultivist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Kite and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family centre-table, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$3 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,

AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, BLUE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends, and at home in place of packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lake is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at Owner's Risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 166 pages sent free. Time Cards, Folders and further information, address
A. B. LEST, Gen'l Pass'r Agent,
Grand Rapids, Mich.

NOTICE TO SPORTSMEN.

SHOOTING IN CURRITUCK SOUND, NORTH CAROLINA.

A daily line of conveyances is established by Mr. M. H. Snowdon between Snowdon Station, Elizabeth City, and Norfolk Railroad and Currituck Court House on the Sound, leaving Snowdon on arrival of Norfolk train connecting with Baltimore steamers and returning in time to connect with Baltimore steamer for Baltimore. Time between New York and Currituck Court House, south-bound, twenty hours; north-bound, twenty-four hours.
M. R. KING,
Gen. Manager Elizabeth City & Norfolk R. R. Co.

Hotels and Resorts for Sportsmen.

GUNPOWDER!
DuPont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DuPont's Government Mills, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

DuPont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. cans.

DuPont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting;
will either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cans, and 6½ and 12½ lb. kegs.

DuPont's Choke Bore.—Specially adapted
for "Choke Bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 1 and No. 2.
No. 1 being the coarsest. Packed in 6½ lb. kegs and
1 lb. cans.

DuPont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. cans and 6½ lb. kegs.

DuPont's Rifle Fg.—"Sea Shooting."—
Ffg. and FFG. 1 lb. Fg. for long-range rifle shoot-
ing, the Ffg. and FFG. for general use, burning
strong and moist. Packed in 1 lb., 1 lb. and 5 lb.
cans, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG.
fine.

DuPont's Sporting, Mining, Snapping and Blast-
ing Powders of all sizes and descriptions. **Special
grades for Export.** Also Rifle, Cartridge, Musket,
Cannon, Mower, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard,
powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.
N. B.—Use none but DU PONT'S Fg. or FFG. for
long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. Send for Catalogue.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. cans and 5½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. cans and 5½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" Fg. In kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. cans. Burns slowly and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" Fg. is the standard Fg. powder of the country.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. No correspondence of any name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To clubs of three or more annual subscribers, \$3 each. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Mm. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, December 29.

THE CLOSE OF THE YEAR.

WITH the first day of January comes the close game season in most of the Northern and Western States. It need not mean, however, a cessation of sport by those whose circumstances will permit them to follow the birds to the South. Our game columns from time to time describe rare hunting grounds beneath the Southern sky. The American hunting territory is so wide and varied that a sportsman may, and without shooting the nesting birds, follow the pleasures of the field all the year through.

The shooting during 1881 has not been of the best. Several causes transpired to lessen the game supply; the unusual severity of the winter of 1880-81 decimated the birds in several States; other localities were affected by the summer's drought; and the extraordinary open weather of the present season has precluded fine sport with the ducks. The year has witnessed a great pigeon shooting tournament, which in magnitude will probably never be equaled in the future. There has also been wrought a notable change of sentiment regarding the propriety of such wholesale pigeon slaughters by ostensible game-protective societies; and in this respect it may be said that in 1881 the cause of true manly sportsmanship has made a decided advance.

To the angler the past year has, in most parts of the country, been an average one. The Southern sea coast angler always has a good season, and a great variety of fishes to choose from. The Northern salt water fisher is more dependent upon the migration of his favorites, and some of them

were late in coming last spring. The bluefish did not appear until late, and it was feared that there would be none. In August they came more plentifully, and in September blue-fishing was good along the coast of New Jersey, Long Island and Massachusetts. Other salt water species were rare, and sheephead scarce. A few minor inventions in tackle have appeared, and the usual crop of new reels. In fresh water the season has not been good, but as in most places the fishing is gradually growing poorer, year by year, perhaps it was as good as could be expected. The Adirondacks are being skinned by the trout-hog, and the grayling are nearly numbered with the past. The progressive fishculturer has noted several discoveries, the most notable being the hatching of the Spanish mackerel; and fishculture has spread over new territory, and some fish commissions have been created in States which heretofore have not had such useful officers. In the States where fishculture is older, the ravages of the poacher have been partly compensated for by an increase of fish for this free American to kill out of season. But for the work of the fishculturer he would long ago have poached the last one. Altogether it has been a fair year for the angler.

In the matter of Natural History events the year has not been without interest. Ornithologists have to thank Mr. Robert Ridgeway for his new check list of North American birds, which is the most important contribution recently made to the subject. A number of additions have been made to the North American avifauna. The first volume of New Eng'land Bird Life has made its appearance. Among the papers published in these columns Mr. Hapgood's essay on the Migration and Range of the Limicolar is especially noteworthy, as being a suggestive discussion of the intricate problem. The march of science during the year 1881 has not been retarded by any lack of earnest workers, nor by any lack of diligence and enthusiasm on their part.

There have been an unusual number of important events in the kennel world. The bench shows and field trials have been more numerous than in any previous year, and also more decidedly successful. The performances of the competing dogs have been of a high character, and the meetings have been noticeably free from the trickery and jockeying which has in former years marred some such occasions.

The year in rifle shooting circles has been a busy one, though we have had no great international match to dazzle the general public with its show and hubbub. The year opened with Creedmoor, the parent race of the country, free of debt, and the Association in possession of an establishment and plant that it would require \$50,000 to replace. In the country at large there has been an abundance of target practice. Our files will show records of shooting from Albany, San Francisco, Milwaukee, Boston, New Orleans, New Bedford, Newport, Washington, Chicago, Baltimore, Cincinnati, Pittsburgh, Cleveland, and many other points. Several of the State Rifle Associations have done good work in carrying out annual meetings. The fall meeting at Creedmoor brought together a good company of contestants, with scores in some instances beating the record in the standing matches. In small-arm shooting the pistol tournament of the past winter in this city was a great success; but somewhat of a rebuff was met when the off-hand shooters found themselves unable to meet the challenge of John Rigby, of Dublin, on his own terms. The year closes with a good prospect of a military shooting by our American Guardsmen at Wimbledon next year. There is no good reason why a strong team should not go over next July, and add another to the series of American triumphs with the rifle. The year 1881 has not shown any retrogression. The score list of the year will show that the riflemen of the country have not lost their cunning.

The year has been especially fruitful in yachting. Not only have we had an international match for the old honored trophy won by the schooner "America" in 1851 from a British fleet, but, through the visit of the cutter Madge, we have been taught some most valuable lessons in the science of building and the art of sailing. These lessons, it is true, will bear fruit in the future rather than at once. Yet their import is none the less worth chronicling now as belonging to the season just closed. Great strides have been made in the knowledge of the principles governing naval design, and

much old foginess and many musty misapprehensions have passed away. The peculiar antipathy to wholesome depth, keels and low ballast, as well as handy rigs, which has so long characterized our yacht builders, now bids fair to give way to a more intelligent understanding of the whole problem. In the future safe, seaworthy boats, with sailor-like rigs, seem destined to displace the dangerous overpowered light draughts of earlier days. In congratulating the sailing public upon the turn of the tide, now fairly set in, favoring the able ship in preference to the machine, FOREST AND STREAM may justly claim to have contributed in no mean share toward bringing about the healthy reform.

This is not a season for review only. Anticipation paints pleasant pictures of pleasures to be realized in the months of the coming year. May the fields and streams of 1882 be of pleasantness and peace.

FORUM, FIELD AND FLOOD.

WE find in the last number of the *Hour* an appreciative sketch of Hon. John E. Develin, of this city, a gentleman who has won distinction at the bar and in legislative halls. He is also well known to members of the craft as an expert and enthusiastic follower of field sports. "While leading a busy professional and political life," says the sketch, "Mr. Develin has found time to indulge the love of field sports inherited from his father. He is a true sportsman, ready at any moment to shoulder gun or rod and start for the woods, the prairies or the streams. There is something remarkable about the rapidity and facility with which he merges from musty law books and complicated authorities to plunge into the midst of his favorite sports; or chains up his setter and throws aside his birds to resume the study of intricate legal problems with which he is soon to puzzle a court or astonish a jury." Mr. Develin has also rendered valuable service to the cause of game protection; several of the wisest provisions of the law were originated by him and carried through the Legislature largely by his personal influence and exertions. For his labors in this field credit and honor are due him from the great body of sportsmen who have been benefited thereby.

Our esteemed and evidently well-meaning but mistaken contemporary thinks to add to its praises of Mr. Develin by depreciating the present standard of American sportsmanship, that by the contrast his may appear the more creditable. "Between gamblers, cockney huntmen, glass ball breakers, and gentlemen riders," says the *Hour*, "American sportsmanship has reached a low ebb, at least in this part of the country." All of which is simple nonsense. The truth is, that never before in the history of this country, or of any other country for that matter, has the standard of sportsmanship been so high as at the present time. Never have the legitimate field sports of rod and gun been accorded greater dignity than now, nor has the ideal sportsman's character ever been nobler and worthier. That men must be willfully blind who fails to recognize the vast and radical difference which to-day distinguishes the great host of American sportsmen from the "gambling fraternity." The sportsman who seeks his recreation in the field and along the stream knows as little of pool-rooms, faro-dens and sawdust walking-match swindles, and has as little sympathy for them, as the gambler knows and feels for sunshine, forest aisles and purling brook. And the public—which in some things is wiser even than newspaper editors—is fast coming to find this out. The public is ready to accord the manly sportsmanship of the day its due; indeed, it has already done so. Instead of being at a low ebb, the tide of sportsmanship is at that flood which is leading on to fortune.* The *Hour* could have turned a neat compliment for the subject of its remark, had it said, as with propriety it might have done, that the tone of sportsmanship is at present exceptionally high, and that among the worthiest exponents of its spirit and practice, Mr. Develin holds a distinguished rank.

By the way, now that the *Hour* has employed the term "true sportsman," will it rise and explain what it understands the expression to mean? Meanwhile, we refer our contemporary and our readers to the admirable picture of "The Ideal Sportsman" given elsewhere.

* If any ambiguity attaches to the fortune, the reader is respectfully referred for a solution to any of the sportsman's goods stores.

AMATEURS AND EXPERTS.—It is but a narrow mind which would estimate the value of a day's field shooting by the number of birds brought to bag, or of a day's fishing by the quantity of trout or bass in the basket by sundown; and so it is but poor judgment which rates a man's standing as a "whole-souled, genial sportsman" by the number of times out of a hundred shots that he can kill his bird, or by the number of fingerling trout he can land, as against his neighbor's count. As long as a man commits no offenses against the written and unwritten laws of the field, and earnestly tries to enjoy and appreciate the health-giving and purifying influences surrounding him, while at the same time promoting the enjoyment of his companions, so long is the merest beginner as fully entitled to fellowship in the guild of sportsmen, as the greatest expert of the day. Not that we would have him always a beginner, in point of skill. What is worth doing, is worth doing well, fully as much in field sports as in anything else; but the disposition of some so-called sportsmen to frown upon a would-be shooter because he was not born a crack shot, cannot be commended. The scoffers forget that they ever were beginners themselves, as some grumbling and gouty old gentlemen forget that they ever were boys, when the young people annoy them. Skill in field sports is gained by enthusiasm and practice, but enthusiasm in some cases grows up with the youth, and in some cases comes to the man with the sudden discovery that he somewhat enjoys a branch of sport which he would have equally enjoyed before, if he had known anything about it. In the latter case, give the man a chance, and in these days of improved guns and tackle, neat and well balanced, he will, urged on by enthusiasm and encouraged by practice, in all probability become as expert as any amateur could wish, and a thoroughly "good fellow" in all appearance, as well as at heart. We wish to see more, every season, of the office-penned, deck-bound, care-worn men of this busy age, taking a few days of recreation, from time to time, among the brooks and by the ocean, in the fields and the mountains, and returning to their labors with minds and bodies renewed and strengthened; fully able, in their increased power, to more than make up for the few days passed away from business. If a man's sense and bodily health are uninspired, and he is inclined in that direction, he can scarcely be too old to become a sportsman, in deed as well as in thought. It should, therefore, be a matter of pride, with those who are already members, to welcome him to the fraternity, rather than to repel him by criticisms upon his inexperience.

A GREAT SPORTSMAN'S ROUTE.—Hon. Hinton Rowan Helper, of St. Louis, ex-Minister from the United States to the Argentine Republic, author of that famous book, "The Impending Crisis of the South," is now in this city on business connected with the projected "Three Americas Railway," planned and promoted by him, intended to run from Manitoba through the North, Central and South Americas, longitudinally to Patagonia. What a glorious "sportsman's route," on a large scale, this line will be when finished! Think of the varieties of game, large and small, to be met with throughout the entire length of the route, and the untold possibilities of "stopping off" to fish in the Amazon! Certainly, for a sportsman with spare time and a large purse, no one trip could furnish more varied attractions or greater changes of scene and action. "Dogs, guns and fishing tackle carried free," of course. We can imagine the enthusiastic "thorough sportsman" leaving the Northern terminus with a baggage car filled with the entire sporting department of a beach show, all kinds of tackle from a split bamboo fly-rod to a set of explosive harpoons, and everything in firearms, from a twenty gauge hammerless to a Gatling battery. "Going to Buffalo to shoot buffaloes, ah, y'know," would be nothing to it!

THE WIMBLEDON CHALLENGE. As we go to press a communication has arrived from the Secretary of the National Rifle Association of Great Britain, informing Gen. Hancock, the President of our National Rifle Association, that the Council of the British organization will welcome a team of American Guardsmen at Wimbledon next summer. A special sub-committee has been appointed, and they are now busy arranging a scheme for the competition, which will be submitted to us in a short time. In our next issue we will publish the letter in full.

THE RULING PASSION.—A curious letter came to the *FOREST AND STREAM* office the other day. It was written by a deaf mute, who had seen an advertisement of this paper and wrote: "I want to know if you have pictures of lions, tigers, elephants, and any animals or beasts in that illustrated weekly journal," and in the letter to us was inclosed another one to a gun dealer, asking for an illustrated catalogue, that he might look at the pictures of guns. There is the ruling passion.

DOES THE COLLEGE AMATEUR PRESS represent the student life of the day? Baseball, cricket, foot-ball, lawn-tennis and boating appear to be the most prolific topics of discussion. These, with growlings at the faculty, slangy "grinds," and downy love poems make up the average college paper. Are athletic sports and flirtations the absorbing occupations of American college students?

"DON'T HULLO BEFORE YOU'RE OUT OF THE WOOD," says the wise old saw, and there are still two more momentous days left in 1881, but—who will care for Mother Shipton now!

BYE-WAYS OF THE NORTHWEST.

TENTH PAPER.

THE next morning we passed Point Atkinson and into Burrard Inlet, and by noon were at the little town of Granville. We made a brief stop here to purchase some supplies, and then passed on, reaching Hastings an hour or two later. Here we were cordially welcomed by Mr. Fannin, who agreed to accompany us to the head of the North Arm. Our arrangements were soon made, and the canoe started off again, while I remained behind, to follow in a single canoe with Fannin and the Siwash Scammux, whom we intended to get as guide. When we went to the rancherie, however, we found that our worthy friend, and all his brother Indians, were hopelessly drunk, as a *klootman* had died the day before, and they had been mourning for her. They would remain drunk as long as their whisky lasted, so it was useless to wait for Scammux. We, therefore, took our things aboard Mr. Fannin's light canoe, and started for the head of the Inlet, which we reached the next day.

On our way up the Arm, we met several canoes loaded with salmon, which the Siwashes had caught with spears and gaffs in the river which empties into the Inlet at its head. One of the canoes had a four pound trout, which had been speared. Here, too, I noticed, for the first time, a number of great holothurians, or sea-cucumbers, lying on the bottom. One of these being brought to the surface with the spear, proved to be ten or twelve inches long; an unattractive creature, brown in color and studded with great warts. The Indians eat them, as they do also the octopus, and pronounce them excellent; but none of our party seemed inclined to try them. We paddled up Salmon River nearly to the first jam of logs and camped on a sand bar. A little later, in the light canoe, we started up the river on an exploring tour, which, however, did not carry us beyond the jam. As we were passing through this our attention was drawn to the immense school of salmon slowly swimming round and round in the deep pool under the logs. In this pool, which was, perhaps, twenty feet wide and forty long, were swimming slowly about or lying quietly near the bottom, four or five hundred salmon, each of which weighed from eight to ten pounds. As the canoe passed over them they would make a rush to one side or up stream, but would almost immediately return to their former position. The water was clear as crystal, and looked about six or seven feet deep, but, in reality, was over eighteen, and our sixteen foot salmon spear was not nearly long enough to reach the fish upon the bottom. The sight of these splendid salmon excited the members of our party not a little, and the spear was in great demand. It was an instructive and amusing sight to see the learned, scientific light of our number, a mathematician of high attainments, a man who is supposed to take pleasure only in measuring the angles which the various faces of a crystal make with one another, and to whom the mysteries of differential calculus are rather more simple than a chapter in one-syllabled words would be to the average man—it was an instructive and entertaining sight, I say, to see the Professor stretched out at full length on his face on this jam of logs, his eyes glued to a crevice through which he watched the fish below, while his right hand grasped eagerly at the air above him, and his lips repeated these words: "Oh, please let me have the spear for just a minute; they are so thick here that I know I can't help catching one if I only thrust it at them." But although the Professor made many a thrust, as did all the others, the total result of the afternoon's work was one single salmon. Afterward, however, when the depth of the water had been measured and a longer handle rigged to spear and gaff, we caught all the fish we required.

We had hoped to have had a day or two of hunting on the North Arm of Burrard Inlet, but during the three days of our stay there it rained constantly. The woods were so wet that travel through them was extremely uncomfortable, while the mountains were shrouded in a dense white mist. Once we climbed part way up one of them during a lull in the storm, but it was impossible to see fifty yards ahead of one, and hunting was out of the question. So one morning, we ruefully broke camp, and paddling down to Hastings, unloaded our baggage, and paid off and dismissed the Siwashes. The next day we bade farewell to the beautiful Inlet, and took our departure for New Westminster.

There is something wonderfully impressive in the forests of British Columbia. The gigantic trees, straight and symmetrical, like the pillars of some great cathedral whose dark green roof spreads out far above us, and whose height cannot be measured in feet, awe the traveler by their size and their regularity. The stillness is unbroken. No voice of bird or beast is heard to disturb the solemn quiet of the scene, only sometimes the sad moaning of the winds among the lofty branches, or the whispered echo of the salt waves breaking unceasingly against the iron bound cliffs is felt though scarcely heard. Occasionally, it is true, as in contemplative mood you yield to the influences of the silence, and give yourself up to the melancholy reveries to which the surroundings incline you, the intense quiet is broken by the harsh chatter of the red squirrel, or the hoarse, ill-omened voice of the raven, far more in keeping with your surroundings, may be heard. But as a rule these woods are voiceless. The cedars, the firs and the cypresses are swathed in a funeral drapery of moss, which hangs in long, motionless festoons from the branches. To find bits of color we

have to look carefully among the undergrowth, where we can detect bright berries and particolored lichens, while the ground is covered with the brown and withered foliage of the evergreens, the accumulations of many a long year.

The sawmills and logging camps of Burrard Inlet and of Washington Territory are too important to be passed over without some mention. One may see among the gigantic red woods of California individual trees which are much larger than those of this northern country, but, so far as I know, there are on this continent no forests where the timber will average so large as it does here on the North-west coast. The two most important species, as they are the largest, are the Douglas fir (*Pseudotsuga Douglasii*), and the cedar (*Thuja gigantea*). I was informed that the largest tree of the first named species, which had been cut for the mills on Burrard Inlet measured 318 feet when felled, and was 9 feet in diameter at the base inside the bark, and a stick of timber sawed at Hanson & Atkinson's mills, at Tacoma, Washington Territory, measured 96 feet in length by 14x23 inches. The cedar grows quite as large as the Douglas fir, but not as tall. The largest tree that I saw measured eleven feet in diameter, six feet from the ground, and in the hollow in its butt, three or four men could have slept very comfortably. These trees are usually felled by cutting through them some distance above the ground. This is done because the bole of the tree at its base is knotty and unfit for timber, and is thus much harder and more difficult to chop through than it is a few feet farther up the stem. The chopper begins operations by cutting a notch six or eight inches deep in the tree trunk, three or four feet from the ground. Into this he drives a "paddle," a piece of timber four or five feet long, four inches wide and strong enough to support a man's weight. Standing on this "paddle" he then cuts another notch, a few feet higher up, into which he inserts a second "paddle," and mounting to this one, draws out, if necessary, the one below, and drives it in again still higher up. Almost all the stumps that one sees in these forests bear the marks of the position of two "paddles." I am informed, however, that of late years another method of felling these trees has been adopted, by which the chopper is saved much of his labor. Four holes, opposite one another, are bored with a large auger in the bole of the tree, and in each of these a fire is kindled, which burns, it is said, without any further attention, until the tree is so weakened that it falls of its own weight. A man can fell trees in this way much more expeditiously than with the axe, and two or three hundred trees can be felled before they begin to fall. It would seem that this method is, however, open to serious objection on the score of wastefulness. Aside from the danger that the fires thus started are likely to spread, and may burn over a considerable extent of country, much of the timber felled in this way must be lost. An expert chopper, with an axe, can lay the top of a tree within a yard or two of where he wishes to, but when the trees are burned down they will of course be as likely to fall one way as another, and there would thus be more danger of their being broken, or of their falling in places where it might be impossible to get them out. The timber when felled is stripped of its branches and dragged to the water, and from time to time a steamer calls at the different camps, makes up booms of logs, and tows them to the mills.

These mills are curiosities to one who has been accustomed to the sawmills of the East, where nothing but small timber is sawed. Starting with the ordinary sawmill machinery, with which all are familiar, a process of evolution has gone on, which has developed the appliances by which these enormous sticks can conveniently be handled and sawn, so that at present the sawmills of the Pacific coast are unlike any thing to be seen elsewhere on this continent. One mill at Port Ludlow, W. T., which, when we passed it, was only just being completed and not yet in operation, is five hundred feet in length.

The vast extent of the forests and their general accessibility to water has made lumbering on this coast extremely profitable in the past, but already we hear complaints that the timber lands are all taken up, and that the loggers have to go farther and farther back to find sticks that are worth cutting. These complaints, however, are heard mainly south of the boundary line. The vast forests of British Columbia are as yet almost untouched, and with reasonable care in cutting the timber, should yield lumber enough to supply the west coast of America for many years to come. The mills at Moodyville in Burrard Inlet can saw sticks 120 feet long by 7 in diameter, but at the time of our visit they were handling what they called "small logs," which were only about four or five feet in diameter.

It was pleasant on reaching New Westminster once more to meet our friend Mowitch and his charming family and receive his cordial welcome. Once more we sat on his piazza and watched the mountains of Pitt River glow, pale, and then grow black as the sun went down; again beheld the glories of Baker as its pure white peak first glistened and faded, and then again grew gray in the afterglow and once more became blue, hazy and indistinct, until at last, as the clear stars one by one appeared and the constellations took shape in the heavens, and night resumed her sway, the grand mountain stood for a while like a spectre and then was gone from our sight. So keen a sportsman as Mowitch could not let us depart from New Westminster without suggesting a hunt, and I was by no means loth to listen once more to the music of the hounds. So by four o'clock next morning the Professor, who had never killed a deer, Mowitch and I were

tramping briskly along toward Mirror Lake. A thick mist curtained the landscape, and we missed the wonderful sunrise that I had hoped for; even the treetops were not visible. Arrived at the lake, Mowitch started off to put out the dogs, while I cut an armful of hemlock boughs for the canoe, and before long, with the Professor amidships, firmly grasping his trusty rifle, and Mowitch and I wielding respectively the steering and bow paddles, we passed out on to the surface of the lake. The fog still hung low over the water, and though the upper air was rosy, the rays of the sun had not yet pierced through the white vapor which hid the surrounding forest on all sides except that from which we had just pushed off. From out of the still whiteness which surrounded us came from time to time the bell-like voices of the hounds. The trumpet-like notes of Captain, the shriller tones of Diaca, the short, sharp bay of Wallace and the excited ravings of Dolores, blended and softened by the distance, formed a quartet whose melody was most sweet. And as I knelt in the bow of the canoe, and bent my ear to catch their "musical discord," it seemed to me that indeed—

"A cry more tuneable
to no chorded with horn."

So for a while we waited, and as we sat there, the sky grew brighter and gradually the mist disappeared, and the dark green of the woods was once more seen. The clamor of the hounds had died away, and now the voices of forest and lake began to be heard. The shrill piping of a cross-bill sounded from a tree-top, and was replied to by the grating notes of a rollicking company of Steller's jays that were foraging among the branches of an enormous fir. Faintly from the direction of Lake Burnaby was borne to ear the mournful quavering cry of a loon, and a great white-headed eagle, who from his perch on the summit of a blasted fir overlooked the scene, threw back his head and laughed a shrill answering scream, and then unfolded his enormous wings and floated out of sight. From the other side of the lake came a series of mysterious sounds, a splashing in the water and a breaking of small twigs, which made us suspect that a beaver was hard at work behind a fringe of low willows. Further on in a little bay was a tiny grebe dallying with his breakfast. He evidently believed that life was made for enjoyment, and dawkled over his meal like a man of unlimited leisure. When he had satisfied his appetite he went through an elaborate series of evolutions connected with his toilet, and then, deliberately clambering upon a bunch of floating vegetation, turned his breast to the sun and in meditative mood closed his eyes. I was wondering whether he was merely ruminating, and really thought best with his eyes shut, or whether as a matter of fact he had gone to sleep, when I felt the canoe shake and, turning my head, saw Mowitch dipping his paddle in the water, as he motioned toward the bird that I had been watching. Without the slightest sound the little vessel moved toward the grebe, but when we were within twenty yards of him, I heard once more the faint cry of the hounds and turned to listen for them, and when I again looked for my feathered friend he had vanished. Silently, and without making a ripple in the water, he had disappeared beneath its surface. We moved slowly on, and reached the end of the lake, and just as we were about to turn, a low groan from the stern caused me to look round, and there, two hundred yards distant, was a deer swimming away from us, parallel with the shore, and not twenty yards from it. Although the chances of our getting a shot were infinitesimally small, we turned the canoe and started in pursuit, but before we had made half the distance, the animal turned in toward the bank. Mowitch, for the sake of the hounds, most anxious that the deer should not escape, called out "Try him, Yo." The canoe was still darting along as I raised the heavy rifle, and fired at the delicate head that was cleaving the lake's surface, now within a few feet of the shore. As I lowered the gun, I saw the water splash high from about the mark, the deer reared nearly half its length out of the water and then for a few seconds lay floundering on the surface. I could scarcely believe that I had killed, but for a moment it looked so. Then the animal recovered and crawled slowly out of sight into the long grass. In a few seconds we were at the spot, and as the canoe shot by a little passage way that led through the meadow toward the shore, both the Professor and I saw the deer lying in the water. The channel was but a foot or two wide, so that we had but a glimpse of our game, but it was enough. I shouted exultantly to Mowitch, "There he lies dead." If I had omitted the last word of this sentence I should have done better. Better still, however, if I had quietly backed the canoe and fired another shot, for when Mowitch stepped ashore with drawn knife to cut the animal's throat, it sprang up, almost under his hand, and danced derisively through the high grass off into the forest. I think we all felt a little foolish. I felt particularly so, but the idea that a deer should quietly lie down less than ten yards from the spot where it had been shot at, had never crossed my mind. I was confident that it had been hard hit, and proposed going to the lower end of the lake, where Diana was now to be seen, and getting her, to put her on the trail again. But at this moment old Captain made his appearance on the shore and started to swim out toward the canoe. We paid no attention to him, however, so he went back, and started along the bank after us, and presently his sonorous tones told us that he had crossed the trail, and was off again after the deer. It was not long before I saw behind a little point, a ripple that showed that the deer was again in the water, but before we could get sight of it, it had once more sought the shore. Dolores, however,

now took the trail, and in a short time, we had a beautiful view of the deer advancing over the meadow with long, graceful leaps. Once more it plunged into the clear waters of the lake, and now for the last time. It struck out boldly for the opposite shore, but the light craft propelled by sinewy arms gained rapidly upon it. As its feet touched the bottom we were not a dozen yards away. When clear of the water a shot was fired, but did not check its speed; another report rang out on the still air, a small red dot appeared in the blue coat behind the shoulder, and the animal, after half a dozen bounds, fell dead on the meadow. We leaped ashore and while two stepped up to the spot where it lay the third man lifted the canoe well up on the bank and then joined his comrades. We carefully looked over our quarry, but there were only two holes in the glossy skin, one where the ball had entered and one at the point of exit.

While gralloching the game the good dogs came up one by one, and were gratified with a hearty meal of the warm meat. Then with our deer we sped swiftly back to the landing place. To pack the animal out to the road did not take long, and soon Mowitch and meat were put on the stage for town, while the Professor and I started with the hounds to do the four miles afoot. Yo.

The Sportsman Tourist.

CRUISE OF "THE NIPPER"—III.

THE 30th of last July was a bright day along the Fulton Chain, clear and cloudless. The shelter tent and blanket were made into a snug roll, the canoe lay hidden from the heat in the shade of a thicket, and everything was ready for a trip out to the open lake, when two sharp-sneezed Long-lakers darted from the outlet into the placid Seventh, and recognized "Slim Jim" and Fred Rivett, with parties, bound to the eastern side. Seeing me on the shore they came to a halt, and Jim sang out, "Come on, Uncle Nessmuk, go through with us to Raquette." "You'll outrow me. I'll get left."

"No, we'll keep company; come along," said Jim.

"Can you wait five minutes," I asked.

"Yes, fifteen of them," answered Fred.

"These gentlemen would like to see your canoe work; come on," said Jim.

It struck me that the guides had got the idea. They had been at it all the season, and knew just where to strike the landing that had eluded me the evening before. So I launched out and soon laid them alongside. The gentleman who headed the party was much interested and pleased with the canoe. He asked many questions and was a little sceptical about her weight, and the three youngsters who composed the balance of the party were enthusiastic. Their questions "little meaning, little relevancy here," but the guides made some queries with meaning in them. For instance, Fred asked, as he leisurely picked up his oars, "Did the storm keep you awake last night?" And I, remembering that my little hatchet had gone on to the Raquette, answered stoutly, "Not a bit; never slept better in my life."

As the guides took up the easy, effective stroke that sends the Long-lakers through the water so speedily, I crept under Fred's counter, took the draw of his wake, and made the inlet without noise or company. They said, "Boys, your boats can and ought to beat any paddle on open water, but when you come to these crooked channels, outlets and inlets in the form of the letter 'S,' where you have to look over your shoulders right and left to see the course, and pull first to starboard, then to port, why you see the paddle—the double blade—has rather got the bulge on you." We had stopped under a huge cedar for a modest nip, for which the leader of that party has my thanks, and as Jim and Fred very quietly resumed their oars, a meaning glance passed between them. They said nothing, but I thought it as well to lay aside extra clothing, spit on my hands and settle down to work. For the first half-mile the odds were rather in my favor. The water was deep, channel crooked and the chances for cutting off bends and "going as you look," rather made an easy thing of it. Then the course grew straighter and less distinct. The swift Long-lakers drew rapidly away, and I saw them turn a bend forty rods ahead. I tried to cut off the bend and ran on to a sunken log. Backed off, took the channel and put on all the steam I had at command, but in vain. I was left. I paddled up the stream until I lost the blazed trees which mark the course, stopped, listened a moment, and then used my spare wind in a long, loud la-whoop. An answer came from the swampy forest far to the left, where I found the party landed upon a shaky sort of corduroy platform, which is the landing now. They were waiting for me, they said. And Fred remarked, "A double blade does take the skates on these crooked channels. Notice how he cut the corners and went the way he looked?" Boys, I hope that wasn't "sarkism." I have faith to think you wouldn't make fun of geyhairs!

I like to see the guides organize for a "carry," and I watched Jim and Fred as they prepared for the trip over to Eighth Lake. First, the "party" was loaded up with fishing rods, guns, pack-baskets, gun blankets, and the usual impediments of the average tourist, and started over the carry looking like a crew of pack-peddlers. When they were out of sight, Jim remarked coolly, "We can take it easy; they ain't going to hurry." Then he and Fred tied in oars, seats, etc., snugly and neatly, made the neck-yokes fast at the balancing point, and then, inverting the lightest boat, Jim held the stern high in the air while Fred crept under and adjusted the neck-yoke nicely to his muscular shoulders, saying, "All right; let go," which Jim did; and the inevitable blue boat, with the pair of sturdy legs beneath, disappeared rapidly up the trail. Jim raised his own boat, and said, "Think you can hold her up?" I thought I could, but I did not, balancing on point on all the steam, and weighing over 100 lbs., she was a lift. And then Jim quietly seized my blanket roll and hung it on his broad shoulders without comment, before shouldering his boat. It was a kindly thing to do, and like his generous nature; but I was ashamed, and raised a feeble remonstrance; he went away with a long, quick stride, paying no heed, and I thought of honest old Jack Falstaff, that Prince of Deadbeats—"Hal, an thou seest me down in the fight and bestirre me, why so; 'tis an act of friendship."

I organized my own canoe for the carry, and tried to overtake the party, but the guides walk fast. I found them at

the clean, sandy landing; and it was a relief to see the fresh, green shores, wholesome waters and healthy trees of Eighth Lake, after an experience of Fifth, Sixth and Seventh. At the Eighth the leader of the party began to feel hurried. He wished to reach Bennett's Landing on Raquette in time for the little steamer to Blaine Mountain, and guides always follow the wishes of employers so far as they can. I saw I was likely to get left; but, meaning to keep up as far as possible, I paddled out with the party, and rather got down on the double blade. The guides went in for an ash breeze. The distance is less than 15 miles, and they led me to the landing just about 100 rods. Yes; the Long-lakers are fast—but cranky and uncomfortable to ride in.

As you strike the landing at the head of Eighth Lake, there is a path, leading along the shore to the right, which leads you to a cool spring. Here the guides, having seen the party off, stopped a few minutes for a lunch. Let me commend that spring, with its bright, cold water and beautiful surroundings to any lone canoeist who may happen to strike the landing at the head of Eighth Lake. Again the boats and canoe were shouldered. Jim, as before, totting my blanket-roll. Again the guides beat me over the carry, though they stopped for a rest and I did not—and when I arrived at Brown's Tract Inlet, guides and boats had disappeared. I was in no hurry. The carries were all made, and six and a-half miles of paddling lay between me and Ed. Bennett's. The day was fine. The wind just brisk enough to be lively, and I missed Bennett's about, three-quarters of an hour behind the guides.

Going down the inlet I was interested by the movements of the fish that lay basking near the surface among the lily-pods, and darted off with a splash and swirl as the canoe neared them. A man with oars would hardly have seen this. But, paddling silently down stream, looking the way I went, I probably started more than a score of good-sized fish, without being able to decide on the species. I intended to return and try them, both with fly and bait, but failed to do so; though I certainly shall, if I find myself there in the summer of '92. I thought they might be pickered out, but the guides assured me there were no pickers in Raquette Lake.

I found Bennett's hotel crowded with tourists and sportsmen, and was unable to get a room, or even a bed. But the bark-roofed guide camp, "For guides only," had a bright fire in front, with balsam browse for heating, and was preferable to a close room. I took up my quarters there while on the Raquette, and had no cause to regret it. As to the fare, whoever has stayed with Ed. Bennett knows that his table would rank as first-class anywhere. There is no pleasant lake in Raquette in the North Woods. It is the largest, the water is clear, and the shores, while being well-wooded, are mainly rocky. Large as the lake is, I should not know where to paddle to get more than a mile from the nearest land. The numberless bays, capes, indentations and islands, make it difficult to describe on paper; and even the best maps fail to give just the correct idea of it.

I do not know a better place to investigate the now popular bass question. In the summer of '80 the small-mouth had got a pretty strong foothold, and was evidently taking his way. A few were being taken with spoon and bait. His increase for the next twelve months was to me marvelous. Starting from Bennett's landing with an hour's sun, and paddling to the mouth of the Marion I could get all the sport I wanted, and more fish than I needed before dark. I used an 8oz. rod and the scarlet ibis fly, with silver body, as the best. But a brown hackle was also killing. And the gold-bodied ibis is about as good. The three, taken as a cast, and as others are needed, are Garvan, a young man from the Catskills, and an enthusiastic bass fisherman, and used a powerful rod with minnow or spoon. His favorite ground was the mouth of South Inlet and adjacent shores. He was nearly always successful. I liked the mouth of the Marion and the rocky shores below, with the islands in front of the hotel. There was not much to choose. His fish averaged about twice the size of mine, and I could take about two to his one. On the whole, I should say the bait fisherman had the best of it. The guide complained, that the bass has destroyed all the lake trout, would have no point had there been any lake trout worth mention to destroy.

I took a lively interest in the tourists, or boarders, who had worked their way into the wilderness for health, and not for sport. There were many of them on the waters of the Raquette, and more on the Saranacs. News travels fast in the woods. Every day that I was on these waters I saw guides and tourists from almost every route you can mention. I heard that more than a dozen consumptive patients had died on the Saranac waters. Others were dying, and many were in a crept away, beaten and exhausted, to die at home among friends and relatives.

Paul Smith said he would, by five hundred dollars, rather the article entitled "Camp Lion" had never been written. I saw for myself that parties who had sought the Adirondacks for health, were sick, disfigured, and only anxious to get away anywhere that dryness, warmth, and rest were easily attainable. I was interviewed and questioned time and again as to the healthfulness of the mountain resorts, and the headwaters of the Susquehanna; and truth compelled me to say that all my observation and experience led to the conclusion that the high lands about the headwaters of the Delaware and Susquehanna afforded more hope of healing to the sufferer from pulmonary disease than the damp, cold high lands of the Northern Wilderness. That some unexpected and surprising cures have happened in both regions is certainly true.

And it is equally true that the Northern Wilderness is unrivalled for boating and canoeing facilities, and hardly to be excelled for scenery. All this is most attractive, and it is not to be wondered at that the average tourist much prefers a wild region, where, by making short carries, he can travel hundreds of miles by water.

But, as regards the single question of health, I can name half a dozen localities, easily reached in one day from New York, where I would rather make my chances as a consumptive patient, than in the Adirondack region. The first is a small spot, in a picturesque and little known, within twenty miles of where I write—has struck me often as the healthiest resort I know of in these United States, for weak or diseased lungs. I allude to the high plateau between Little Pine and Otter Run, a goodly tract of country, dry, sterile, breezy, and well supplied with living springs of the purest and coldest water. Gamy too, so far as hares, grouse and deer can make it so. No boating; but Little Pine and Otter Run afford good trouting. There is a modest village, with a neat little hotel, and a neat little hotel, where permanent board may be had for four or five dollars per week, with plenty of fresh eggs, and best of butter and milk. But it is out of reach of mar-

less lunatic. They like a stiff horn "on time," and they have firm belief in its power to cure "all the ills that flesh is heir to."

The best grouse shooting that I know of in Newfoundland is found along the southern coast, the more distant and inaccessible the locality, the better are the prospects of sport. Generally speaking, the barrens or moors are not far distant from the fishermen's houses, which will have to put up with him. He will probably tell you that the "partridges," as he calls them, are numerous; Mike, his boy, "saw a power of them the other day as he was after the cows." You will perhaps ask him, "Are the barrens far off?" "Oh, not far at all; you have only to go through a few scattered trees, and you are on the grounds at once." Now you must take this statement with a large grain of salt. You will find that the word "scattered" has a very peculiar meaning in this colony. When you are fishing, for instance, my friend Pat McGrath will casually observe that "there are a few scattered flies about." In that event, prepare yourself to be eaten alive by musquitos. And when he tells about scattered trees, expect a stiff climb of a mile or so through thick bush and fallen timber. Generally speaking, however, there is a path from the little settlement to the barrens, perhaps a road. As a rule, the Newfoundland fishermen are the most hospitable people in the world to strangers. They live very isolated lives and they are always pleased to see new faces. All who visit this country are struck with their old-fashioned politeness and civility. Their very isolation, which produces these primitive traits and simplicity, also develops their remarkable ingenuity. They build their own houses and their schooners and boats. Of course the stranger sportsman, in return for hospitality and civility, will make himself generally agreeable, tell his best stories, exhibit any ingenious instruments he may have about him, sing without much pressing, and, if he can, play the flute or the fiddle, I will promise him not only that the whole population turn out *en masse* in the morning to assist him in his sport, but that all possible political power and prestige will be at his feet. He may fiddle himself into the local Parliament and become problematically a Premier, possibly the Chairman of the Board of Works!

After all this roundabout talk, perhaps, my gentle reader, you are getting just a trifle impatient; you want to get on the barrens and have a shot at the birds. But bide a wee bit; before I let you go a step further, I must ask you a few questions. Can you shoot fairly on the wing? Can you walk well?—mean, can you, as Paddy says, "step out on the wing"? Are you the kind of a good setter or pointer, and will you "hound out?" Answer me all these queries satisfactorily and honestly, and I will promise you, not a big bag, probably only ten to twelve brace of grouse for a long day's tramp and very straight shooting powder, but in that long day you will have had as genuine wild sport as you ever had in your life. And now, my friend, let us climb the hill together, keeping the dogs well to heel. The ascent is what English sportsmen call a "pumper." We stay a moment to draw breath at the top. The view is worth looking at. Below you lies the bay with its fleet of fishing boats and the purple islands, and through the clear, pure air, twenty miles away, we catch the gleam of white houses; and on the opposite shore, the dark, fir-clad hills and the wild barrens and marshes, clothed in their summer verdure. Before us is a vast, gently-undulating plain, rising here and there into low, rounded hills, sometimes spreading out into long, level, dry marshes, which, in the distance, look as bright and green as a newly mown meadow. Clothe this moorland here and there with white mosses and with clumps of low, stunted spruce; intersperse it everywhere with wild flowers and low berry-bearing shrubs, with purling streams and pools and endless lakes, and you will have a good general idea of a Newfoundland barren, stern, wild and bare, but not without beauty. And now—

"Together, let us beat this ample field;
Try what the open, what the covert yield."

He out, good dogs! Away they go with a rushing gallop, right and left across the wind. Suddenly Bang's lashing tail becomes stiff, and with head outstretched and rigid body he slowly creeps up wind until at last he stands, as motionless as if carved in stone. Grouse is hid behind a low hill; instantly, as he mounts the ridge and catches sight of Bang, you see him transformed into another statuesque canine, backing his companion. And now keep cool. Don't mind Mike's ejaculation, "Come on, Captain, begor! Bang have 'em." Walk; saunter up slowly, if you have any regard for the steadiness of your dogs; if they see you excited they will assuredly copy your example. Below you get up to Bang, he begins slowly and cautiously to move ahead; while you are being walking up, the birds have moved away from him, not far, but still further off than he thinks the correct thing, so he cautiously crawls a few yards forward. Keep close to him. Suddenly he stands again, with his body stiff and rigid, while, if you look at his eyes, you will notice them almost out of his head with wild excitement. Just as you are wondering where on earth the birds can be hid in the bare ground before you, suddenly there is a whirr of wings, and a dozen brown birds are in the air about you. Down goes the old cock with your right; shot right through the back he lies with wings outstretched, while two yards further to the left lies another noble bird. "A great shot, 'captain," says Mike; "I never see the like; you're as quick as lightning." "Well, Mike, it was not a bad shot; but did you mark down the covey?" "Mark em! They're gone seventeen mile down into the green woods beyond there." "Well, forward and points the old cock whose head Mike carefully smooths out, and puts into the loops of the game-bag, while the dog is now at a dead point on the other rooster. You fondle the good dogs a bit, and let them smell the birds; then on you go, as proud and happy a man as there is in the universe. Probably, notwithstanding honest Michael's flattery, the shots were as easy ones as ever were fired; but the shooter dearly loves to be praised; and for this particular reason of encomiums commend me to a Munster man. To hear Tramore when I had made a villainous miss at a bird rising within ten yards of me on the open, or Ned Molloy telling Bat Malone as he made some wonderful chance shots in their presence at very wild birds, killing two with the right barrel as they crossed, and my companion and I bringing down two more at awful long distances, all three quite random shots. With cool and deliberate mendacity Ned says: "That's the way they're doin' it all day, Bat." "Begob, then, Ned, it's time we went home," and off they go with half a dozen grouse slung on their long gun barrels, each with a raw and bloody head, showing that Bat had killed them all on the ground.

Well, to pursue our day's sport. On the next rounded, dry

hill, Grouse sets, and it is Bang's turn to back. You get your two barrels well in, and Mike marks down the remaining ten birds, in what he calls a "big tuck." This is a low clump of stunted spruces not more than two or three feet high. You keep the obedient dogs into heel and make straight for it. The birds in this dense cover rise by twos and threes, and if your shooting is straight you will probably bag half a dozen birds, and Mike's keen eye will mark down the stragglers that escape your deadly breech-loader. After meeting a few more birds it will probably be time for lunch. Of course you have a camp kettle to make the tea which all Newfoundland fishermen are immoderately fond of. Mike will probably tell you about some "Mulligan-Tawney" the Doctor had here, 'onst wid him, the most illigant soup he ever tasted." You will find your trusty follower a good trencher man; but you must help him, and press him to eat. It will always be, "After you, Captain, sure I have lasherin;" whilst all the time he would eat the whole concern, and then beg in again. In manners, he is one of nature's gentlemen; but with a far more robust appetite than falls to the lot of most so-called gentlemen in this dyspeptic age.

Now follow my advice and take two good hours' rest. The birds are not on the move, and both you and your dogs will be the better for the spell. Except in the hours of the very early morning, between five and six in the evening is the most killing time of the day. By that time you will find all coveys you started in the morning, or rather what is left of them, back to their old haunts; and you will be sure to get some good chances. Probably you will feel tired and make a clean miss or two, but Mike will duly swear on all such occasions either that "he seed a whole fistful of feathers come out of the bird," or else that "you shot his tail away entirely." By sundown you will be back to your comfortable quarters with a good bag of birds, and, bye and bye, in easy costume and slippers, when "you have judicious drink, and greatly daring, dined," you will, with your after-dinner pipe, agree with me that there is no finer sport in America or Europe or anywhere else than your day's shooting in Newfoundland.

St. John's, Newfoundland, November, 1881.

SPORT AS BBAIN-FOOD—II.

WHILE fishing, hunting, boating and riding through the wilderness on my well-trained Indian pony, I still kept up my literary engagements, writing with an ease and freedom I had not known for years. My home was frequently visited in the summer time by the leading sportsmen of the day. George Dawson, of the *Albany Journal*; General Spinner, then a Congressman; Seth Green, always a knight of the plant rod, and many, many more of the old Walton Club made Eagle's Nest regular visits every summer. Alfred B. Street, the poet; Church, the artist, and other noted men made me annual calls when they went to the forest for fresh brain inspiration.

But when I wintered there, my trappers, my library and a mail brought in on snow shoes once a week, were my only company. Of music I had plenty. The scream of the panther, the howling wolves and the hoot of the great white owl, made the weird portion—the winter gales sung a loud chorus.

Talking of panthers, I was out one spring morning, having with me a large white buldog, imported from England and kept as a watchdog. It was between my house and Blue Mountain Lake, and though I never knew him to do it before, the dog took a fresh trail and ran off as if Satan had kicked him on end.

A minute afterward I heard him barking furiously.

I had my double-barreled rifle with me and made lively tracks to where he was. There, up a scrubby beech, about twenty feet from the ground, was an old she panther and two half-grown ones. They glared at the dog, whose hair fairly stood on end, he was so anxious to get at them.

Taking careful aim, I drew a bead between the eyes of the old panther, and in a second a ball, 32 to the pound, conical, went through her head and she came down all in a heap.

The dog pitched for her throat and got a couple of ugly scratches from her claws in the death throes, but he didn't mind that. He opened a gap as wide as a New York Alderman's mouth in her throat in a hurry.

Reloading the empty barrel, I proceeded to lay one of the cubs beside the mother in the same way. Reloading again, so as to have spare shot on hand in case of a miss, number three was added to the list.

As this was before breakfast, I thought it a fair morning's work and went back to the house, whence some of my men soon went to skin the beasts and take their scalps, worth ten dollars apiece at the county seat, Lake Pleasant.

But I promised you that poem, if rhyme such as mine is entitled to be called poetry, which I doubt. It was published in the *Weekly Mercury*, then edited by Caldwell, Southworth and Whitney.

MY MAPLE.

I have watched it since last winter,
That grand maple near the door,
Standing just beyond the caba,
By the lake's white-sanded shore—
Watched it while its quivering branches
Were all laden down with sleet,
And the tempest, without mercy,
'Gainst its rugged bosom beat.
And when the kindling sunshine
Came to melt the ice away,
And the breath of Spring so genial
Came with many a welcome ray—
When the "snow-drops" head was lifted
Up in beauty at its feet,
And the grass began to brighten
O'er its half-uncovered root.
And I watched it in its budding,
Saw the little leaves come out;
Saw them day by day expanding,
As Dame Nature went her route;
Saw them weave their roof of shadows
Twixt the sun and ground below;
Saw them spread their web of shadows
On the wavert's glassy floss.
Yes, I watched it till its fineness
Fled the naked trunk and limbs;
Till it hid the feathered songsters,
While they sung their mairn hymns.
I have watched it in its beauty,
In its waving sea of green,

Till the tips of many branches
Wear a gold and scarlet sheen.

Like a golden crown of glory
To a faithful servant given,
When he resteth from his labor
In the quiet hour of even,
Looks the yellow crown of Autumn
On my favorite maple tree,
And of all the season's changes
This is brightest far, to me!

So a Christian who has battled
With the tempter in his youth,
So a Christian who has conquered
By the mighty power of Truth,
Who has seen his Spring and Summer,
For the Winter hath no dread,
For he knows Christ's Spring will bring him
Resurrection from the dead.

Hoping this is proof to the readers of *FOREST AND STREAM* that wild life and sport is brain-food, I close with the best wishes of the season,
NED BUNTLINE.

WITH A HUNTING KNIFE.

CHRISTMAS, 1881.

THIS keen-edged dagger, gleaming bright,
I ask you, friend, henceforth to wear,
In memory of this Christmas night.
The dainty foot thy hand will clasp,
A timid, antlered deer once graced,
Whose anguished look and dying gasp,
I still can see, I yet can hear.
He oft the mazy forest traced,
Through bosky dingles often fled,
Or from the hill-tops, sunset dyed,
Marked where the winding river led,
By lichen rocks and woodland glades,
Through sunlit vales and scented meads,
And the half-lit canyon shades,
Where lottening south winds gently sighed
Among the river's margin reeds.

He saw the deeply blushing day
Fly from the kisses of the night,
And through the lonely forest way,
"Neath rising, guiding stars he went
(Fleet-footed phantom of the wood)
To where the arching grapevines bent
Above his resting place from flight,
Within the greenwood's solitude.

When perfumed clover cups at morn
Held dewy gems of priceless worth,
When snowy blossoms of the thorn
Grew rosy with the flush of dawn—
When summer, with a loving hand,
A flow'ry garble close had drawn
Around the scented zone of earth,
He wandered safe through all the land.

But when the autumn's changing hues
'Tinted the wood and hill and vale,
And earlier fell the evening dews,
And song birds went and snow birds came,
The hunters, merry, lithe of limb,
Roamed all the land in search of game,
And slyer grew the turtled quail,
And mute the pheasant's vesper hymn.

Then, seeking far, a huntsman found
A fountain on a rocky steep,
And round about upon the ground
The dainty trace of timid feet;
And broken twigs and trampled grass,
His eager, searching eyes did greet,
And one white-waited roe, deep deep,
Told where the deer did often peep.

The low breeze whistled through the wood;
A distant grove called to its mate,
Then in the copse where he stood
A deer gave voice. A moment more
A noble buck sprang full in view.
A rifle shot—and woundless rose
The red deer leaped, alas! too late—
The grass was stained with crimson dew.

O, Time! bring back those joyous days
The bracing, keen, autumnal air,
The mossy, leaf-strewn forest ways,
The blushing, frost-kissed golden rods,
The grapes like ripened opals falling,
The chestnuts dropping from their pods,
Maple and birch in raiment rare,
And shy quails from their covert calling.

Bring back my dear four-footed friend,
The brown-eyed dog whose love for me
No chiding coldness ever could end;
Truer than half the friends I've known,
That kind, mute favorite "neath the ground,"
Whose faithful dust is still my own.
Ah! cruel, mocking Memory,
Bring back my old Siberian hound!
I'd give the dross the world calls wealth
If for a moment I could stand,
Young and aglow with ruddy health,
Again upon that steep hill slope,
Drinking "the wine of mountain air,"
While skies from gray to hues of hope,
Change "neath empyrean splendors grand,
Waiting with dog and gun for deer.

Sacramento, Cal., Dec., 1881.

ELSIE WARNER.

THE TELEGRAPH BRINGS US THE STORY of a Newfoundland dog, which accompanied its master and mistress every night to the door of the Ring Theatre in Vienna, and waited for their coming out. On the night of the burning of the theatre he accompanied them as usual to the entrance. He is still stationed there waiting so patiently for those who will never more come to meet him, and cannot be induced to leave the spot or even to take food or water.

THE SEVEN PONDS AGAIN.

CAMPS BEUIS, ME., Dec. 12.

BACK to the old Rangeley once more after a month's cruise, and not in the woods as usual at this time of year, but on a twenty-two ton steam yacht, all the way from Augusta, Me., to Norfolk, Va. I had different weather here from what I left a week ago in Norfolk. The twenty miles of sleighing from Philip to Rangeley is as good as I ever saw. To-morrow I start for Farmachene Lake to join my friend Danforth on our annual still-hunt. The condition of the snow and weather is strongly against success. I am glad just to get out, and as John has about a peck of mail that has been coming along for the last two months, which I shall take to him, he no doubt will be glad to see me.

Looking over my *Forest and Stream* that have collected during my absence, I find that Mr. Secret, York, also, "J. W. T." reply to it. Surely, it is not the most affectionate answer that I ever received from a letter; and, lest Mr. T. should think he has missed me this time, I will "flatter" again, though it brings neither a more and more deadly volley. He handles his weapon with ease that speaks of long experience, but his imaginary powder, it seems to me, is a little smart for his fuzee. In this case possibly he might do more execution with a little lighter charge, and before he shoots again, perhaps it would be for his advantage to know that I have no interest whatever in the Seven Ponds, camps, boats, roads, nor any route that the Seven Pond travel takes. My route is by Steamboat on Moosemenatic Lake and my camps are Camps Beuis on the same lake.

It really seemed to me that some one ought to say a word or two in favor of the Rangeley route, to let gentlemen know that there at least used to be a way to get to Seven Ponds from there. As Mr. T. prefers the rail car to the stage coach, suppose we start from where the car leaves us. He has generously allowed me thirty miles from Seven Ponds to Rangeley, and the twenty miles to the iron horse. It is a route that is a distance fifty miles. By the other route he has given us eighteen miles from Seven Ponds to Mr. Smith's house. Now, adding the fifty miles from Smith's house to the rail car at Farmington, we have thirty-eight miles, a distance in favor of the Rangeley route of seventeen miles. I will "red my eyes" and remain where the ten or eleven miles from Tim Pond to Seven Ponds will probably hold out according to the time it took Mr. T. to walk it last summer. If I remember right he was until well into the afternoon doing it. He probably is not a great walker.

Since we have been so confidentially reminded that our Rangeley fishing "needs rest," I will say that the fish have been having a rest for the last four years. During this time the Union Water Power Co., of Lewiston, who control these lakes, have kept them a little higher than nature intended them to be; and the trout have been making a change in their location since then, and perhaps "Steve" has not found just the place, since the change, where he is sure of one every time he "chucks a bug." The fish Commissioners say that the fish are increasing. Guides generally say they are increasing, and from what I have seen by taking notice of the different spawning grounds and the spawning seasons for the last nine years I should surely say they were increasing. The waters of our lakes are wide and deep, and the several fish that trout live on are plentiful enough to warrant good fishing in the Rangeley Lakes for years to come, in spite of the troubles of travel. There are many ponds woven in with our lake, and in some of them I have seen as good fishing as I ever saw at Seven Ponds.

May I think to Mr. T. for so kindly inviting me to his cabin. If it ever comes in my way I will surely call, and I should be glad to be introduced to him, to his loved ones and to his friends; and I would also be most happy to see the entire circle at Camps Beuis. I would again "manifest my amiable spirit," and they should have the best of the camp, indeed. I would tell them all the interesting stories I could think of, and, as business is business, the charges would be two dollars per day apiece. I am sure we should be the best of friends.

CAPT. F. C. BARKER.

Natural History.

THE POISON IVY.

THERE is one danger to which people who spend much of their time in the fields and woods are exposed, which is not generally appreciated. There are a few native plants that are so poisonous that contact with them is to many people productive of severe and long continued suffering. The best known, as they are the most injurious of these plants, are two species of the genus *Rhus*, and very many individuals are susceptible to their baneful influences.

We have known men who believed themselves unable to approach within several yards of either the poison ivy or the poison sumach, without being very severely affected, and it is quite common to find among farmers and farm hands, individuals who have been severely poisoned from standing in the smoke of the burning brush. As a natural consequence of the different degrees of susceptibility to the poison in different individuals, it follows that, while to some contact with these plants brings intense and long continued suffering, to others there results only a trifling and temporary inconvenience, while some people are not at all affected by it.

Sportsmen are especially exposed to danger from this poison, for in traveling through the brush they are extremely liable to come in contact with these plants, and that at a season when the leaves being off, they are not so readily recognized as when in full foliage.

In a recent article in *Harper's Young People*, Mr. A. W. Roberts contributes some interesting information on the Poison Ivy, from which we quote below:

"Poison ivy, poison oak and mercury vine are the common names for one and the same vine, found climbing up the trunks of trees, on rail, board and stone fences, over rocks and bushes, in the fields and meadows; in fact, wherever and anywhere it can secure a foot of ground, no matter how poor, or how much exposed to the scorching rays of the sun, this wretched vine prospers, happy and contented to spread out its poisonous arms hidden beneath its glossy and graceful foliage."

Rhus toxicodendron.

This plant, which is the more abundant of the two poisonous species, is often found growing in great profusion on the seashore. "Here, when the ivy has a chance to climb up a tree trunk, up it is, and, throwing its aerial rootlets in all directions, when growing away from any support, in the sand which is being constantly displaced by the strong ocean winds, it then grows stout, erect and bushy like. Under these peculiar circumstances of growth it has received the name of *poison oak*, and was supposed by many botanists to be a separate variety, though in fact the poison ivy and oak are one and the same thing. When the stem of the poison ivy is wounded, a milky juice issues from the wound. The leaves, after being separated from the vine, turn black when exposed to the air.

The stem of the vine is nearly smooth in texture; the aerial rootlets, which start from all parts of the stem, are of a bright brown color when young. The masses of berries when unripe are of a light green color; when ripe, of an ashen gray. Below the mass of this year's berries are gener-

ally to be found those of last year. The leaf has a smooth and somewhat shiny texture, and curves downward from the midrib. To many people the slightest contact with the leaves of the ivy will produce poisoning. I have known of instances where persons in passing masses of ivy vine, particularly when the wind was blowing from the vice toward the passer-by, became severely poisoned. One of our most beautiful native vines, the so-called Virginia creeper, which frequently grows side by side with the ivy, is often mistaken for it and blamed for the evil doings of its neighbor, and yet is an innocent and beautiful vine. The Virginia creeper has a leaf consisting of five lobes, which are distinctly notched, and which curve upward from the midrib. Instead of aerial rootlets like the ivy, it has stout tendrils more or less twisted and curled, often assuming the form of a spiral spring. These tendrils are provided with a disk, by means of which an attachment is made to any object within reach. The stem has the appearance of being jointed. The berries are large and grapelike in the form of the cluster, and when ripe are of a deep blue color, with heavy bloom. In the fall of the year the leaves turn to a deep red and brownish red color.

"The poison-sumac, swamp sumac, or dogwood, is ten times more severe in its poisoning qualities than the poison ivy. It grows from six to ten feet in height in low, marshy grounds. The berries are smooth, white or dun-colored, and in form and size closely resemble those of the ivy.

"This sumac is terrible in its effects, often causing temporary blindness."

The poison oak, or poison dogwood, as the *Rhus venenata* is indifferently called, sometimes grows to a height of not less than twenty feet, and becomes as thick as the calf of a man's leg. It does not always grow in swampy ground, being often found on knolls and moderately elevated ridges. It is a plant which once known will always be recognized, as its foliage and its mode of growth are very characteristic.

The leaves are 7 to 10 pinnate, and bear, in shape, a general resemblance to those of the hickory, but are smaller. The bark is smooth. Some persons are so easily affected by this plant that a leaf drawn across the hand will leave a red streak, resembling a scratch, on which blisters will almost at once appear.

This variety is not a vine but a shrub or small tree, and early in the fall the leaves of this plant assume very beautiful tints of red and yellow, and from their attractive colors they are often plucked to adorn country houses. We have known of a number of terrible cases of poisoning which resulted from this carelessness. In one instance, which came under our immediate observation, three ladies, who in September had gathered branches of these brightly colored leaves, held them, during their walk back to the house, close by their faces, as a protection from the afternoon sun. As a result of this, all three were so severely poisoned as to be confined to their beds for six weeks. The berries, too, are sometimes gathered for the purpose of home adornment, and give rise to similar poisoning. Instances are on record where people have been poisoned by sleeping in a room in which a cluster of these berries hung. We give a figure of the berries of this species.

Many remedies have been suggested for this poisoning, but most of them are either ineffectual or so slow in their action as to be practically worthless. A solution of 60 grains of sulphate of zinc in 8 ounces of water was recommended some years ago in the *FORESTER AND STREAM* as very effective, but we have had no personal experience with it. Another remedy is said to be to eat the leaves and berries, but this is an experiment that we fancy most people would hesitate to try. An infusion of the bark of the tamarac (*Larix*) is another popu-

lar medicine. The most effective and speedy treatment that we have ever seen tried is the following: As soon as the "blisters" appear, paint them and the surrounding parts with tincture of iodine as strong as can be borne; then puncture the vesicles, dry up the moisture with a cloth, and dust freely with rice powder, sometimes called shaving or baby powder. Of course, different remedies may be used with varying effects, according to the susceptibility of the system of the patient to the poison, but we have found this very efficacious.

The poisonous sumachs are not without a certain economic value. From the leaves of *Rhus toxicodendron* a strong indelible ink is made, and from the juice of a poisonous sumach which grows in Japan a beautiful lacquer varnish is manufactured. The fumes of this juice are said to be so potent that Europeans passing the factory are poisoned by it, and it is even stated that those who handle the varnished good are likely to suffer.

A QUEER FOX.

CLINTON, Ct., Dec. 15, 1891.

Editor *Forest and Stream*:

Very recently Mr. George Buell, a gentleman living in our neighborhood, killed a peculiar looking animal that has bothered us to classify. At the first glance no one would hesitate to say it was a fox; and, doubtless, that is just what it is; but a closer examination would incline one almost to believe, if such were possible, that it is no very distant relation to a woodchuck. Let me give a careful description of the animal, as I saw it, after Dr. A. H. Stevens, who is a skillful taxidermist, had set it up. The comparison is made with a specimen of the common red fox:

The general shape was that of a fox; the body was round and fat, and the size about two thirds of that of a full-grown fox; legs rather short; ears more rounded than those of a fox, and the tips blunt. The whole back, sides, shoulders and thighs are rich mottled gray, caused by the hairs being each black and white above the fur, beginning white and ending black—the hairs of the red fox beginning white above the fur and ending yellow. Down the tail, the upper side was a jet black, running to the very end, and instead of being round and bushy, like a fox's tail, was like that of a setter dog; in fact the tail looked more like that of a setter dog than it did that of a fox. Buck of the ears the color was a continuous red down to the shoulders on either side. The fur was not so soft nor so dense as that of a fox, and reminded one of the hair of a woodchuck. The gray color of the body extended down to the feet. In short, in the red fox, the reddish yellow is the predominant tint, and shades off into the other colors; in this animal the woodchuck gray predominates, and there is but little of reddish yellow color, except the under side of the tail.

We should like to know if you or any of your readers can tell what kind of a fox the above-described animal is, as we have never seen one like it before in this country?

Mr. George Buell, mentioned above, hunted on a fence in front of him as he was about to water his horse. The fox hesitated a moment on the fence, when Mr. Buell hurled a brickbat at him, and struck him just back of the head, and killed him. That, perhaps, was the first fox ever killed in exactly that way; and Mr. Buell's friends thought to equip him with a sling and leather bag, but we believe that his modesty made him decline the honor.

C. W. R.

[May the specimen not have been a gray fox (*Urocyon cinereo-argenteus*), but if so, how about the tail?]

THE ENEMIES OF GAME BIRDS.

NEW RUSSIA, Dec. 17th, 1891.

Editor *Forest and Stream*:

Your Ferrisburg correspondent R. E. R. says: "If squirrels kill young grouse, why not chickens?" One of my neighbors who lives near a grove, informs me that hearing one day an outcry in a coop of young chickens, he went out and found a red squirrel attacking them. It had already killed one or two. He drove it away three times that day, but each time it succeeded in killing some of them. A shooting friend also informs me that he found a grouse's nest of a dozen eggs, each egg bitten into by what he thought was squirrel's teeth.

Now, it is nonsense to think that they destroy tree-nesting birds and would not do the same for those that nest on the ground.

When red squirrels are about as thick as we generally see them, the harm they do to the grouse may be as serious as to hawks and foxes; but when they get to be as thick as house flies, one to every square rod of woodland, as they do sometimes, and take it upon them to move through the country in May and June in a half-starved condition, then look out for your grouse crop. It will not take a very shrewd guesser to foretell what the next autumn's shooting will be.

I should think the tick might destroy some grouse where the soil is hard, clay for instance, because they have no soft dirt to wallow in. Grouse wallow in the dust as persistently as barn-yard swine. They do it to free themselves from vermin.

I have never observed any ticks on the grouse in this part of the country, but it being a sandy region may have something to do with it.

BAINBRIDGE BISHOP.

THE DECREASE OF RUFFED GROUSE.—Sherbrooke, Canada.—The decrease of ruffed grouse is also a matter of interest to us. I don't know but we can kill as many in a day now as we could five years ago, but we certainly have to go further. Out of twenty-one grouse picked up last month, only one was a female. Do you or any of your readers attach any significance to that fact?—CANADA.

RESTAURANT NATURAL HISTORY.—In front of a popular restaurant in New York city there hung a young caribou one day. A explanatory placard accompanied the following truthful legend, which we give verbatim, capitals and all: "*Caribou*. Native of Greenland. Captured in the Neighborhood of the wreck of the *Janetie*. Procured for this Hotel Direct. These Animals the caribou are not for their Peculiarity as Relative to their Mode of living, having nothing but Water Ice & Snow visible to the human Being For their Sustenance."

TAME QUAIL.—Chicago, Ill., Dec. 20.—I have a tame quail at home, which was caught last June just after being hatched. He runs at liberty through the house and will respond to a whistle readily.—TEX BORE.

ENGLISH AND AMERICAN SONG BIRDS are the subject of an article by John Burroughs in the January Century.

I agree with "Kull of Grouse," where he says: "It is the very skill and nerve required to bag grouse in difficult places that afford the fascination of the sport and build up the muscle and tones up the system," and as far as travel is concerned I could convince him that I am no "slouch shot" in cover or open field, and can snap-shot as many in close timber or thicket, without the gun to the shoulder, as the best of them I have ever met. But in the Eastern and some of the Middle States and Canada, where abundance of thick timber and brush preclude the possibility of war-

shooting and grouse are abundant, and die of old age and natural causes, and are certainly "good for man to eat," then cockers are a pleasant aid in preventing a few from going to waste. Stop the scaring and trapping of grouse, and the clearing of timber, and grouse will always hold their own in spite of the gun or treacher cocker. I have watched this in sections where cockers and guns were out almost continually during the open season, and even some few years I have known them to grow more and more plenty each year. We can readily perceive that "Ruffed Grouse" is an advocate of setters or pointers, but we hope he will not show the disposition of the "dog in the manger," and wish us not to use the legitimate cocker because he does not choose to.

He tries to impress upon you that we are "not hunters." 'Tis true that we put our birds in the "pot" and do not send them to market, or willfully destroy or let them go to waste by spilling on our hands. But are we to suppose that "Ruffed Grouse" has never put any in the pot, or is doing the opposite from what we are with our birds? We certainly hope not. The very best of our honored present and old time sportsmen that have had extensive experience with ruffed grouse all acknowledge that shooting this bundle of witchcraft and feathers upon the wing, or over skilled treacher setters is as sportsmanlike, legitimate and exciting as any sport with the gun known, and is not "pot hunting" in any form of its definition.

M. P. McKEON.

LOADING FOR GAME.

LOADING FOR GAME.—Much diversity of opinion prevails as to the correct loading for different kinds of game. It is a subject upon which we would like to hear the experience of gunners.—*FOREST AND STREAM*, Dec. 15, 1881.

No two gunners will agree, probably, as to just what constitutes the most killing charge for any given kind of game. In a 16, 12, 10 or 6 gauge gun.

Of course all will agree that different gauges require different charges of powder, and that a 16 gauge would be but a "squib" in a 6-gauge gun, but an over-load for a 20 gauge 24 drachms of No. 1 (fine) powder in a 20 gauge gun would, with a corresponding quantity of No. 8 shot, increase the recoil without increasing the penetration; besides, the powder would not all burn before leaving the gun (which will account for the decreased penetration), while 34 drachms of No. 3 (coarse) in a 6-gauge gun, with a corresponding charge of No. 8 shot, would be little more than a "squib," producing but slight recoil and poor penetration. It is also clear that different gauges require different charges of shot as well as of powder. And to some extent the charges of both powder and shot should vary in the same gauge as the sizes vary from fine to coarse.

Powder and shot should be weighed, not measured, if great accuracy be aimed at; for, bulk per bulk by measure, the coarse grained powder (No. 3) will weigh about 1.9 more than fine (No. 1), and it will be found about the same between coarse and fine shot (No. 1 and No. 8).

In order to answer your inquiry correctly, or rather with an approximation, you will find that if we fairly considered the correct loading for different kinds of game, it will be found necessary to take into the account: 1st, gauge of the gun and its weight; 2d, size of the powder and shot; 3d, weight of the powder and shot, and 4th, the size and toughness of the game and the distance off (assuming that to be from 35 to 60 yards, according to the size of the shot used).

Keeping these points in mind, and omitting to particularize each kind of game, but grouping them according to their size and toughness, I give the result of over forty years' experience, trusting it may do you some good and lead to further and more scientific investigation.

FOR 10-GAUGE GUN.

1. For large game, such as deer, turkey, geese, etc., use 34 to 44 drachms of No. 1 (fine) and No. 3 (coarse) powder, mixed half and half, with two pink-eyed wads of one felt wad over the powder, and 12 to 14 oz. shot, from No. 1 to B. B's inclusive, with one Baldwin wad over the shot, the wads in metallic shells to be two sizes larger than the gauge of the gun; in paper shells one size larger if metallic wads are used in loading, to prevent the bulging and enlargement of the paper shell.

2. For medium-sized game, such as canvas-backs, mallard, red-head, dusky-ducks, widgeon, gadwall, pintail, and birds of that class, when in the plumage, use 4 to 44 drachms of fine and coarse mixed powder, as in No. 1, and same kind of wads; with 12 to 14 oz. shot, from No. 5 to No. 2 inclusive, using your judgment in choosing about the proper size of shot for the kind of shooting, whether canvas-back, etc., on points, or mallard, etc., over decoys.

3. For small game and birds that usually lie close, such as snipe, woodcock, plover, gallinule (rail), pinnate and rough-legged, teal, summer ducks, etc., etc.: 4 to 44 drachms mixed powder, as in No. 1, wads the same, with 12 to 14 oz. shot, from No. 9 to No. 6 inclusive, judging always which is the proper sized shot for the work in hand, say 9's and 8's for snipe, woodcock, etc., and 7's and 6's for grouse, etc.

From a great number of trials it is found that in a 10-gauge gun, 34 drachms of mixed powder (1 and 3), with 12 oz. shot, will produce the maximum initial velocity and penetration of which the gun is capable, and probably will give the best average pattern.

FOR 12-GAUGE GUN.

1. For shooting large game: 23 to 3 drachms of mixed powder, Nos. 1 and 2 (Oriental, for instance), one pink-eyed or felt wad over the powder and one Baldwin over the shot (in all small gauges two wads over the powder increases the recoil and adds but a trifle, if any, to the penetration and pattern), with 1 oz. of shot, from No. 1 to B's inclusive.

2. For medium-sized gun: 3 to 34 drachms powder (mixed 1 and 2), with 1 oz. of shot from No. 5 to No. 2 inclusive.

3. For small game and close-lying birds: 34 to 4 drachms mixed powder (Nos. 1 and 2) and 1 oz. shot from No. 9 to No. 6 inclusive, 34 best.

FOR 14, 16 AND 20-GAUGE GUNS.

and for medium and small game, load with 24 to 34 drachms No. 1 (fine) powder and 1 oz. shot for 14 gauge; 24 to 3 drachms No. 1 powder and 1 oz. shot for 16 gauge; and 24 to 34 drachms No. 1 powder and 1 oz. shot for 20 gauge.

FOR 6-GAUGE GUNS.

1. For large game: 42 to 5 drachms No. 3 (coarse) powder and 12 to 14 oz. shot from No. 1 to treble 8 G, using two pink-eyed wads or one felt wad over powder and one wad over shot, two sizes larger than gauge of gun.

2. For medium game: 5 to 6 drachms of No. 8 (coarse)

powder and 12 to 2 oz. shot, from No. 8 to No. 2 inclusive, wad the same as in No. 1.

These charges may not always produce the greatest initial velocity and penetration, but it is confidently believed that, taking into the account the penetration and pattern, they will be found, in the long run, the best and most killing charges. The impact of three or four shot with less velocity will be more likely to kill than one or two shot with greater velocity. It should be borne in mind that there is found to be a difference of from 15 to 25 per cent. in favor of metallic shells over paper, in penetration and pattern combined.

Heavier charges have been and may continue to be used, but they will result in more recoil, greater recoil, black-and-blue shoulders, without any increase of pleasure or bag.

Cleveland, O.

D. W. Cross.

AN ARKANSAS GAME COUNTRY.

Looking over notices of the many game resorts of our country I see nothing from this region, which is, I think, the best of all for general sport. By this region I mean the lower White River country, or Arkansas and Prairie counties, Arkansas. The Memphis and Little Rock Railroad traverses a Prairie country from east to west, making it easily accessible to the Memphis and Little Rock sportsmen, therefore it is becoming somewhat popular. But yet immense quantities of deer, bear, turkey, chickens and quail have been brought to bag there this season.

But the region for sport par excellence is Arkansas county, immediately south of Prairie county, and lying between the junction of the White and Arkansas rivers. This is a region seldom reached by outside sportsmen, and game of all kinds abound. The country is about half prairie and half timber, and abounds in nearly all the game found in any of the older States, except ruffed grouse. Here we have bear, deer, porcupine, beaver, wildcats, opossums, weasels, rabbits—two kinds—turkeys, geese, ducks, prairie chickens, quail, squirrels and minks in great abundance. In December, January and February ducks and geese swarm on the prairies and in the great bays, lakes and lagoons of the White and Arkansas river bottoms, in countless millions; and also sundrill cranes on the prairies in February—all these making a variety of sport great enough to please all.

The large bays and lakes (old river channels) in the White River bottoms, deep, clear pools, abundant in black bass and other game fishes, and the beautiful White River, the finest stream on the continent, navigable for 700 miles, contains both these and great blue or channel catfish. The patient follower of "old Isaac" can satiate himself with his favorite sport.

The winter climate of this region is the finest on the continent; its people are hospitable, glad to see and kind to visitors. This town of Crockett's Bluff, founded by the descendants of the ancient and renowned Col. Davy Crockett, is the center of this fine game region. The old town has gone to seed and dried up since the war, but still good accommodations can be had here at reasonable prices. The old Crockett family is worthily represented by Col. "Bob" Crockett, a "chip off the old block," a pleasant, genial, hospitable gentleman. He has in his possession the old Crockett rifle, presented to his grandfather, Col. Davy, by five hundred young men of Philadelphia, while he was member of Congress from Tennessee, and other mementoes. This old rifle is yet one of the finest deer guns in the nation.

The hunting season here is from December until March, and we are sorry to say that they kill deer here as late as April, and then again in June. But the deer are so plenty that the people are forced to kill them in self-defense. (Don't mistake my meaning, please; deer don't "bite," but they eat up their field peas and watermelons.) But this kind of deer murder should be stopped. Arkansas needs, and needs very badly, stringent game laws.

This country is at this time the best stock country on the continent—that is, for cattle and hogs. They neither of them need nor care for any protection, and generally remain fat the year around. Cattle have the prairies in the summer and the immense canyons to winter in. Hogs have the immense mast of nuts, acorns, persimmons and berries, and even this season, when all of these were almost an entire failure, the hogs (great herds of them) are in fine condition—many of them fat enough for good pork. Land is very, very cheap here. The climate is as healthy as in any of the Western States where the soil is very rich. Crockett's Bluff can be reached by the White River steamboats from Memphis—a very pleasant trip—boats first-class—or by railroad to De Wail's Bluff and thence to Crockett's Bluff by White River boats.

One firm made one shipment of 183 deer from this region by one boat, besides other game.

Crockett's Bluff, Arkansas county, Ark., December, 1881.

FLORIDA WINTER NOTES.

JACKSONVILLE, Dec. 20.

FOR three months the weather has been out of joint—cloudy during the day, foggy at night, and anything but reasonable. It has now cleared off, and it is probable that in the future we shall have a dry atmosphere, a bountiful supply of sunshine, and the glorious winter weather for which Florida is famous.

Ducks have appeared in great numbers on the St. Johns river, below this city. As usual, quail are very plentiful in every portion of the State.

Last week I enjoyed several pleasant visits from the great canoeist, Mr. Bishop, of Lake George, N. Y. He is accompanied by his estimable lady, and they intend indulging in a short trip of some duration on the Indian River. On Tuesday last, too, Dr. Henshall, the great authority on black bass, called on me. He, in company with his wife, started on Saturday for Titusville. On arriving at that point they will take possession of a small schooner, and will devote over three months to a cruise around the coast from Indian River to Cedar Keys. The Doctor promised that he would write up for your columns certain portions of the Southwest Coast that I have not described.

This city has long been famous for its superior hotels, and it affords me pleasure to state that the National Hotel, in Bay street, has been purchased by Mr. Nathaniel Webster, of Gloucester, Mass., and has been named the Everett. It has been repaired, extended and refurnished, at an expenditure of over \$80,000. The house, containing 120 large bedrooms, is supplied with luxurious furniture. The ladies' parlor has been supplied with gorgeous fittings and a grand piano. The house fronts the south, and from its spacious veranda

a charming view of the St. Johns is obtained. Nearly every room is supplied with an open fire-place, and the entire house is heated by steam. Filtered rain water will be used for domestic purposes. The building is substantially constructed of brick, and for the safety of patrons every modern appliance has been secured and introduced, embracing fire hose on every floor and Babcock fire extinguishers. The hydraulic elevator was built by Moore & Wynum, of Boston, and it is supplied with safety appliances which render accidents impossible. The Everett has been leased by Mr. Everett Webster, of Gloucester, Mass., and Mr. William P. Davis, late of the Carleton Hotel, of this city. Mr. Davis, Sr., will give his personal attention to the business, which will be a sufficient guarantee that guests will not be disappointed. The names of the parties connected with the hotel are: Day clerk, J. W. Potter, late of Highland Home Hotel, Martha's Vineyard; night clerk, W. S. Bigelow, late of Seaford House, New Haven, Conn.; cashier, W. F. Young, Fitchburg, Mass.; \$3 to \$5 per day. From what we know of the proprietors and the superior fittings we can confidently recommend the Everett to the favorable notice of the readers of *FOREST AND STREAM*.

On several occasions we have referred to the advantages of the Southwest Coast of Florida as a winter resort for canoeists. Two weeks since Mr. Monroe, editor of *Harper's Young Folks*, called, and I furnished him with necessary information. He launched his canoe, Psyche, at Ellenville, and descended the Suwanee River. At last accounts he was at Cedar Keys, en route for Charlotte Harbor, the Caloosahatchie River, Lake Ocheechee, Kissimmee River, Indian River, and St. Johns River to this city.

AL. FRESKO.

SANFORD, Fla., Dec. 15.—Quail are fairly plenty in this vicinity. There are, to my knowledge, at least four coveys within half a mile from our place, four miles out from the town itself.

Ducks and snipe are reported as plenty on the river, and yesterday several deer were brought into town from the surrounding country.

The heavy rains of the past week or so have kept me from taking any trips. I have, however, managed to get some quail around the place. By the way, I had quite an interesting experience the other day. My dog stopped at a clump of palmetto, and I gave it a kick, expecting there was a bunch of quail there. Immediately the dog made a jump and seized a large skunk. The skunk came to the dog's mouth and held on. I whistled at the dog and he killed the skunk. I think there is no danger from rabies in the dog, as I have had several dogs bitten by skunks with no bad results.

T. TRUMP.

LORD DUNRAVEN AND THE NOVA SCOTIA GAME LAWS.

HALIFAX, NOVA SCOTIA, Dec. 24, 1881.

Editor Forest and Stream:

SIR—In your issue of the 22d inst. you publish a letter written by Lord Dunraven, which is intended as a reply to some remarks for which I am indebted to your paper on the subject of his lordship's arrest in Queens county some time since for a breach of the game laws, which requires some comments from me.

I observe that a Halifax morning paper, the *Herald*, characterizes his lordship's letter as a "very clever one," and laments that "a gentleman of such distinguished literary ability, and one whose influence in England is very great, should have been subjected to such an unpleasantness as being arrested for a breach of the game laws, and hopes that he will not give our people a bad name."

Now, I have no wish to cast any reflections upon the noble Earl's ability, both as a mighty hunter and a writer of several very interesting works, which I have read with much pleasure, but in this letter I submit that his cleverness is only exhibited by his aptitude for special pleading, and his attempts to evade the real points at issue between us, as I shall endeavor to show.

His lordship charges me with falling into the same error as that in supposing that the game licenses are good for the whole Province and are issued in Halifax. I did say so, and I now repeat it, and will prove that I am correct. It will be remembered that I was combating the assertion made by his apologist, the *New York World*, that the only mistake his lordship made was in not taking out a county license, and I stated that no such licenses were issued under our laws. The assertion that the game licenses are issued in Halifax is proved by the fact that they must be signed by the Commissioner and Chief Game Commissioner, who both reside in Halifax. It is true, as I stated in a former letter, that for the convenience of sportsmen entering the Province, in remote districts, a certain number are deposited with the Clerks of the Peace or municipalities, from whom they can be procured without reference to headquarters. That a license is good to hunt "over the whole Province," as I asserted, is easily proved. The Province is divided, for the purpose of the act, into six game districts, each comprising several counties, over which are appointed a Commissioner and several Wardens. A hunter is allowed to kill in any one season two moose and one caribou—six animals in all—so that it might happen that he could kill one in each district of the Province under the same license, taking the precaution to make affidavit before the Clerk of the Peace in the district to which he removes of the number of animals he is yet entitled to kill. And here it appears that not having the Act by me when I wrote my first letter I committed the error of stating that the affidavit should be made before the "Game Commissioner," a not very material point. Having thus, I think, clearly shown that I was correct in my view of the law upon these two points, I pass on to the real question in this case, which his lordship very conveniently winks out of sight—viz., was he, or was he not, guilty of a breach of the game laws of this Province by hunting without a license of any sort?

Out of his own mouth I will convict him. He says that he "telegraphed to his agent in this city (Mr. James Scott) to send his servant to Calicut and to obtain a license, over which he appointed a Commissioner and several Wardens. A hunter is allowed to kill in any one season two moose and one caribou—six animals in all—so that it might happen that he could kill one in each district of the Province under the same license, taking the precaution to make affidavit before the Clerk of the Peace in the district to which he removes of the number of animals he is yet entitled to kill. And here it appears that not having the Act by me when I wrote my first letter I committed the error of stating that the affidavit should be made before the "Game Commissioner," a not very material point. Having thus, I think, clearly shown that I was correct in my view of the law upon these two points, I pass on to the real question in this case, which his lordship very conveniently winks out of sight—viz., was he, or was he not, guilty of a breach of the game laws of this Province by hunting without a license of any sort?

ant of the fact that he ought to have procured his license in the district is a very lame one, indeed. *Ignorantia legis neminem excusat* is a maxim that his lordship ought to be familiar with. He could easily have rectified his error by inquiry of the Clerk of the Peace or Game Commissioner (the resident judge at Caledonia) or any Warden.

Now, having, I think, shown by his own evidence that his lordship was clearly liable to be fined for hunting without a license, a word as to the way he was dealt with. He complains that he had not all the formalities of "trial, conviction and sentence," and asks if it is right to hang a man without these preliminaries. Certainly not. But this is a very different case, and his lordship having been caught *in flagrante delicto*, I do not think there was anything to try. A clause in the Game Laws (Sec. 29) reads that "every holder of a license must produce the same when required so to do by any Justice of the Peace, Game Commissioner, or Warden," or officer of the Game Protection Society, or that if his lordship, being a non-resident, was found hunting, and could not produce his license when called upon, I am inclined to think he could be fined on view, as is done under the Fishery Act. However this may be (and I am only expressing my own opinion), I believe, upon reflection, that his arrest under a capias was not illegal. The section (31) relating to the collection of penalties, reads:

"Any penalty imposed by this Act may be recovered in a summary manner, *in the summary manner* as a *private debt*, in the name of any person who may sue for the same."

Now, in the case of a private debt, any person can take out a capias against a debtor by swearing that he is about to leave the county, etc. That could have been easily and properly done in this case, and then his lordship could have given bail, and had his trial if he wanted one. And this right to arrest by capias is a very necessary one in order to carry out the law—for what would be the use of issuing a summons to a transient person who, before the day of trial, would be out of the county—so that anyway I fail to see where the "harsh treatment" comes in. There are several other points in his lordship's letter which I would like to remark upon, but this letter has already grown too long—one let me briefly allude to. He says that "no one supposes that the object of the Game Society is to make money out of strangers." He forgets that his champion, the New York *World* (inspired no doubt by its interview with him), very intemperately remarks that "the object of the game laws of this interesting region (Nova Scotia) seems to be more to extort money from the wayfaring sportsmen than the preservation of the game, and compares the officials of the law to the harpies who infest Niagara Falls demanding money from visitors at every turn," and one of the objects of my first letter to the *FOREST AND STREAM* was to correct this misstatement, so calculated to injure the character of our game officials among sportsmen abroad.

I am sorry that his lordship holds the opinion that our Game Laws are inadequate for the purpose and are inadequately administered." The statement that the law is a dead letter as far as the natives (under which term, I suppose, he includes Indians and other Nova Scotians) are concerned is not correct. I know of many prosecutions and convictions of residents—so much so that the poor backwoodsman (for whom there might be some excuse if they killed more than the prescribed number of animals for food for their families) complain that they are punished, while, too often, the gentlemen sportsmen, who kill for pleasure, escape. But no human laws are perfect, and I am free to admit that there may be imperfections and discrepancies in our Game Laws. All that I can say is that a great deal of care and attention were bestowed upon their preparation by the gentlemen who framed them, and that their sole desire was to endeavor to put upon the statute book a law suitable to the requirements of the country. In conclusion, I would invite his lordship to join our society. A contribution of ten dollars will make him an honorary member, and he will thus be assisting the friends of a very useful society, and at the same time be able to give us the benefit of his varied experience as a sportsman in amending and removing whatever incongruities may exist in the present Game Laws of this Province.

A MEMBER OF THE NOVA SCOTIA GAME PROTECTION SOCIETY.
Halifax, N. S., Dec. 10, 1881.

THE POT-HUNTING SON OF HAM.

HEARNE, TEXAS, DEC. 3, 1881.

Editor *Forest and Stream*:

I am indignant. The cause of my wrath is this: One day this week, two fellows came into town, each with a covered wagon or "prairie schooner;" and they were peddling live quail, which they claimed to have trapped, to the number of thirteen hundred in four days. Now, at one time I was a boy; and that boy dearly loved to set traps and catch quail, and I think I know enough about it to know that this exploit of catching thirteen hundred in four days is manifestly impossible. They must have used nets and driven the quail into them. Is there no way in which this wholesale destruction of game birds can be stopped? Is there no law to protect them from these wretched pot-hunters? Why don't our Legislature do something to protect the game while there is plenty here to protect; and not as some of our sister States have done, of late, where the game is all destroyed, and then make laws to protect birds that are extinct or very nearly so? "An ounce of prevention is better than a pound of cure." If laws were made and enforced now, while game is plenty, there would still be plenty for generations to come.

Another thing that is driving the game away, though destroying comparatively little, is the negro with his old army musket. He is very numerous in Texas, and especially so in the vicinity of the Brazos River. He is not a hunter, and he does not shoot for sport. He is a pot-hunter, and he goes to sleep by it. He carries his old relic of war-times wherever he goes, and no matter whether in season or out of it, he hangs away at everything in the shape of a bird that is so unfrightened as to fall in his way. You have some nice pond or some place on the river where you have been preparing to go for a week, and know perfectly well that you will find duck there, and are "dead sure" no one knows of the existence of this particular "duck-hole" except yourself. You go there at the first peep of day, and there you are, and there are these animated black waddling storks, who has been there for two hours. If any ducks have been there, and he managed to get pretty close to them, and his old fifty-pounder didn't bang fire, he probably got one, seldom more. He watches that place all winter, after he has killed one duck there.

When he finds where a covey of quail "use," he takes his gun, and goes out early in the morning or late in the evening and watches for them. As soon as he gets them as nearly in a bunch as possible, he "turns loose" his old cannon. When he "comes on" and finds his gun hasn't "busted," he takes what he has killed, never getting what have only been crippled and hobbled off to die, and goes to town to sell his bounty.

He is one of the evils with which this country has been afflicted ever since the war. You can't get rid of him, nor away from him. He is in every clump of bushes in the country. If you ask information of him about game, he tells you willingly all he knows to be a lie. But he can't shoot on the wing, and he never owns any dog but a manny cur. Pointers and setters and their workings are a mystery to him, and I hope they will remain so.

I wish some of our Texas sportsmen would look into this netting and trapping business, and see if it cannot be remedied by law. I would bring it before them in your valuable paper, and stir them up.

When I wrote you last, we had promise of a fine season, but since then it has turned warm and no wild fowl are stopping here at all. Quail and deer are plenty; but no snipe.

B. C. H.

WASHINGTON, DEC. 18.—Having an office near the river, and being compelled by business to remain there after dark, I have noticed something which is contrary to all law—the gunning of ducks at night by the aid of a light fixed in the bow of the boat. The ducks being attracted by the light, swim up quite close to the boat, and are then easily killed with an ordinary gun. This practice is one which, I believe, is quite new in this vicinity, but which has existed and been stopped in Chesapeake Bay. Upon inquiry I have found this shooting is done by two negroes, who use sail-boats.—H.

NEW YEAR IN THE WOODS.

ON the First of the Year every fawn, bird and beast, Protected by law, sat down to a feast; 'Twas a Thanksgiving Dinner, hence all of them came, As the time had expired for the hunt and game. First came Mr. Buck, and his wife Mrs. Deer, Mr. Gobbler, and Mrs. Wild Turkey were there; Then came Mr. Ruffed Grouse, and pretty Miss Quail, With Mr. Buck Rabbit, and Miss Cotton Tail. Mr. Fox Squirrel, Miss Grey Squirrel and Black Squirrel, next came, With Woodcock and Snipe, too numerous to name. Mr. Pickering and Lady, and beautiful Miss Trout, And old Mr. Black Bass brought Widow Pike out. When all had arrived and the cloth had been spread, And the guests were all seated, Mr. Buck rose and said, "It affords me much pleasure to see you all here, At our annual reunion this first of the year, Yet many old friends, it grieves me to say, I miss at our Thanksgiving dinner to-day. Let us all return thanks that our lives have been spared," Cotton Tail said, "Amen! for I nearly was snared." "And I," said Wild Turkey, "came near to my end, And am thankful that I have escaped being penned." Mr. Woodcock, Miss Quail and Miss Snipe all said that They were thankful to have escaped the Hawk and the Cat. Mr. Ruffed Grouse was thankful the Fox and the Mink Had left him alive, for he really did not think Several times through the summer and fall of the year That he never would live to meet with them here. Buck Rabbit declared the Owl was his foe, And would watch him at night wherever he'd go. He was glad he was living to give thanks to-day, And now wished to hear what the squirrels might say. Mr. Fox Squirrel, Mrs. Black Squirrel, and also Miss Gray, Declared they had nothing before them to say, Except that through vigilance strictly applied, They had managed thus far to keep their own hide.

The Pickering, the Bass, the Pike and the Trout, Had various things to be thankful about. They'd escaped the fish basket, the net and the seine, The Fish Hawk, the Heron, Kingfisher and Crane. In addition to these they'd escaped all along, The angler who caught fish not four inches long. When all had given thanks then Mr. Buck said, The Pot-hunter was always his greatest dread. That while to the sportsman he'd been a late day down his life, And so would his daughter, his son or his wife, He trusted that Pan, the god of the chase, Would spare all his kindred the shame and disgrace Of being killed by a hunter to fill up his purse. For certainly nothing on earth could be worse. When the repast was finished a motion was made, That "a premium on scalps of destroyers be laid, Whether Pot-hunters, Foxes, Cats, Weasels or Mink, Or on Owls or on Hawks, for we really do think That if ten dollars per scalp were laid upon these, All sportsmen could find game wherever they'd please." A motion to amend was indignantly spurned. The first motion passed and the meeting adjourned.

SANCIO PANZA, No. 2.

TENNESSEE GAME NOTES.—Nashville, December 21.—John Nicholson has just returned from Icefield Lake. He reports ducks and geese abundant, and a large number of sportsmen to shoot them. Many of these gentlemen are from Indianapolis, Springfield and Cincinnati. The hotel at Idlewild is admirably kept, and the shooting close by is the best on the lake. This point is most easily reached from Union City, where Messrs. Cardwell or Williams will only be too happy to give visitors all the facilities within their power. Our market is now overstocked with game; quail and snipe to a dollar per dozen; chickens and raccoons from twenty-five to fifty cents, according to size. Venison only brings ten cents per pound. Wild turkey the same. Two novices in field sports went out last week, and although they emptied one hundred and seventy-five shells, only brought home a highland turtle and two woodpeckers, the other killing shot taking effect in their dog. John Burkholz said very justly, "Ten wools better stay in ze haus, abee de next time dey pin gills zun veller, und den dey pin gittin in ter benedictin." Fox hunting has been magnificent this fall; game plentiful and weather is fit made to order. William Hobbs still keeps up his nocturnal chases after 'possums.

J. D. H.

TEXAS.—Abilene, Taylor Co.—Antelope, wild turkey and quail are quite plentiful in this vicinity.—W. S. H.

STATE PIGEON TOURNAMENTS.

Editor *Forest and Stream*:

I most heartily endorse your views in relation to the slaying of pigeons at the meetings of the "Game Protective Societies" of our country. With you, I think these societies at their annual meetings can find enough to engage their time by taking active measures for the protection of our game. But if not, then let them be consistent in the eyes of the world and haul down the flag of game protection, and raise in its stead the flag of game destruction. It has long ago been written that we cannot serve two masters, and this is as true to-day as it was then.

I find in my travels, wherever I go, that the public sentiment is emphatic against these pigeon slaughters, and yet more decided against netting pigeons under any circumstances whatever. They speak the truth when they say these birds are becoming very scarce under this awful netting system, and that the time has now arrived when it should be stopped by stringing up laws in every State and Territory of the Union. I heartily endorse these sentiments.

Game societies should never forget that nearly all the sporting grounds of our States are the private domains of the people, and that it is to them we are indebted for all the sporting amusements we enjoy. Hence, we should not be blind to the privileges we receive at their hands, nor deaf to their righteous judgment. For myself, I believe in the kindness of the people, and would I treat them with ingratitude by ignoring their wishes.

Besides, these shooting matches are cruel and barbarous. I allude more particularly to the one held last year, where, under the banners of "game protection," over 40,000 pigeons are said to have been killed. These were specially netted for this occasion, and nearly 2,000 miles away, in the deep and secluded forests of the Indian Territory, bordering on Texas, where they had collected in great numbers to build their nests, they are caught, hatch their eggs and to feed and raise their young. Here among the Indian tribes, they would have been safe from the barbarism of the treacherous net, had not the greedy white man followed them there to gobble them up by thousands while they were upon their feeding grounds and seeking food for their young. Here the unsuspecting parent birds were caught and huddled into coops and carried away in wagon loads for over 100 miles, through the rough forests, and over the yet rougher roads, to the nearest railroad, and from thence they were carried as prisoners of war to Coney Island, there to await in debility and sickness their coming fate.

It is to be presumed that the young of these birds numbered at least 2,000. These were left to perish with hunger in their nests. Day after day, in their lonely nests, with mouths wide open, they anxiously await the usual return of their watchful parents to give them food. But they wait and fast in vain. The parent birds do not return. So, the young birds pine away from the stress of hunger and thirst, until death finally comes to their relief. Now, all this is no fancy sketch of mine, but is a sad and half untold reality, and may it be received and treasured up as a lesson, pointing to that humanity of feeling and action which we should all observe and follow as the rule of our lives. Especially should this be the case with all who profess to be true sportsmen.

Our motto of "game protection" is good, and let us labor to build it up.

H. W. MERRILL.

New Rochelle, N. Y.

INDIANA.—Angola, Dec. 27, 1881.—The first thing in last issue that struck me was "Real Off-Hand Shooting." Now, I have attended some of these rifle shooting matches here in the country, and find they all shoot from rest. That does not show any ability or nerve on the marksman's part, but only the quality of the gun. I like to see them stand up like men and hold their arms free from their body and shoot at a good distance and come as near the centre of the mark as they can. That shows both the nerve of the man and the qualities of the gun. I should like to hear through your columns from some of the "coon-hunters." There is plenty of "coon here, and a few hints from some of the "older heads" may add some improvement on my way of catching them. Quail and squirrels are scarce here; a few rabbits and turkeys in the swamps. I killed one of the latter on Saturday last that weighed 8 lb., with a 14 bore muzzle-loader, using double B's, which I think is a little too heavy to shoot well in that size gun.—E. R.

AN ECHO OF THE CHINA GUNS.—Sherbrooke, Quebec, Dec. 15, 1881.—Editor *Forest and Stream*: God speed you in your war against the warring game. One thing you do not mention, that is, that the "Saxon" gun is being sold under several different names. The "Zulu" and the "Ranger" are identical with the "Saxon." We have them here in the hardware stores. They are awful. But what surprises us most is that such high-class publications as the *Century Magazine* will advertise them. They may not burst for some time; but they will kill, there is no doubt of that. And what a swindle to say they are well-made and finely finished. They are the roughest, awkwardest, clumsiest, meanest looking earthquake-handles ever made. One advertisement says they were made for the French army, another, that the Zulus. Strange that even the Zulus wouldn't have them.—CANADA.

ADIRONDACK WINTER NOTES.—Moirn, Dec. 26.—We have had no snow here yet. We are so late in the season that it is favorable for deer, and if we don't have a late spring they will be likely to come out in better condition than commonly. The open weather also prevents crusting, which is better still. Beechnuts are very plentiful also, and all kinds of animals and birds that feed on them cannot fail to have plenty of food. Partridge are quite plenty about here yet, and a good stock will be left over to breed next season. I do not hear they are hunted to any amount since the open season. The fact is, that they would hunt them do not care to unless they can sell them for marks on their darts not do that. Besides, they could not find buyers now. A. C.

ONTARIO DEER.—Belleville, Ont., Dec. 3, 1881.—Deer hunters have been very successful this season, despite the destruction of large tracts of woodland by the bush fires. One party of four from this city got five deer, and another party of three got a like number, in ten days' shooting. A party of three from Henderson, N. Y., shot seven deer in as many days, and fifteen deer were got by a party from Campbellford. The method of hunting pursued here is chasing into lakes with hounds, and the game do not seem to diminish in numbers.—R. S. B.

point of beauty, there was noted: One string of white Panama pearls, worth \$25,000; one yellowish or straw-colored string of oriental pearls, worth \$20,000, and one black string, worth \$80,000. Single pearls of rare sizes, shapes and colors were seen, and their value was great.

In Japan pearls are found in several species of mollusks which do not yield them in other waters. They occur in a species of scallop, *Pecten yessoensis*, in *Arca suberata*, *Uthya pectinifera*, *Tapes semistriata*, *Haliotis gigantea* and a snail. There are statistics and chemical analyses of waters where pearls are found, and much valuable and interesting information in the appendix.

MAINE WHITEFISH TAKE THE HOOK FREELY.

Editor Forest and Stream:

I note from time to time, in letters from your correspondents, the taking of whitefish with baited hook mentioned as a rare incident. A species of the whitefish is found in many of the lakes of Maine, in the St. John, New Brunswick, and far up to the Arctic regions. Your Western whitefish is much larger than with us, weighing from two and one-half to an occasional six pounds; with us it seldom exceeds one and one-half pounds, the average being one pound. In Moosehead Lake it is taken with a baited hook alone, in fact no other mode of taking it is permitted. A summer seldom passes without some of these beautiful fish being taken on the fly by anglers who are fishing for trout. It spawns in the autumn, about the same time as the trout. It is in good eating condition for the table in March, having time to recuperate from casting its ova, and is then taken in considerable numbers through the ice, with hook and line.

My colleague and myself have taken as many as seventy-five in five hours' fishing. They are a very delicious fish, preferable, I think, even to trout. The same foregone conclusion exists in regard to this fish not taking bait as with the famous blueback trout, *Salmo gairdneri*, of the Rangeley lakes, where the real fact is that they may both be readily taken by this mode of angling, and for proper reasons, if fished for in Grand or Schoodic Lake they are only netted, indeed, no other way of taking them is known or believed in; the result is that they are only brought to market when full of spawn and least fit for the table. In Maine it is a rarely beautiful fish, more delicate in its outline and coloring than the fish of the Western lakes, a very delicate biter, and to be fished for with a small hook and minute bait, owing to the size of its mouth. The bait is kept in constant motion by slowly lifting and falling the hand about a foot, and when a slight obstruction is felt, as it is reported, it is to be taken. As we have said, it strikes quickly and you have your fish. As we have said, it has a very small mouth, and hence its peculiar mode of biting.

It is the custom with our Moosehead Lake fishermen to roast a cusk in the ashes, the flesh of which is very white when cooked, and then rub it between the hands into the hole in the ice, to attract the fish. Others anchor a bullock's lights or liver on the body of a large cusk, well slashed with the knife, as an attractive ground bait. That course, the fish, the tongue, or "laker," feeds largely on the whitefish, and is apt to "visit" our favorite fishing grounds in pursuit. We then assume a heavier line and coarser hook with a larger bait, a live chub if possible, and soon capture and send him where we hope the assassin Guitave will soon be conigned on a hempen line. We think the Western whitefish may be taken if fished for, as easily as our own. We propose to introduce our Eastern whitefish into all our lakes so soon as we can afford the proper apparatus for hatching the ova. Unlike our trout the young fry are too delicate, as is the parent fish, to be transported. They must be hatched where they can be allowed to swim directly into the waters they are intended to stock as soon as hatched.

E. M. STILLWELL.

A FISH IN AN OYSTER SHELL.

ZANESVILLE, Ohio, December, 1891.

For the edification of your readers and to satisfy my curiosity, I send you herewith a cut or drawing of a small fish, species unknown to the writer. From this and the meagre description I am able to give I hope you will explain to your readers to what species it belongs, and how you account for the peculiar and extraordinary position in which it was found.

The drawing was made by laying the fish on the enclosed slip of paper, and with a pencil I proceeded to take the outline so as to make it life-size. The dorsal fin, you will notice, is continuous to the caudal fin, and the anal fin the same. The pectoral fin appears to be larger and longer than fish of its size. There is a full row of fine teeth on the upper jaw, and on the lower jaw about one half the number of teeth less. The head is of a dark green color, with black spots or dots, as you will notice in the cut. The pectoral fin is also covered with black dots nearest the head. The body is of a darker hue, nearly black on the back, and gradually running into a dusky yellow toward the belly. Seven or eight lines or streaks of white run on each side of the body, parallel with the spinal column, from head to tail.

It came into my possession in a very extraordinary manner. During the first week in November last I called at one of our oyster dealers for shell oysters, and noticed it lying in a half shell on the counter. Expressing my surprise at it as a curiosity my friend C., the dealer, presented me with the same, and had his son, a fine lad of about seventeen summers, relate to me how it was found. The boy was on oysters, which had arrived from Baltimore, and in handling them one attracted his attention by a hollow sound. His curiosity being aroused he and a colored help proceeded to open it the usual way with a shucking knife. Failing in this they finally succeeded by the use of a hammer and mallet, and lo! in an excellent state of preservation, and floating in dirty-looking fluid like water. No oyster or anything else was found in the shell.

The shell is nothing different from that of a common oyster shell after the oyster is taken out. It has the dark spot on the inside to which the oyster is usually attached. I preserved both.

I have been a reader of Rod and Gun, and then of Forest and Stream for many years, and do not remember of having read of anything similar. No doubt many of your readers, like myself, are anxious to know several things connected with this matter. First, to what species does the fish belong? Second, how came it in the shell? Third,

why was the shell so hard to open after the oyster had been devoured, if it all?

ALCIPHON.

[Your figure is imperfect, having no ventral fins, and your description does not say whether the it has scales or not. We think we recognize the "head fish" or "oyster fish," *Dabrachius tau*, a scaleless fish common to the muddy bottoms of the Atlantic coast. The following is a partial description from "The Fishes of New York," by DeKay: "Body thick and rounded before, attenuated and compressed behind. Head broad, depressed; its width equalling its length. Skin without scales. * * * lateral line obsolete. Facial outline sloping. The eyes large, lateral, but with an almost vertical aspect, and nearly covered with a fleshy membrane. Opercle with three concealed spines. Numerous cirri along the head and mouth, and a series of from five to seven cirri on each side of the lower jaw."

DeKay described what he supposed to be another and smaller species, but which is now known to be identical with the former, and in his description ("Two-spined Trout Fish," *B. celatus*, p. 170) he says: "This little fish, which I have never known to exceed the above dimensions (1 in.), is usually found on muddy bottoms. It has frequently been brought to me between the two valves of an oyster." The fish must have entered when small and found it a good hiding place. When an oyster dies its shells often remain fixed in position.]

EFFECT OF MOONLIGHT ON FISH.

KEY WEST, Fla., Dec. 14.

Editor Forest and Stream:

Some time since I mentioned the belief prevalent here that moonlight spoiled fish, and you suggested that experiments be made to determine the question. I have acted upon the idea, and can positively say, from the result of experiments that moonlight does not *always* spoil fish. That it *never* does, I can not say. I purchased five small fish, called here "grunts," freshly caught, and preparing them all in the same manner as is always done to keep them over night, I kept some of them in the house, hung some out of doors where there was no shade or protection, and the moon could shine on them all night long, and hung the rest up out of doors where they would be subject to the influence of the night air, but out of the influence of the moon.

The next morning all were equally good, and could not be told apart, either before or after cooking. This was about two nights after full moon. Some say that it should have been tried while the moon was on the increase; but, as I have already said, I am satisfied that moonlight does not spoil fish *always*.

Still, from the testimony of many old fishermen with whom I have conversed, I am fully convinced that fish do many times spoil when left on deck or hung up in the moonlight, while those below, out of the moonshine, keep well. What the cause of this is remains to be found out. Whether it is the night air, the heavy dew, or some other atmospheric influence can not be positively said. The fishermen naturally say it is the moon, that being the most prominent phenomenon. Whether it is a factor or not, and what the other factors are, I intend to find out if it can be done by any experimenting within my power.

NIGHT FISHING.

WASHINGTON, Dec. 20, 1891.

Editor Forest and Stream:

Touching the above subject I beg to add that I have had, and seen others have, very good success in night fishing for trout in California streams—notably in the Merced River—by candle or lantern light. The trout, I am sure, are the same in day time. The process there was to set a good lamp at the edge of the water and use worms for bait. The California trout, as a rule, are not educated up to the point of rising to the fly; at least, so far as my experience and observation go.

I have also tried night fishing for trout with the fly—never with worms or other live bait—in the Maine lakes, but always without success in those waters.

FOOD OF THE ANGLER FISH—New York, Dec. 19, 1891.—Editor Forest and Stream: Last week a strange fish was seen struggling on the water off New Rochelle, and was shot. It was a large angler fish, and on being opened a cat and a gull were found in it, in their natural condition.—F. O. DE LUZE.

[We assisted on one occasion at New Haven, Conn., at the autopsy of a large specimen of the angler fish (*Lophius*), which contained no less than seven large cats. He was, as they say out West, "plumb full."]

CALIFORNIA MOUNTAIN TROUT EGGS—Rochester, N. Y., Dec. 19, 1891.—Editor Forest and Stream: The New York State Fish Commission will send any number wishing to experiment in pisciculture from 300 to 500 eggs of the California mountain trout on receipt of fifty cents to pay for the package. This species is very hardy and a valuable game and food fish. Applications must be made before March 1, 1892.—Address, SEYMOUR GREEN, Rochester, N. Y.

Fishculture.

THE "GOLD-ORF." (*Ictalus melanostictus curvatus*).

THE "Orfe," also "Ladies' Fish," is distinguished by its beautiful orange colored back and its bulky scales, which glitter like silver. Taking into account its slender, trout-like shape, it may well be called one of the most beautiful fishes.

There is scarcely a fish which as an ornamental fish, so satisfactorily meets all the demands made of it as the *Ictalus melanostictus curvatus*, which, in summer and winter, is constantly seen near the surface of the water. It does not sleep in winter like the carp and perch, and never makes the water muddy. Ever restless, the "Orfe" constantly swims near the surface to seek its food, and even when it thickly covers the pond red spots indicate that this active fish is alive.

Gold fish, gold perch and carp only occasionally rise to the surface of the water, while they seek their food at the bottom and thus make the water muddy.

The raising of the Orfe as an ornamental fish has a peculiar advantage over that of the gold fish, their young floating about in large schools, even when leaving the eggs present a remarkably beautiful appearance. Having a thickness of about two lines and a length of one-half to one centimeter, their color being a bright red with a black head, the easily frightened school swim with lightning-like rapidity from one place to the other.

It is certain that a fish which immediately on leaving the egg answers its purpose as an ornamental fish so completely is preferable to the gold fish, which does not so soon assume a brilliant color.

In the year 1858 Gesmer wrote, in his "Natural History," that the "Orfe" enjoyed a high reputation as an article of food, especially when fried, particularly in the months of April and May. Fermentation to sell the "Orfe" was only after when it had reached a certain size, as they were considered an excellent food for the sick and, consequently, it was desirable not to let the species die out. This fish was also considered a wholesome and strengthening food for women in confinement.

The "gold-orfe" is a native of Germany, and sought after by keepers of aquaria on account of their beauty. We have imported a few specimens of this new fish to America, from which we intend to propagate.

BROOK MULLERT.

Cincinnati, O.

EGGS FOR GERMANY.—The North German Lloyd steamer Oder, which sailed on Saturday, the 21st inst., took out the following lots of eggs:

300,000 whitefish eggs for von Behr, Berlin.
12,000 whitefish eggs for F. Bassé, Giesemanns.
20,000 brook trout eggs for F. Bassé, Giesemanns.
12,000 brook trout eggs for G. Ebrecht, Giesemanns.
The whitefish eggs were sent by Prof. Baird from the ponds of Frank N. Clark, Northville, Mich. The brook trout eggs were sent by Mr. Johnson Stone from the ponds of Mr. W. L. Gilbert, Plymouth, Mass.

CARP FOR PENNSYLVANIA.—Philadelphia, Dec. 24.—In a show window on Arch street, near Sixth, Philadelphia, an Assistant to the Fish Commission has in an aquarium a number of carp on exhibition. They are attracting great attention, and many more are demanded than can be supplied. The great trouble in the neighborhood of Philadelphia will be to prevent gentlemen from introducing this fish into ponds where there are gold fish; the two varieties will cross and the result of the cross will be an inferior fish to the carp. Ponds should be laid out for breeding of the carp alone.—C. S. WESTCOTT.

The Kennel.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. VI.

RETREIVING is an accomplishment that nearly all sportsmen place a high value upon, and even its opponents generally become quick converts to the practice as soon as they are fortunate enough to own a dog that is well-trained in this almost indispensable branch of canine education. We have often been amazed at the sudden change in the mind of some of these out-spoken adversaries of the practice upon their acquisition of a really good retriever. How quickly their fears that it will make him unduly vain; how soon their belief that it will ruin his nose takes flight, and henceforth the system has no stronger advocate until they get another worthless animal. We do not propose to argue the question here as to whether retrieving is detrimental to the dog or not, but will, instead, state that it is our firm belief that if our dog is properly trained, and we should, and kept up to his work as he should be, no possible harm can accrue either to his nose or steadiness; and that in no single instance where evil results have ensued was it the fault of the practice or the dog, but entirely the fault of the man; for the dog is certainly not to blame for breaking shot and chasing the wing broken bird when his master sets the example. Neither should he be blamed for repeating the indiscretion. Here we can see that the check cord and spiked collar could be used to very great advantage, but we should by no means test its efficacy upon the neck of the dumb animal.

We will now resume our lessons, reserving further remarks upon this very important subject until we come to actual work in the field. We do not think it advisable to commence teaching our pup to retrieve until he has shed his puppy teeth, and his permanent set are pretty well grown; for until this time his mouth is generally more or less inflamed, and his first teeth are sharp as needles; and we may not hope to succeed in achieving that dignity, delicate mouth—that is so indispensable to the good retriever—so certainly as we shall if we wait until his gums are hardened and he has become somewhat accustomed to his new teeth. He will also have acquired all the more experience with the added days, and will all the more readily understand what you require. We shall now derive no little benefit from our so-called "fancy training." In fact, should our pupil possess no natural taste for retrieving, we shall find it almost indispensable; and should he prove never so hard-headed and never so hard-hearted, we may rest assured that with the same fancy training we shall be able to bring him safely through, and that no doubting fears will disturb our mind when we send him for his first bird.

Our pupil should be well up in all his lessons by this time, and so perfect at *To ho* that he will not only "draw" on a piece of meat one step at a time, but he must be also so well trained that when you cluck to him as a signal that he may eat it, he will, after taking it in his mouth instantly, at your command of *To ho*, hold it perfectly still and deliver it into your hand without any hesitancy. If this has been thoroughly taught him, one-half your task in teaching him to retrieve is accomplished, and you will find it an easy matter to complete his education; for you will have no trouble in inducing him to take a single step toward you when he has the piece of meat in his mouth; and by using great care that you do not tax his patience too much by an undue haste to perfect him too soon, he will, in a short time, readily take two or three steps, and with proper care and good judgment on your part he will soon learn to readily bring you the smallest bit of meat from across the yard, and to deliver it into your hand intact.

We must again caution you to go very slow, and to be satisfied with a very little progress. In this lesson especial care must be had that each successive step is well and thoroughly learned before proceeding any further. Thus, when you have succeeded in getting him to take a step or two toward you, do not try him at a longer distance until he has had considerable practice at this, and then gradually add the step or two at the word "*bring*;" or you can use the word "*fetch*," if you prefer, but do not use more than one of them, at least until your pupil is further advanced. Of course you will have taught him to come to you when called, long before this, and by prefacing your call with the word *bring*, or *fetch*, it will not be long before he will understand its meaning; but until he does not understand it and comes readily at the word, it should not increase the distance.

There is a great difference in dogs in learning this; some of them will give you scarcely any trouble and from the first appear to know just what you want and take delight in

bringing anything you may throw for them; while others seem to be stupid and will never bring anything of their own accord. The first is a natural retriever and will be easily taught, and also easily spoiled. The last, although harder to teach, will make nearly as good a retriever as the former if the proper course is pursued. We very much dislike that a pup should retrieve before his mouth is all right and his permanent teeth well grown; for this propensity, if indulged before this time is very apt to give you a hard-mouthed dog. Hence, for this reason, we never encourage a pup to bring anything while at play. In fact he should never for a moment be allowed to think that he is at play while under instruction in any of his lessons, for there is nothing that is so conducive to bad behavior and disobedience as this. Therefore, make him realize that when you require him to do anything you mean work and not play.

Do not forget that he must never be allowed to eat the piece of meat that he has held in his mouth or brought to you, but that he must be rewarded with something different. This is a very important point, and you will find it very useful in perfecting the delicate mouth that all admire so much. You must also insist upon strict obedience to your command to drop. This can be obtained at the outset by practice with your hand, clapping his muzzle as we have before described, and this must be resorted to should he show the slightest inclination to hesitate or roll the morsel around in his mouth; for we are aiming at perfection and must be satisfied with nothing short.

When our pupil has become so proficient in this that he will pick up a piece of meat and bring it a few steps and deliver it safe into your hand, you should take a piece of cloth and loosely wrap up the meat inside of it, and commence as in the first place by putting it in his mouth and proceeding as in your first lesson at this. He will probably understand what is required and very soon perform as well with this as he did with the bare meat; but should he not like this, you must proceed with the same painstaking perseverance that we have endeavored to impress upon your mind as being of the utmost importance, until your end is attained. You will find that a piece of old cotton cloth that is clean and about as large as your two hands will do admirably. You should let him see you wrap it around the meat, that he may the more readily understand your object, and if he gives you any trouble you must be very careful that you do not try to force him too fast. Perhaps you will find it expedient to leave the meat partially exposed until he understands what is wanted. Or you can merely tie a shred of the cloth to it for a while, and very gradually increase the amount until you have it entirely covered. Your knowledge of his disposition will aid your judgment in so finding his lessons and in so conducting any new experiments that he shall not become disgusted nor sulky, thus giving you no end of trouble. Your aim should be to so handle him that his lessons shall prove a source of enjoyment, and he be ever anxious to receive your instructions. Thus you can easily accomplish by a proper system of rewards when he does well, and by withholding upon him untended caresses and praise when giving his lessons. To bring about this result you may find it advantageous to be chummy of your caresses at other times and to reserve your words of praise for your hours of practice; but this will be necessary only in extreme cases.

When our dog brings in his birds in the faultless manner that we have been at so much trouble to teach him, we shall want to see him deliver them into our hand in the same faultless style. And to secure that end we will teach him to come with his captive directly in front of us and to sit on his haunches with his head well up and quietly await our pleasure. Proceed to do this by calling him up in front of you, and placing one hand upon his hip and the other under his chin, gently, and you will cause him to come to you. You hold up his head, at the same time telling him to "sit." This will be enough for the first lesson, and by continuing in this manner he will soon sit at the word, and then you can give him the order every time that he brings the piece of meat, taking care that he sits directly in front of you every time and remains quiet for a second or two before delivering it; and in a short time he will become so accustomed to this that he will do it of his own accord. We prefer that our dog should bring his birds in the good old-fashioned way, by coming into the house and putting them down at our feet. This is the only way in which he can be taught to do so when the bird is only wing-broken, and to our mind it is far more preferable at all times. Especially is it so when among close lying birds; for with the bird in his mouth, back away from his nose, he will not be nearly so apt to flush game that may be in his path. Still we have trained dogs to fetch the bird by one wing, which is easily done by taking half a dozen of the stiff wing feathers of any game bird, or if those cannot be had, those of a fowl will answer. These should be braded together and fastened to the collar so that they will come apart. We do not recommend this style, but as many think that it is quite an accomplishment, we give our method, which has proved successful. Should you wish to adopt this course you should confine your practice entirely to this bunch of feathers, and when he brings it readily you should vary the performance by attaching different articles instead of the stone—your knife, for instance, or a bunch of keys or a bit of wood, and by always making him bring by taking the feathers in his mouth. You can try him with this to bring his birds in the same manner if you show him how with a few of his first ones by placing the wing in his mouth, or perhaps the mere showing him the wing will be sufficient.

Should you decide for the old-fashioned way, you should procure a soft ball. We have found a ball of lampwick to be the best possible thing that could be devised—it is soft and just about the right size. This should be stitched through and through, so that it will not unravel, and after he brings his bit of meat in go on where you can try him with it. You will find that the best place to pursue is to commence at the beginning, and place it in his mouth as you did the first piece of meat, and to pursue the same course by asking only one or two steps, until he gets accustomed to it. And be sure and do not try to accomplish too much at once, but go no faster than your pupil's progress will warrant. When you think that he will answer to order him to pick it up and bring it to you, watch him very closely, and if there is going to be any trouble, and he does not seem inclined to

pick it up readily, you must instantly go to him and place it in his mouth, and be content to let him bring it this way for this time, and wait until he is well hungry, and then try him by tying a piece of meat to the ball, and he will soon learn what is required and give no further trouble when he brings his ball readily. You should procure some feathers—from the body of a game bird if possible, but those of a fowl will do very well—and commence by sewing two or three of them on the ball; and as he becomes accustomed to them you should add more until the surface is entirely covered. This will accustom him to feathers, and he will not refuse to take a bird in his mouth as we have known some dogs to do that were really good retrievers. We should not advise you to require your pupil to bring anything except bits of meat and this ball; until he does this in good form and appears to fully understand what you require. Then you should gradually accustom him to bring other articles—a half sheet of newspaper crumpled into a ball the size of your fist is a good thing to practice him on, always remembering to commence with anything new, by first carefully placing it in his mouth and requiring him to bring it but a few steps the first time. This may seem needless to you, but you will find it necessary with some dogs, and we have ever found that the best results have been obtained by strictly following this course, no matter how intelligent our pupil may be, nor how willing to bring anything that you may wish him to.

THE CLUMBER SPANIEL.

HALIFAX, Nova Scotia.

Editor Forest and Stream:

In looking over the prize lists of bench shows held in different parts of the United States, I notice an entire absence of the Clumber spaniel. For the Western States, where a large proportion of the hunting is done on clear ground, I can well understand that the setter and pointer would be the favorite, and perhaps the more useful animal; but in the Eastern and Middle States I should suppose that the Clumber would have made a name. Whether it be that they are not used on account of the scarcity of good specimens of the breed, or that they are not suitable for the grounds shot over, I am at a loss to determine. It certainly cannot be that the Clumber is a bad dog, for it is well known that no other dogs take precedence of them for intelligence, docility, keenness of scent and general usefulness in the field. It can hardly be that the covers are not suitable, for many of the hunting localities of the Northern States must be similar in character to those in which the Clumber is used. The Clumber, being to the front in the want of good specimens or the class to make the breed known, and for it to take the place it should in the front rank of sporting dogs.

In Nova Scotia, for cock and snipe shooting, they are the most valued, and long experience has taught the sportsmen here to prefer them to any others. A Clumber can be used where a setter or pointer would be almost useless; and in a country where a dog has to endure the extremes of heat and cold and to beat up swamps and wet covering, and to hunt in the most difficult places, the Clumber stands ahead for strength and endurance. For putting up a cock from a close thicket of alders in August, or in retrieving a duck from a half frozen pond in November, he is equally at home.

For training there are no dogs known to me more easily taught their work or more tenacious of what they have once learned; and, in comparison to a setter or pointer, or even their sisters and rivals—the cockers—the training of a Clumber is mere child's play. This is a great advantage, for a sportsman may devote time and money to the training of a valuable dog to find, the next season, much of the labor has to be gone over again, or the dog sent out into the country to be kept up to his work. For residents of cities, or where the want of a good run would soon ruin a setter or pointer, the Clumber would be quite at home and thrive where the others would languish.

An idea was at one time held that this breed was delicate and more liable to disease than most sporting dogs. Such is not now the case. If it was ever so, some cause, such as in-breeding, has been the trouble, and it is a valuable dog for generations to come, and without the introduction of new blood, such results would be natural; but since the breed has been more generally distributed no such evil has shown itself. I have been induced to write these few lines in hopes that some of your readers may have had some experience with this breed, and may be able to bring me, through the columns of your valuable paper, how they have fared in the United States, and why, so far, they have not been shown at any of the great bench shows; or, if shown, they have taken an inferior position.

Any information tending to improve the sporting facilities or make known any new feature in the breeding or introduction of good sporting dogs, will, I know, be acceptable to you and to the readers of your paper. E.

NOTES AND NEWS.

A gentleman residing in 135th street, in this city, has in the yard of his residence, an admirably arranged kennel for city use. The building is of wood, substantially jointed and roofed, and occupies the full width of the yard at the rear of the house. It is about some six feet from front to back. The doors in the centre of the front, opening into a plain, square room. On the left hand is a door of slats, leading into the sleeping apartment, which is furnished with a bunk or bench running from front to back, and is reached by a stair leading from the front. On the right hand is a door, with iron bars and a sash. On the right hand side of the main room is a closet for the storage of kennel traps, dog biscuits, brooms, feeding dishes, etc., and in the rear a door opening into the vacant space. The one end of the building is used for the kennel, and the size of the yard but little, and furnishes excellent quarters for a small number of dogs. Of course, portable benches could be placed in the centre room if necessary. It would, perhaps, be better to have all benches portable, so that they could be moved into the open air, if desirable. This building, if well managed, would be a great improvement. In fact, many alterations and improvements would be suggested to the mind of any dog-keeper erecting another such building, but the general idea of the structure, as it stands, is good, and we would be much pleased to hear of many more examples of this kind than to find our city kept sporting dogs in the parlor, fed with cakes by the children, in the man-servant's bedroom, in the cellar, in the usual bow-leg causing barn, or in the flea-breeding and never-cleaned "dog-house."

The catalogue of the English Kennel Club Bench Show this month, at Alexandra Palace, contains a list of one hundred and eighty entries, fox-terriers alone numbering one hundred and eighty. An exhibition of paintings, drawings and prints of dogs and sporting subjects was given in connection with the dog show.

The annual meeting of the Eastern Field Trials Club, for the election of officers, will occur on Thursday, January 12. The place of meeting is not yet announced.

Mr. George T. Leach, winner of the FOREST AND STREAM and Members' Cups, at the Eastern Field Trials, is shooting in North Carolina, over the winning dog, Brock, and litter sister, Countess.

The managers of the Westminster Kennel Club propose to purchase, in February next, at the expiration of their present lease, the property now occupied by them, comprising seventy acres, with club-house, kennels, etc., at Babylon, Long Island. The club has also the exclusive right of shooting over several farms adjoining the club property, extending about one mile to the

northward, and enjoys a five years' lease of a fine trout pond of some twenty-five acres to the eastward. Important additions to the buildings are in progress, and will be completed by January 1. The kennels have been enlarged and are to include a canine hospital, properly drained and paved with concrete. The entire kennel buildings will form three sides of a square, the fourth side facing southward, and admitting the sun, thus furnishing a bright but sheltered yard for the dogs. A small house for the accommodation of gunners has been erected on the trap-shooting grounds. It is arranged with movable front, facing the traps, so as to admit sun-bath in winter, or to be cool and shady in summer. The trap-shooting grounds are among the finest and most pleasantly situated in the State. The dogs are all in fine condition now, particularly Champion Sensation. The club is composed of seventy members, to which number it is at present on Monday, January 9, the next meeting of the Board of Managers will be held.

"Hello, Smith! Fine dog you've got there. Ever got a prize at a show?"

"No, but he won at a trial."

"At a trial! Indeed? You don't say so? Is he bit some man, and you didn't have to pay any damages. Must have had a mighty smart lawyer! Who was he?"

"No, no! On Monday, January 9, the next meeting of the Board of Managers will be held."

THE LOWELL BENCH SHOW.

THE exhibition of dogs at Jackson Hall, Lowell, Mass., on the 14th, 15th and 16th inst. was largely attended, the visitors and exhibitors expressing themselves well pleased with the management and arrangements. It is considered by all to have been one of the best local shows which have taken place. About one hundred and fifty dogs were on exhibition, under the superintendence of Mr. O. A. Andrews, of West Boyford, and the judgment of Mr. George Walton, of Boston. The following is the prize list:

English Setters—1st, Grouse, D. P. Waters, Salem, Mass. This is the sire of Buckingham's well known Grouse-dale; 2d, Leah, H. McLaughlin, Boston, Mass.

Irish Setters—1st and special prize (silver medal), presented by Dr. F. C. Plunkett, 2d, the best setter in the show, Dash, Thos. Quinn, Dedham, Mass.; 2d, 3d, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th, 101st, 102nd, 103rd, 104th, 105th, 106th, 107th, 108th, 109th, 110th, 111th, 112th, 113th, 114th, 115th, 116th, 117th, 118th, 119th, 120th, 121st, 122nd, 123rd, 124th, 125th, 126th, 127th, 128th, 129th, 130th, 131st, 132nd, 133rd, 134th, 135th, 136th, 137th, 138th, 139th, 140th, 141st, 142nd, 143rd, 144th, 145th, 146th, 147th, 148th, 149th, 150th, 151st, 152nd, 153rd, 154th, 155th, 156th, 157th, 158th, 159th, 160th, 161st, 162nd, 163rd, 164th, 165th, 166th, 167th, 168th, 169th, 170th, 171st, 172nd, 173rd, 174th, 175th, 176th, 177th, 178th, 179th, 180th, 181st, 182nd, 183rd, 184th, 185th, 186th, 187th, 188th, 189th, 190th, 191st, 192nd, 193rd, 194th, 195th, 196th, 197th, 198th, 199th, 200th, 201st, 202nd, 203rd, 204th, 205th, 206th, 207th, 208th, 209th, 210th, 211st, 212th, 213th, 214th, 215th, 216th, 217th, 218th, 219th, 220th, 221st, 222nd, 223rd, 224th, 225th, 226th, 227th, 228th, 229th, 230th, 231st, 232nd, 233rd, 234th, 235th, 236th, 237th, 238th, 239th, 240th, 241st, 242nd, 243rd, 244th, 245th, 246th, 247th, 248th, 249th, 250th, 251st, 252nd, 253rd, 254th, 255th, 256th, 257th, 258th, 259th, 260th, 261st, 262nd, 263rd, 264th, 265th, 266th, 267th, 268th, 269th, 270th, 271st, 272nd, 273rd, 274th, 275th, 276th, 277th, 278th, 279th, 280th, 281st, 282nd, 283rd, 284th, 285th, 286th, 287th, 288th, 289th, 290th, 291st, 292nd, 293rd, 294th, 295th, 296th, 297th, 298th, 299th, 300th, 301st, 302nd, 303rd, 304th, 305th, 306th, 307th, 308th, 309th, 310th, 311st, 312th, 313th, 314th, 315th, 316th, 317th, 318th, 319th, 320th, 321st, 322nd, 323rd, 324th, 325th, 326th, 327th, 328th, 329th, 330th, 331st, 332nd, 333rd, 334th, 335th, 336th, 337th, 338th, 339th, 340th, 341st, 342nd, 343rd, 344th, 345th, 346th, 347th, 348th, 349th, 350th, 351st, 352nd, 353rd, 354th, 355th, 356th, 357th, 358th, 359th, 360th, 361st, 362nd, 363rd, 364th, 365th, 366th, 367th, 368th, 369th, 370th, 371st, 372nd, 373rd, 374th, 375th, 376th, 377th, 378th, 379th, 380th, 381st, 382nd, 383rd, 384th, 385th, 386th, 387th, 388th, 389th, 390th, 391st, 392nd, 393rd, 394th, 395th, 396th, 397th, 398th, 399th, 400th, 401st, 402nd, 403rd, 404th, 405th, 406th, 407th, 408th, 409th, 410th, 411st, 412th, 413th, 414th, 415th, 416th, 417th, 418th, 419th, 420th, 421st, 422nd, 423rd, 424th, 425th, 426th, 427th, 428th, 429th, 430th, 431st, 432nd, 433rd, 434th, 435th, 436th, 437th, 438th, 439th, 440th, 441st, 442nd, 443rd, 444th, 445th, 446th, 447th, 448th, 449th, 450th, 451st, 452nd, 453rd, 454th, 455th, 456th, 457th, 458th, 459th, 460th, 461st, 462nd, 463rd, 464th, 465th, 466th, 467th, 468th, 469th, 470th, 471st, 472nd, 473rd, 474th, 475th, 476th, 477th, 478th, 479th, 480th, 481st, 482nd, 483rd, 484th, 485th, 486th, 487th, 488th, 489th, 490th, 491st, 492nd, 493rd, 494th, 495th, 496th, 497th, 498th, 499th, 500th, 501st, 502nd, 503rd, 504th, 505th, 506th, 507th, 508th, 509th, 510th, 511st, 512th, 513th, 514th, 515th, 516th, 517th, 518th, 519th, 520th, 521st, 522nd, 523rd, 524th, 525th, 526th, 527th, 528th, 529th, 530th, 531st, 532nd, 533rd, 534th, 535th, 536th, 537th, 538th, 539th, 540th, 541st, 542nd, 543rd, 544th, 545th, 546th, 547th, 548th, 549th, 550th, 551st, 552nd, 553rd, 554th, 555th, 556th, 557th, 558th, 559th, 560th, 561st, 562nd, 563rd, 564th, 565th, 566th, 567th, 568th, 569th, 570th, 571st, 572nd, 573rd, 574th, 575th, 576th, 577th, 578th, 579th, 580th, 581st, 582nd, 583rd, 584th, 585th, 586th, 587th, 588th, 589th, 590th, 591st, 592nd, 593rd, 594th, 595th, 596th, 597th, 598th, 599th, 600th, 601st, 602nd, 603rd, 604th, 605th, 606th, 607th, 608th, 609th, 610th, 611st, 612th, 613th, 614th, 615th, 616th, 617th, 618th, 619th, 620th, 621st, 622nd, 623rd, 624th, 625th, 626th, 627th, 628th, 629th, 630th, 631st, 632nd, 633rd, 634th, 635th, 636th, 637th, 638th, 639th, 640th, 641st, 642nd, 643rd, 644th, 645th, 646th, 647th, 648th, 649th, 650th, 651st, 652nd, 653rd, 654th, 655th, 656th, 657th, 658th, 659th, 660th, 661st, 662nd, 663rd, 664th, 665th, 666th, 667th, 668th, 669th, 670th, 671st, 672nd, 673rd, 674th, 675th, 676th, 677th, 678th, 679th, 680th, 681st, 682nd, 683rd, 684th, 685th, 686th, 687th, 688th, 689th, 690th, 691st, 692nd, 693rd, 694th, 695th, 696th, 697th, 698th, 699th, 700th, 701st, 702nd, 703rd, 704th, 705th, 706th, 707th, 708th, 709th, 710th, 711st, 712th, 713th, 714th, 715th, 716th, 717th, 718th, 719th, 720th, 721st, 722nd, 723rd, 724th, 725th, 726th, 727th, 728th, 729th, 730th, 731st, 732nd, 733rd, 734th, 735th, 736th, 737th, 738th, 739th, 740th, 741st, 742nd, 743rd, 744th, 745th, 746th, 747th, 748th, 749th, 750th, 751st, 752nd, 753rd, 754th, 755th, 756th, 757th, 758th, 759th, 760th, 761st, 762nd, 763rd, 764th, 765th, 766th, 767th, 768th, 769th, 770th, 771st, 772nd, 773rd, 774th, 775th, 776th, 777th, 778th, 779th, 780th, 781st, 782nd, 783rd, 784th, 785th, 786th, 787th, 788th, 789th, 790th, 791st, 792nd, 793rd, 794th, 795th, 796th, 797th, 798th, WANTED—One hundred live quail, **D. SUMMERS, Aiglen, Pa.** Dec23,3t

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INSTRUCTION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishiculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishcultivist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$3 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.
Dupont's King of Ducks.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 and 12 1/2 lb. kegs.
Dupont's Clockwork.—Specially adapted for "choke bore" guns, and particularly for prize and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of 1 lb. kegs, only No. 1 and No. 2, No. 1 being the coarsest. Loaded in 6 1/2 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Sea Shooting.—FFG and FFG. for long-range rifle shooting, the FFG and FFG. for general use, burning strong and moist. Packed in 1 lb., 1 1/2 lb. and 5 lb. canisters, 6 1/2 lb. kegs, 25 lb. kegs, FFG, coarse, FFG, fine.

Dupont's Sporting, Mining, Snuffing and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Junc, Cartridge, Musket, Cannon, Morn, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use no. 1 or DUPONT'S FFG. or FFG. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island, this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. FOREST AND STREAM.

Thursday, January 5.

FLORIDA TOURISTS.—Many sportsmen are visiting Florida this winter. The game along the beaten paths of travel has been so depleted that there is very little sport now to be had. But the recently constructed railroad lines and new routes to the southern and western parts of the State have opened up new game countries, where abundant reward awaits the tourist. Our issue of December 3 contained a description of the Kissimmee River country, which is now among the best game districts of the State.

THE REMARKABLE ACCOUNTS which we have published of duck-shooting performances, gone through with by gunners on the Gunpowder Creek Bridge near Baltimore, should, it seems to us, have a tendency to make self-respecting sportsmen forswear the locality. If a man cannot get the birds which he kills without fighting for them, he had better give up using the gun where such annoying squabbles are likely to take place.

THE WALKING MATCH MANIA has run its course. There are spasmodic rag-tag-and-bob-tail attempts to revive the neat scheme of wheedling the public money into "the management's" pocket. One such sorry attempt was made in this city last week, with the usual dismal ending financially.

THE INTERNATIONAL MATCH OF 1882.

WITH the receipt of the courteous note from the Subcommittee of the Council of the National Rifle Association of Great Britain, given in our columns of this date, everything seems to promise well for a good contest at Wimbledon during the coming summer. Where there is a will there is a way, and certainly there is desire enough on both sides to have a match. The British rifleman is just now under a cloud. He had for years been vaunting his superiority with the rifle, and then somehow seemed to stumble and make a bad break of it when he met the American marksman on his own range, and had no better fortune when the Yankee crossed the sea to meet him. He had, extending over a period of four years, a series of matches in which the picked shots of the British Empire—first pitted against us in teams made up from the separate nationalities, and later in a magnificent team sent out by the National Rifle Association itself—were all defeated after full, fair trials before the butts; but all these contests were at long range. They were fought with special rifles by a set of civilian shooters, and were, in a certain degree, artificial tests. They simply showed how proficient men could become in a certain art, but that art had its sole aim and purpose in accomplishing good scores. The long-range shooters are but a drop in the bucket to the great sea of marksmen. If rifle-shooting had no other purpose in being than score-making at the target, then it would soon die out, but if the scores thus made are tests of a proficiency in the real use of the rifle for war or sporting purposes, the practice at the butts takes rank as an important pointer. The coming match, in place of being a struggle between men who represent less than ten per cent. of the entire body of range-habitues, will be one in which the great majority will be interested as possible contestants; and there ought to be, and no doubt will be, a corresponding popular interest in the match. It will be fought out with military rifles, and the result will be taken as a verdict upon the weapons which have been put into the hands of our troops. These weapons have been selected by boards of public officers, and have been provided at public expense by the outlay of large sums. While it is, of course, possible to have bench tests and private trials of the competing rifles, the general public will, very naturally and rightfully, view a public test in a set trial by marksmen as far more satisfactory. It is the man and the gun that become one acting whole, and it is to try that unit that matches on the range are organized.

The entire detail of the match has not yet been settled, but within a few days or weeks at most the conditions of the proposed contest will have become known. They should be severe and stringent enough to make the test a thorough one, and if the match could be extended over several days it would seem that enough variations in weather conditions would be secured to give the shooters equal chance of striking their favorite wind, or sky, or light, etc. In any case there ought to be no hesitation on the part of our American shots in accepting any fair set of conditions, though they may differ somewhat from the rules under which we have been accustomed to shoot. There will be an abundance of time if it be not wasted to bring together a strong team of American National Guardsmen armed with an American made rifle to contest with good prospect of success with any team that may be pitted against them. To be sure, our National Guardsmen, numbering, perhaps, through the whole country, less than 50,000 men, and having in the most favored instances about half a dozen years' drill, will have to meet the pick of over 500,000 men who have been assiduously trained in rifle shooting for twenty years past. We have somewhat of a record with which to compare our ability with theirs, and that will not discourage us. We have every reason to believe that our rifles are just a good trifle better than the best that have been turned out of the English armories, and as for familiarity with perplexing conditions of the weather elements our riflemen have little to learn. At any rate, be the chances ever so much against us, the courteous challenge must be accepted, and promptly, and the match fought over to whatever conclusion fate may bring. We have a plucky example in the acceptance of the challenge of the Irish team in 1873 by the American Rifle Club. At that time we had neither rifles nor men. Now we know just what we are

to do in order to win, and are not rushing blindly forward to stumble upon good luck. Whatever we get in the way of honors must be won, and won by hard, systematic work.

The attempt of the directors of our Association to secure a team has developed some curious facts about the tendency of our rifle practice. When the Creedmoor Association was started on paper in 1871 the rules of the N. R. A. of Great Britain were adopted entirely. With the opening of practice on the range in 1873 these rules were put in operation, and from that time on there has been a constant changing and tinkering of the regulations, until now it seems that it will require concessions on both sides to bring about anything like a fair regulated match. The British riflemen have abandoned position in shooting, as we knew it ten years ago, and shoulder shooting has become obsolete. Here it has been strictly insisted upon, and, we think, very wisely, keeping in view our distinction that rifle shooting is something more than the making of a certain score, and is rather the preparation for some real work in another field. An overwhelming percentage of the shooting in war and hunting is necessarily done from the shoulder, and so many arguments can be brought to sustain the desirability of retaining this style of marksmanship that our American directors will be very loath to make the concession of "any position" at any distance to the British marksmen. But the question of position may be agreeably arranged, giving to the Britishers plenty of time to become proficient in off-hand work, much more readily than the matter of rifles may. Our Association have been too lax in the matter of the manipulation of rifles. The files of the FOREST AND STREAM will bear testimony to our protests against the turning of the rifles, especially of military weapons, into more shooting machines. The Board of Management of the British Association have all along insisted on treating a military weapon as such, and would no more allow each man to exercise his own individual judgment in changing it than they would allow each soldier to interpret the tactics according to his own ideas. A wind gauge on a military gun is an anomaly. It has no business there, and its only *raison d'être* is that it may, in the hands of one accustomed to it, and under the quiet work of the range, after, perhaps, the requisite sighting shots, etc., enable the marksmen to show a good string of bull's eyes; but then to assume from this that he is any the better soldier is so manifestly absurd that no one will for a moment press it. We will have the same charge that the test was a purely artificial one, if fought out with these monerel rifles, as we had against the old long-range weapons, and it will be much better founded, too. That good scores may be made without the use of this "hubber hole" to high aspirations is shown in the fact that two of the best military marksmen at Creedmoor, Messrs. Dolan and Van Heusen, have resisted the temptation to employ it. It is possible they fired to overcome any difficulty of strong winds, by "holding off." They have trained their individual judgments, instead of relying on a device which, under a good coach, reduced their function to that of merely holding on the bullseye. Our own judgment would be in favor of the off-hand holding and the use of a practical military rifle as such.

The proposition for the match has met with the heartiest approval from the press of the two countries. There is a disposition to help on the contest in every possible way. The fact that this is to be a match with military rather, than with small-bore rifles, gives much satisfaction. The scribbling contingent of the British shooting men have opened their batteries and are firing suggestions with the utmost freedom, and all sorts of curious conditions are urged for adoption. None such are needed; the simpler the rules are made the better, so that every non-shooting citizen may know and readily understand just what the champions of his country are trying to do. In its issue of Dec. 1, the *London Telegraph*, speaking of the match, says:

We have become accustomed to the presence among us, from time to time, of American riflemen, and our own picked shots have reason, more than once, to entertain for their Transatlantic rival the highest possible respect. Hitherto, however, competition between the marksmen of the United Kingdom and the United States has been limited to the match rifle, a delicate and very complicated weapon of very little practical value except in so far as the improvements to which it is continually subject tend to further the better construction of fire-arms generally. Efforts are now being made across the water to send to Wimbledon from America next year, a strictly military team, composed of members of the National Guard,

armed with a military weapon. The expense will be considerable, and the difficulty of selection great; but these are obstacles which the energy and patriotism of our Transatlantic kinsmen are sure to overcome. The Volunteers of this country may reckon, therefore, upon a thought for next July, and have need to do their best, lest the laurels of the rifle range follow those of the race course. Whatever the result, the representatives of the American National Guard are certain to receive a cordial welcome and all the admiration their skill may deserve. The contest will do good service by giving additional distinction to the military rifle, as compared with the small bore, and will tend to increase the practical character of the doings at Wimbledon. In this respect there is much room and urgent need for reform. Fancy shooting is all very well in its way, and no one wishes to discourage it, but Wimbledon should be first and foremost a tournament of military marksmen, competing as far as possible under military conditions. These requirements will be distinctly met by the advent here of American soldiers.

ANOTHER SWINDLE EXPOSED.—The daily papers announce the arrest of a swindler who has been advertising extensively in the newspapers his Solargraph watches. Just what these watches are we do not, of course, know, but we remember a few weeks since, when the advertisement was offered to us, wondering whether it was possible that this man could find any people foolish enough to respond to his advertisement, and smiling in admiration at the impudence of the fellow in bringing it to us. Another amusing incident in connection with advertising, is the wonderful unanimity with which our contemporaries, esteemed and otherwise, have, all on a sudden, dropped the flaming notice of apatent preservative, which has, up to within a short time, occupied a large portion of their advertising space. This advertisement was brought to us in due course, but like hundreds of similar things, it failed to find a place in our columns. One reason for the high estimate put on the advertising space of the FOREST AND STREAM by its patrons is the fact that it is so well-known that all possible care is exercised to prevent the appearance of anything that can be questioned. That we take especial pains to keep our advertising pages clean is not at all to our credit. We are only performing our plain duty; but that this action is appreciated by advertisers is shown by the eagerness of Chichester rifle companies, Saxon, Zulu, and Champion gun men and other preys upon the unwary, to find a corner in the paper. That they will not succeed in this, our readers may feel sure. These men know the advantage of being seen in good company, and this, added to the advantage of the paper's circulation and influence, makes them most anxious to advertise their spurious wares with us. We can afford to let the business of these men go by, and to steer very wide of anything that has a doubtful appearance. We do not pretend to be infallible, and once in a while we get caught, but we venture to say that there is no newspaper in the world which has a cleaner record in this respect than the FOREST AND STREAM. We examined, the other day, a truly curious breech-loader—we forgot what it was called, but it belonged to the same class with those mentioned above, but with another name—and found it a marvel of clumsiness, rude work, and last, but not most important, of insecurity. Men may safely enough buy cheap fishing-rods, solargraph watches, or even send a three-cent stamp for a superb steel engraving of Washington, Jackson or Lincoln, but we warn our readers against cheap guns. To be swindled out of one's money by some cunning device only hurts one's feelings, but to have one's hand or head blown off, is a more serious matter.

MR. A. ALFORD, who has been with E. Remington & Sons, of this city, for nearly fourteen years, has severed his connection with that firm to assume the management of the Greenfield Tool Co., of which he is the President. The firm title is Alford, Ward & Davenport, their establishment being at 85 Chambers street. Mr. Alford is widely known among sportsmen, whose best wishes will go with him in his new work.

DOGS ARE PROPERTY IN INDIANA.—We are indebted to an Indianapolis, Ind., correspondent for memoranda of an important ruling by Judge Howk, of the Supreme Court, of Indiana, declaring that "dogs are property of value." Following close upon similar action by courts of other States, the decision is full of promise for the future protection and safety of "man's unselfish friend." The abstract of the decision is as follows:

9,780. Henry Kinsman, versus the State. Lagrange, C. C. Howk, J.—Appellant was prosecuted for maliciously killing a dog. The affidavit charged that said killing was "to the damage of the property in the sum of twelve dollars." It is claimed that a dog is not necessarily an animal of value, and that the affidavit was bad because it did not charge the dog to be of some value to the owner. Under the law of this State dogs are taxed as property, and any article which the law subjects to taxation is *prima facie* an article of value. (60 Ind., 293; 62 id., 362.) The affidavit was sufficient. On the trial the court permitted the State to ask a witness, and compelled the witness to answer, whether the latter was not on bad terms with the prosecuting witness. This was not error. (See *Wright, Crim. Ev.*, 8 ed., §147; 1 Greenl. Ev., §350-355; 64 Ind., 400.) One of the instructions given by the Court was as follows: "It is not sufficient for the State to prove that the defendant killed or injured the dog merely, but the evidence must show beyond a reasonable doubt that the defendant maliciously or mischievously killed or injured it." This instruction was erroneous. The charge against appellant was that he killed the dog and this charge told the jury in effect, that if he injured it, that was sufficient. Judgment reversed.

The Sportsman Tourist.

THE HUNTER IN AFRICA.

THE hunter roamed far in the broad Africa land,
Where the pallahs and gnus are gathered in band,
And the oryx and springboks and sable laartebest
Over green boundless pastures collect to the feast;
Where the herds of wild elephants crash thro' the woods,
And the black rhinoceros wallows in floods,
Where the lion and leopard devastate the plain,
And hyenas and jackals feed on their slain;
Where the stately giraffe and swift antelope
Sweep the vales at the base of the grand mountain-slope.

How fair are those woodlands, those pastures of green,
Where the intellect boughs wave in an emerald screen,
So deep in their gloom that scarce may the light
Pierce the roof of the grove with pendulings bright.
There boundless the iron-wood forests extend
And the lofty acacias gracefully bend,
And mimosa and willows and fragrant white-thorn,
Whose rich yellow blossoms the woodlands adorn,
Where gay blooming flowers embroder the grass,
And birds of rare plumages and sweet melodies pass.

In the belt of the woods, with their green colonnades,
The fern and the passion-flower brighten'd the glades.
O noble the game of this African land—
The lion, the leopard, the elephant grand,
The wild boar and buffalo sweeping the plain,
Their measureless pastures, their endless domain.

The hunter takes rifle, then summons his men,
Betchuanas and Bushmen, from mountain and glen;
Tall, stalwart and lithe as leopards in flight,
Some true as the steel, some true as the light.
He bids them take knife and sharp assegai
When the herd of wild elephants threaten the way.
Bull elephants, arm'd with tusches so strong,
That trample and crush as they thunder along,
So majestic in stature, colossal in height,
It is peril and death to meet them in fight.

In these vales and ravines and forests of green
The foot-paths of elephants thickly are seen,
Where for aye unto these monsters have trod,
And whose waste, bleaching bones still sprinkle the sod.
Mid jungles of spears and spears and spears
Where mimosa thickets overshadow the ground;
Where the yellow-wood, cedar and iron-wood grow,
Crown'd with vine wreaths perennial, a wonderful show.

'Tis Jao, the lion, is monarch of all!
Whose roarings terrify the Bushmen appal:
When you meet him alone in the forests beware;
Beware when at night he stalks forth from his lair.
How majestic in death—the eyeballs of fire,
The great, rounded head, once right in the ire,
The vast, massive arms, the black shaggy mane,
The sharp crooked claws, blood-red with the slain;
The powerful jaws, the symmetry fine,
In beauty so perfect in every line;
And you feel that the noblest of prizes is won
When he lies grin in death, the spot of your gun.

Ah! hear him at night when all nature is still
And darkness and silence hold forest and hill;
Hear his low, growling moan, his full, solemn roar,
Now muffled, now hoarse, like the surge on the shore;
Hear the roar of two troops that meet at the brink
Of the forest-shout fountain its crystal to drink.
Hear the roar of defiance, so fierce, so intense
That it deafens and damps the terrified sense,
Then say if the roar of the lion is not sky
Nath a tone so sublime as this menacing cry!

Greenport, Dec. 17.

ISAAC McLELLAN.

IN THE FORESTS OF YUCATAN—I.

THE scene of this mild adventure is laid in the interior of Yucatan, which the writer visited last March. After a great deal of rough riding in strange vehicles we reached a town in which resided an American, a naturalist and collector, who was practicing as a physician. He had invited us to go on a grand turkey hunt, but we were detained on the road at every town we passed by the hospitality of the inhabitants, and especially by the General of the district, who gave a ball every night in our honor. It was at the end of the third performance of this kind that I fled my party and the story opens.

After the last ball the good General insisted upon remaining and ascertaining the quality of the balance of the Doctor's three dozen of beer; and at 3 A. M., seeing that it was likely to be an all night session, I crept into the kitchen and took possession of one of the hammocks. This kitchen was the usual structure devoted to that use in Yucatan, of loose poles driven into the ground, forming a square pen, topped by a roof of thatch. Lorenzo Acosta, who owned the house the Doctor hired, and who piloted me to this retreat, had a "rancho" in the logwood district, which he invited me to visit, promising plenty of flamigoes and wild turkeys. We were to start early in the morning, before the Consul and John would be stirring, and as the ride was to be a long one, had made good our escape from the General in order to gain a few hours' sleep. Two old women and a boy occupied this apartment, but the latter was unceremoniously ejected from one of the hammocks, which Lorenzo and I appropriated. Perhaps the rear is not acquainted with the Yucatan way of sleeping, two in a hammock, and I will proceed to enlighten him. As the first one lies down in the hammock, he carefully takes up only one-half, measured longitudinally, leaving the remainder for his friend. This the latter occupies, with his feet toward and parallel with the other's head, so that the two are packed "heads and points," like sardines. This leaves a kind of partition between the sleepers which effectually separates them; though if one is inclined to kick in his sleep the other must guard well his nose. In any event, a person at all nervous should object to this style of sleeping, and prefer sleeping family fashion, crosswise in the hammock. But when one abandons himself to the guidance of a stranger, upon whose hospitality he is dependent, he must promptly check any qualms of his sensitive soul, and be duly grateful for what he can get.

It was so cold that I awoke several times during the brief space we occupied the hammock and tried to remember that

this was what they term the "hot" season. From the great flat surface of rock exposed to the rays of a powerful sun during the day in Yucatan, and the extremely rapid radiation at night, a degree of cold is sometimes reached that produces nocturnal freezing. During the hot, dry season the cool nights are in most refreshing contrast to the heated atmosphere of day, and induce sweet slumber if one is properly guarded from extremes of temperature.

At about seven in the morning we were off for the logwood camp, by the way of the town of Gilm. This inverted G with which Gilm is spelled, is a necessity arising from the retention of the ancient Maya names, and has the power of "Ts," the word, consequently, being pronounced Tsilam. Don Alonzo could speak excellent Spanish, but what availed that to me when I had not a single word of that language? He could not speak English, but he had a new dog. "Ollendörf," and with this and my "conversation book" in our hands, we rode through the cool woods, startling the birds with our blunders and laughing at our mutual mistakes.

After an easy ride of four short leagues we arrived at Gilm, entering its principal street between low, white-walled houses. Going to a house near the great square we tied our horses and I paid the man who brought my luggage two "reals"—twenty-five cents for his services and four "reals" for the horse, and he returned to Tixmax. We are provided with breakfast in a "tienda"—a shop—and while we are eating the proprietor plays on a guitar. After a siesta in a hammock, drowsily watching a girl with graceful figure, clad only in a snowy "upil," combing for an hour her abundant tresses, I am taken out and introduced to the Presidente, as the learned naturalist, author and discoverer, of Senor Don Federico. By him I am promised seven Indians with whom to make an excavation in the great mound. I should explain here, that Gilm is leagued for its great aboriginal mound, four hundred feet in length and fifty in height. This occupies one side the great plaza of the town, and towers above the church and principal buildings, which were all built of stone from its ruins. It was visited by Stephens and carelessly examined by him, a somewhat fanciful sketch of it being given in his second volume on Yucatan. He attached great importance to it as being the centre of a population at the time of the first visit of the Spaniards, quoting Herrera in confirmation that it was then "a fine city, the ruins of which were a youth of the Race of the Choles, then a Christian, and the great friend to Captain Francis de Montejo, who received and entertained them."

From the summit of this mound the country for leagues around can be seen, and the eye ranges over a vast extent of scrub, with no village in sight but the one about its base. A second mound lies north of this one, running east and west, while this larger and contiguous one has its longer axis north and south. The ruins of these great tumuli once greatly exceeded their present area, as dressed stones can be seen in the streets, in position, a long way distant, and made of great rocks run out into the scrub. Under guidance of Don Juan we climbed the smaller mound, and some little boys commenced to throw out the dirt and stones from a small hole in the top. They soon brought out fragments of pottery and plaster, the former finely glazed and tinted, the plaster colored bright red, drab and green, and all the tints fresh as if put on yesterday. After the adult Indians arrived, more rubbish was exhumed and a room disclosed, filled with debris from above. The entrance was arched, in a way similar to the "Akabau," at Aké. They opened it sufficiently to show its shape, but did not find any more pottery or plaster, which was evidently above and outside the building. So I caused the earth to be removed from the top, and soon revealed great pieces of stucco, showing bright colors and elaborate ornamentation and design; not enough to satisfy me, though I was obliged to desist digging before finding much. Lest the sun was setting. Its last rays alone directly into the chamber we had opened. Half the men and boys of the village were gathered by this time, and all assisted eagerly at the work, even the Presidente and schoolmaster. I paid the Indians a "real" apiece, and the boys a "medio," and all were delighted. The ruins of a building upon this mound would seem to indicate the use of these vast accumulations of earth as foundations for palaces or temples. In a flat country, like Yucatan, it would be necessary to elevate the public buildings in this manner, in order that they should be seen from a distance. Though the ruin of the structure was so complete that no satisfactory outline could be obtained, its stones, covering all sides of the mound, and large trees and agaves growing upon the summit, yet it seemed to have been composed of successive platforms, each one covered with a thick layer of cement or plaster. Stephens did not visit it, but states that the padre, a young man of thirty (when he was here, forty years ago,) remembered when a building still stood here, "with open doorways, stairs in them, and a corridor all around," and was called, "el castillo." The castle!

Fragments of the stucco, some of the ornaments and sherd of pottery I collected and sent to Merida, intending them for Professor Baird, of the Smithsonian Institution; but the best of them were ground to powder in transit, and this opportunity lost of ascertaining their analogy, or dissimilarity, to the decoration of the ruins.

Alonzo and I occupied a hammock in a large empty building belonging to Don Juan, and slept again in the Yucatan manner, the feet of each in close proximity to the head of the other, as in compact quarters, as the Spaniards call it, "spoon-fashion." We were to start at four the next morning, but didn't arise till five, and though I expected to get on our journey by sunrise, it was nine o'clock before we left the town. This night have been expected, for the day before it was to have been "my tempano"—very early—and we left Tixmax three hours behind time. No one was stirring in the plaza, but a baker's shop was open, with the usual knot of men in cotton pants, silencing their "sarapes," and here we got a cup of chocolate. While waiting for my horse, we visited the old churchyard, a walled-off corner with orange trees in it. It must have been formerly used as a cemetery, for there were heaps of boxes—wine cases, brandy and soap boxes—full of dead men's bones, and in a recess in the church wall were arm and leg bones, and grinning skulls that seemed inclined to dispute our entrance. Don Juan took us to see an old stone with a strange inscription on it—probably, as he said, the work of Indians, under Spanish direction—and he helped us a young man, who had been crowned from the boxes bones. Having been cheerfully fortified for the journey, I thought Alonzo would start, but he lingered here and there, buying meat and bread, till eight o'clock, then we mounted our horses, bade our friends "adieu," and rode down the street to a hut, where he asked for breakfast. This consumed another hour, though the "Mestiza" girl worked hard to prepare it for us, being hindered by the admiring and

amorous Alonzo, who haunted the kitchen, teasing the pretty cook for a caress. Her mother, a wrinkled old lady, learning that I could not speak Spanish, pulled a dolorous countenance and called me a polaco, a poor little fellow, and wanted to know where in the world I lived, that the people couldn't speak "Castillano." We finally got fairly astride our steeds at the cross of San Jose, near a big ceybro tree, and turned into a narrow trail that was, its whole length, very stony, or "muy piedragozo." This led into the forest, forming part of the belt that lines the eastern and northern coasts of Yucatan, the trees gradually increasing in size and becoming more open as we advanced. Birds grew more numerous, especially the queer bird called the road-runner, "corcoranum," a species of quail, and a small, spotted cock. We had to leave our horses, the road was so slippery, very little soil covered the coral rock, which was full of holes, caves and "senotes," nearly all leading to water. At noon we halted at a small "senote," where there was an opening in the rock about three feet long and two feet wide, down which our Indian went and got a calabash full of pure water. A team of pack mules came up just then and their owner sat down with us and joined in a "Yucateco refresco." Into the calabash of water Alonzo put a big ball of corn meal, procured of the Mesquites in the morning, and stirred it up with his fingers. When of proper consistency it was passed to me, and drinking of it I found it sweet and refreshing. This is prepared by the women, of maize, spiced and sweetened, and is universal use in Yucatan and Southern Mexico, forming, with water, a pleasant and strengthening drink. We drank all around from the same calabash, then mounted and went on again. The great woods were open at times, sweet, clean and inviting, and the leaves lay on the ground as in autumn in the North; but I had no stomach for them, desiring to reach the end of a ride that promised to be interminable. Late in the afternoon we reached a change in the dry, hot road, an "aguada," or small pond, and here, at a sign from Alonzo, I got off my horse and crept toward the water with my gun. Through the bushes I saw a gallinule, a beautiful bird, which I shot, and immediately after another that flew up at the report of the gun. These Alonzo secured by wading into the dark pool, though he had sore feet, and our Indian, though bare-headed, refused to. The "aguada" was surrounded by tall reeds, with lilies and water plants, and fringed with an abundance of dead small shells. My friend had hitherto ridden perched upon two packs of luggage, while I had used his horse, while the Indian carried a great load on his back, supported by a band passing across the front of his forehead. We both dismounted here and pursued the rest of our way on foot, and I shot a "chachalaca," a kind of pheasant, and from a little gem of an "aguada" we put up three large ducks. The gallinules, Alonzo tells me, are "senotes preciosos," and very precious birds, and they are, indeed, a rare species and valuable addition to my collection. The whole character of the forest changed at this—the "aguadas" were more frequent, and the entire country appeared as though at times submerged. Of this, in fact, my friend assured me, adding that when he came here last June, where he had his camp—now dry land—was entirely under water.

I was very weary when we at last reached a meadow, in which some horses were feeding, and was told that we were near the "rancho." To my surprise, however, the "rancho," from the name of which I was led to expect a small farm—proved to be nothing more than a collection of four huts of palmetto leaves, merely a roof to shed the rain, with open ends and sides. They were on the southern rim of a lovely "aguada," surrounded by palmetto and deciduous trees. A pile of logwood, thatched with leaves, a bath house of palm leaves, and a leaf roof over some hollow logs that served as bee-hives, completed the establishment. A dozen horses, with loads of wood, had evidently just come in from the forest.

On the road we had met a train of mules, each with a great plauk, fifteen feet long and two wide, lashed on each side, one end projecting beyond his ears, the other dragging on the ground. This is the only way in which Western Yucatan can get its timber, all the west and central portion being covered with scrub or second growth.

About twenty Indians and Mestizos, with bare bodies and legs, sandals and great outlasses, were lounging about as we rode in. Three of them carried a company of mules, and busy about their household duties. Upon a large plauk, three feet wide, supported on four logs, were two "metates" with rollers used for grinding corn for tortillas, and in addition to this there were a few tubs, a grind-stone, and all the things necessary to a camp in the forest. From pole to pole, under the thatched roofs of the open huts, were stretched hammocks of Sisal hemp, and two great mosquito bars told their own tale of insects at night.

We rode into this logwood camp, and was invited to a hammock while they talked over news and business, for Alonzo had been gone some time. I noticed one man, a "Mestizo," who had an uneasy look, and one woman, a "Mestiza," who was comely and had an anxious look, though a very sympathetic one, as they say here "muy simpatica." Of the other women one was fat and restless and the other old and honest. They all worked well, not intermitting their labors for a minute.

Supper was soon ready. After the fashion of the country we first washed our hands in a calabash, and five minutes later that same calabash was brought in full of water to drink.

Poor Alonzo had but two bowls besides calabashes, for he was only camping, and no knife, fork or spoon, so I took my jack-knife while they ate with fingers and "tortillas." Our companion was a Spaniard, lately from Europe, a pleasant, black-eyed young man, who was sent by a firm there to look after their interests in the logwood. There were no chairs, of course, and we sat in hammocks while the food was placed on a cloth. As the night drew on, more tortillas were brought, hot from the fire, handed to us on a cloth by the cook, and taken by us and clapped down on the table. Quite a pile was heaped up before we left, and these were taken and warmed over for the men. After eating, a calabash was passed round full of water for rinsing the mouth. The proper way is to fill the mouth with water, and, after inserting the finger and scrubbing the teeth, to spit it out. This custom prevails throughout Mexico, even in the houses of the rich. To spit over noses, as the fellows in the forest were going all the time. By this time darkness had settled down and some of the men retired to their hammocks. Though surrounded by strangers and some with not very pleasant faces, I left all my arms outside the mosquito bar, as I retired, conscious that they as well as myself were safe. Later in the season, in the Highlands of Mexico, I would have sooner slept without my blanket than without

my revolver, for the people of Yucatan are as honest and true as the Aztecs are treacherous and faithless. After a second coffee we all sought our hammocks, where Alonzo and I reclined smoking and chatting. I was anxious to go on to the coast for flamings, but my little horse, who I could not, that I was at his disposition, which remark rather irritated me, until he added, with a smile, "and I am at yours, also." I had got accustomed to this, polite insincerity, however. On the way, I asked him if the horse he rode was his and he replied, "Si, señor, y de usted, tambien."—"Yes sir, and yours as well." After that I ventured but one more question of the kind, and that was when in the house of the young lady who had prepared our breakfast, I asked if she was his sweetheart. The customary reply came readily to his lips: "Si, amigo mio," and yours also.

I had fallen asleep, as soon as the insects feasting on me—ticks, sand-flies, fleas and chinchies—would permit, but soon awoke suddenly, conscious that Alonzo had darted out from under the bar and was in angry expostulation with the man with the evil eyes. This man, early in the evening, had gone raving to his hammock, and after crying there awhile he had come tearing out and seized his woman, she with the pretty face, dragging her away from her work. She had submitted, though expecting a beating, merely glancing at her foot, "upil," but one of the men jumped at him as he drew her along, and quieted him for a while. Now he had broken out afresh, threatening to kill Alonzo if he didn't immediately pay him his wages, and brandishing a great "machete" furiously. Alonzo was in nowise frightened, but sprang at him like a jaguar, promising him a beating that would answer for his wages. And I have no doubt the Indian would have got it, though my friend is a little man, for in glim he had flown at a man who talked insolently to him, slapped his face and pounded him well, until he ceased from talking. So they had it out in talk and piled fresh fuel on the fire as though they intended to be at it all night, making my hut as light as day. The fight ended, Alonzo quietly entered the mosquito bar, which was made large enough for two hammocks, and ordered coffee and cigarettes for two. When he asked me to enter he said in Maya, "Kom in," which is the equivalent in that language for come in. There are also other words similar in sound and signification to ours. In the morning, after coffee and cigarettes, we went into the woods to inspect the logwood—the "palo linta" or "palo de Campeche"—which the men had cut during Acosta's absence. It was then very hot, though the night had been freezing cold, as we entered the logwood forest. The logwood tree, "hematoxylon campechianum," grows to a height of 20 or more feet, is rough and gnarled, with one trunk that divides soon from the ground, with ob-ovate leaves.

The wood they had cut lay in little heaps where they had cut it. It was composed of all the same kind, some white outer wood and was in color from light red to dark purple. One of the men had a steel yard with him, and this was hung from a tree and the wood piled on a suspended platform and weighed, four "arobas" or 25 pounds, at a time. This was noted down, with the name of the man who cut it, and we passed on to the next, being engaged in this way several hours. The horses were then led up and a load of four "arobas" packed on each and carried to the camp.

The sun was blazing hot, butterflies played about us, birds sang in the thin-folaged trees, and a native quail, or "faisan," got up at intervals. We saw one deer, a "venado," and one turkey, "pavo del monte," but not near enough for a fair shot. There were many caves and depressions in the limestone surface, with water in them looking cool and inviting for a bath, but numerous adders swimming across them rendered them less attractive. Thousands of dead snails lay in windrows, but not a live one was to be found, though I searched diligently under dead logs and leaves. The logwood was brought into camp and stacked, whence it will be carried to one part of Yucatan and shipped. There seems to be vast quantities of it, but it is in remote sections where it is difficult and expensive to get it out. As we returned to camp, my friend was taken with cramp in the stomach, and howled and cried, and the man with whom he had quarrelled in the morning was the first to hasten to his aid. I suspected then it was but a ruse to bring about a change of sentiment through sympathy. In the evening Alonzo brought out a big bag of silver which he had brought to pay the men, and proceeded to divide it out, portioning out, I admired the pluck of my little friend, that he would not let him brow-beaten into paying it out before he was ready, though in apparent danger from the Indian with the bad-looking eyes. We walked out in the cool of the evening toward the "aguadas," or ponds; the birds were still and a quiet brooded over the lovely places, except for the cries of the gallinules in the marsh. One of these birds Alonzo shot, and waded into the water waist-deep to secure it. Sometimes the simplest thing will awaken thoughts of home when in a strange country where the scenery is different, and mine were carried back to the North by the sight of a group of cat-tail flags, growing as in Northern meadows.

The industry of the Indian women of Yucatan is a matter of wonder. From long before daylight till late at night, after we had retired to our rest, they were toiling at the "metates," grinding corn for the morrow. It is the most laborious of occupations to work the stone roller over a smooth slab of stone all day long. I saw two girls in Tlaxcala who worked in this way, and "metates," grinding castor beans, for which they received eighteen cents per day. Our women were kept employed unusually late that night in cooking up a store of tortillas for our journey next day, for we were to go to the coast for flamings. —OBER.

WILD CEREAL.—A very valuable description of the wild cereal is given elsewhere. We understand that several attempts have been made to transplant the seed. Mr. Cross having very kindly furnished the seed. The results of these trials will be awaited with interest.

QUAIL IN CONFINEMENT.—Many clubs will be interested in the report published elsewhere of the Springfield Gun Club experience in keeping live quail for stocking purposes. We hope that other persons who have tried keeping quail will add what information they may.

A Book containing much information about guns is Greener's new work on the Gun and its Development. We can still furnish copies to those desiring them. Price, \$7.50.

ONE DAY'S HUNT IN BRITISH COLUMBIA.

(The following extracts from a private letter written to our correspondent, "Yo," and by him furnished to us for publication, will be read with interest by our readers. The scene of the hunt is in a locality which, though not very far distant from the settlements, is yet seldom penetrated by the white man, and where, as will be seen, the game is abundant and tame.)

BURRARD'S INLET, British Columbia, Nov. 25, 1891.
EVER since your departure from Burrard's Inlet I have felt annoyed at my failure to furnish you a day's sport with the goats that I could not settle myself down to work until I had got some sort of satisfaction. While I was considering whether it was best to make the trip alone with Seammux, the door opened, and in walked a fellow in a red shirt, his hat on the back of his head, and a Ballard rifle slung over his shoulder; and he reached out his hand and recognized Dick G., an old companion who had been for the last year trapping up the coast. So, with Seammux and a younger Indian, Sillicum by name, the party was made up, and leaving the hotel at daylight one morning, we took our way up the North Arm. We went as far as a point on our left, at the foot of the big island, which, if you remember, is near the head of the inlet. At the time of your first visit up the Arm I think I pointed out to you, from the deck of the steamer, a bare point on which a considerable bank of snow was lying. It was at the foot of this point that we landed, and dividing our blankets and grub into two packs for the Indians to carry, we commenced the ascent at half-past twelve, noon, and after five and a half hours' traveling, pitched our camp within the timber, a few hundred yards below the bare summit. The Indians advised this, lest by camping in the opening our camp fire might warn the game of our presence.

The next morning by daylight we had devoured our breakfast of hard crackers and coffee, and, leaving the timber behind, we passed up a beautiful grassy lane to the summit. We had scarcely reached this, when a dense fog, enclined us in every direction. It was so thick that objects two hundred yards distant were totally obscured. This was aggravating, the more so as appearances indicated a continuation of this state of things all day.

The air was chilly, and as we had left our coats below, we were obliged to unpack our blankets and wrap them around us. In this state, grumbling at our luck, we moped like *delate Schollens* (the true spirit) moving in the fog.

Presently the chatter of the old dried crossbills (*Corvus americana*) came up from the tops of the pines just below us, and I looked at the old Indian, thinking this might be an indication of clear weather. But the stoical savage gave no sign, and I was about to ask Dick's opinion on the subject, when out of the murky darkness flitted two birds, which I identified as Bohemian waxwings (*Amphisp. garrulus*). This was a chance I could not let slip; so, picking up my shot-gun, I was about starting in pursuit when the old Indian caught me by the arm, telling me if I fired a shot I would forfeit the chance of seeing a goat that day. So I let them go; but had I known as much about mountain goats then as I learned a few hours later, I would have secured the birds if I had been obliged to fire a dozen shots to do it.

At half-past eleven, a slight breeze sprang up, a few faint shafts of light penetrated the darkness, and then, as if by magic, the great bank of fog rolled away, the sun burst forth, and at half-past noon, and daylight was with us. We were now enabled to determine our position, and found we were on the summit of the divide between the North Arm and Seammur Creek, a broken and uneven back bone, made up of sharp ridges, deep ravines and level stretches as smooth as if graded by human hands, and everywhere, except on the very tops of the rocky ridges, was heather—"beautiful, sweet scented heather"—over which we moved as noiselessly as if treading on carpet. We now picked out a place for a permanent camp, leaving our grub and blankets there, and then started out on our run. At every step we came upon fresh signs of the game, but for a while the Indians appeared puzzled as to which way to steer; for, although the country was quite open and the eye could reach for miles in any direction, yet the broken state of the ground was such that goats might be within a few hundred yards of us, and still out of sight.

At length Seammux left us and started down the side of the ridge, but he had hardly got two hundred yards away when he turned and slowly walked back to us, telling us the game to be at least three or four hundred yards away. We hastily scrambled down after him, but what was our surprise upon reaching him and peeping over the clump of cypress, behind which he was standing, to discover four goats within thirty yards of us.

There was a clear open field for a running shot, did they attempt to escape, and feeling confident that my Winchester was good for two of them before they got beyond its range, I stood the lever of Dick's Ballard falling back to its place. I was none of that startled look about them which we always notice with deer and animals of that kind at the approach of danger. There was no throwing up the head for a moment, and then a bound as if a whirlwind had undertaken to pack them out of your sight. On the contrary, these silly brutes appeared to look at us from under their eyebrows—trotted about a dozen yards to the right, then wheeled and retraced their steps. I felt almost ashamed to shoot, but hearing the lever of Dick's Ballard falling back to its place, I opened fire, and with four shots we dropped the four within fifty feet of where we first discovered them.

Just here a rather laughable incident occurred. I had laid down my rifle and was instructing the Indians how to take the skin off, when, as Dick took hold of one of his goats by the horns to drag it to a level place to skin, the animal suddenly sprang to its feet and started down the hill. I turned to pick up my rifle, but before I reached it Dick had grappled with the animal, and they both, falling on the slippery heather, rolled down the hill at least fifty feet.

When they reached the bottom the live was out of the goat, and Dick so bespattered with blood, that he looked as if he had just escaped from some of the disturbed districts in Ireland.

It was past one when we had the pelts off, and feeling somewhat hungry we decided on making our noonday meal of mountain goat. So, building a fire, we soon had choice slices of mountain kid, roiling—Indian fashion—before it. The meal finished, I gave my rifle to Seammux (but he had come without a gun) and taking my shot-gun started toward the top of one of the ridges, on the lookout for ptarmigan, while Dick and the two Indians moved along the bottom to a gap which cut through this same ridge, about a quarter of a mile from the point at which I was ascending.

Before reaching the top I turned to get a look of the country behind me, and just here I picked up a little experi-

ence concerning at least one mountain goat, which I wanted, when the Siwash stopped me from shooting at the wallowing. On the top of a ridge which ran at right angles with the one I was on—the two being separated by the gap before mentioned—I discovered a large buck goat poking along on the very edge.

The side of this ridge appeared to me to be almost vertical, and its height about seven or eight hundred feet. About half way between it and the one I was on, the smoke of our camp fire curled up and drifted off in the direction of Sennour Creek.

But this goat didn't care anything about camp fires, he was going to come down the side of that ridge if he broke his neck in the attempt; and so I sat down to watch him. His distance from me was not over five hundred yards, and with my glass I could watch every move he made. About thirty yards below him, growing out of the side of the cliff, was a bunch of broad leaf plants, which the Indians had told me were a favorite food of the mountain goat. This spot appeared to be the objective point in his operations, and carefully he worked his way down, till he reached it, when he commenced feeding.

Just then I was startled by a *kak-kak-kak* just above me, and looking up, discovered a flock of ptarmigan not twenty yards off. There were eight of them, and I shot them all, firing seven shots, and yet that goat stood there the whole time, as unconcerned as if he was a thousand miles away. And still he must have heard the shooting, because Dick, who was double the distance off and nearly in the same direct on, heard every shot. I felt somewhat disappointed on picking up my birds and finding they were the black tell instead of *Lagopus leucurus*. They were also in the last stage of summer plumage, and scarcely fit for specimen to mount. Hanging my game on the limb of a cypress, I reached the top of the ridge, and found I commanded a view of the opening into which my companions had gone through the gap, and at once began to look round for them. Presently I discovered two dark objects beneath the shadow of a spreading pine, which, with the aid of my glass, I made out to be Dick and the younger Siwash, while further on, near the foot of the opposite ridge, was Seammux, creeping along as if on the lookout for some animal ahead. The younger Indian got up and started back toward the gap, and just then I heard a shot in the direction of Seammux, but before I could bring my glass to bear on the spot, a dense fog rolled up the opening and enveloped the whole scene in darkness. Then came another shot, and another until I counted nine shots in quick succession. I became alarmed, thinking probably that my companions had stumbled on to a cinnamon bear, and was on the point of starting down the ridge, when the fog cleared away, and I saw that it was Dick came up through the thick fog, "Cuteh in alive," and then a hearty "haw-haw-haw" from the same individual, satisfied me that nothing very serious was wrong. So I resumed my seat and waited for the fog to lift. It rolled away, however, almost as suddenly as it came, and I then discovered Dick and Seammux bending over some animal, which, with the aid of my glass, I made out to be a goat. I turned to look for my friend on the side of the cliff. He was still in the same place feeding away, but another actor had come into the stage. A dark object was creeping toward the white one. It was the young Siwash. Stealthily he picked his way along the side of the ridge, until he got within what appeared to me fifty yards of his prey. Then he halted, a puff of smoke shot out in front of him, the goat sprang backward, in fact turned completely over, and fell, a distance of full five hundred feet, to the bottom.

In a short time the young Indian joined me, bringing, with him the mutilated skin of the unfortunate goat. Ever since he started the hunt he had been feeling between the two Indians, more noticeable on the part of Seammux, because I had engaged the young Indian as guide, and all points as to routes and the chances for game were referred to him. I did this out of spite, simply to punish the old fellow for the way he acted during the time of your visit here. He, however, missed no opportunity to sneer at my proposition; the young fellow made, and now it was Seammux's turn, and, as he seated himself beside me, he asked if I had heard the shooting in the valley below us. I replied that I had, and asked just as we left it, where did you get that conical grin on his greasy face he answered, "*Klonas sogers*" (Perhaps it was soldiers). It turned out that Seammux had fired the nine shots at one goat, and the young Indian had shot an animal at him. In the meantime Dick had brought down his goat, which made seven, more than we could manage. So I gave the order to shoot no more, to pick up our skins and head for camp.

It was five o'clock when we reached a spot about three hundred feet above our camp, and looking down and seeing how very tiny they just as we left it, where did you get that conical grin on his greasy face he answered, "*Klonas sogers*" (Perhaps it was soldiers). It turned out that Seammux had fired the nine shots at one goat, and the young Indian had shot an animal at him. In the meantime Dick had brought down his goat, which made seven, more than we could manage. So I gave the order to shoot no more, to pick up our skins and head for camp.

After all there is a good deal of murder in the shooting down of a wild animal. At least so it has seemed to me in very many cases of my own experience. This one I am about to relate in particular. Here is a woman enjoying the freedom of a wilderness almost unknown to me. There is no caution—no thought of danger—because there is no animal of her surroundings that she dreads. She strolls leisurely along, stopping now and then to pick up some choice root or carress a favorite cub. The sun is sinking lower and lower behind the hills. The shadows of approaching night are creeping higher and higher up the opposite slope. She stretches her great length on the heather covered ground, and placing her head between her paws, quickly makes the playful motion of her three eyes. What is that? Only that, while; but it comes from the lips of a human being, and, as if seized with the dread of some terrible danger, she raises her head and, turning it in the direction of the sound, the object for which that whistle was given is attained and the next instant a bullet from a Winchester rifle crashes through her skull. She springs to her feet, and uttering the most piteous wail I ever heard from the lips of human or beast, drops dead at the

feet of her three cubs, who a moment after share the fate of their mother. This was murder in the first degree.

We had now been hunting just seven hours and a half, and had bagged seven goats, four bears and eight ptarmigan, the most successful day's sport I ever was engaged in.

That night, as we sat round the camp, I took out my notebook, and by the light of our fire wrote down your name as the one by which this camp should be known. The Indians, who were watching me, and, Indian like, having a curiosity for everything in the shape of paper and writing, asked what I had put down; and when I told them, the old fellow's face lighted up, no doubt with kind remembrance of his trip with you up Salmon Creek, and your killing of the bear, and he replied "*Akosh kookan*" (Very good). JOHN FANNIN.

DOWN WITH THE FLOOD.

Now had the season returned when the nights grow colder and longer, and the retreating sun the sign of the Scorpion enters. Birds of passage sailed through the laden air from the ice bound, desolate northern bays to the shores of tropical islands.

SAM and I were waiting for this. It was the fall; and up to the first week in November the weather had been so mild as to offer no inducements to make the big, long-tailed trip for ducks down the Savannah River. We had everything ready. Two large boats had been built under Sam's special direction and skill, made strong to undergo hard usage—one built to shoot from, the second to carry all the plunder, comprising food for ourselves and two darkies, cooking utensils, extra clothing and ammunition. We went in comfortable style, had plenty of time and anticipated sport in every season of the year. An added pleasure was the possession of two new 10-bore Scotts, fresh from the Reads; we had tried these guns and found nothing lacking in pattern and penetration. We just knew that any mallard, or any individual of the duck species that would get up within two hundred—well, call it eighty yards, was just so surely dead, if these guns were held right on it. Even our two fifteenth Amendments appreciated those heavy 10's, and as they gazed on the old Damascus barrels and fine proportions, they grinner with interest in anticipation of future duck feasts. Alex said, "If dem guns fail to bring what dey's aimed at, dey'll bring sunnin else, su." Joe remarked that "We's gonna give to scoop all de ducks in de Savannah."

The boats must be hauled six miles before launching, and so an early start must be made. At 4 A. M. we were under way. Two wagon loads of plunder, boats, shooters and niggers. The town was asleep as we passed silently out and beyond. At 8 A. M. we were eating breakfast on the banks of Horse Creek four miles from where it empties in the Savannah.

A wood-pile was close to the bank. With the rope in my hand I was hunting for a place to tie the boat which I was to take charge of. I stepped between that infernal wood-pile and the trunk, and slightly lost my balance. Grasping an innocent and deceptive stick on top to regain my lost equilibrium, it slid—so did I—we both slid, and

I plunged heady.

No more boat.

Ten feet of water. I swam. The boat was surely pulling me down stream. I grasped a rope. Then came Sam to the rescue. I felt myself in his strong hand, and I was lifted clear of the water and landed high, if not dry; but I bravely hung to that rope.

It was a most exciting run down the rapid Horse Creek. Alex had taken several nips from a mysterious flat bottle. This was unfortunate, because Alex steered my boat. He ran the dangerous points scientifically and successfully for the first time. Finally we reached our camp and place and came drifting down another. I turned the boat's prow over to the right, and the next instant we were heading for a large tree top bending over the water some two feet from the surface. I seized a paddle, but too late. I had only time to dole. Looking back I beheld a sight. Alex had stood up and caught the limbs, thinking to arrest the speed of the boat, if not to stop it altogether. But he had calculated beyond his strength; he might as well have tried to stop a freight car going ten miles an hour. He hung desperately to the tree with one hand, and kept as much of his weight in the boat as possible. The boat pressed him up against the tree and then slid from under him, the last impulse being to cause the thoroughly frightened darkey to turn a complete somersault over the limbs. For one awful moment he hung suspended, head down and eyes as large as trade dollars, and then, with a yell of fear, he dropped into the ice-cold water fifteen feet deep, with a current ten miles an hour. What must have been his thoughts, when hung between sky and water, he himself can't know. He could neither swim nor stand his head in the water. The boat had struck the shore and was wedged in the bank. I was incapable of doing anything; if it had been my last hour I must have had that laugh out. I stood up and laughed. I lay flat and laughed. I kneeled and laughed. I hung over the mess-chest and roared. Alex came up a sober nigger. Fortunately, his first grab was at the side of the boat and he was scrambled in. I could not do anything, for I was rendered helpless by his useful look, as he sat there soaked and shivering.

We soon reached the Savannah, and that night made camp just below Sandbar Ferry. The river was low. We pitched the tent on the sand quite near a cornfield, which was on higher ground. This was Wednesday night. As supper was announced it began to rain. All night it poured. It came down in buckets all day Thursday and Thursday night. Friday opened gloomy. It was rainy most of the time, but not that steady, discouraging downpour. That afternoon Sam shot some nice birds, the first game to be secured. About 3:30 Friday night we turned in, and soon all was quiet. I woke up once at 12:30 o'clock, and heard, or thought I heard, the rushing of water. I remember the bed felt mighty comfortable, and then went to sleep again. I was aroused by a tramping of feet outside, and exclamations of amazement and almost of fright, "Dick, Dick, get up! Kick Joe and Alex out. The river is rising. We will have to work for our property and perhaps for our lives. The water is within ten feet of us." Up in an instant, I roused

the boys, and they made a rush for the boats, through water that came up to the waist. Each one seized a rope, cut it from the stake and dragged the boats up until they grounded. Clearing our traps, we dumped everything promiscuously into the boats. Sam brought the last load, his gun case and the frying pan. But he forgot the pot-hooks—and I was only when the water was four feet deep over our recent camp that those venerable hooks were remembered—and those relics of bygone days rest in peace at the bottom of the Savannah.

A miserable crew we were. It was two in the morning; the rain came down and the river came up. All through those dreary hours we were shoving the craft toward the head of the flood. As the water came up, it was a black, cold, wretched night. At dawn we faced the overflowed bank, and after some trouble got a fire started. All was then changed. Gloomy faces and fears departed. Joe soon had breakfast under way. The aroma of coffee was wafted to our nostrils, and soon we were cheered by a hot breakfast, and then we cast off and away we sped booming down the river with the flood. It was magnificent. Alex, with strong and steady hand, guided my boat as it rushed on. My spot of observation was the top of the mess-chest. Sam's colossal figure loomed up ahead in the other boat. Swiftly we went on past bending willows, likely places for ducks—past forests, grand and beautiful trees, whose tops were sixty and eighty feet in the air, stretching out their giant arms for yards; great cypress knees, the impenetrable canebrake, and far reaching swamp—on, on, we rushed, with the rapid flow of the river, the water now clear out of its banks and the flood spreading out into lakes where it encountered the low lands. At about nine o'clock Silver Bluff was sighted and soon thereafter we made a landing. We conversed a short time with some of the natives who had come down anticipating the little steamer from Savannah, and from what we could glean, coupled with Sam's experience, found it about useless to go further, as what ducks there were on the river would most probably be away back in the woods, and consequently impossible to get at.

Dropping a half-mile further down the stream we found a splendid camp ground, with plenty of wood and water. All this time it had been raining intermittently, but as night came it letted a little, and the clearing.

Sunday morning broke bright, with only a few clouds, and by noon old Sol came right out and stayed there. Camp was immediately turned inside out to dry. During the day we received visits from the gentlemen on whose land we were encamped and others of the neighborhood, and accepted an invitation from a planter living some two and a half miles distant to join him in a quail shoot on the morrow. The next morning Mr. H. sent us mules to ride up to his house. Arriving, we were most cordially welcomed. We dined at four negroes, who made good, well-boasted—all the mule-back but the canines. Striking the field back of the house, we found a covey at once, and when the dogs pointed each shooter discovered, leaving his mule with his attendant. At the rise five birds fell. We had the covey well scattered and were just in for good sport when the rain began pouring again, and we were forced to retreat to the house, where the rest of the day was spent with our host. The sitting-room was filled with neighbors and friends of Mr. H. and friends of Sam, and all being good, great legs were piled in the rear fire-place, and as the flames lapped up the chimney, we sat in a circle around the pleasant warmth, and stories of the field and river were in order. Every man there was a sportsman, and each had "the best dog in the country," and such yarns as were told. Veracity was pretty well adhered to until we sat down to dinner, eight of us, and each individual enlarged upon his personal recollections and imagination amid roars of laughter. Some of the participants in that day's festivities have "passed beyond," but their memory lingers with us still.

Thursday morning we break camp, the river being at a fair stage for the shooting. Sam sits in the forward seat. I immediately behind, Alex at the stern with the paddle, and Joe in command of the provision ship. Onwego. The boat guides by the bending willows with scarcely a ripple. Mark! seven mallards spring from under a thick bunch of willows twenty yards in advance. I rise to cover my bird. The boom of Sam's 10-bore awakes the echoes, followed by mine right and left. The water is low. Sam's second sprang an old drake in the water sixty yards away. Mark! again. The water is low. The ducks flying up stream. Alex's strong arm sends the boat close to the willows. The fowl fly within easy range, and as the guns are brought up they clump, but only three go on. Joe retrieves the fallen.

We made camp at 4 P. M.; and strung up a log thirty-seven ducks, mostly mallards and teal, a few blacks making up the total. Dinner was served at about 6 o'clock, the camp fire heaped up, the pipes filled, and we lay on our backs and listened to the steady monotone of a good preacher. The time wore on to nearly 9 o'clock. Suddenly a low moon is borne to us from up the river. All of us are hushed to silence. It grows louder, louder, louder. The woods echo and re-echo the sound. The steamer from Savannah is coming. We pile on the logs and wake our camp fire blaze. We will let them know that we are here. She rounds the point above with many a light, pouring great clouds of smoke and sparks from her stacks, and sweeping swiftly and gracefully onward, is soon abreast of us. The passengers see the great fire and cheer. We reply in reply. Soon the little steamer is lost to sight. Presently all sounds cease, and we turn in for the night.

Onward we go, 178 miles down the river, with good sport and fine cold weather all the way. We beach our boats at Burton's Landing and take steamer for Augusta. The trip lasted three weeks. I gained seven and three quarter pounds. Sam was so frightened at what people said of his increased adipose that he would not go near the scales. We both felt better. The business of life did not drag, and out of the business we had something pleasant and profitable to think of.

DICK SWITTELL.

One of Mr. Van Dyke's most charming works is his "Piration Camp," a story of shooting in Southern California, where game is abundant and out-door life is a delight throughout the whole shooting season. There is a thread of romance running through the tale, which renders it very attractive. We have a few copies left, which we can furnish at \$1.50 each.

Fritz has named his dog Non Sequitur, because it does not follow.—*Detroit Free Press.*

Natural History.

SOMETHING ABOUT WOLVES.

"BEEN camping out among the bears and wolves," was the remark of my young friend and sportsman, Bill Sykes, who had just returned from a two weeks' cruise in the mountain range.

Ah, glad to see you again, if you have had a tussle with the critters and come off with a whole skin and—

"Hold on, there, you know as well as I that I never saw a wolf, nor more than one bear, which was chained to a post and kept walking back and forth, and came as a carperpetual motion as anything I ever saw. Come, now you old antediluvian, sit down and tell me something of the nature and habits of wolves, not those little nasty prairie wolves, them I have seen. But it is of the big gray wolf that I wish to know. Now, if I had lived in the days of my great-grandfather Sykes I should—"

Yes, yes, if you had lived in the days of your great-grandfather you would have known more about wolves than you do now. I knew old Sykes right well when I was a boy. He caught wolves when the scalps brought \$600 bounty each, and he accumulated more money than I ever knew any other Sykes to do since, and paid the whole amount for a large tract of land which after years became very valuable. Not after living twenty years, as I might say, among the wolves, I was hardly able to learn the habits of the animal. They bred but once in a year and from four to six puppies are produced at a birth. The young are born about the first of April. The whelps when six or eight weeks old have a thick coat of woolly hair of a dark brownish or dun color; and their looks and actions are much like dull, lazy puppies, while the full-grown wolf does not very closely resemble the dog either in appearance or actions. I knew an old she-wolf, who later in one hollow log three years ago. She was robbed of her cubs about the first days of June in each year, the old wolf generally keeping out of gunshot distance, even while being robbed of her young. There are comparatively few wolves killed by gunshots. Instinct seems to have taught them the potency of firearms. When they are shot, as sometimes happens, they are almost sure to escape unless broken down or struck in some vital part. I once followed a wounded wolf for days when it seemed to me that every drop of blood had run out of him; and the second day of the chase I thought he ran the better for the bleeding.

The wolf is rather cowardly, and would generally prefer to run from a dog rather than fight. But he is a powerful fighter when he does fight. Notwithstanding some reports to the contrary, I believe that there never was a dog that could master a full-grown wolf. There are few dogs that will attempt to fight a wolf, and when they do they are badly cut up if not killed outright. The bite of a wolf is not like the bulldog grip, but is a succession of snaps, which are about as quick as lightning. The wolf leaps back and forth over the dog, his jaws snapping like a steel trap, and the dog is cut up with knives in less time than it takes to write it. Wolves will occasionally run down a deer, but it is a rare thing that they hunt that way. They have a more easy method, which is to get on the windward side of the deer while lying in his bed and creep up cat-like and pounce on him before he fairly makes the first bound, as has been frequently ascertained by the tracks in the snow. Wolves were often caught in steel traps than any other way; but it requires great skill and patience to succeed in trapping them, as they are shy and wary. The wolf is not going to run into any pens or deadfalls, nor slip his neck into any noose or snare.

I have seen two animals, the progeny of a cross between the dog and the wolf. They were ill-looking nondescripts, which were neither wolves nor dogs; and were the most vicious, surly, ill-natured brutes I ever saw. It became necessary to keep them chained before they were fully grown; and they proved decided failure toward improving the breed of either wolf or dog.

The dismal howl of the wolf is what we often see written and often hear quoted; but I contend that there is nothing dismal about it. I would be willing to travel some distance to hear a concert gotten up by a half-dozen wolves. Not that I claim any very sweet melody for the sounds except that they would bring back to my memory pleasant reminiscences of other days.

The wolf, like the Indian, is fast disappearing before the march of civilization, and we may safely predict that at no very remote period they will be counted among the extinct races.

Piney Falls, Tenn., Dec. 27.

THE DIVINING ROD.

MOUNTAINS OF SOUTHERN KENTUCKY, Dec. 10, 1891.

IT was by a curious coincidence that not a week before I was reading my *FOREST AND STREAM* of Dec. 1, in same column, which contained a very interesting article on supposed relations between beechnut crops and waters—the only instances of those identical items which came under my immediate cognizance—had been discussed. A night spent with an old friend took me off my accustomed route to our county town and past the spot where I had seen the water-wizard's manipulations of his rod. This was so vividly impressed upon my boyish memory that after a lapse of thirty years I located the well (now filled), though the house had been removed and the road changed. Arrived at town I met my old schoolmate and boy confidant, now living in Central Kentucky, who, while on a visit to me in July, 1889, directed my attention to the remarkably heavy beech crop, and after informing me that a certain native of the mountains had a few days before told him that such a crop always forebodes a "hard winter," added: "Now, let's remember and watch that." The winter of '89-'91 did no counterpart in severity in the memory of the oldest observer.

Dr. Crenshaw observes that mild winters are apt to follow good beechnut years in New York. The reverse obtains here.

Not only retain an abiding faith in the approximate infallibility of the divining rod in locating the meanderings of subterranean streams, and no believer doubts that volume, course, depth, confidence and divergence can be accurately determined by the aid of the rod in peculiarly gifted hands. It is averred that the bark has been wrenched from the divining rod, in particularly gifted hands, when crossing the course of subterranean forests and under and violent dips of the switch have proclaimed underground rivers. I am

not positive as to accuracy of memory in associating the introduction of water-witching with the time that spiritualistic phenomena were so intensely absorbing a theme in our community, but remember well that about the time the Foxes were so interestingly notorious, developments of mediumistic gifts with the rod were scarcely a secondary amazement. In this famously spring-watered country, wells and cisterns are few, and he is thought rash who essays a well without appeal to the water-wizard's rod. Professional well-diggers avoid the wand in my boyhood, but principally amateurs cultivate the art now. A peach-tree twig, three to four feet long, and straight, used in one hand by some, forked and a prong held in each hand by others, was the popular wood when the practice was in its glory a score and a half of years ago.

I suppose I was ten years of age when I visited the farmer, for whom a water-wizard was at the time digging a well on contract—no water no pay, but board whether or no. The peach-tree twig, forked and held in both hands, had located the confidence of two strong streams, at a certain depth, in the most convenient hollow, so far below which the old gentleman had tediously blasted his way through expensating strata of limestone that he made daily appeals to the rod in hope of new revelations, or detection of some miscalculation. After showing me the persistent but deceptive movements of the rod, he placed it in my hands for trial. My recollection is that I was led in his courses, and that I agreed that his interpretations of indications were in perfect accord with mine. A gentleman who has lived on an adjoining farm for more than forty years told me that the hole was abandoned, filled, and a spring half a mile away is still the dependence of that farm house, no owner having had the enterprise to dig a cistern. My observation has been that to topography is a prime motor with all operators left to their discretion—a natural fallacy, in view of the illiteracy of the average wizard.

Some years ago a charlatan gravitated into our neighborhood, in whose hands the divining rod performed such wonders in the direction of coins concealed within mysterious bounds that many believed him gifted as were Pharoah's magicians; and he had a soft time sponging his board and a few dollars, till a skeptical old farmer, in discussing his abilities, led him to a climax from which he could not decline a proposed wager without virtually confessing himself an impostor. The old gentleman was to conceal a half-dollar in a field of growing corn, within agreed limits, which, by aid of the divining rod, the wizard was to find on first trial. He was accurately led in the old man's very direct footsteps till a sudden deflection of the treacherous rod—where the keen eyes of the rascal discovered a very slight disturbance of the surface—led the unsuspecting to exclaim: "Here it is." But it was not there; nor could repeated efforts locate it, so skillfully had the old man concealed the coin and "set his traps." That was the last performance of that magician in that locality.

A neighbor began building a new house last spring, near a point where one of our popular amateurs had located a strong, superficial stream, in the bottom, and so strong was his faith that he sold off that portion of his farm on which was the house and surroundings and pushed the new house up much faster than he did the well down. Result: After digging much below the indicated depth and drilling four feet deeper, without sign of anything to drink, he availed himself of a lucky chance to sell out, and invested in a perpetual spring, of which he had some knowledge.

I know of no statistics by which conclusions can be reached as to the comparative merits and demerits of the water-wizards and comparisons made of successes and failures; but there is a preponderance of failures in this limestone region. Some persevering individuals, confident of water at insignificant depths, in their disappointments have obstinately pushed on till artesian depths, coupled with pecuniary stress and insufficiency of human power to run the hoisting apparatus, constrained suspension of operations. Allusions to water-witchery is all-sufficient in most such instances to cause a more or less complete thrashing. In the more favorable part of Kentucky faith in the divining rod is extinct, and the party who decides upon a well selects a point most convenient to the cook-room, and puts a well-bor to work, though the nearest alluvium is ten thousand feet below his site.

KENTUCKIAN.

PORT ROYAL, TENN.

Editor Forest and Stream:

In the *FOREST AND STREAM* of Dec. 1, I notice an article, headed "The Divining Rod." Evidently the writer of the article thinks the divining rod a delusion and a humbug, the outcome of a more or less scientific knowledge of mathematics, and can be clearly and satisfactorily demonstrated. I can show you several men down here who can convince the most skeptical that the rod is not a fraud. I can show you a man who can not only locate underground streams with the rod, but will manipulate the rod in such a way that it will point as unerringly and indicate the direction that underground streams flow as the mariner's compass points toward the north. The divining rod is no more of a humbug than the mariner's compass. All rivers and creeks are fed by small underground streams, but there are no sure indications of their existence. Now, I know a man who, with a rod, can find every underground stream that flows into a surface stream. You might set him down in California, or any strange place, might lose him in the "continuous woods where rolls the Oregon, and hears no sound save its wave dashings," and he would find every underground stream in the neighborhood and trace them from source to mouth. I have seen him do that very thing—have seen him put the rod under a creek, and he has never failed in a single instance to demonstrate clearly and unmistakably that the rod is not a fraud. Carry him to a well, and in an instant he will show you the direction the stream flows that sustains the well, and the side on which it flows into the well. Carry him within, say, a quarter of a mile of a spring that "he knows not of," and with the rod he will find it. Where his rod indicates that there is water, dig and you will find it. I set him down within a few hundred yards of two never failing wells that he is using the rod to find. When people want water below the surface they send for him. He never fails to find it. My father once put a rod man to a severe test. He claimed that with his rod he could locate deposits of precious metals as well as water. My father thought him and his rod a fraud. He thought he would test him. He said to him, "Please walk with me to my business house and work your rod, and see if you can find water." Now, the road leading to my father's house ran parallel with a creek for some distance, and he knew the existence of several underground streams that crossed the road and ran into the creek, and he wanted to see if the rod

would indicate them. He found every stream and traced them to the water's edge. He could not have been guided by surface indications, for there were none; for at the time the creek was flooded, and the streams flowed beneath the surface. My father is now a believer in the rod. Some years ago a certain journal in our State discussed the rod question quite elaborately *pro and con*. Correspondents had it up and down. The rod men offered to bet large sums of money on the rod. The anti-rod men would cry "fraud," "humbug" and "delusion," but did not dare come to the scratch with money. Then the editor came out and said the "who" thing was a fraud and a delusion." But, remember, the editor was a pompous, conceited individual, with A. M., Ph. D. stuck to his name, and had learned and forgotten more than the balance of mankind knows. Because they do not know the whys and wherefores in regard to the workings of the rod, many people are ready to cry "humbug." Does any one know why the needle points unerringly toward the North Pole and guides the mariner across the trackless ocean? There must be a cause, and when we see the effect must we not see it a humbug because we do not know the cause? Effects are more obvious than causes. Ignorant people contend that the science of astronomy is a humbug and a delusion. Can it not be easily demonstrated? It can. So can rhabdomania. Birdo.

THE SNOW GOOSE AND BLUE GOOSE.

PHILADELPHIA, Pa.

Editor Forest and Stream:

I have read Mr. Dutcher's communication to you in reference to the snow goose (*Anser hyperboreus*) and the blue goose (*Anser carolinensis*) in last number of your journal. I am quite sure an examination of adult and young specimens of both will convince one that they are an entirely different species. I have to-day visited our Academy of Natural Sciences in Philadelphia, and last week the Smithsonian collection at Washington, and find the full-plumaged adult bird of *Anser hyperboreus* is no larger than specimens of the young of the same species, yet the latter is of entirely different color, being a dull bluish or pale lead color, while the young of *Anser carolinensis* is much smaller, and has the bill shorter and the laminae less prominent. In color I find the latter darker and of a more solid shade than the young of *Anser hyperboreus*—gradually, as it grows older, assuming the brown hue and attaining the white head and rusty markings of the parent bird—while the young of *Anser hyperboreus* changes from its bluish or pale lead-colored markings as it grows older to the lighter hue, and at last dons the snowy plumage of the full feathered form.

Prof. Elliot Coates informs me he deems the species undoubtedly distinct. Prof. Baird likewise inclines to the same belief, and my friend, Mr. Spencer Trotter, writes me: "*Carolinensis* is certainly a distinct species from *Hyperboreus*. From specimens I have examined in the collection of the Philadelphia Academy of Natural Sciences, the blue goose was apparently smaller and very differently marked than the young of the snow goose." It has struck the writer, in his examination of specimens of the *Anser* family of this continent, that very possibly some of the varieties which now exist and have become numerous, and bear marked peculiarities of plumage, may be prolific crosses of older known species. Without venturing an opinion, it struck me that a full-plumaged blue goose would be just what the result of a cross between *Anser albifrons* and *Anser hyperboreus* should be.

I will take this opportunity of stating to Mr. Dutcher that the bodies of snow geese that yearly appear in Delaware Bay make their appearance in the spring and not in autumn, although occasionally a stray bird is killed in the fall and winter.

Another variety of the snow geese exists which should not be confounded with *Anser hyperboreus*. It is named by Cassin *Anser albatus*, and is much smaller and more delicately outlined than the first named. They are plumaged alike in every respect, save that in the smaller variety the rusty head markings are seldom as distinct as in the larger; in fact, adult birds are often found without it.

Since writing the above I would mention that I met John McCullum, one of the market shooters who has posted himself as to the habits of the snow geese, and he told me that winter before last (it was a remarkably open one, it will be remembered) the bodies of snow geese remained in Delaware Bay, below Bombay Hook, until spring, and that they are there now. Daniel Wells, a professional gunner, well and favorably known to all Philadelphians, is at Bombay Hook at this writing, in charge of Mr. Chas. Matthews' yacht, and so remains the new season, in prospect of the snow geese. McCullum is about going down the river, and could readily procure for Mr. Dutcher all the specimens desired. Using McCullum's words, "The geese are not all of one color. Some are pure white, with red bills and feet, and black tips to their wings, and russet-colored heads; and some are of a light gray, with black bills and feet." Doubtless there are many grades of plumage in these flocks at Bombay Hook, and an opportunity now presents itself for collectors who wish to procure the former species in purity. I have seen one of John Krier, Second and Walnut streets, Philadelphia, will reach him.

I was not aware that the snow geese appeared on our bay excepting with spring, and have so written it, but the information received to-day assures me it is now a regular spring and autumn resident, and that in mild and open winters they remain with us until breeding season, when they move to more northern regions. The attraction seems to be the immense meadows which border the lower Delaware River and Upper Bay, in which they feed, and from the fact that they have not been molested owing to an ignorance regarding their merit as a food, and a consequent slow sale for them at the poultryer's, it is safe to suppose their numbers have gradually increased. It may be that among them the *An. carolinensis* and possibly the *An. albifrons* can be found.

O. S. WESTOOTT.

ZOOLOGICAL SOCIETY OF PHILADELPHIA.—Editor *Forest and Stream*: I was under the impression that the want of identity between the blue goose (*Anser carolinensis*) and the snow goose (*An. hyperboreus*) had been clearly settled, but the question is again raised in your correspondence column of last week. Permit me to say that in September, 1875, the Zoological Society procured eight specimens of the former species in purity. One of the snow geese was still living, and have of the snow geese, except possibly that the dark coloring has become slightly intensified. I cannot speak from personal observa-

tion, but authorities seem to agree that the young of the above species, and probably also *A. albifrons* resemble each other to a greater or less extent. As all ornithologists know how difficult it is to identify immature members of many closely allied species without a long series of specimens for comparison, any single shot of the supposed change from one of these forms into the other should be accepted with much caution, particularly when it can be shown that a considerable number of individuals, at least seven years old, have not gone through the transition.—ARTHUR ERWIN BROWN.

THE SPARROW PEST.—South Norwalk, Dec. 23, 1891.—Your article on the sparrow cove in Australia should be read by every farmer and fruit grower in America. I cannot fail to open the eyes of the most skeptical to the universality of this importation from old England. As you have already given much valuable space to this subject, I will make my remarks as brief as possible. I have three large bird houses on my place, each house containing twenty or seventy-five compartments, making 225 nesting places. They were formerly occupied by bluebirds and other birds. The sparrows have driven all these entirely off my place. For six months in the year every compartment in these houses is occupied by them in breeding, and the lack of nearly all signs of other birds in the town are used by them for that purpose, causing much annoyance to the owners. To say that the sparrows are very prolific is simply drawing it mild. Within a few years they have increased to an alarming extent, and if not checked will become more numerous than the leaves on the trees. A general war of extermination should be waged on them by every one. The past two years they have destroyed every grape on my arbor, picking each berry on a bunch as fast as it ripened. I have a friend whose peach buds were all destroyed by them, they not leaving one on a tree. They commenced nesting in the houses as early as February, and I shall shoot them off as fast as they go to them. In the fall and at this season of the year they collect in large flocks and offer good opportunities to make "pot shots." Your humble servant has made some heavy ones by scattering cracked corn and oats near the thick shrubbery, where they come to roost at sundown in large flocks. I have an 8-bore gun, and with 2 oz. No. 10 shot, backed by six drachms of powder, one barrel directed on them while feeding, the other just on the loop, this arm will do more to exterminate them than anything else I know of. They are very cunning, and after one or two pot shots of this kind will not alight on the ground to feed within a long distance of where the shots have been made. Poisoned grain and water will not work to any great extent, as they soon take the hint. Shooting them, breaking up their nests, and offering a bounty for their scalps and eggs will be the only way to get the upper hand of this most destructive of birds.—F. B.

THE WHITE-HEADED EAGLE AS A FISHERMAN.—St. Louis, Mo., Dec. 19, 1891. *Editor Forest and Stream:* To corroborate your reply to "Jack" in your paper of the 15th, with reference to the fishing propensities of the bald eagle, I have to advise that during the past fall, when on a hunting and bird observing tour on Lake of the Woods, B. A., my companion, Mr. George Mitchell, informed me that many times he had watched the eagle of that section catch fish. Oftentimes the fish would be so large—his estimate of six to eight pounds—as to be almost too heavy for the eagle to carry off. In 1874 on the same lake, a tributary to the Lake of the Woods, Mr. Mitchell killed a very large eagle whose head was just turning gray, and which was shot while in the act of killing a fish it had just caught, my informant having witnessed the catching. Mr. M. has, for a number of years, been a resident of this lake country, and who lives at Rat Portage, on the north end of the lake, and he is well acquainted with the habits of the osprey and other birds of that section, and having confidence in his statements, and from the description given me, I am convinced that the fishers this gentleman has so many times noticed are none other than our "Bird of Washington," emblem of the Nation—*Haliaeetus leucocephalus*.—D. H. TALBOT.

Game Bag and Gun.

THE CARE OF LIVE QUAIL.

SPRINGFIELD, MASS., December, 1891.

Editor Forest and Stream:

I have lately received from gentlemen in different localities many letters making inquiries about quail; and though I would be glad to answer each one in detail, it would take more time than I have to spare; and the fact that I have been for over a year under treatment for my eyes, and am still under strict orders from my physicians to use them "as little as possible, and for only necessary work," compels me to ask through courtesy of *FOREST AND STREAM*, the privilege of answering some of the many questions, and giving such information as a little experience has taught me, and she is said to be a wise teacher.

A correspondent asks: "Will they breed in confinement?" I have never tried the experiment, and do not think it would succeed with birds taken wild. Birds hatched under chickens are said to be easily tamed, and I learn upon good authority that a farmer, only a few miles from here, now has quite a brood that live and feed with his chickens and are equally tame. I am told that his moving machine killed the old bird last summer. He caught the young, took them home and put them with his chickens. I shall drive out, my first opportunity, and learn the truth of it; think it will prove that he took the eggs and hatched them under a domestic fowl, as the young, even when very young, are hard to catch. It seems reasonable to believe that these birds will mate in the season.

Do they become tame if kept a while? No; not by any method of handling I have ever practiced. On the contrary, those that we liberated last April had been kept, most of them, through the winter, and though fed and watered every day, grew more wild the longer kept. Same is the case so far this year.

Can I keep them in a barn? Should advise not, for impure their wings are trimmed they will soon batter their brains out. Better not to mutilate them in any way; but if so, pull out the flying feathers from the wing to may have to be done more than once, and, when they are cut, they soon grow out. If they are cut they will not grow until after the moulting season; and if the birds are liberated in this condition they will soon be prey for the skunk (their worst

enemy) as they must walk to their resting place for the night and leave a trail easily followed, instead of making a flight to it, as is their custom. I speak of skunks as their worst enemy. These vermin are constantly running about, night and day, and if they cannot find the old bird on her nest, they will suck the eggs. Hawks are also very destructive in winter. I have seen when fox hunting, one or two hawks in the neighborhood of a nice covey of quail, which would dwindle day by day until only a few feathers were left to tell the story. The birds are a shining mark on the snow while feeding, and getting terrified, become an easy prey for the hawk.

"How much do they cost?" This must be guessed at, as it cannot well be estimated. Shippers usually charge \$2 per dozen. Not less than half a dozen, which makes the cost \$4. Add, perhaps, \$1 transportation charges, and you have something near first cost. The best success we ever had was to save forty out of a shipment of fifty birds. Of the last lot received forty-five were sent; sixteen were dead when received, and at the end of four days only nine were alive. None die after the first week; they then grow fat and strong. Why this mortality at first I cannot explain. The cages indicate rather rough handling by transportation companies, possibly a little water put in for them to drink during the four or five days' journey would help them, but perhaps it is too much to ask, as the companies are only paid for carrying. The fact is that the cage this last lot of birds came in was the same one sent us from Meville with 200 birds in. They were over two months on the way, and not one in the whole lot died, or was in any way disabled. It looks as if the native birds were very weak or the expressmen very strong.

One correspondent says he would prefer not to buy the birds before March or April, even if they cost more, as he has no suitable place to keep them. Last year we could not get any after February, as the season was such they could not be taken. One must recollect that the spring is earlier in Tennessee than in Massachusetts. A few hours' work will make cages to keep them in, and the barn, if no cats or rats are around, is as good as any place to keep them. The boxes I have used are about five feet square, and seven inches deep, with holes bored in side and ends, and covered with lath, leaving spaces of about an inch, with feed trough at one end extending whole length. These boxes will keep fifty birds each. Give them fresh water every day and feed mixed seeds, rye, oats, wheat, buckwheat, cracked corn, etc. Put in clean sand occasionally, and hayseed; sweepings from barn floor are excellent for them. Be careful when making box that it does not exceed seven inches in depth, for it is in flying up that they do themselves the greatest injury, and they are liable to be panic stricken any hour of the night. What causes the alarm I do not know, but have frequently, on hearing the commotion, gone into the room and turning the gas light on, all was quiet, but dirt and feathers would be found flying from every cage, and a good many sore heads in the morning.

A correspondent from a hill town of Hampshire county, this State, asks if they would probably eat seeds from the weeds and support themselves. They probably would, unless something else was provided, but only until they could find some locality furnishing grain stubble. They are great travelers, and will go until they find feeding grounds to suit. The thing for him to do is to sow broadcast on ground, not cultivated, grain in three kinds. Enough will come up. Do not cut it. See that it is sown near running water and good bird or alder cover.

When liberating the birds see that they are well distributed. Don't put many in a place; two pairs is better than more. We have attained best results in this way, and put them about a mile apart. WM. M. WILLIAMS.

MARIETTA, Ohio, Dec. 26, 1891.

Editor Forest and Stream:

In your issue of Dec. 22, your correspondent "Verde Mont" asks if it is difficult to keep quails in confinement. I am a lover of birds and have had some experience in just this thing.

Two years ago I bought ten quails and put them in a cage which I had made for them, 24 feet long, 7 feet high and 6 feet wide. A small part of it was tight or inclosed—the front and open part shut in simply with laths 7 feet long and 1 inch apart. The quail were very wild and would fly from end to end in a full rush against the laths; but they soon learned that it was no use hurt them, and in a few days quit it. I kept them all the winter and until midsummer, when I opened the door and let them out.

They became in a measure tame or at least quiet and I enjoyed very much their answer to my call of "Bob White." When I came home at noon I would rap upon the window-sill looking out upon their cage; they would jump up in the perches and answer me back as I softly whistled their beautiful notes—and very beautiful creatures they were.

I fed them screenings, corn, wheat, and kept a cake of cracklings or residue from the lard kettle all the time in the cage. I remember with what avidity they ate the seventeen-year locusts we gathered for them during the summer.

A box filled with straw or some covert place is necessary for them to hide and rest in. I have had a new cage, half tight and half open and a very much better one made this fall, in which I have at present twelve beautiful quails, and I expect in a few days twelve more. I have also a wire cage (woven wire) about 10 feet square and 13 feet high in which I have kept six birds for several months. During the fall I set up Shelbyville, Tenn., for live quail, and the birds came all night. I hope soon to get more from the Indian Territory and also from Texas, and am also expecting four or five prairie hens from Kansas. H. B. S.

A GAME CHRISTMAS TREE.—Buffalo Farm, Forest County, Pa., Dec. 24.—A wide spreading apple tree in front of the old farm house. Suspended from the limbs are eight deer—four fawns, one yearling spike, one three-yearling and a four-prong buck. The deer are all real, and the cause of the very dry Christmas. They have been about sixty deer killed within a radius of ten miles, by different parties, all still hunters. I have heard of no dogs as yet, and think it would not be healthy for any in this section. Our party, of three, use Sharp's, Winchester and auxiliary rifles.—LAURENCE OWL.

UNDER THE SHADOW OF WHITE TOP.

UNDER THE GREENWOOD TREE, }
Washington County, Va., Dec. 24.
AS our open season for game draws to a close rapidly to its end, along with the closing year, perhaps a few notes from this remote corner, overshadowed by the mighty White Top, king of all the Virginia mountains, may not be unwelcome to the *FOREST AND STREAM*.

In most localities west of the Blue Ridge quails have been less numerous than usual, no doubt chiefly owing to the cruel cold of last winter, as the past hatching season was exceptionally favorable. Here and there, however, in well sheltered valleys it has been possible to make a good bag. A few days ago, four gentlemen of this neighborhood, all square and honest shooters, bagged fifty-one quail and five hares before 12 o'clock, when the weather grew so stormy as to drive them from the field, and all four confessed to having shot badly, and to having done great injustice to their opportunities. Stuffed grouse (called here pheasants) are very abundant, but it is no child's play to beat the ground where they "do mosty congregate." He is lucky or skillful indeed who takes a single shot from a dog's tramp. Ducks are unusually scarce on the mill ponds and on the various branches of the Holston River, perhaps because, so far, we have had no winter. One swan "*rarinaria avis in his tervis*," a straggler from some passing battalion, lost, no doubt, and perplexed in the extreme, has been shot on a neighboring mill pond, the "first seen here for many years." There are a few wild pigeons, and the woods are fairly alive with gray squirrels, that time-honored delight of the ancient countryman with a gun taller than himself, or a mountain rite carrying a bullet of a hundred and forty to the pound. Wild turkeys and hares are scarce, but are to be had by the persevering. Two bears were killed ten days ago on the slopes of old White Top.

The last deer hunt of the local club would have been most enjoyable, even without the trophies which marked its success. Those who only see the mountains in the glow of summer know less than nothing of what their beauty is; and on this occasion, landscape, weather, noble dogs, the presence of charming and gracious ladies, and the good luck to make a perfect scene, long to be remembered. The meet was at a height, crowned with grand old oaks and overlooking the lovely valley of the Holston. Our leader

"Gave an inspiring air, that dale and thicket rung,
The hunters call to Faun and Dryad known,
The oak-crowned sisters and their chaste-eyed queen,
Sisters and sylvan hounds, all were seen
Peeping forth from their alieys green."

and away, away flew the hunt, the "notes of the mellow horn by distance made more sweet" mingling with the ringing echoes of hoof and hound. "Twas enough to quicken a graven image into life. The trophies of the day were two bucks, one to the gun of W., the other to that of R., both of the crack shots and good sportsmen; and if any of the readers of *FOREST AND STREAM* think it nothing to knock over a deer from the saddle at 50 to 80 yards, while both hunter and hunted are going at racing speed, and every muscle is quivering with the excitement of the chase, why, all I have to say is "Let them try it." But I might say of such sport as good old Walton said of something else, "This is too good save for very honest men."

Later I will send you notes of our late sojourn on one of the great swamps of the coast, with its mixture of all sorts of sport. DEXHIGHT.

STATE PIGEON TOURNAMENTS.

BY GLOAN.

THE indorsements you have already received of your views in condemnation of wholesale pigeon shooting have been so numerous and strong that probably any other is superfluous, but yet I would like to add my concurrence, which has not hitherto been unavowedly delayed.

I never could understand how such a practice came to be tolerated at the meetings of sportsmen's conventions. I never could understand how any competition for gain, bringing with it the usual concomitants of gambling for money, could be considered a branch of sportsmanship or an adjunct of field sports.

It has been a task arduous enough, in all conscience, to educate the American public up to the point they have now reached as to sportsmen and game preservation. And even yet, outside of a few large cities, I fear that by the majority of the people, the name sportsman is held to mean a sporting man—i. e., a gambler, and that having gone that far in nomenclature, they generally go a little farther, and associate the name with criminal practices.

It has been the effort of your paper and of your co-laborers to remove this prejudice and ignorance, and to endeavor to inculcate a knowledge of the benefits to be gained to the individual from out-door life, and the good to be derived by the masses by the supply of cheap and nourishing food.

But how fatally are these efforts contrabated by the annual meetings of some of the clubs. There are gathered together ostensibly the very pick and flower of sportsmen, presumably the best representatives of the game and fish preserving sentiment, and the highest attraction offered in the contest at the traps, with either money or money's worth at stake, to be contended for with all the agencies of gladiators. Heart-burnings, jealousies and disappointments are not here in some instances, the only results of this strife. Charges of foul play have been too frequently made, and, if not proved, have nevertheless been believed and constantly reiterated.

This is not the way to promote high sportsmanship in this country. We may talk as we please of the open air, the beautiful sky, the green fields and the sparkling brooks, which bring bloom to the cheek and vigor to the frame, but these will be of no avail if it is supposed that to be a sportsman is to take a risk of a ruinous version of the moral tone, worse may be than physical disease.

We should draw the line here as it drawn is in England. There they have no such difficulties as we have as to game preservation. Consequently there do not exist at all any associations similar to ours, formed for such purposes. There is no need of them. There are many gun clubs existing, however, of high and low degree, all devoted to prize pigeon shooting, and men of title and men known to be fine field sports and keen sportsmen are to be found in them.

And it is distinctly understood and accepted, that when they go to the gun clubs to shoot, they go there, not as sportsmen or as game preservers, but solely and simply to win money by their skill with the gun, precisely as they would go to a card club to win money by their skill with cards, and they are estimated accordingly.

gun maker's name, and he will make you a gun that will do it every time, guaranteed. Above all, be sure that your powder is good; not necessarily expensive.

In concluding this brief paper I should state that the charges named above are for guns weighing from 7½ to 8½ pounds. But I am sure that I have given the maximum of shot for any gun that a gentleman ought to use. Pot hunters have their peculiar guns and they load them to suit themselves.

But I have found several very surprising things in my experiments, "things which," as Lord Dundreary says, "are met a fellow's flapping out."

With 3 drams of powder and 1 oz. of shot I obtained nearly or quite as good penetration at a target as I did from 3½ drams of powder and 1½ oz. shot. But when I tried the same loads on game there was no comparison. Can it be that the feathers and the wind would make this difference? Who will rise to explain? In the old muzzle-loading days a man who would use 4 drams of powder was considered as a mere pot hunter, and, indeed, the jar, smoke and general discomfiture precluded, as a general thing, the use of more than 3 drams. Now the muzzle-loader, bore and pistol, which takes more than half the recoil, and a better idea of making guns, have improved the modern breech-loader so that but little improvement can be asked by the most exacting.

Sportsmen will try the above named charges, now that most good guns are bored alike, I think that they will be satisfied that they have obtained the true charge for game shooting.

ST. CLAIR.

Editor Forest and Stream:

In your last issue (which, by the way, let me say in your correspondent's judgment, is the best number he ever read) is an article on "Loading." I was very glad to see it, and hope the subject may now be fully discussed as you invite. In your issue you had an article on one and one-half drams of powder. He used an 8-b. muzzle-loader, 12 or 14 gauge. One I asked him, How do you load? "I always load the same," I would put in the same charge to shoot a robin as I would to shoot a bear," was his reply. This friend had the most uniform success in killing of any hunter I ever knew. He was very careful about his gun, and equally so in the selection of his ammunition, and never varied the amount of powder nor the quantity of shot, but would use different sized shot as others do. His theory was that when the capacity of a gun was found as to the quality of powder it would use to best advantage, to never vary from it. I have had the opportunity of late to test a No. 12, 10-b. breech-loader with different charges, and as I experiment, lean to the belief that my friend above alluded to was right. I have followed in many instances suggestions made in your journal—to use "plenty of powder"—using from three and one-half to four and one-half drams to one ounce and one and one-eighth shot. I expected to get greater penetration from four and four and one-half drams and one ounce than from three and three and one-half drams and one ounce, but I have failed to discover it. The recoil coming from the larger charges was not at all unpleasant, but somehow both at target and at game three and three-quarter and one and one-eighth has done the best work even at sixty yards. Why there should not be a decided difference in penetration with four and one-half drams and one-ounce, over three and three-quarters and one and one-eighth, is something I cannot account for. Your valued correspondent speaks of "impulse" in its article—that he considers a number of shot driven with even less velocity more valuable than two or three set at higher speed. Perhaps he is right, but much of our game must be shot for at long-range and penetration seems the great essential. So far as my experience has gone, I think guns of the game weight, bore and make, differ very much as to the kind of loading each needs to bring out its very best qualities. (Why this is so, let the gun-makers tell us.) What that load shall be is no easy thing to determine, both as to how much powder, how much shot, and the size, how coarse the powder shall be, how many wads to use on the powder, how hard to press them down, etc., etc., but I leave this subject to abler hands, and trust to see the whole matter thoroughly ventilated.

QUINOT, Ky.

Editor Forest and Stream:

All the varieties of game we have here are geese, ducks, quail, quail, quail, and in the spring plenty of snipe and a few woodcock. For all but the last two my favorite charge is 3 drams. Hazard sea-shooting and 1 oz. shot. In my gun, which is a modified choke, I have no use for any shot larger than No. 6. Once, while after geese, loaded some shells with ¾ drams. powder, and 1½ oz. No. 1 shot. I found my old 3 drams and 1 oz. No. 6 charge much more effective. My gun is a Parker, and on the card was this target: "3½ drams. powder, 1½ oz. No. 8, 45 yards, 24 in. circle, 140 pellets in circle." I cannot get that pattern, but the gun is entirely satisfactory. Now my experience affords me that the 3 drams and 1 oz. is the best charge. With 3½ drams and 1 oz. I do not get as much penetration as with 3 drams. In this part of the country we can never tell what will be next to shoot at, whether a grouse with his rapid wile, a squirrel with his tough skin, or a quail or woodcock, and we have to load to meet the wants of them all. I have owned and shot No. 10, No. 12 and No. 14 guns, and in none of them would the big load of powder and shot fill my bag as well as the lighter ones. In the 10-bore I only used 1½ oz. No. 6, the same in 12 bore, and 1½ drams and 3 oz. No. 4-bore. The game is wild and much shot at in these parts, and it requires a nice shot to get any game.

MIDDLETOWN, Conn., December 24, 1881.

Editor Forest and Stream:

In your issue of the 13th inst., you invite the relation of experiences of particular interest in loading for game. I have that some of your correspondents will give their ideas as to the proper proportion of powder to different sizes of shot.

I have known the theory advanced and plausibly supported, that the charge of powder should be less with large shot than with small. This theory is, I think, contrary to the generally-received idea, but its supporters urge that the greater momentum of large shot will give them sufficient penetration, even at long distances with small charges of powder, while the lighter charges will scatter the shot too much to be effective at long-range, and the argument seems reasonable.

I find that the best method of keeping a gun clean is to use refined kerosene, no water and a little oil, such as is sold for use on sewing machines—Schrader.

FOUR QUAIL AT ONE WING-SHOT.

Editor Forest and Stream:

Perhaps you may consider these two incidents of a recent day's sport of sufficient merit for publication in your "valuable paper." Tuesday, Dec. 20, was a beautiful day for our-door sport, and I took advantage of the opportunity and enjoyed a fine day's shooting. Although late in the season, the day was as pleasant as in October, and all that remained to make it equal to an October day was the bright-hued foliage on rough winds lately cast. I had been informed where I could probably start a bevy of quail, and upon reaching the desired locality my setter, Scout, made a fine point in a stubble, and then commenced tracking, finding the birds in the centre of a low swale adjoining. It was a large bevy, and we raised them with good success. They then scattered in the edge of our wood. My dog worked well, finding two or three single birds and then made a staunch point in a little opening. I stepped in ahead of him and flushed four birds, which flew between bunches of brush. And here comes the almost incredible part of my story; but a young man that was with me at the time will corroborate the following: As the four birds gathered in their flight, between the brush, I fired, and with the contents of one barrel killed every bird. Two birds fell where they were when I shot, about three rods distant, and the other two fell further on, but perfectly dead. The gun I used is modified choke, and, considering the short distance, I think the shooting was remarkable.

The other incident which I mentioned above was not as disastrous to quail as the foregoing one, but was quite laughable. My dog made a good point, after the birds were well scattered in the edge of the wood. The bird lay close, rising almost under the dog's nose; it flew right into his mouth. Scout held the bird until, in my excitement, I commanded him to "nose." He obeyed, and the imprisoned quail made good his escape, notwithstanding the volley of shot we sent after him.

I wonder if any of your readers ever did better than to raise four birds and kill every one with a single shot, at short range?

NIMROD.

Middletown, Conn., Dec. 26, 1881.

KILLING WOUNDED WILD FOWL.—Deering, Me., Dec. 26. —Editor Forest and Stream: To kill wild fowl that were wounded in the head, I have found the following to answer as well, if not better than any other way, and I have tried them all. Take a long and rather slim-bladed knife, open the birds bill and run the blade up through the roof of the mouth into the brain. At little practice will enable you to reach the brain with the knife. If "Bay Ridge" does not wish to practice on a living specimen, let him take a dead bird. Split the head open from the top down; then open the bill and introduce the knife, and he will see at once where to put the steel. I should hardly want to try to press the life out of an old drake with my thumb and forefinger as "Early Bird" suggests.—JACK.

Answers to Correspondents.

R. L.—Rabbit season in New York State will close Feb. 1.

Hur.—The "possum story" was published in this paper long ago.

W. N. L., Belaire, Mich.—Wild rice may be procured of Mr. Chas. Fitcher, Port Hope, Ont., or of Mr. Richard Valentine, Janesville, Wis.

W. B., Portage La Prairie, Manitoba.—The gentleman you refer to is the regular accredited American agent for the guns, and has a wide reputation for square dealing.

J. B. T., London, Ont.—I would refer to the pattern that your gun was a choice-bore. 2. See our game columns of last week and today for hints on loading for different guns.

G. H. B., Watertown, N. Y.—Where can I purchase cartridges for a Sauer sporting rifle? English manufacture? Ans. Made by T. M. Cartridge Co., and for sale by New York dealers.

YOUNG NATURALIST, Greenville.—Manton's Taxidermy without a Teacher will help you to learn to make up ornithological specimens. For information as to where to get Dr. Coues' works see our Natural history columns.

W. A. F., Lennoxville.—See hints on loading in our game columns last week and to-day. Buck-shot should be chambered to fit the choke of the gun. This may be done by pressing a wad down into the choke and squirting the shot on to it.

DEERING, Abington, Va.—The rifle felt flat on the market, and the company manufacturing it were compelled to close out for what they could get. The breech-action is clumsy. Should advise you, if you cannot get the rifle, to look for other patterns. The cost is immaterial compared with the superiority.

SCHREIBER.—I have a half-setter half-shepherd puppy, both parents full blood. Will he make a squirrel dog, bird dog, or can he be made to follow rabbits? Ans. Your dog may (if properly taught)—make a good squirrel dog, but not a good bird dog. He is a pure bred animal. He should make an excellent farm dog.

W. Elmira, N. Y.—In a rifle shot on the third prize does it follow that in shooting off the winner has third and his competitor fourth? or does the winner of the fourth prize remain undisturbed? This applies to match with four cash prizes. Ans. See answer to "W. R. O." in our last issue. Draw up your conditions before shooting, then there can be no dispute.

E. T., Norfolk, Va.—What can I do to make my dog go into briar patches? He is a high and black pointer and is thoroughly broken in all other respects. But I cannot coax or make him go into the briars. Ans. We have ever found—if our dog was possessed of the right courage and the right training, he would go into the briars. The example and showed him the way, instead of remaining outside and trying to send him in. You will probably find this course successful, especially if you take care to bribe.

W. H. H., Waterson, O.—Will you hurt the shooting qualities of B. L. shotgun, 28-b. barrel, to cut off two inches from the muzzle? 2. What will it cost? 3. Would it be well to choke after cutting off? 4. What expense? 5. In choking are the barrels rendered so contracted at the muzzle? 6. Can I muzzle-bore? 7. What is repaired. Ans. 1. No, if it is a cylinder-bore. 2. From \$2 to \$5. 3. If you want it to shoot closer, 4. \$3 to \$4. 5. See Game Bag and Gun column of last week. 6. Practically. 7. The English gun probably has good reputation.

G. C. E., Milton, N. C.—1. Out on a turkey hunting expedition some days ago I carelessly placed my gun on the ground where it was struck by a lightning bolt. The gun was damaged, and I was very perceptible from the inside and out. I have shot several times since and do not think the shooting qualities of the gun injured, but it is damaged. 2. What kind of powder and what number you think best suited for my gun, 10-bore, 30-inch barrel, choked, breech-loader? I have been using Brown, E. & Dupont's Fig. and No. 4 shot. 3. Would it be any risk to injure the gun? 4. Can a gun be sighted by a competent gunsmith without injuring it in the least. 5. Try Ozone ducking No. 5, or Dupont's ducking No. 2.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

FRESH WATER.

Pike, *Esox lucius*. Yellow Perch, *Perca flavescens*. Rock Bass, *Ambloplites rupestris*. White-bellied, *Channichthys lucicola*. Pike-perch, (Walleye), *Esox lucius*. Crayfish, *Pontoporeia nigricaudata*. Striped Bass, *Morone americana*. Rock Bass, *Ambloplites rupestris*. Rock Bass, *Ambloplites rupestris*.

SALT WATER.

Smelt, *Osmerus mordax*. White Perch, *Morone americana*. Striped Bass or Rockfish, *Morone americana*. Yellow Perch, *Perca flavescens*.

A PICTURE of the past visiting the present, as time glides on, making more perceptible the cruel changes which come to mortal strength. How now do his feet touch the heather? Not as of old, with a bound, but with slow and unsteady step, supported on the one hand by his stick, while the other carries his rod. The breeze gently moves his locks, no longer glittering with the light of life, but dimmed by its decay. Yet are his shoulders broad and unbent. The lion-like presence is somewhat softened down, but not gone. He surely will not venture into the depths of the water, for only one hand is free for a cast, and those large stones, now slippery with moss, are dangerous stumbling blocks in the way. Besides, he promised his daughters he would not wade, but on the contrary walk quietly with them by the river's edge, then gliding at his own sweet will. Silvery bands of pebbled shore, leading to loamy-colored pools, dark as the glow of a Southern eye, how could he resist the temptation of near approach? In he goes, up to the ankles, then to the knees, toiling every other step, but never falling. Trout after trout he catches, small ones certainly, but plenty of them. Into his pocket with them, all this time maneuvering in the most skillful manner both stick and rod; until weary he is obliged to rest on the bank, sitting with his feet in the water, his hands on his daughters' horror, and obstinately continuing the sport in spite of all remonstrance. At last he gives in and retires. Wonderful to say, he did not seem to suffer from these imprudent liberties.—The Last Cast of "Christopher North," in *Memoir of John Wilson*.

GAME FISHES.

IN our issue of November 24 we noticed the work entitled "Game Fishes of the United States," basing our remarks mainly upon an inspection of the truthful and elegant plates by Mr. Kilbourne. The character and importance of this work demand that the text accompanying the plates should receive more than a passing notice, for, instead of being a mere compilation of what others have written, as is too often the case in fishing books, Prof. Goode has given us much new material from his studies of fish life and habits. The fact that the text was prepared by him is a sufficient guarantee that this portion of the work is of a high order. The descriptions of the fishes and their habits were originally intended to be subordinate to the plates, and, with this in view, they are limited to two pages for each fish pictured, which Prof. Goode has filled with matter mainly new. Wisely omitting discussions of tackle and other questions over which anglers dispute, and which can be found in *cazoo* in any angling work, he has taken higher ground and given an array of facts and observations on the life history of the fishes of which he treats that places this book far above any popular work on the subject ever published. He has kept it as free from technical terms as possible, in order to make it truly a work for the people, and yet he has not impaired its value for scientific readers.

In the introduction we are told that a definition of the term "game fishes" is particularly difficult, and that Isaac Walton's definition, which he has taken higher ground and given an array of facts and observations on the life history of the fishes of which he treats that places this book far above any popular work on the subject ever published. He has kept it as free from technical terms as possible, in order to make it truly a work for the people, and yet he has not impaired its value for scientific readers.

In the introduction we are told that a definition of the term "game fishes" is particularly difficult, and that Isaac Walton's definition, which he has taken higher ground and given an array of facts and observations on the life history of the fishes of which he treats that places this book far above any popular work on the subject ever published. He has kept it as free from technical terms as possible, in order to make it truly a work for the people, and yet he has not impaired its value for scientific readers.

"Game fishes are those which, by reason of their cunning, courage, strength, beauty, and the sapidity of their flesh, are sought for by those who angle for sport with delicate fishing tackle." It was the design in preparing this book that twenty species only should be illustrated, and after consultation with several prominent anglers the selection was made. The fishes chosen belong to both salt and fresh water and to several families. No technical descriptions are needed with the admirable pictures of Mr. Kilbourne, but the habits and geographical distributions are the prominent points in the text. Acknowledgment is made of assistance from Prof. Baird, Mr. Charles G. Atkins, Dr. Tarleton H. Bean, Mr. Eugene G. Blackford, Mr. J. Matthew Jones, Prof. David S. Jordan, Mr. Fred. Mather, Mr. James W. Miller and Mr. Burnett Phillips. Other acknowledgments appear in the body of the work.

THE EASTERN SALMON AND RED-SPECKLED TROUT.

PART I. contains plates of the salmon and brook trout. Of the plates of all the fishes are of uniform size, 2 1/2 x 3 1/2 inches, and we have before spoken of them as being the best illustrations of fishes yet made. The salmon (*S. salar*) inhabits the North Atlantic and its tributary waters; but the Arctic Circle. One hundred years ago the salmon fisheries were one of the most important resources of Southern New England, but in 1810 the Rev. David Dudley Field stated that they had scarcely been seen in the Connecticut river for fifteen or twenty years. In 1878 five hundred large salmon were taken in that river, the direct result of the labors of the State Fish Commissioners in 1874. A curious fact is noted by Mr. Atkins, who calls attention to the absence of great runs of grise in the rivers of the United States, which are so frequent in the streams of Canada and Europe, our own fish not returning from the sea until they have become adults; also that with us the male grise only is sexually mature, while in Europe the male part and female grise are found in that condition. Mr. Kilbourne's painting represents a dead fish of 30 lbs. weight, drawn on a scale of three inches to a foot, lying on a bank near a stream; and the artist has perfectly delineated this noble species.

The Eastern brook trout, or, as often called in localities, "speckled trout," "mountain trout," etc., is now called *Salvelinus fontinalis* by Gill and Jordan; the former nomenclature.

"Game Fishes of the United States" by J. S. Kilbourne. [Text by J. G. Brown, Goode & New York.] [Published by Charles Scribner's Sons, 157 N. 5th St., New York.] [Copyright 1878, by Charles Scribner's Sons.]

SALT WATER VS. FRESH WATER FISHES.

THE issue of *FOREST AND STREAM* for Dec. 1 contains as a motto for its fishing columns an extract from the writings of H. W. Herbert, which affirms that "with very few exceptions, the game fish are those which do not confine themselves either to salt or fresh water, but visit one or the other as their habits or taste direct them."

This seems to be one of the generalizations of that great writer, who, however, was familiar only with the fishes of New England and the Middle States, as known in his time. Recent investigations show the incorrectness of these statements.

Professor Jordan in a late work describes of bass, 3 species; perch, 4 species; pike, 2 species. Total, fourteen species of game fish found east of the Mississippi and north of North Carolina, which inhabit fresh water exclusively. Besides these there are several species of *Silimoidna*, which live wholly in fresh water; the lake trout of Northern New York and New England, as well as two species in the great lakes.

West of the Mississippi, in the waters of the great plains and the Pacific slope, are other game fish which never visit the sea.

Mr. Herbert also affirms "that those fishes which never visit the salt water at all are unquestionably so much inferior to others of the same family which run periodically to the sea, that they are with difficulty recognized as belonging to the same order with their roving brethren; while of those none of which are known to leave fresh water, but two or three kinds are worth taking at all, and even these are not to be compared with the migratory fish."

Either Mr. Herbert had never tasted the brook trout of Wisconsin and Michigan, the silverside, the black bass, the muskellunge, the great Northern pike, the pike-perch, and the whitefish of the great lakes (considered by many to be the best of fresh water fishes), none of which visit the sea—or he might have brought with him his British prejudices.

Another of Mr. Herbert's theories was that there were no large trout in America, and that trout in this country were confined to small streams, and never occurred in rivers of any size. He had never fished the Maine lake, the Penobscot, or the Magalloway—the Kestigouche or the Novelle in Canada—or the big rivers of Lake Superior. His experience was confined to the trout brooks of New York and New England. As far as that went his writings and descriptions are valuable, and as one of the earliest of our sporting writers, especially so, but he did not live to know the works of the new school of American observers and writers upon natural history and field sports. Perhaps they also will appear obsolete in 1920. S. C. C.

SILK WORM GUT.

THE color and quality of gut is a most important topic of consideration to the angler. He may have the best of rods and the strongest of lines, but if the gut that composes his leader, or "casting line," as it is called in England, be of poor quality, or contain one poor strand, his whole outfit is rendered worthless. In gut the first requisites are strength and pliancy, and it is not easy to judge of these. The color is important, as there are many receipts for treating the gut invisible to the fish, which see it from below against a cloud, a tree, or a clear sky. Some of the coloring processes employed render the gut brittle. There have been lengthened discussions on this subject in the *London Field*, which are still being carried on, and we propose to quote from them for our readers, without expressing any opinion on them at present.

Mr. Francis Francis says: "I quite agree with your correspondent as to stained gut—viz., that a deep stain makes it brittle and more easy to see in water than gut which is unstained. If you want to prove this, get some strands of gut stained of various shades, take a glass shade such as you put over ferns, etc., half fill it with water, lay the strands on the surface of the water, and then look at them from below with only the sky for a background, and I doubt if you will ever stain gut again. The color which is affected by many anglers, particularly some of our Winchester friends, is perfectly absurd. I have seen it often almost black; and as they use very fine-drawn gut, it is almost impossible to tie it in a knot if kept any time, and when on calm water you can see it any distance off. If it must be colored at all, the palest smoke color is sufficient. If you can only dim the exceeding brightness of new gut, it would be far better than any stain. I have heard of waxing the gut slightly, but though that would dim it and waterproof it slightly, would it not materially add to the weight?"

Another correspondent, Mr. John L. Moilaws, of Scotland, writes: "Fine fishing, go where you may, is a necessity in our day, more especially on open public rivers. I have been charged with having underrated the light, delicate casting powers of English anglers, but most unjustly so. On the contrary, I have had occasion frequently to admire and envy the skill and dexterity which several of these fishermen exhibited on reaches of water difficult to approach and *down* to kill in. But then I said to myself, 'Matters are pretty even; here in Scotland we have little or no private water on any river of importance; our best fly reaches are daily waded through and fished over by hundreds of anglers. The same thing is repeated during the long summer nights; and when our streams present more rough broken water than the English rivers, where the current is more sluggish and canal-like, still we on the Tweedside have to deal with trout as wary and wide-awake, as well fed and willful, as any down south.'

"Such being the case, two questions naturally present themselves: Of what color and quality should my gut consist? These two points deal with the whole subject raised by your correspondents. A third one might be suggested—the length of each casting line. I would briefly refer to the first—viz., color.

"This is a much disputed point. For salmon fishing I consider stained gut quite superfluous, though its use is perfectly harmless. What does a salmon in its sober senses take as a gaudy parson or a glittering Jock Scott for, and why? Let this matter be settled before we become over-fancied in our notions of dyeing. I have seen a Galashiels weaver, coming down over a salmon 'lie' after it had been carefully fished some half-dozen times, hook and kill the capricious brute which had obstinately rejected the most tempting looking flies nuzzled on to one of Forde's finest stained gut. No man disputes about the gut. It was double twisted, old, worn, frayed and unstained. Yet I saw from the high bank, with the forenoon sun glaring upon the water, the dainty

little fish of 11lb. swiftly shoot upward from behind the stone where she lay, and, regardless of the white, stringy-looking gut wrabbling over her nose, take down the quiet commonplace steel-drake with it.

"As regards trout fishing, the matter is a much more difficult one to settle, if it ever will be settled, which I doubt. Mr. Brander prefers opaque gut, while 'Corribian' argues in favor of the unstained material, because it "is far less observable in the water than the stained," having tested it on the Usk; and, in *The Field* of the 19th, Mr. Francis lends the weight of his wide experience in upholding this clear gut theory. I cannot, in the limits of a letter, enter fully into the discussion here opened up. I trust others will give the results of their experience; allow me to state only this:

"Your correspondents, in their strictures against the use of stained gut, fall into the common error of trying to prove too much. Granting, for a moment, that unstained gut, as a general rule, is superior to the dyed material, I would ask: Are there no exceptional cases in which the latter is not only preferable but absolutely necessary if you want to kill? I hold there are. And these instances are so numerous and critical that I am constrained, in the absence of further proof, to reach a conclusion, not only broad, general rule, universal in its application and true in all circumstances. In every condition of water, weather and sky, whether clear or colored, still or broken; calm, wet or windy; bright or dull; stained gut is an essential. This rule, however is constantly violated by indiscreet anglers. Some stain their gut over-strength; others, the great majority, use colors which when the gut is drawn through the water, must convince the astute trout that the deception is too 'thin.' The great thing to be aimed at is to get a dye which will harmonize with that dull grayish-blue light which floats between sky and water when seen from the trout's point of view. Opaque gut will not give you this, still less can clear gut. Accordingly, we must resort to staining. Logwood, copperas, coffee and tea, however skillfully combined, produce too strong a dye. After long experience I have come to the conclusion that, to obtain that light gray slate shade, a mixture of walnut and ink, well diluted, is about the nearest approach one can make in the present state of matters. Mr. Francis' test of stained gut, by placing it in a large glass globe filled with water, and not to the eye, but to the camera lucida, is not the same as in a river, with its rapid current, its swirls and eddies, its combination of shade, sunshine, and shadow which trees and hills and passing clouds help to deepen or soften—these and many other circumstances of river life render the comparison one sided and the test fallacious.

"In fishing a stretch of not over-deep fly water, you observe an exceptionally heavy trout leisurely feeding in mid-channel. The sun is not over bright, the current is not too swift, but nicely broken; an on-off fly is only casting down now and again, just serving to whet his appetite and disarm his suspicion; the cast is not a long one, and you are eager to draw blood. The case is now on its trial—stained vs. unstained gut. What will the verdict be?"

We will continue this subject from *The Field* and other papers, and would invite our correspondents to give their views. It will be seen that there are two questions at issue—the best color, and the dye which does not impair the strength of the gut.

PIKE FISHING THROUGH THE ICE.

LEWISTON, Me., Jan. 1.

Editor *Forest and Stream*: Among the winter sports of the people of our State there is none more vigorous nor exciting than that of taking the pike, or pickerel as we call it, through the ice. It is one of those sports which have an exhilarating effect upon the human system, and instead of fatigue one feels refreshed the day after.

Pickerel bite well after the ponds have just frozen over, and the fishermen like to get on the ice about as soon as it will bear their weight. Talk with an incorrigible angler for an hour, and you will find him full of all sorts of old chimney corner superstitions and traditions of the forest and stream. One of the current beliefs is that the first time a green hand goes out he is bound to have good luck. Another tradition is that pickerel sometimes swim or scoot on a down grade, and that when they have their noses pointed toward the bottom, you can't catch one, if your pickerel bit were peaches and cream.

The piscatorial belief in the influence of the sign of the almanac is profound. A few old fisherman generally consult his almanac before he catches his bait. When the signs are in the belly they'll bite well every time. I don't know what the meaning of it is, but I suppose they're hungry," said a veteran whom we consulted on the zodiacal question. Fish will bite well when they are spawning. Their many trails afford a wide range of study. "Fish are crafty creatures," is the way the aforesaid veteran sums up his philosophy.

When the pickerel fisher finds the signs and the weather right, he goes to his dip-net and goes down to the river after live minnows for bait. These foolish little fish are attracted into the fine meshes by meal liberally fed to them. The pickerel doesn't relish dead food, and must be caught with live bait. The fun of pickerel fishing is in your ability to have so many strings a-going at once. Twenty-five is a fair number, although two men can fish with 40.

Cutting the holes through the ice is fun, if you have a sharp chisel and the ice isn't over four inches thick; but when you lay two rows of solid freeze under you, one old axe with which to penetrate it, it's more like business. Two men generally go together, and one sets the sickle and arranges the lines while the other cuts the holes. The man who sets the lines first gets the bottom and adjusts his bait about two feet above it—more or less, perhaps, according to his own idea of the correct thing. The lines are attached to poles set in the ice at an angle of about 45 degrees, over the holes. Each line is also looped over a bob screwed loosely on the pole, so that when a pickerel bites and darts off, the bob is turned and forms a cross with the longer stick, thus signaling to the fisherman.

One of the ways of the pickerel is to chew his bait a little while, and this is in favor of his catcher. When the pickerel begins to bite before the lines are all set, as they frequently do, the excitement is at its pitch. "There goes one!" shouts one man. "There's another!" shouts his elum, dropping his axe and running to pull him up; and when the 25 or 40 lines are all in and are pulling sharp, you then wouldn't be a pickerel fisher for Lewis.

FRANCIS AND LOCHT, No. 45 Maiden Lane, this city, publish a handy "Ice Fishing Almanac" for 1882. It is just the kind of note-book that almost every body wants.

Fishculture.

MAINE LOBSTER CULTURE.

WRITING to Mr. E. M. Stillwell, one of the Maine Commissioners of Fisheries and Game, Professor Spencer F. Baird says: "There is a very great promise of success in cultivating lobsters on a large scale by including them in small salt water bays, where there is a free circulation of water, and the eggs of the lobsters can be prevented by grading or netting. If they can be fed, as I understand, very largely upon clams, and will not only grow very rapidly under such circumstances, but carry on the propagation of the young. The young can either be kept in the inclosure or go out to sea, and the latter is the more desirable, by far, the most feasible way of solving the problem in regard to the depletion of lobsters along the coast of Maine and the Provinces. Is there any provision in the fishery laws of Maine by which an individual undertaking this work can prevent unauthorized persons from going in and reaping the benefit when the individual cultivator actually owns or leases the adjacent shore? Of course no man will be willing to go into the business unless he can be protected, and if there is no provision in Maine; as there is in Massachusetts, by which the Fish Commissioners can lease a pond to particular individuals for the purpose of propagating fish and secure to them thereby exclusive rights in the waters, it would be well to have such a provision, with the understanding that it is to apply to salt waters as well as to fresh. If the experiment proves as successful as I have no doubt it will, it will be a great benefit to the resources of the State, as there are hundreds of localities where such ponds could be established to the best advantage. Of course I suggest no interference with high seas navigation."

TROUT AND SALMON IN NORTH CAROLINA.

RALEIGH, N. C., Dec. 22, 1881.

Editor *Forest and Stream*:

During last September I captured two specimens of *salmonoides* in Mill Creek, McDowell county, differing from the brook trout, *Salmo fontinalis*. I recently forwarded them to Prof. Baird, and I have received from him to-day the following letter: "Washington, D. C., Dec. 21, 1881: Dear Sir—Dr. Baird reports that the two specimens sent by you, one the 24th of November, the small one of $7\frac{1}{2}$ inches the land-locked salmon, and the one of 8 inches is the California trout, *Salmo iridia*. Yours truly, Spencer F. Baird."

The above specimens are of the planting of 1850, and it affords me much pleasure to record the fact that they are flourishing in North Carolina. Mill Creek contains but few brook trout, but is of the same pure character of most of the head streams of Western Carolina. Over two hundred land-locked salmon were taken in 1880, and I have seen by you, one the 24th of November, the small one of $7\frac{1}{2}$ inches the land-locked salmon, and the one of 8 inches is the California trout, *Salmo iridia*. Yours truly, Spencer F. Baird."

YANKEE.

BY JEROME BURNETT.

CONCERNING dogs—you ought to know
The pointer we call Yankee;
He's smart and sharp and full of "go,"
And never dull nor cranky.

Bring forth the gun, he leaps to life
In all his proud elevation;
He's eager for the joyous strife,
The soul of animation.

Say but the word, he's right with you,
What'er the wind or weather,
He'll take the field and work it through,
And never mulls a feather.

And when he strikes the subtle trail,
You'll watch him every minute,
His action shows he cannot fail,
Because his soul is in it.

Then when the steady point is made,
The climax he intended,
No workman better knows his trade—
"Tis art and nature blended.

The right form, the foot upraised,
The breast that's gently swelling,
The beaming eye so often praised,
Of rarest sport are telling.

A picture list, here rudely done,
Of wondrous combination,
A pose of grace that c'er has won
Our greatest admiration.

It tells of one that's true and tried,
As friend we have no dearer;
What'er may come, what'er betide,
No love can be sincerer.

He's taught us much that men receive
Their doubt with faith to leave,
For knowing him we can believe
That good dogs go to heaven.

TRAINING VS. BREAKING.

IN TEN PARTS—CHAP. VI.—CONTINUED.

SHOULD you desire that your dog become proficient in the fancy department of this accomplishment, there is no end to the tricks that you may teach him; but until he is fairly proficient in bringing his bit of meat and ball, you should confine your practice strictly to these; for although he may understand you and readily bring anything that you may ask him to, you will find it the better way to go slow and sure, ever bearing in mind that anything that is worth your while to teach him, should be taught in a thorough manner, that he may not forget it should it happen that he should go a few days without being called upon to perform it.

We like our dog to carry, as well as to fetch, and deliver his bird to our companion who has shot it, and we wish him so well trained that he will carry any article and lay it down at the word "drop" in any place that we may designate. This he may be taught to do understandingly if you pursue the proper course with him. To teach him this, you will require an assistant, who should be one of your own family, or some one that the dog is well acquainted with. When you give the first lesson, your assistant should be a few feet from you. Calling your pupil to you, give him his ball and bid him "carry" it, at the same time moving with your hand in the direction that he is to go. Your assistant should not say a word, but should merely hold out his hand for the ball, and when the dog delivers it, he should praise and pet him a little, while you should make much of him, and if he has performed the task in a pleasing manner, reward him with a bit of meat. After a few lessons of this kind, the distance can be gradually increased and he will soon carry as far as he can see your assistant. If there is any difficulty in getting him started right, let your assistant take the ball and send him to you, until he understands what is wanted, which he will do after a few lessons. Of course, you have told him to "drop" every time that he delivers anything to you, and as he knows the meaning of the word, it will be an easy task to teach him to lay down his ball or bit of meat in any place that you really wish him to. In order that he may learn to do this in a proper manner and readily drop his burden at the word, and instantly leave it without regret and come to you, we will commence at the beginning and give him the order for the first time when he is close to us, and with his hand extended as if to take it. As soon as he opens his mouth the hand should be instantly removed and the article allowed to drop on the ground. At once praise and pet him and give him to understand that this is all right. On no account must you pick up the article or he may be led to think that he should have delivered it into your hand as usual, nor should you allow him to pick it up, but at once call him away and interest him with something else. This will be enough for the first lesson. This should be repeated until he appears to understand what is required, before you attempt to increase the distance. Your pupil must be made to understand that when he hears the order to drop he must instantly lose his hold, and leaving the article, at once obey whatever signal you may give him. You should so teach him that when coming in with anything that you have ordered him to bring he will at the word drop it and wheel at the motion of the hand in any direction that you may indicate. You will derive no little benefit from this accom-

plish, and not only save yourself much worry, but also spare your dog much labor, by bidding him drop his dead bird and first secure the wound, one, which may make it difficult to escape unless attended to at once. The same thing often occurs in quail shooting, and many birds are lost that might be brought to bag, did your dog understand this fancy training.

The careful reader will readily understand that our so-called "fancy training" is in reality not so useless as some would-be critics would have us believe; but is a part of our system whereby we not only bring our dog a "killing" dog, but we make of him an intelligent companion and elevate him to our own sphere, as it were, and by the wonderful development of his reasoning faculties we not only greatly increase his capacity for intelligently entering into the enjoyment of the ever changing phases of our woodland sports, but we greatly add to our own pleasure in witnessing the marvelous manifestations of reason and intelligence that he will display in his encounters with some wary patriarch of the forest, whose tricks and subterfuges will outvie the wily strategems of a Halliard.

There are many things that you can readily teach your pupil after you once get him fairly started on the road, for the more you teach him and the more pains you take with him the more readily will he understand what you wish. You must use great caution when you begin teaching him to bring anything that is new to him; and be very sure that he will understand your orders before you issue them. This point is worthy your careful consideration and you should strive to make yourself perfectly understood at all times. This you can easily do by closely watching his disposition and the workings of his mind as he performs his tasks. Some dogs are possessed of remarkable reasoning faculties and appear intuitively to understand just what you wish, while others are slow to learn and require more time to develop their latent powers. From personal experience we are well satisfied that the former requires to the full as much painstaking, careful handling as the latter in order to perfect his education, and make of him a steady, reliable dog. Therefore, unless you wish to see exemplified the truth of the old saying "quick learned, quick forgotten," go slowly, and be very sure that every step in each lesson is well learned before you advance any further. You should never ask your dog to bring anything that will tax his powers too severely, especially should this rule be observed until his education is complete. Your judgment will tell you better than to bid him bring the crossbar or a piece of custard pie; you should likewise refrain from asking him to bring you anything that is hard or bulky, at least until he has arrived at maturity and is well established in all his lessons. Many good retrievers are ruined by allowing them to bring articles that they are obliged to grasp hard in order to hold on to. For this reason we never allow our dog to bring our knife nor anything of the kind, for just so sure as this is allowed just so sure will the dog acquire the habit of pinching his birds.

We once owned one of the best retrievers that we ever saw. In an evil hour we bade him carry into the house the earthen plate from which he had eaten his dinner. After this it became the regular thing for him to do at every meal, but also at every dinner, and he was so proud of our pride and boast, was so sure forever, and after this every bird that he brought that was not stone dead, would show the marks of his teeth. We are well aware that there is a great difference in dogs in this respect, and that we occasionally see one that will bring anything that he can drag along and at the same time he will hardly ruffle a feather of a struggling bird; but for fear that you may not possess such a paragon we advise you to be very careful about trying any experiment that will tax your dog, especially when there is no possible benefit to be derived that is at all commensurate with the risk that you run. Your hat and gloves and slippers, you can safely allow him to bring you, and it will take but little time to teach him this if you carefully follow the instructions that we have given. You can even teach him by constant practice to distinguish between them so that when you send him for either one he will make no mistake, but, understanding your order, bring the article you wish. In order to teach him this you should first accustom him to bring each article at the same time to take him to his name. Take, for instance, your hat, and after placing it in his mouth, bid him "bring the hat," and be sure to use the same language every time that you practice him at this. The same course should be pursued with the gloves or any other article that you may wish. After he has had practice enough to bring readily the article desired you can place several articles close together. Put your hat and gloves with his ball and other light articles, then order him to bring them, and he should be able to do so, and he will be very likely to do so, you must praise and pet him, and as you talk to him you should speak the word "hat" in order to impress upon his memory the meaning of the word. This should be done in an intelligent manner, perhaps by saying he "is a good dog to bring the hat," just as you would talk to a boy. Should he pick up his ball, or any other article, at once tell him to "drop," and repeat the order for the hat, and do not allow him to bring you anything else. After he brings the hat ready to drop, you can change to something else, your gloves for instance, but until he has learned the meaning of the words and brings the articles readily, do not place the hat near them, nor where he can see it, as it may confuse him. When he has become accustomed to the gloves you can place the hat with them and he will soon understand which to bring. This course should be pursued with each article, and in a short time he will understand the meaning of the words; and when you send him for any article that you have thus taught him the name of, he will seldom make a mistake. While teaching your pupil to retrieve, you should never allow yourself to become careless, nor let him do this work in a slovenly manner. Always insist upon a perfect performance of his task, for if he is once allowed to depart from the accustomed manner that you have taught him he is sure to get the impression that this is right and pleasing to you, and you will have a harder task to set him right than you would have kept him straight in the first place; and worse than this, he will be very likely to become careless and will fail to understand just what you want; therefore, firmly insist upon implicit obedience to your orders, and never allow yourself to devote one iota from the course that you have marked out.

We have ever found that all intelligent dogs are very prone to look to their masters for guidance and instinctively to take their cue from them as to their behavior. You should take every advantage of this trait, and by cool and collected behavior, under all circumstances, strive to impart to your pupil a steadiness that will ever be to you a source of pride.

This trait is especially to be cultivated when trying to make a careful, tender-mouthed retriever. You should always handle with the greatest care any article that you are teaching him to bring. There appears to be a natural tendency in the careful manner in which you handle the object that is potent to impress upon his mind a corresponding carefulness in taking hold of it that is not apparent when the object is roughly thrown upon the ground; and we have frequently taken pains to go, and with ostentatious care lay the article down instead of throwing it, and have in this way succeeded in obtaining the best of results, especially when our dog was a little inclined to be rough or hard-mouthed.

There is one rule that we have carefully observed for many years, and will can assure you that it is well worthy your consideration. We never allow a pup to retrieve a bird his first season, until we have first handled it, and found that it was stone dead. You should allow him to point it for a short time and then daintily pick it up; and, after smoothing out the feathers very carefully, lay it down in front of him, taking care that he can see your every motion. Now retreat a few steps and very quietly bid him "bring dead." By pursuing this course you will improve, not only his mouth, but his steadiness and will; and also give him a chance to become acquainted with the difference in the scent between a live and a dead bird; and so render him less liable to make a mistake by pouncing upon a close-lying bird that chances to be near where he has marked the dead bird down.

Having intimated in the first chapter that we are in favor of using the whip when it is needed, we will briefly explain. As we have before stated we never use the whip until our pupil's education is complete, and there is no occasion to resort to it even then, unless our orders are willfully disobeyed. When we find that our pupil is willful, and deliberately refuses to perform his task, we seek occasion to give him a lesson that he will never forget. We are very careful to select an occasion for punishment when the order disobeyed is of a passive character, like *To he or Charge*, as better results are obtained than when the command is of an active nature. Provided with a heavy whip, we take the opportunity when our pupil is very much engaged about something that will be pretty sure to cause him to disobey, and give him the order in *Charge*. If we positively know that he plainly understands and willfully refuses to obey, we instantly take him by the collar in such a manner that he cannot bite nor break away, and repeating the order, strike him once with all our force. Retaining our hold, we calmly wait without speaking, long enough to slowly count ten. We then repeat the order and blow simultaneously. This we continue until our judgment tells us that he has had enough. You may depend upon it that a dozen blows thus administered will accomplish more in the way of reform than a hundred thrashings as generally inflicted, for your pupil not only knows why he is punished but he has plenty of time between the strokes to reason it all out, and he will surely come to the conclusion that you really want him to charge when you give the order; and that the best thing that he can do is to instantly obey. Unless he is uncommonly stubborn, you will find that one or two such whippings will last him his lifetime. You must be very careful to issue your commands in your ordinary tone of voice; and on no account must you display the least sign of anger or impatience, and so soon as you have through with the punishment must speak a few kindly words to him in order to let him understand that you are still his loving friend. As soon as he recovers a little, you should repeat your order, which he will at once obey, when you must pet and praise him without stint, thus indelibly impressing upon his mind that the way of the canine transgressor is hard and that obedience will bring a sure reward. We very much dislike to punish a dog; but if this has to be done, we greatly prefer that the lesson should be given before we take him into the field, as the knowledge that he incurred may prevent the necessity of resorting to this extreme when among the birds.

GERMAN HUNTING DOGS.

NEW YORK, Dec. 22, 1891.

Editor Forest and Stream:

I saw in your paper of the 15th Dec. a short description of the German dachshund, the schwehdend, and their use. Thinking that it would be of some use to some of your readers, I send you a description of the dogs used in Germany for sporting purposes.

The English setter and pointer are used as well as in the United States, but you will find very few retrievers. There are in Germany three breeds of dogs used for hunting purposes, namely, snipe, woodcock and other shooting, called *Kurzhaare deutscher jagdhund* (smooth-haired) and *langhaariger deutscher jagdhund* (long-haired). The former is very like the English pointer, with which he shares the derivation from the old Spanish pointer, but is more strongly marked in many respects. The latter is a pointer, which are much in fashion now, are, however, almost as strong as they are, and the well known champion Wegg, winner of many prizes at English and German dog shows, who was considered in England a typical dog of his race, looked very much like a German smooth-haired jagdhund. The color of these smooth-haired dogs is liver, white and liver, or white and black. Of the long-haired dogs, liver, white and liver, red, or black and white. They have coarser hair than the English setters. Both kinds are used for the same purposes. They will, if of good breed, point as well as any English pointer or setter, and range as speedily as they do, but are very obedient to their handler. This is of special advantage when in search of pheasant or woodcock in a thick cover, where, to order, they will only range a short distance from their handler. Both kinds are extremely hardy, and can do their work in very warm weather, adding very little water in comparison to the English setters and pointers. The long-haired jagdhund will also do the work of the water spaniel, for he is very fond of going into the water, being an extremely good swimmer, and cares little for bitter cold weather, or even the ice covering the surface, but will go into the water anywhere you send him to stir up some wild ducks hidden in the reeds, or to retrieve wounded or dead birds. Both kinds will sit during a long time motionless to your feet, without attempting to follow the passing game, but when ordered will retrieve anything you can carry, or kill a wounded fox. I have seen some of the smooth-haired kind, which are a little stronger in their loins, retrieve large red hares, carrying them into the house on their backs. They will follow you when stalking on deer, going in the most cautious manner, avoiding any noise which would frighten away the deer, and, if properly broken, will not run after the deer after you have shot. I saw some of these dogs long crouched in the brush, and when the deer was close, they would spring forward, and blood of a deer. But this quality is found rather seldom, and only if the dogs are used for a long time in the forests. They are extremely courageous, and will defend their master against any enemy, whether it be a man or a bear, and are very intelligent animals. Notwithstanding this they are a very gentle nature, very obedient, and are good playmates for children. During the last fifteen years the German breeds have been much mixed with English blood, but for the last five years much has been done to purify the German races, and the pure German breeds are especially called "Verein zur Veredlung der Hunderrassen in Deutsch-

E "REX."

MASSACHUSETTS KENNEL CLUB.—At a meeting of the Massachusetts Kennel Club held last week the following officers were elected for the ensuing year: President, J. Fother, Jr.; Vice President, E. E. Haley; Secretary, J. W. Brewster; Treasurer, J. Sawyer; Jr.; Judges, J. W. Fother and J. R. Foster. This membership list shows possibilities of a bench alone in the spring, and the club will undoubtedly hold one, of which due notice will be given. We are sure that the members of the club will be able to give a very good show, as they have in the past, and will have a very successful one at least so far as the number and quality of the dogs are concerned, and we feel assured that, with the greatly increased number of sportsmen in the State, the dog, there is no doubt about it proving a success financially.

ST. JOHN'S ENCH SQW. We have received a copy of the rules, regulations and premium list of the second annual bench show of dogs, to be held under the auspices of the New Brunswick Poultry and Pet Stock Association, at St. John, N. B., on January 17, 18, 19 and 20, open to the competition of the Maritime Provinces of British America only. There are to be four classes of dogs, viz:—(1) English Bred, (2) American Bred, besides which a special prize of ten dollars is offered for the best animal in each of the seven largest classes in the show. Entries close on January 9, and should be addressed to the Secretary, H. W. Wilson, Esq., 16 Waterloo street, St. John, N. B.

CORRECTION.—Mr. Washington A. Costar desires us to say that the name of his pointer by Croxeth out of Royal Fan is Royal Cara C. and not Cora as it appeared last week.

NAMES CLAIMED.
C. Mack, Indiana.

RICE LAKE CANOES.

Editor Forest and Stream:

In a yachting experience covering many years I have been a member of several clubs. My invariable experience has been that the fostering care of all clubs, without exception, has been given to but two classes of yachts, to the entire exclusion of a third class, which third class, in my opinion, is the most important one of all.

The first class of clubs, such as the New York, Atlantic and others which may be deemed the first-class clubs, the entire interest is centered in schooners and large sloops. In all other clubs, which may be here called second-class clubs, interest is only taken in open sand bag racing machines.

Editor Victor and Stream:

To a yachting experience covering many years I have been a member of several clubs. My invariable experience has been that the two classes of yachts, the "wildcat" exception, have been the first and second classes of yachts, to the entire exclusion of a third class, which third class, in my opinion, is the most important one of all.

All large clubs, such as the New York, Atlantic and others, which may be called first and second class, the entire interest is centered in schooners and large sloops. In all other clubs, which may be here called second-class clubs, interest is only taken in open sand boats.

For these clubs in their respective clubs all the money is expended, all the handsome prizes are given, and regatta committees cipher and "scryphage" matters so that each and all of their pots can win a prize. The money is expended in the regatta, and the money is generously bestowed upon the small cabin yacht class. As this communication is written in the interests of this latter class of boats, as the owner of one I may be thought of as the imputation of being prejudiced. But, you will say this is the interest of the small portion of large yacht owners who know one end of their boat from the other, all have originally learned all they know about a small boat from the same source, and the interest of the small boat skippers of a cabin boat not our own backsided to a sandbogger, to my knowledge.

In this, as it may, I feel that there are a large number of gentlemen who own small cabin yachts and who would like to belong to a club, but who are unable to do so because of the expense. Yacht clubs with fifteen tons can be enrolled there. The A. Y. C. has a price list of the same, as, although there is a small cabin class there, it receives little or no attention and is so meagre in numbers that, practically, it is not a class. The A. Y. C. has a small cabin class, which is represented in prizes for schooners and first-class sloops, Corinthian matches, etc., and the small fry are being gradually more and more neglected.

This ends the list. In the second-class clubs, if they raise \$100 for a race, all cabin boats, big and little, 20 feet to 50 feet long, are put in the same class and the prize money for \$10, while 50% is divided among sundry classes of open boats.

The only remedy that I can see is to start a club of our own, and, to prevent confusion, we will bar out the millionaire with his big yacht and the talented "sharp" with his 2-foot sandbagger.

The proposition is that we, the small cabin yacht owners, do establish a sailing club for the 25-foot cabin yachts, with membership, sailing, cruising and racing. In small cabin yachts, in which the maximum cruising water line length can be enrolled; that all yachts enrolled must be cabin boats and must carry fixed weight only; that the fees must be fixed and moderate, not to exceed \$10 for initiation and \$5 for dues—no assessments; and that great scrutiny be used to avoid membership, so as to make the organization acceptable to gentlemen.

Now, as an old yachting man, I extend an earnest invitation to all who are willing to form such a sailing club to send in their names to the Yachting Editor of this journal, who has kindly consented to receive them; and I propose that, as soon as twelve yacht owners besides myself have indorsed my proposition we have a meeting, in which a general plan of organization can be agreed upon, views interchanged, and rules and regulations can be discussed, by all.

I can state here that many yachtmen have long urged me to make public this proposition, and that four yachtmen besides myself will join. With twelve others this would make seventeen yachts to start with. I think there is no doubt but that a club can be formed so strong that it will at once take front rank over all those devoted to small yachts.

FRANKLIN BEAMES.

Dec. 28, 1881.

[illegible]

Editor Forest and Stream:
I forward you, on behalf of the Toronto Yacht Club, copies of our by-laws and regulations, as we are the only yacht club owning small boats on this side of the Atlantic that does not believe in shifting ballast, and that the height of ambition is to sail an extensive skimming dish with an excessive crew, and therefore feel that there is a bond of union in that respect between us.
H. F. W.
Toronto, Dec. 25.

[illegible]

diversity of the officers of the Toronto Y.C. are: Commodore, T. McGraw; Vice Commodore, H. E. Kyle; Lieut. Captain, G. H. Duggan; Secretary and Treasurer, I. P. Wyatt. Burgeo is red pointed, with white cross and a yellow maple leaf in upper red square. Club ensign, the red bottom half with maple leaf in the field. The Commodore's flag is red with white leaf; the Lieut. Captain's white with red leaf; the fleet Captain's white with yellow leaf.

The most excellent rules adopted by the club is that of prohibiting driving promiscuous hunting, and the sailing committee is

charged with enforcing the rule. We commend this to many of our junior clubs whose boats fly all manner of hideous rage with names and fancy devices, generally hoisted only about half mast or not, check apeak at that. Like all live institutions the Toronto Y. C. throws open its matches to all comers, reserving a few special races for club members only. Annual subscription \$5; for non-residents \$2, payable in January every year.

[illegible][illegible]

Editor Forest and Stream:
As you do me the honor to publish a letter sent you some days ago, I thought I would in relation to what I wrote of the Madge, I want of freighting for a cruise, since you say in your issue of Dec. 2d that she has plenty of it, "having no less than \$ it at the lowest point and 4 ft. 9 in. at the highest." I am sure that such a small point and 4 ft. 9 in. at the highest would be detrimental. I did not measure the Madge's height, but I shall be much surprised if you have not added at least a foot to it—at any rate, in a firm in which I have confidence. I have been told that the Madge has very low sides, and questioned her sailing master particularly on that point, but, as I was before, he was right. She was high enough for raising the amount of cubic contents you propose to give him, that by keeping his model low sided he can get a good many cubic feet to put in the hold, and I am sure that where they will tell much more than they would above water.

Besides, if, as I say, every half inch added to Madge's height would hurt her, why should you seek to tax such an addition? If I want a trust deck vessel, with good height below, it is just as unfair to tax her high sides as it would be to tax the unsightly trunk I should otherwise be compelled to put on her under cubic contents rules.

EDWARD HURGESS.

The above was received too late for insertion last week. We believe most of the points raised by Mr. Hurgess have already received consideration in our last issue and in the answer appended to the letter from "T. C." in this week's issue.

fixing upon the length, the beam and depth will not alter them selves into the least shaned boat. As a general proposition, the more beam the less depth, and vice versa, but both taken together, will, in the best of boats, be in the same ratio. The length of the beam will include the largest bulk possible on the length, since the power derived from the use of bulk is such a great advantage in overpowering small boats. The beam is the only part of the boat that is not fully utilized its value for winning on a length rule. It is this we object to in such rules. They compel us to adopt the largest boat on her length, whether the bulk be up to beam or depth, or to the least bulk possible on the length. The beam is not beam and to add length with a view to producing a more satisfactory as well as economical and roomier boat, for the tax on the use of extra length is as a rule, small. The beam is not beam, and the length is not length, and therefore, driven into excess in the remaining two dimensions in the pursuit of power, but we are at liberty to infringe *these three dimensions in any proportions* we please, to select the best, instead of merely the largest, as under the length rule.

Editor Forest and Stream:
In your remarks on the letter of Mr. David Hall Rice I notice a statement that "Madge" has "no less than 11 feet of freeboard at the lowest point and 1.9 at the bow." Is it a fact that these figures are correct, or has there been a misprint?
I have never seen Madge, and a reply to my query would oblige not only myself but also many others.
T. C.

[illegible]

RICE LAKE CANOES.

Editor Forest and Stream.—

In your last, "Nauticus," I read about the mark. Rice Lake canoes are copyrighted, and the mark is the font; that is, if you give them a shadowy sheer and a Shadow's midship keel, and a deck and a double keel and build them as you would a shadow and keep them going with a shadow, you will get the mark. The best kind of a canoe—a regular start out and our shadow. Rice lakes are good enough to sell to foreigners, who buy their launch in the same spirit as they do Indian bows and arrows—as a sort of reminder of the frontier; and they may be strong enough to carry a load of goods, but they are not strong enough to hold one as a gift. There is no accounting for tastes, still I think the man who would, in sober earnest, choose a Rice Lake canoe, would be able to get something else, is little better than the savage who would buy a canoe because it has been appropriated by the white man's source. To my knowledge there is not a single Rice Lake canoe in use in New York. They would make a very poor figure in our country, and the graceful lines and handsome work of the redoubtable Stepiens, Isham and others. Since your canoeing correspondents all seem to belong to the high aristocracy, including notables like the Statesman, "Alderman" or "Commodore" and such, I will sign myself, as you do, "Nauticus," and

AVIS COMMENS.

New York, Dec. 23.

After cruising for a thousand miles and more in canoes of all sorts, let me say that, in my opinion, there is nothing like the regular shadow and similar models for open waters; but for river work they are no umbrous. You must have a quick boat under paddle. I have ridden on the Hudson's American Travellers' canoes, and I have seen them from every standpoint. Although, for everyday work, I like her better than anything I have tried. As for an open Herald canoe, one might as well go back to the stage coaches of our forefathers at once. Those I have seen are always heavy, ugly and slow. That was the case with the first one I tried. If you are a canoeist, you should suppose they are by way of copying from the most modern styles.

A. R. TREVIS.

Editor Fiske and Moore: The heartless paragraph signed "Nautilus," asking if the "connoisseurs" and the "critics" are still using nice lake canoes, and "stout yet hot," has just row caught my attention, and I hasten to say that I am at present the owner of a canoe various, but first let me ask "Nautilus" if he has ever heard of a broken-hearted mother, who, while mourning the loss of her first-born daughter has consorted herself with a son? She might, perhaps, have been a little more particular in her choice, but she is together within her control send her a son and she wishes the best of him. So with my loved and lost nice lake, I might have preferred a different one, but I have no choice. I am sure I should have had something to do with the non-fulfillment of my desires, and other reasons which I need not publicly enumerate may have contributed to my present state of mind. I am not, however, in a position to lacerate by still tender feelings. Therefore, and I think with justice, do I characterize his note as "heartless." As for the "critic," he has never consulted himself with a successor to his last "adventure," and he has been very much like the "connoisseurs" who is by a second impression of the same type. Something went wrong at a critical moment, and, if it may be allowed the expression, the "critic" has been "cooked." I am not, however, in a position to lacerate the Custom House, although the "Cook" declares solemnly that the professional fees were all duly paid. I trust that "Nautilus" will be able to do better, even if he cannot fully understand them, and permit us to be at least to comfort myself as best I may.

[illegible][illegible]

size of more bulbo depends upon the disposition made of it by the modeller. If the apertions it wisely his boat becomes faster, for the good reason that she has become larger. If the apertions it badly his boat may become slower, but it has enjoyed the use of the bulk of the bulbo. The bulbo is not a good reason for the slowness of the development of a speeder in his boat than his neighbor, who has had to go without it in a smaller boat. The relative success of the two builders rests fundamentally upon the bulk they have developed, and the bulbo is compensated in material only to the extent of making the bulbo a better reason for the slowness in two boats than in one, and not some difference in the shape they have imposed upon it of their own free choice, as, for example, the burlins selected.

AN INDOSEMENT OF VALUE.

WE are in receipt of the following, from the owners of a fleet of twenty fishing schooners, which we value highly as coming from experienced men:

"You have our heartiest approval and congratulation for what you have done and are doing in Forest and Fishery to promote abundance and sensible rights in this country, and we wish you every success. We have a 31 ton schooner that will be overhauled next summer and are thinking of trying the yawl rig on her.

"In the winter sloops are almost useless for our fishing business, and schooners, as they are commonly rigged and modeled, are not much better; so we want to try the yawl to see if a boat so rigged will be able to stay out longer and to work over the grounds more easily in bad weather."

YACHTING NEWS.

MEASUREMENT.—Mean length, however, is received with derision by many in America; and one writer, better than the rest, pronounced it "idiotic." We need not apply any indigestible adjectives to this fraudulent suggestion, as a similar proposal has been made in this country; but, at any rate, there will be no harm in showing that there is no more reason for including the counter in a length measurement than there is the length of bowsprit. Each is used to extend a sail; but the counter, whilst forming a sort of outrigger for the mainsheet, also provides some extra deck room. The idea, however, sometimes prevails that the counter, when the boat is heeled, helps to support the boom, or gives additional power in some way by adding to the stiffness of the boat. It is almost needless to say that a counter could not help to support the boom any more than a life buoy on deck could; and if the counter is made so full and heavy that it becomes immersed as the boat is heeled, and thereby adds to the volume of the "wedge" of immersion, the boat had much better be without the counter at all, as the counter would tend to aggravate the boat's pitching in a sea, throw her out of trim, check her speed, and make her generally unhandy. The fact is, in designing a boat which has a counter, the greatest care is taken to provide against its becoming hampered as the boat heels; and the supposition that "power" can be gained by immersing the counter involves the absurdity that the buoyancy of the boat can be made greater in the heeled position than it is in the upright. This would be an entirely unknown achievement in hydrostatics, and is simply an impossibility. There is not the smallest doubt that it length is to be included in any expression for the rating of boats or yachts in competitive sailing, it should be length on the load water-line, as that length cannot be altered by any conceivable means so as to impart additional power to the boat. For many years length from stem to sternpost in a line with the gunwale was used on Southampton water and other places; but there was no objection to this, as, owing to the upright position and surmount, length so taken was the same as length on the load water-line. Now, however, for the sake of small additional comfort, and for greater convenience in working the sheets, a counter has been introduced on many of the boats in the South; but to put a penalty upon them would be almost as absurd as taxing a man for having a spring mattress in his berth instead of two inches of hair and a deal board.—*London Field.*

THE OTHER SUNDAY evening, down at the village of Greensboro, Md., religious services in the church were greatly disturbed by the persistent pursuit of a coon by a dog in the immediate vicinity. The colored portion of the congregation was greatly excited, and when it became evident by the barking of the dog that the coon was in a tight place there was a general exit from the church, and on the following day one of the colored brethren was smacking his lips over "roast coon and plenty of grabby."

TWO WEEKS AGO 600 partridges were received by Mr. Churchman, Secretary of the Delaware Game Association, at Wilmington, Del. They came from Danville, Va., and will be distributed in lots of twelve, six males and six females, among the Delaware farmers. Another lot of 1,000 arrived subsequently and will be similarly distributed. It will be some years until the bird again becomes numerous in Pennsylvania if like efforts are not made to propagate it.

COLORS.—Should the new club of small yachts be formed according to the plan of Commodore Franklin Hughes, laid before the reader this week, how would it do to call it the Corinthian Yacht Club, and adopt for a burgee a blue field with yellow (gold) wreath of laurels, as bestowed upon the victors of the Corinthian games held by the Greeks in ancient times? We have had play enough upon the red, white and blue triangles with stars interjected here and there. A flag with some idea in its composition would seem more appropriate as well as more easily distinguished from the usual run. As it is, most flags of our yacht clubs are meaningless calico patterns—one commonplace borrowed from another—and very confusing in their similarity of plan or shade. There should be some derivation to club colors, conveying a distinctive meaning, a trademark of character, locality or purpose, so to speak, and not the tiresome repetition of variegated patches and bars of three prime colors.

EXHIBITION OF SPORTING ARTICLES.—It is intended soon to hold an exhibition of articles used in sports in London. The show is to include everything appertaining to yachting and sailing. This suggests the advisability of instigating a similar exhibition of yachting appliances here. Could not some club take the matter in hand? A collection of models, drawings, books, miniature craft, all kinds of boats, canoes, prizes, photos, historical records, etc.—grouped together in a hall would be pretty certain to attract a paying number of visitors. The surplus funds obtained might be devoted to the furtherance of the sport in some public way. By this means, if properly managed, the general public might have its interest drawn prominently to the most fascinating, instructive, useful and many of all sports.

NEW SCHOONERS.—Mr. A. Cary Smith is busy getting out the lines for two new schooners, besides half a dozen other yachts. The demand for designs exceeds anything yet known and promises lots of new boats, besides proving that capable men are beginning to be appreciated in their true worth, and that the days of gaudy boats are passing away. One schooner is for light summer work and, therefore, only 1½ ft. draft on 35 ft. water-line and 23½ ft. beam. She has 5 ft. 2 in. freeboard. The other is for a cruising cruiser and is 9 ft. water-line, 19 ft. 5 in. beam, 10 ft. 5 in. draft with 3 ft. 5 in. freeboard. She is to cruise to the West Indies in winter. All the latest wrinkles will be combined in these yachts.

VISITING CUTTERS.—The London Land and Water is in doubt about our custom house practices concerning cutters shipped out for racing here. We can assure our comemporary that any boats sent out by steamer will be entered here free of duty. The Treasury has decided that yachts imported for racing and not to be sold in our waters will not be classed as "wood manufacturers," subject to a duty of 25 per cent. The Midge was detained only to await a formal deci-

sion of this kind, as no dent existed upon which the local collector could act. The decision will hold in future cases of the kind, bringing on our cutters.

STEPHENS' CANOE.—Mr. Stephens has removed from Rahway to a more convenient point at West Brighton, Staten Island, where he has secured ample shops and will devote attention to building small yachts as well as canoes and boats. We may add that Mr. Stephens knows what a ship's draft means and can design yachts with understanding, while his work is well known as the best. To get to his shops take North Shore Staten Island ferry from the Battery to third landing, including the stoppage at Sunnyside Harbor. Post office address: P. O. box 662, West Brighton, S. I.

NEW YORK CANOE CLUB.—The following officers have been elected for 1892: Commodore, C. Bowyer Vaux; Vice Commodore, Chas. P. Oudin; Secretary and Treasurer, W. P. Stephens, Bayonne, N. J.; Executive Committee, William Whitlock and C. J. Norton; Regatta Committee, C. K. Monroe, F. B. Ward, W. M. Cook, Fred Reid and W. P. Stephens; House Committee, Dr. E. D. Bronson and Wm. Whitlock.

WREN.—Mr. C. G. Y. King, well known as one of the leading cronels of the Clyde and as a writer over the cognomen of "Wren" has arrived in this city and may remain with us permanently. It is that case his Clyde canoe will be shipped to him and a welcome addition made to our fleet, bringing about very interesting trials between the most advanced style of Clyde canoe and our native productions.

FIVE-TONNER.—We learn that it is contemplated to buy one of the narrowest two-tonners of record, English build and import her to this city for experimental purposes. Also that a shaver of half-a-ton like the Dodge will likely grace our waters next year and disgust the rowers in a blow.

ATLANTIC YACHT CLUB.—The Atlantic Yacht Club have finished their new anchorage basin at Bay Ridge. The club's new steam launch Atlantic is about finished, and next season will run daily between the club house at Bay Ridge and the dock of the Sea Beach Coney Island passenger boats, near by.

NEW NONPARRELS.—Mr. Clapham, of Roslyn, L. I., is getting out the frames for two 66 ft. nonparels. He has also just shipped one of 23 ft. to France to race with the shifting ballast boats. She has a 29 ft. mast, 5 in. at partners and a 50 ft. boom.

SAN FRANCISCO YACHT CLUB.—Commodore Asbury has returned his thanks to the club for the friendly attentions bestowed during his recent visit to the California coast.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the *FOREST AND STREAM* point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The *FOREST AND STREAM* will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and ichthyology; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known pisciculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the *FOREST AND STREAM* is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the *FOREST AND STREAM* a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the *FOREST AND STREAM* that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the *FOREST AND STREAM* form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address *FOREST AND STREAM PUBLISHING CO.*, 39 Park Row, N. Y. City.

II.—ADAPTED TO THE TASTES OF ALL.

Among the hundreds of correspondents of the *FOREST AND STREAM* are Business Men, Lawyers, Physicians, Clergymen, Army and Navy Officers, Naturalists, Pioneers, Trappers, Prospectors, College Professors, Tourists, Civil Engineers, Artists, Editors of other papers; young men who have not yet struck out for themselves, and old men who have retired; in short, members of every trade, profession, and occupation.

Farmers and Farmers' Boys constitute a large class of our readers. They will find the *FOREST AND STREAM* ever disposed to reconcile the seemingly conflicting but really identical interests of respectable sportsmen and reasonable land-owners.

IV.—INDEPENDENT.

The position of influence now occupied by the *FOREST AND STREAM* imposes upon the paper responsibilities which it has no wish to shirk. The organ of no clique, it will be perfectly free to criticize everything inimical to the interests of the highest and manliest sportsmanship. Its attitude on all important questions within its field is well understood. For the benefit of advertisers and readers alike, it will also, as in the past, expose and denounce all dangerous frauds. Advertisements of doubtful character will not be admitted to its columns on any terms.

V.—COURTEOUS.

The *FOREST AND STREAM* will have no room in its columns for personalities and bickerings. Its editors have neither taste nor time for "mud throwing." They do not share the opinion, held by some other journals, that blackguards and indecencies are essential characteristics of a sportsman's paper. Readers who want that sort of thing must look for it somewhere else than in the *FOREST AND STREAM*. *Verbum sap.*

VI.—BROAD IN SYMPATHY.

The *FOREST AND STREAM* will ask for, and strive to win, the continued support of readers in every part of the country. It never has been narrow in spirit; nor has it ever held itself up as the organ of any one "section." The paper is, and will be, *American*, in the broadest, highest and best meaning of that term. Every State, Territory and Province on the Continent, with many foreign countries beyond, are represented in our list of contributors and subscribers. The very wide geographical distribution of the friends and correspondents of the *FOREST AND STREAM* is a sufficient guarantee of the variety and excellence of its contents.

Literally and figuratively it is true that

The Central.

Portraits of Celebrated Dogs

NOW READY.

GUNPOWDER!

Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness, adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting; with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for prize and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle Fg.—"Sea-Shooting."—2 Fg. and F Fg. 7 the Fg. for long-range rifle shooting, the 2 Fg. and F Fg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 6 lb. canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, F Fg. fine.

Dupont's Sporting, Mining, Snapping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also, Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or power.

Agencies in all the cities and principal towns throughout the United States represented by F. L. KNELAND, 57 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or F Fg. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. The Hazard Powder Co., MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for razzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6½ lbs. and canisters of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five copies for \$16. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by the American Exchange, 440 Strand, W. C. London, Eng.; and by Em. Terquem, 16 Boulevard, St. Martin, Paris, France.

FOR SALE BY NEWSDEALERS EVERYWHERE.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 60 cents per line—eight words to the line, and two lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, January 12.

BOSTON BENCH SHOW.—The energetic sportsmen of the Massachusetts Kennel Club have decided to hold a bench show at Boston next May, commencing on Tuesday the 9th and continuing four days. Well knowing that the gentlemen who have the matter in charge will be content with nothing short of a first-class show—with all that this implies—we heartily congratulate the sportsmen of the country upon this opportunity to see and compare the most prominent dogs from all sections, as well as many new aspirants for fame and for the privilege of enjoying the generous hospitality of the whole-souled sportsmen of the old Bay State.

THE INTERNATIONAL MATCH.—No new steps have been taken in the matter of the visit of a band of American National Guardsmen to Wimbledon in July next. On this side the water there is a willingness to have the match, but there is a desire to wait until the conditions under which the Englishmen would like to have the match fought have been received and examined. The Eastern States are coming forward with promises of assistance in the way of men and money, and if a proper care is taken in pushing the matter of the match, there is no doubt but that the visit will be made and an interesting contest ensue.

BOUNTY FOR SPARROWS.

FOLLOWING closely upon the recommendations of the report, which we noticed a week or two since, of the injury done to the agriculturist by the English sparrow in Australia, comes the news that the government has offered a bounty for these birds. A premium of sixpence a dozen for the heads, and of 2s. 6d. per hundred for the eggs, ought to have some effect in reducing their numbers, and thus relieving the farmers of the burden with which they are now saddled. The testimony printed in the article above referred to gave a very alarming idea of the amount of damage that these wretched birds may do, but it is to be hoped that they may never so increase in this country as they have in the Australian colonies. Traps, nets and poison seem ineffectual to check their increase or their depredations, and to destroy them in any large quantities by shooting is scarcely practicable. Here, in North America, they have severe winters to contend against, which, of course, check, to some extent their increase, and the severe cold undoubtedly kills more or less of them every season. The small hawks and the shrikes, which are the natural enemies of the sparrow, kill a few, and would do good service if they were encouraged during the winter months. The sparrow-hawk and the sharp-shin and the mottled owl are too small to do any serious injury to our game birds, while the shrike, although sometimes killing our smaller song birds, is in reality one of the farmer's best friends. Its food, and the same may be said of the sparrow-hawk and the screech-owl, consists very largely of insects injurious to vegetation, and of field mice.

We certainly have no pity for the sickly sentimentality which expresses sympathy with the sparrow grasped in the strong claws of these birds. As well shed tears over the capture of the rat that is taken in the trap set in your corn crib. Sparrows are vermin just as rats and mice are, and should be destroyed whenever it is possible. It is to be hoped that the energetic measures put forth by the Australian government may succeed in ridding this flourishing colony of the plague of sparrows, and although we can imagine that the bounties paid out on this account will at first be heavy, we cannot doubt that they will prove to have been well expended.

THE MENHADEN QUESTION.

A LITTLE fish is the menhaden, and its importance is not at all commensurate with its size. It is, indeed, one of our most valuable coast fishes. It not only gives employment to thousands of men and fleets of steam and sail vessels, in the oil and fertilizer interest, but indirectly it is one of the greatest sources of fish food, as it feeds many of our best fishes. It has also entered into politics in the State of New Jersey, where the fishermen near the coast favor a law prohibiting the capture of the menhaden by steam vessels, on the plea that the fishes which formerly fed upon them are forsaking the New Jersey shores on account of the present scarcity of this favorite food, which has been nearly destroyed by the purse-nets.

There exists also a Menhaden Association, which is composed of the owners of steamers and other vessels engaged in the capture of the fish, and the proprietors of the "factories," as the oil works are termed. This society meets yearly in New York city, usually in the month of February, and discusses questions of interest to the business and often listens to essays from men of science. This society is also troubled about the decrease of the menhaden, and at the coming meeting will probably consider plans of remedy.

We would respectfully call their attention to the following facts: The capture of the menhaden, for manure only, begins with the appearance of the first fish in the bays of Long Island and elsewhere. The fish then contain little or no oil, and would not yield enough to pay for their capture; but they are carted off and plowed under the soil for manure. This continues all through the spawning season, and, in fact, as long as the fish remain upon our coast. Any fishculturist could preach a sermon with this for a text. Any farmer could tell what the result would be to his poultry yard if he killed every fowl on sight, all the season. The Menhaden Society know this as well as either the fishculturist or the

farmer. But the society is composed of individuals; each individual says to himself: "If I don't catch the fish some one else will, although I know it to be destructive to my interest."

What is the remedy? Let the Association obtain concurrent legislation in all the States, on the coasts of which the menhaden are captured, forbidding the taking of the fish for any purpose whatever before the middle of July or the first of August. Then will the fish fulfill their destiny in increasing their species, and consequently their numbers; and waxing fat, they will furnish food for our valuable fishes and also oil in increased quantities for the factories. Such a law, and this only, will restore the menhaden to its former abundance and remove all complaints against the use of the purse-net.

THE INVASION OF THE GERMAN CARP.

THE introduction of the carp from Germany has been a fruitful topic for the past two years, and it promises to be more so in the next two years. There are several reasons for this. The fish grow fast and they are new. The same may be said of the rainbow trout of California; and yet they have not made the stir that the carp have; and those persons who only look at the surface of things suppose that the reason lies in the fact that the carp is a fish for the farmer to grow in his duck-pond, while the trout is a fancy fish for the epicure, and demands a spring brook.

The fact that the carp is a monarchial emissary in disguise is not perceived.

We now publicly throw off the mask from the disguise, and will show how this foreign-born fish threatens the liberty and permanency of American institutions, and how if this fish is not immediately expelled from our land our Republic is in danger. The object of the introduction of the German carp is to furnish cheap food for the coming swarm of Chinamen who are spawned along the coast of Asia and, having almost rendered California uninhabitable, are now preparing to overrun the Middle and Eastern States. It is well-known that the carp can be cheaply grown in great quantities in water that is now useless, and which will support nothing else. Carp can be grown on a large scale (no levity intended) at two cents a pound. The Chinese bred the carp, it is alleged, before the Germans did. A Chinaman can live on carp and rice and work for so near nothing, that a low grade of decimal approaching the infinitesimal, will represent his day's wages. It is most significant that this introduction of carp did not take place until some years after the abolition of slavery in the United States. It is also worthy of note that the carp thrives best in the most Southern States where labor has formerly been cheap. But the carp can be cultivated very cheaply even in Vermont, and will furnish a cheap food to a frugal Chinaman in every State.

At first the introduction of this fish was regarded by all as a great boon; and enthusiastic fishculturists, who saw no ulterior object in its introduction, regarded it as of great economic value to our people in the way of cheap food, and we must admit that we thought the same, so carefully was the Chinese project covered up. This imported imperialism may drive our native cars from their bayous and the catfish from the sloughs by quietly devouring the vegetation on which these native species indirectly depend. Every true American must feel his blood tingle at the thought. True, the gars are worthless, but they are American. Certainly the gross catfish are eaten in all their oleaginous rankness by the native American of African descent and are despised by the epicure, yet they were hatched beneath the banner of freedom and should not be crowded from the enjoyments of life by a fresh importation, even though that imported fish comes under the disguise of an edible fish which has the merit of cheapness.

We will admit that this view of the subject is new even to ourselves, and came as a sort of inspiration when we learned that the United States Fish Commission had proposed to invade the Trans-Mississippi with the carp; and that Colonel McDonald left Washington on the night of January 3 with a car-load of them, and that thousands more are to follow by express to stock one thousand ponds and lakes in the great interior of the continent the fertile fields of which are destined to support a dense population. It then flashed upon

us that this was but a preparatory step to a flood of Chinese cheap labor, and that it was a step which threatened the very existence of our people by making food so cheap that the Mongol would set up a "washee" on every quarter section.

Oh, for the lungs of a stump orator to exclaim in stentorian tones over the land where the buffalo now grazes in quietude and the wolf howls in solitude "Beware the introduction of this cheap food which is but a prelude to an invasion by a cheaper people!"

THE NEW YORK OBSERVER has reached the green old age of sixty years, having entered upon its sixtieth volume last week. It carries its years with dignity and strength; and to-day is the most able journal of its kind in the world. The Irenaeus Letter in the current number recounts some interesting facts in the history of the paper. "Very few are now living who subscribed for the *Observer* in 1823. Many who as children read it then, are its constant readers. A few of the original subscribers survive. Four families are now residing in 37th street, in this city, to whom the paper has been going in the same name from its first number. Rev. Calvin Yale paid his sixtieth subscription last week, and, more remarkable still, he began with the *Boston Recorder*, six years before the *Observer* was begun. Mr. Cunningham, now our Superintendent of printing, was a boy in the office in 1829, and he has been in it ever since. He remembers the first line he set up at the desk." The life of a good paper is not measured by the span which limits the career of the men who make it. Men may come, and men may go, but the paper goes on forever. The *Observer* has the wisdom and experience of old age; it has also the vigor of young blood; and time will be when these sixty years will be accounted its youth.

PSEUDONYMS IN NATURAL HISTORY NOTES.—The point advanced some time ago in our natural history columns by Dr. Merriam, and again referred to this week by Dr. Fisher, is, undoubtedly, well taken, and deserves the serious consideration of our contributors. The value of any published note on natural history depends on its authenticity, and this cannot be determined unless the name of the author is given. We must much prefer to have all our contributors on this subject sign their articles with their full names, for there are numerous observations recorded each year in the columns of *FOREST AND STREAM* which are of great value, and might prove of much importance to naturalists, were it possible for them to learn more of the topics recorded and the individual by whom the record is made. The matter, of course, is one which each writer must decide for himself, but in the interests of science we hope to see the plan advocated by Drs. Merriam and Fisher, generally adopted by our natural history contributors. There is no reason why articles outside of this special department should not be signed by pseudonyms, and we have no desire that any change in the manner of signing should be made.

BARON ERNEST LAGRANGE, of France, well known to readers of our *Paris* contemporary *La Chasse Illustrée*, and a prominent sportsman in his country, has come to America for a two-years' stay, to visit some of the famous game grounds of this country, of which he has heard so much. Accompanied by J. C. Gregory, Esq., Naval Agent at Quebec, Canada, Baron Lagrange called at this office last week on his way to Florida. They propose going into the Kissimmee game country, the charms of which we may believe will, in due time, be eloquently described in *La Chasse*.

PITTSBURGH BENCH SHOW.—Mr. Edward Gregg, the President of the Pennsylvania Poultry Society, under whose auspices the coming bench show at Pittsburgh will be held, writes us that the prospects for a large show are very flattering. They have already received many applications from prominent sportsmen for a place in the hall for their dogs. Mr. Charles Lincoln is there, and the premium list and entry blanks will soon be ready and may be had by addressing the Secretary, Mr. C. B. Elben.

NEW YORK BENCH SHOW.—The Westminster Kennel Club will hold their sixth annual bench show in April. The date will be determined at a meeting of the club this week. Full particulars will be found in our next issue.

FLORIDA.—Dr. C. J. Kenworthy's "Climatology of Florida," contains just the information that very many people are seeking now. It may be had from the author, whose residence is at Jacksonville, Fla.

KILL THE OWLS; kill the hawks; kill the foxes; kill the skunks; kill the red squirrels. Remember that this destruction of vermin means something toward the preservation of the game supply.

MUZZLE-LOADING RIFLES are discussed in our game columns to-day. Mr. Van Dyke will find many to agree with him as to the muzzle-loader's accuracy at short range.

THE FLORIDA CATTLE GROWERS.—Can any of the readers of the *FOREST AND STREAM* furnish information about the life of the stock growers of South Florida?

SECRETARIES OF GAME ASSOCIATIONS will confer a favor by notifying us of the coming meetings of their societies.

The Sportsman Tourist.

IN THE FORESTS OF YUCATAN—II.

THE glassy surface of the "aguada," soon after dawn, reflected the rosy hues of the sky, and the sun crept slowly up, dissipating the coolness of the night, and before seven it was very hot. The sand-dust came out and clenched us, while the birds commenced their cries. I dressed and went out. Coffee was ready and cigarettes; and after taking breakfast we were ready to start for the coast. We were to have started "muy temprano"—very early—but the sun climbed higher and higher and still the horses were munching their corn and my friend still unprepared. It is always "mañana—to-morrow—in this country; "mañana temprano"—early to-morrow; but is ever "mañana" and never "temprano." The people lose the best hours of morning and work in the heat of the day.

Across the "aguada" there was a strange bird called the "marinero" or sailor—that uttered a succession of harsh cries for hours. The wood was full of birds of certain species, such as orioles, flycatchers, blackbirds, doves, and a host of others. I shot a very beautiful trogon with a yellow breast, and parrots were crying out all the time. "Temprano" meant ten o'clock, when the sun nearly blistered our backs, yet even then Alonzo wanted to know if I would not like to wait till later.

The trees that composed the wood we first entered, many of them, supported great nests of the white ants, which looked at a little distance like black bears. We passed through a broad area covered with wild "heneceno"—sisal hemp—showing where the plants come from whence the plantations are stocked. Near some lovely "aguadas" was a new "rancho" with a nice-looking girl preparing tortillas, and some hundred rods beyond I saw an Indian mound of shells. An hour later I saw a man-of-war bird (*taquipes aquila*) and felt that, from this sign, the sea could not be far off; nor was I mistaken, for we soon struck a sandy plain with small salt ponds and espied the great lagoon that connects with the sea.

Mangroves and stunted trees had been features of the landscape thus far, but a mound of green cocoa palms now rose up and relieved the monotony. This was the "cerro"—or hill—we were looking for, a shell-heap made by the ancient Indians, covered and surrounded with a few hundred coco palms. Here were two small thatched and wattle-dwells, dilapidated and dirty, within which were two Indian women cooking some fish. They had but little corn and nothing else but fish, but they brought a great fish called "lisa," which had been broiled on the coals in its own fat, and this was delicious. It was, as it lay split open, nearly two inches thick, and we ate and relished exceedingly great slabs of it. These women had never seen a spoon, knife or fork, and as we had none with us, we used our fingers and tortillas, each one taking his turn at the fish and gravy. Fortunately, we had hundreds of coco nuts at hand, and were not obliged to drink the nasty coffee they boiled for us, but had, instead, the refreshing water of the cocos. A man came along as we finished our cigarettes and we engaged him to take us in his boat to a point up the lagoon where there were, according to him "muchos" manatees. The "cerro" is at a point where the lagoon meets the sea, called "Boca de Gilem" and "Punta Arenas"—or point of sand. There are here long sand-bars and shoals, and naturally the fish congregate here by millions and the sea birds by thousands. A wall of mangroves comes down to the border of the lagoon, and beyond the sand point is the open ocean. Flocks of pelicans, sea gulls, terns, cormorants, "peeps," plover, snipe, herons, egrets and spoonbills were lying, wading and swimming in and above the water. Here it is said the flamingoes come by hundreds on the bar, about a gunshot from the lagoon among the palms; but they were not there then, they would come that night or "mañana." The man poled the boat up the lagoon, disturbing hundreds of snipe and sandpipers, to a point where the stream narrowed and where the mangroves came down to the water's edge forming solid green walls with the placid water between them. These trees were dotted with white herons and cormorants, and at a place where there was a spring—a spring of fresh water—bubbling up in this salt water lagoon—we put up a hundred ducks and two dozen spoonbills—"platales ejajaj"—which were roosting on the trees.

Having shot some of these birds we tried to land, but the mud was so soft and we sank so deep that it was impossible, and we had to leave them there. Leaving the main channel we entered a narrow water lane, where many egrets and night herons, with broad boat-bills, flapped across our bows. The mangroves were in bloom, the small concealed flower being hardly perceptible. At last we reached the point where the flamingoes ought to have been, but where they were not, a broad mud flat, where they always have fed till to-day. Disappointed, we turned the boat about, after causing it to be pushed over the mud as far as possible, and returned.

The sun was down then and the water smoother, and all the little water birds and the greater ibis and herons were going to roost, some on the sand bars, others on the trees. Our dinner, when we reached the hut, was the same as our breakfast—a large broiled fish laid out on a palmetto fan—which we ate by the light of an attenuated candle stuck near by on a "matate" table. The interior of the hut was black with smoke, dried fish were stuck up all about, nets and other paraphernalia of a fisher's hut hung in the corners, and one end was filled by a great pile of coconuts. Into the six hammocks, hung side by side in the centre, ten people stowed themselves as night came on, though Alonzo and I, in virtue of our silver, had a single one each. I slept uneasily because they told me the flamingoes would come in the night and we must get up at moonrise and hunt them. Insects of some kind—I could not tell what nor how many, save that I knew they were numerous and they were crawling over me all night. The hammock next me was occupied by an old woman with two babies, and she, with the men and boys on either side, was smoking and spitting all night. It was very dark, and the wind was howling through the spaces of the hut all through those weary hours,

* Perhaps the reader may recall the accounts given of the wonderful fresh waters in the Atlatzli of St. Augustine, on the Florida coast, known forty years ago. "On the northern coast of Yucatan," says Humboldt, "at the mouth of the Rio Lagartos, four metres from the shore, springs of fresh water gush out, and mix with the salt water. It is probable that from some underground hydraulic pressure the fresh water, after bursting through the banks of calcareous rocks between the Atlatzli and the sea, rises above the level of the salt water." Florida and Yucatan are of similar geological formation, hence to have been these springs on the coast of both peninsulas.

and in the morning there was a perfect "norther" and the long leaves of the cocoa palms were lashing their winks in fury. At sunset the Indians told us the flamingoes would come at midnight, then at dawn, and when daylight came they were on an island two leagues off, and would appear "mañana." When I heard this last I knew the case was hopeless, and prepared to depart. The only sight of flamingoes we obtained was early in the morning, when two long lines flapped over the water far at sea, distinguishable miles away from their bright color. Forty years ago Mr. Stephens and Dr. Cabot had similar fortune to mine in this same locality, having been lured here from the port of Yucatan by the stories told them of the abundance of ibis and flamingoes, and having returned empty-handed. Then, as now, Punta Arenas was simply a station for fishermen, and had but a single hut. I perfectly agree with the distinguished traveler that, "for mere sporting, such a ground is not often seen, and the idea of a shooting lodge, or rather hut, on the shores of Punta Arenas for a few months in the season presented itself almost as attractively as that of exploring ruined cities."

COZUMEL AND THE ISLA MUGERES.

Stephens was then on his way back from an extended exploration of the ruins of the island of Cozumel, and the east coast of Yucatan, and perhaps, as this is the point we shall reach in that direction, it will be well to interpolate a short description of that portion of Yucatan. The first point at which the Spaniards under Cordova landed upon the then unknown kingdom of Mexico was at its northeastern extremity, now called Cape Catoche. An Indian chief invited them ashore, saying "Con-Escotech," which signifies come to our town, and it was from this that he gave it the name of Punta de Cotoche. It was determined by us to accept the invitation, says the old chronicler, observing the proper precaution of going all in a body, and by one embarkation, as we received the shore to be lined with Indians." They were attacked by these, the first acquaintances of the new country, and fifteen of the company wounded. "These warriors were armed with thick coats of cotton, and carried besides their bows and arrows, lances, shields and slings; they also wore ornaments of feathers on their heads."

Near the place of this ambushade were the buildings of lime and stone, wherein were idols of clay, with distasteful countenances, and several wooden chests, which contained similar idols but smaller; some vessels, three diadems, and some imitations of birds and fishes in alloyed gold. The buildings of lime and stone, and the gold, gave us a high idea of the country we had discovered. On our return to the shore we had the satisfaction to find, that while we were on the island, the Spanish General, who had taken care of the chests and their contents, which he had, with the assistance of two Indians of Cuba, brought off safely to our ships. Having re-embarked, we proceeded as before, onward to the westward." The island of Cozumel was discovered the next year, 1518, on the voyage of Grijalva, and for it Cortez set sail in 1516. "There was," says Bernal Diaz, "on the island of Cozumel a temple, and some hideous idols, to which all the Indians of the neighboring districts used to go frequently in solemn procession." These idols were of wood, and the Indians, with the aid of the crucifix in their place, which the Indians finally consented to accept. Here they heard of two Spaniards, finally captured among the Indians, one of whom they rescued, and who proved of great service afterward as an interpreter. North of the great island of Cozumel is Isla Mujeres, about six miles from the coast, five or six miles in length by half a mile wide. Here some of the sailors of Cortez were on shore, and found in the town, besides the temple, four idols of which represented human female figures of large size, for which reason we named this place *Puntas de las Mujeres*. They thought the island a cape, or point, and called it *Point of the Females*. What Stephens in 1842 did for Isla Mujeres and Cozumel, in a superficial manner, the learned archaeologist, Dr. Le Plongeon, has also done more thoroughly and satisfactorily. In a communication to Stephen Salisbury, Jr., of Worcester, in 1878, he gives a complete survey (the first) of the Isla Mujeres, and describes the ancient buildings, the shrine, or altar, formerly containing the *loa*, spoken of by Bernal Diaz, and the "altar." A valuable discovery by the Doctor was made there of a terra cotta female figure, which formed the front of a "brasero," or incense burner. It was of excellent workmanship, and valuable, not only from this fact, but owing to the extreme rarity of works of ceramic art in and near the peninsula of Yucatan. The Doctor's description of Mujeres is so delightful that I cannot resist quoting it, especially as the book in which it is embodied is not accessible to the general reader. "The village of Dolores is built on the beach of the pretty little bay, where the fleet of fishing snappers from Havana, as the pilots of old, find a sure shelter from the violence of the stormy northerly that dash the waves against the iron-bound shores of the eastern side of the inlet, producing a terrific and deafening noise. The houses are snugly encoined in a thick grove of cocoa trees, whose evergreen foliage shields them from the scorching rays of the tropical sun. Three streets run north and south. The principal street, the middle one, half a mile in length, crosses the bay at deep sand, and leads, leads in a straight line to the necropolis. The dwellings, though with very few exceptions, are mere thatched huts. The walls are composed of palisades of trunks of palmetto trees. They are stacked inside and out and then whitewashed. Among the five hundred houses of which the village is composed, a dozen may have their walls of stone and mortar, but all are covered with the leaves of the palmetto trees. Each hut is separated from the next by a courtyard. In some the owners, with great patience and labor, try to cultivate in the sandy soil a few rose bushes and other flowering shrubs of sickly appearance, of which they are very proud. The interior of the houses is the same for the rich as for the poor, consisting of a large single room, which serves during the day as parlor and reception room. It is converted at night into a common sleeping apartment by hanging hammocks from the rafters which support the roof. Oftentimes an old sail, hung across the room, divides it into two apartments, and serves in lieu of a curtain. The articles of furniture are few and old fashioned—some wooden chairs and tables, supported on reed stools to isolate them from the damp floors of the *patina* (Maya for concrete) and the stone of the *loa* family, containing the wooden statuette of the patron saint of the place, before which is constantly burning a small lamp. A coarse hammock or two, together with fishing nets, oars,

* See "Proceedings of the Ann. Riccio Antiquarian Society, for 1878, article entitled "Terra Cotta Figure from Isla Mujeres."

masts, sails, and divers other tackle, complete the list, not forgetting a few cheap colored lithographs of the Virgin Mary, and some saint or other.

"The inhabitants, as a general thing, a fine set of people. The men, mostly of Indian race, speaking among themselves the Maya language, are sinewy and athletic. The women, of medium height, are handsome, graceful, not over shy and rather slovenly."

He carefully surveyed the ruins and made photographs of the "temple," which shows that it has suffered from the hand of time since the visit of Stephens. He, however, locates it at the south end of the island, while Stephens erroneously places it at the north. The building is twenty-eight feet long and fifteen deep, of stone. The interior is divided into two corridors, the ceiling has the triangular arch, and according to both Le Plongeon and Stephens, it gives evidence of being the work of the builders of the main land. Portions of the structure have been used for building purposes, but to-day, says the doctor, the people obtain stone from a large ruined city on the main land opposite Mugerres, where they go with fear and trembling, lest they should meet with Indians from Tulun and be made prisoners.

"A very happy confirmation of the statement of Diaz that these people burned incense was made here. "Desiring to varnish the negatives, in order to carry them safely home, I put some live coals in the bottom of the incense burner, and entered the shrine to be protected from the wind, which a slight vapor arose from among the coals, and a sweet, delicious perfume filled again the antique shrine as in the days of its splendor, when the devotees and pilgrims from afar used to make their offerings and burn the mixture, carefully prepared, of styrax, copal, and other aromatic resins on the altar of the goddess." The northern and eastern shores, especially the latter, are dotted with ruins, a cordon of ruined villages, cities, temples and palaces is drawn along the coast. None more interesting has been described than the City of Tulum, which Stephens identifies, with much show of reason in his support, with the great cities of lime and stone seen by the first Spanish visitors. Here he found a grand "castle" and extensive buildings, some with roofs of beams still supporting a crust of mortar. Buried in a dense forest he found sculpture. Limestone, altars, watch-towers, paintings, stucco work and a beautiful style of architecture.

The whole northeastern portion of Yucatan is a wilderness, a section of country that was once teeming with people and all of populous cities. It is the most unknown, and it is today not impossible to suppose that the people of this secluded region may exist, unknown to white men, a living, aboriginal city, occupied by relics of the original race, who still worship in the temples of their fathers."

From this long detour to the north, let us return once more to Puntas Arenas, where I left my friend Alonzo ready to renew the search for flamingoes. He was determined to find some and to put me within gunshot of them; even if we had to go to the Rio Lagartas, fifteen leagues away, for he had promised the Consul he would. But I was determined to leave for Gijlan and civilization, as by another day's delay I might miss the steamer down the coast and be hindered another week in this journey. Mexico, finding me so obdurate, he yielded graciously, and to his already numerous favors added the crowning one that I should take his horse to ride, while he returned to the rancho. Then he embraced me and patted me on the back, commended me to the old Indian who had been our guide, and started on his walk of three leagues to the rancho, while I turned his horse's head westward and we parted to meet no more. My guide, a withered and wrinkled old man, mounted astride a little stallion between his hands, and, after leaning down by the horse's neck, led the way. I thought my misfortune ended, but this was an ill-starred trip, for we had not been ten minutes on the trail before my horse got stuck in soft mud of the shore and rearing up fell over on me, pinning one leg in the soft ooze. How I escaped from the wildly floundering animal is something I do not understand to this day, but I remember scrambling over the mud like a crab, on hands and knees, and afterward picking up cartridges, silver and a broken watch chain, while my guide captured the horse.

After being scraped, I again mounted, experiencing much trouble about this, for the horse, made fearful by the fall, snorted and fell to trembling at every soft place in the sand. At the frequent sloughs I was obliged to dismount and pound the horse with the branch of a tree from behind, while the old Indian dragged him ahead from in front. There were two long leagues of this kind of traveling and we were much rejoiced when some straggling huts announced the approach to the seaport of Gijlan. A large portion of the way was through a mangrove forest, where I had good opportunities for studying the peculiarities of shooting how it sent out and down its aerial shoots for a foothold in the water and at the border of the sea, and the entire absence of such shoots and lateral supports back a little distance on firm land. At the Puerta—a collection of thatched houses and a half-completed church—we sought for breakfast, and seeing a nice-looking girl in a doorway I asked if we could get it there. She said, yes, and gave me some tortillas and frijoles, but the table was guiltless of plate, knife or spoon, though it was clean. After breakfast I reclined in a hammock in an inner room, while the young girl swung a mosquito net a few feet distant, with a plump babe of a year or so. She was hardly fourteen, large and finely formed, with lovely oval face and large dark eyes. She looked so young and childlike, despite her maturity and maternity, that I could hardly believe her the mother of such a bouncing child, and asked if it were really hers. "Si, señor," she answered, slowly raising the lashes from her beautiful eyes. "es mio"—It is mine—and, she added with a charming frankness that astonished me, and young coo, I had interrupted saying something nice, in compliment, before I got this answer, but such an excess of politeness as an offer of joint paternity in a child I had never seen before that hour, fairly overwhelmed me, and I silently withdrew, settled my bill, mounted and rode away. The two leagues between the port and Gijlan were more soon gone over, and I slept that night in the "casa" of Don Juan "el viejo"—of Mr. John, the old man. "Manayana temprano," was the order I gave my Indian for the morrow, and for a wonder he appeared at daylight. We were delayed for about half an hour by the "casa" of Don Juan, the younger, who, while I sipped the drink and ate my "pan dulce," or sweet bread, timed for me on the guitar.

I rained at intervals as we rode toward Tixmar, for the air was pure and sweet with the odors of flowers, and the many birds in the thickets enlivened our journey, so that we arrived at our destination without fatigue. I was in season to go the rounds with the doctor among his patients of the village, and was pleased to find that he had lost but three

during my absence, and had only two in a critical condition. One man, who had been expected to die of a protracted drunk, the Doctor had physicked in vain, and this morning he had mixed up some powerful calomel pills, quietly remarking, "If these don't do the business that Indian will hand in his clucks before noon." They did not kill him, and my friend thereby added another laurel to his wreath and had another convalescent to extend his fame as a *medico*. I could not help reciting those classic lines of the poet:

They prepared some pills of hydragrum
And their patient traveled to Yucatan come.

The last day of my stay the Doctor naturalist arranged for a grand "poo" or turkey hunt, and early in the morning, after giving his patients some quieting medicines, we galloped out to a rancho, ten leagues distant. It was almost entirely abandoned, being solely in charge of Indians. The mayord or head man had on, like all the rest, simply a breech-cloth, hat and sandals, and carried a machete or great knife. His skin was hard, brown and polished. These poor people had nothing to eat except roots from the woods and what they could kill. The corn crop of this year had failed, and the population of Eastern Yucatan were subsisting on roots, small game, lizards and snakes. Speculators had got control of American corn, though every steamer was bringing vast quantities to Progreso, and many people were starving in consequence. We wait an hour under a big *ceibo* tree—a silk cotton—while an Indian knocks down some coconuts, and brings us paw-paw fruits as large as pumpkins, which taste like musk melons. Then we are taken across a large *malpa* or field, in the blazing sun, and posted in a wood, while our Indians range about to beat up the game. In the dry dead woods, which in this dry season much resemble our Northern woods in autumn, we waited for hours. My only visitors were a brown and golden humming-bird, a chachalka and some inquisitive blue jays; but the Doctor got a shot at a flying gobbler, which escaped, and that ended the hunt. We walked back to the rancho in the heat, covered with garzapatos or ticks, that are so small as to be hardly visible, yet bite like red ants. In the evening we strolled through the town, seeing many pretty faces, as at that time the ladies appear and sit in their doorways and chat and smoke.

The next morning the Indians brought in three turkeys, the result of our inciting them to hunt for them, and among them was one fine old gobbler, whose plumage was resplendent with sheen of polished copper and gold, who had two buckshot through the lungs. This was undoubtedly the one the Doctor shot, and which the wild Indians had traced out after our departure. This magnificent bird, representing the finest of its race, the Doctor presented to me as a souvenir of the occasion, and his assistant aided me in skinning and preserving him. My friend had a "corner" of these ocellated turkeys, having killed and bought over one hundred. All were shipped to Paris, to a large dealer in bird skins, who supplied the museums of Europe. Never before had so many been sent to the museums, and even now there are not a dozen in the United States. Since my departure the Doctor has returned to his home in the North. If he can be prevailed upon to prepare his adventures for publication, the record of his three years' sojourn in the solitary forests of Yucatan, the world will be delighted with the richest mine of forest and aboriginal lore ever opened to the public.

The *correo*, or mail coach, left at two in the afternoon for Merida, with myself and two Yucatecos as passengers. In learning that they were Yucatecos we naturally inferred that they were gentlemen, as they were, and that they would linger at every possible point on the road, which they did, first at "fiesta," where there had been a bull-fight—a "toro"—and then at a dance. We reached the town-house of the General just in time for dinner, stayed with him an hour or two, and parted with him with an affectionate embrace, and arrived at Motul at dark. Here my companions ordered supper, refusing to let me pay for it or share in the expense, saying that I was a stranger and their companion, and that it was their duty to see me through. It is the custom here, before eating or drinking, to offer what you have before you to the people about and they thank you, but don't accept.

We charged mules at Motul and galloped nearly the whole distance to Merida, stopping now and then to stretch our limbs and smoke. As there were four of us, including the driver, the "volan" was full. There was no room for reclining, and we were cramped in unnatural positions throughout the long twenty leagues. It was one o'clock in the morning, by the dim light of a waning moon, that we entered the suburbs of the capital, and waked the echoes of the silent streets by driving furiously to the plaza.

OVER.

MY FIRST ROGUE ELEPHANT.

DIMBLEB, Ceylon, 16th Nov., 1881.

I SUPPOSE that long since you have given me up and promised to write to my mind that my oft repeated promises to write to you and give you a full, true and particular account of me, animals and things in general in this far away isle was never going to be fulfilled. Well, I plaid guilty of delay, but better late than never, and I'll promise faithfully to make up for lost time and tell you exactly how we live and "how it's done." One touch of nature makes the whole world kin." So from the East I will touch you up in something I know is common to us both—viz, the love of true sport, and try and relate briefly and succinctly (in time for dinner, say) how the morning the price of coffee is low how I had that never-to-be-forgotten joy of shooting my first elephant.

It is early morning. The pale light just beginning to show itself eager to throw off the dark mantle from the land and expose all its loveliness. Brighter and brighter it grows. The delicious cool breeze is wafted through the jungle and over the small strip of patna (or open ground), on which we were encamped—laden with all the "spicy aroma" of Ceylon's Isle, as Bishop Heber sings, but where he carefully adds, "only man is here." The morning grows still brighter, that faint "shimmer" of the atmosphere, which betokens, however cool the morning, a day of intense heat, warns us all that it is time to be on the track of that old rogue that we have been following up so assiduously for the last two days.

The jungle cocks have come crowing. The tent is struck and safely packed in the bullock cart; and Appahumi, our Cingalese servant—a man tall and gaunt, but, singular to say, not cadaverous looking; on the other hand, like all Cingalese,

he has the appearance "as to" a certain part of his body of a well fed alderman—has received his last orders "to be sure and be ready by ten at latest, at that strip of patna behind the village; and that if he is not there he will get the 'sack,' as sure as his name is Appahumi." "Suah, sah! certain I be there; master hungry; master want breakfast! Why I don't exactly see what it matters to you." "Oh, you come on Mr. Rogue it is equal odds on our not being there."

"Now, Jack, have you got that Rill! all right to-day? You know it was all that beastly cartridge that made us play the fool yesterday; and if we don't get him to-day, I'll be hanged if I'm going to tramp after him any more, but go in for small game. Much better fun."

"All right," replied Jack, "there is no fault with the old gun to-day; but as you couldn't hit a haystack at a yard, I don't exactly see what it matters to you."

All the same, *mon ami* Jack, as I happen to be the one that is to have the honor of carrying, and I hope firing with the said gun, and as elephants, and especially this old boy, are rather apt to charge sometimes, and, moreover, as I happen to be at the present moment in the possession of good health and very full of life, I don't see why I should not be a "leetle partikler" about this 'ere shot-gun. Do you? "Oh dry up, and let's get along," was the rude remark to my very natural appeal.

"Now, Mootisami, lead on. Strike right over there and hit that bit of jungle at the corner, and I'll go over here, while you, Jack, take the centre and meet at the big rock, and *oo-ee* if you hit the trail."

Off we started, each to our several points, with the gun bearers bringing up the rear, each bearer with a spare gun and ammunition, we going like human sleuth hounds, eagerly looking out for tracks. Soon we were in the jungle. Dense masses of undergrowth and creepers, thick as a man's wrist on either side, undergrowth so thick that if you went off the narrow trail, it would take a sharp eye to cut through it, and even with a knife one would hardly make more progress in a day than the crew of an abandoned ship are said to make in the Arctic regions. The jungle is teeming with life. "Twitter, twitter, twitter," right and left, above, and, I was going to say, below, and I don't think I would be exaggerating if I did add it. No matter, however, tempting though—no matter if the graceful "cock" comes with a "whirr!" over your head and you get a chance of a shot that makes your fingers itch to pull the trigger—you mustn't fire if you are after big game, no! Monsieur Rogue Elephant is just as cute as you can make him. It is really marvellous how such an enormous beast as his Lordship is can keep himself so quiet and be so hard to find. I have known an elephant to come right down through a coffee plantation where the trees are planted about five by four, and he being so minded has hardly broken a single branch. But, let my gentleman be in a different mood and woe-betide the place he has set his elephantine mind on destroying. There was to be much of that crop to assess on.

Presently a loud *oo-ee* was sounded to my right, and pressing on I soon found myself at the edge of the jungle we had been passing through—a strip of patna before me, and Jack just beginning to give another vigorous *oo-ee*!—on my right. "Don't make such an infernal row, you idiot. You would frighten any elephant within ten miles." "He's there! He's there!" said Jack, jumping like a maniac, and indicating a small island of jungle just in front and surrounded on three by patna; "I saw him just going in. Here are his tracks, and I'm sure to do in him before he gets to the ground—no doubt of it now. There they were with the ground hardly yet recovered from the pressure of the huge carcass. In fact, as we looked, one little sprig of grass slowly raised itself and once more renewed its life."

"Now, Jack, he's there sure enough, and it is your turn for first shot. He won't turn on his tracks, so you whip round to the other side with your gun bearer, and I and the rest will beat through here. But, mind you, *oo-ee*! loud, if you miss him, for then he is sure to turn, and I must look out."

Here let me explain that the great difficulty and danger in shooting a rogue elephant, or, in fact, any elephant, lies in this: that there is only one really vital spot in the body of the Ceylon elephant, and that is just above the trunk. It is about seven inches in circumference, and I believe you might discharge a mitrailleuse into other parts of his body without doing any further harm than perhaps giving him an attack of indigestion. When an elephant charges, he raises his trunk just above this vital spot, and the trunk, which is about fifteen to twenty yards off, he lowers his trunk and head simultaneously and comes straight at you. This is your time; and woe betide you if you miss and are not quick on your legs. If you have a quick and steady bearer, you may have a chance of a second shot, but it is only a chance, and it is odds on the bearer having bolted before you have fired your first shot.

But to resume. Jack had hardly got round to the other side, and I had not yet begun to beat when I heard a shot. A loud *oo-ee*, followed by something that sounded like "Look out for yourself," proclaimed that Master Jack had missed; and that the man "that couldn't hit a haystack at a yard" ran a pretty good chance of killing his first elephant, or his first elephant killing him, a case of paying your money, etc.

Soon I heard a crash a little to the left of me, and I quickly retreated further from the jungle, and placed myself, with my bearer behind me, opposite to where I heard the crunching of the boughs. A deathly silence followed—not a sound. A white man, standing like a statue, with the butt of a heavy elephant rifle at his hip ready to present, and a bronze statue behind with a rifle in his hands, eagerly bending toward the white statue—patna around—the brilliantly green jungle in front—and, above, the clear blue sky. I remember thinking this at the time, and what a good photograph it would make; and all the time I was, to tell the truth, in mortal "funk." Not that I thought of "bolting," as we have never so braced up that I don't think I could have run if I had tried. But I had a sort of feeling that I would not be angry with M. Le Rogue if he went another way. In less time than I have taken to write this there was another crash! crunch! crash! of the jungle, this time on the right, followed by a trumpet loud enough to wake the dead, and out came the huge brute and made right at me, his trunk waving in the air, and a hoogh, hoogh! coming out of his open mouth. On he came, and just as he was about to sever my yard off, down went the trunk and up went my rifle to the "present." One glance along the shining barrel, a strong pull on the trigger, and what was two seconds before an infuriated "rogue," by whose side, in point of height, Capt. Bates would have looked a pigmy, now came with a run to the ground, and lay a huge inanimate mass at my feet,

* This turkey is now in the museum of Wheaton Seminary, North, Massachusetts.

Alas for Casar! I am not ashamed to say that when I did see him tumble the high-strung nerves of the bold hunter gave way, and that it was not until Jack came round and we had tossed him in some good "Scotch," that I had the power to join Jack in his war dance round the slain.

After that all went to work with a will to cut off his head in order to preserve his skull and his tail, which went to me as the trophy, and his feet to be made into footstools, with polished ivory toes or liquor stands. I have eaten elephants' feet, but take warning by my experience, and when you have the chance, don't. Dreams! Why, sir—but I can't detail them all, only this, if you want to know what it is to fall over a precipice, to be murdered yourself, or be hung for murdering someone else, trial, judge, black cap and all thrown in, then eat elephants' feet—well-baked and with some native pudding to follow.

It may appear cruel to shoot such a noble animal as the elephant, so docile and sagacious as he is in captivity, but one must remember that only "rogues" are liable to be shot, and that all others are strictly preserved by the Ceylon Government, who capture and tame them, and then utilize them in the Department of Public Works, where their sagacity in moving and placing in position huge blocks of stone is simply marvellous, and must be seen to be believed. A "rogue," I may here explain, is an elephant which, from some cause or other, has been ostracised by the rest of the herd and wanders about by himself. He is the terror of a native village and does an incredible amount of damage to their crops, so his removal is as much to be desired as that of the man-eating tiger.

And now all our operations are ended. The sun is beginning to beat down with its full strength on our devoted heads. We send a boy up a cocoanut tree to send down a fresh, cool nut full of delicious milk, and, after one more toast, we return to camp to breakfast, and in the after "snooze" I dream of again shooting my first elephant.

SHIKARIE.

Natural History.

BIRDS OBSERVED IN CENTRAL DAKOTA.

DURING THE SUMMER OF 1881.

BY W. L. ABBOTT.

1296 CHESTNUT STREET,
Philadelphia, Dec. 29, 1881.

THE following is a list of birds taken on a trip through central Dakota, during the past summer, by Jos. C. Krieger and the writer. We arrived at Huron, on the Dakota River, July 15, and remaining there about a week, started out with a team on a trip to the Missouri River, through the region known as the *Coteau des Missouri*. First stopping at the Westington Hills, twenty-five miles west of Huron, we traveled north and west for about one hundred and twenty miles to the Bourne River. From there we went westward until we reached the Missouri, at a point about ten miles south of Grand River Agency. Thence we went southward along the Missouri, past Fort Sully to Siding No. 8, on the Dakota Central Railroad. Then, following the railroad line back, we reached Huron, August 9. The whole journey occupied sixteen days, much of it through country about as fertile as the desert of Sahara. We saw a few traces of deer and antelope, but none very fresh, and did not see a mammal larger than a prairie dog on our whole trip. Back from the Missouri and north of the railroad (Dakota Central) water was scarce, and the country generally very barren. In some places there was nothing to be seen for miles except bare, gravelly hills, without a blade of grass. In the absence of larger game we lived mostly upon upland plover and sandpipers, the first of which were generally very abundant.

1. *Harporhynchus rufus*—Thrasher. A few met with near the Missouri, above Fort Sully.

2. *Sitta canadensis*—Red-bellied nuthatch. We noticed a single individual of this species fifteen miles west of Huron, many miles from timber; it was running up and down the sides of a railroad cut, apparently perfectly at home.

3. *Tringoides acdon parkmani*—Western house wren. Common in the Westington Hills, twenty-five miles southwest of Huron.

4. *Cistothorus stellaris*—Short-billed marsh wren. Taken at Huron and in Hand county.

5. *Neocerys spraguei*—Missouri sky lark. Generally common as far west as when on the ground, so that we took very few specimens. Their song could be heard in almost any place, however barren, especially in the mornings, the bird itself being scarcely visible as a tiny speck in the sky. The song does not seem to me to be inferior to that of the European sky lark, the only objection to it being its brevity.

6. *Dendroica aestiva*—Summer yellow bird. Common in the Westington Hills.

7. *Lanius ludovicianus excubitorides*—White-rumped shrike. Quite common near Turtle Creek Siding, on the railroad Dakota Central.

8. *Petrochelidon lunifrons*—Haven swallow. There was a large colony under the eaves of the round-house at Huron, and we found them throughout our route, often in places that were many miles from cliffs or anything else that could afford them nesting places.

9. *Hirundo erythrogastra*—Barn swallow. Common along the Missouri.

10. *Otello riparia*—Bank swallow. A number met with about twenty miles southwest of Grand River Agency.

11. *Sceloporus gramineus*—Rough-winged swallow. A few noticed at same place with last.

12. *Centropus ornatus*—Chestnut-collared bunting. One of the commonest birds, and abundant in the most barren localities; most of the specimens were in extremely worn and bad plumage.

13. *Centropus bairdi*—Baird's bunting. Very common everywhere, excepting in the neighborhood of the Missouri. We did not see any within twenty or thirty miles of this river. The specimens were mostly in fresh and good plumage.

14. *Poocetes gramineus confinis*—Western bay winged bunting. Common at Huron.

15. *Coturniculus passerinus*—Yellow-winged sparrow. Very common at Huron and along the railroad line.

16. *Chondestes grammacus*—Lark finch. A flock met with fifty miles north of Fort Sully.

17. *Zonotrichia querula*—Harris finch. A male seen at Turtle Creek.

18. *Spycia pallida*—Clay-colored sparrow. Common near the railroad.

19. *Melospiza fasciata*—Song sparrow. Common in the bushes by the Dakota River and near the Missouri.

20. *Passerina amoena*—Lazuli finch. A male taken near Swan Lake, Missouri River.

21. *Sitta americana*—Black-throated bunting. Common wherever a few tall weeds were to be found on the prairie.

22. *Calamospiza bicolor*—Lark bunting. Very common everywhere. The males had nearly all lost their black breeding plumage by the first week in August. They were shy near Huron for some cause, but we found them nearly always quite tame in other places.

23. *Dolichonyx orizivorus*—Bobolink. Everywhere abundant.

24. *Molothrus ater*—Cowbird. Common and extremely tame, coming about the camp within a few feet of us to forage for crumbs and scraps.

25. *Xanthocephalus texanophilus*—Yellow-headed blackbird. Common in many places along our route.

26. *Agelaius phoeniceus*—Red-shouldered blackbird. Common.

27. *Sturnella neglecta*—Western meadow lark. Very abundant.

28. *Icterus spurius*—Orchard oriole. A few seen in the bushes by the Dakota River.

29. *Ectophasia cyanocapilla*—Brewer's blackbird. Common about Fort Sully, and near the line of railroad we met with vast flocks of blackbirds of which this species formed the majority.

30. *Corvus corax carolinensis*—American raven. One seen near Huron.

31. *Corvus frugivorus*—Crow. We saw a few at the mouth of the Okobaja Creek, Missouri River.

32. *Eremophila alpestris leucoloma*—Shore lark. Generally common. I think all the shore larks we met with belonged to this pale colored form.

33. *Tyrannus carolinensis*—Kingbird. Not so common as next.

34. *T. verticalis*—Arkansas flycatcher. Very common. Wherever there were a few trees or bushes to be found, this species was sure to be present. At Huron they were not so common as the kingbird.

35. *Empidonax pusillus trillii* (?)—Traill's flycatcher. A flycatcher which apparently belonged to this species was seen in the Westington Hills.

36. *E. flaviventris*—Yellow-bellied flycatcher. A single specimen taken thirty miles southeast of Grand River Agency.

37. *Chordeiles pictus hyemalis*—Western night hawk. Very common everywhere.

38. *Melanerpes erythrocephalus*—Red-headed woodpecker. Common along the Missouri, near Swan Lake.

39. *Colaptes auratus*—Plicker. Not very numerous; obtained a male at Swan Lake that had the red cheek patches of *C. melanurus*. Other specimens, some from Northern Iowa, show red feathers in greater or less amount in their cheek patches.

40. *Ceryle alcyon*—Kingfisher. A female shot on Turtle Creek.

41. *Coccyzus erythrophthalmus*—Black-billed cuckoo. Met with in the Westington Hills.

42. *Spytoptis cuculoides hypogaea*—Burrowing owl. We met with a small colony near the mouth of the Little Cheyenne, and a large one in a very large dog town on Medicine Creek. They were very shy and hard to shoot.

43. *Hierafalco mexicanus polygynus*—Prairie falcon. Very numerous along the line of the railroad about August 10.

44. *Tinnunculus sparverius*—Sparrowhawk. Common near the Missouri, less so near the railroad.

45. *Circus hudsonius*—Marsh hawk. The commonest hawk.

46. *Buteo borealis*—Red-tailed hawk. Common.

47. *B. borealis calurus*—Western red-tail. Several hawks of this variety met with about fifty miles southeast of Grand River Agency.

48. *B. Swainsoni*—Swainson's Buzzard. A female taken on Medicine Creek.

49. *Archibuteo lagopus sanctijohannis*—American rough-legged hawk. A female shot on Medicine Creek.

50. *Cathartes aura*—Turkey buzzard. Several seen at Huron.

51. *Ectopistes migratoria*—Wild pigeon. One seen in the Westington Hills.

52. *Zenaidura macroura*—Carolina dove. Numerous along the Missouri and near Medicine Creek, and in places many miles from timber.

53. *Pipilo fuscus columbianus*—Sharp-tailed grouse. Said to be common along the Missouri and at Huron, but we only met with one specimen.

54. *Colinus leucurus*—Bittern. One seen at Huron.

55. *Nycticorax nycticorax*—Night heron. Several seen near Huron.

56. *Oryzopsis vociferus*—Killdeer. Common.

57. *Gallinago media wilsoni*—Wilson's snipe. Several met with thirty miles west of Huron.

58. *Macrophthalmus griseus*—Bay-breasted snipe. Common near the railroad.

59. *Actropatema himantopus*—Stilt sandpiper. One specimen taken.

60. *Aetodromus maculata*—Jack snipe. Common.

61. *A. minutill*—Last sandpiper. On August 7, thirty miles west of Huron, we fell in with vast flocks of sandpipers of many species, this being the most numerous. All kinds were very fat and unfit for specimens.

62. *Limosa fedta*—Marlin—Several taken forty miles southeast of Grand River.

63. *Totanus melanoleucus*—Greater yellow legs. Common.

64. *T. flavipes*—Lesser yellow legs. Very common.

65. *Symphictia semipalmata*—Willet. Less common than either of the last two species.

66. *Rhyacophilus solitarius*—Solitary sandpiper. Rather common.

67. *Bartramia longicauda*—Upland plover. Abundant everywhere.

68. *Tringoides rufescens*—Buff-breasted sandpiper. We met with one flock near the mouth of the Little Cheyenne.

69. *Tringoides macularius*—Spotted sandpiper. Not common.

70. *Numenius longirostris*—Sickle-billed curlew. We met with large numbers about thirty miles southeast of Grand River, in company with flocks of marlin and willet; they were mostly young birds, and extremely tame and unsuspicious.

71. *Steganopus villosus*—Wilson's phalarope. Met with only in a slough in Walworth county.

72. *Porzana carolina*—Sora rail. Common in all the sloughs about Huron.

73. *P. nasorum*—Yellow rail. One met with in Walworth county.

74. *Bernicla canadensis* (?)—Canada goose. A flock of

geese that seemed to be of this species were seen forty miles west of Huron.

75. *Anas boschas*—Mallard. Generally common.

76. *Querquedula discors*—Blue-winged teal. Common.

77. *Lophodytes cucullatus*—Hooded merganser. Two young ones shot west of Huron.

78. *Pelecanus erythrorhynchos*—White pelican. Three seen in a slough in Walworth county.

79. *Larus* (sp. ?)—We saw a flock of gulls on a sand bar in the Missouri River, but were unable to determine the species.

80. *Sterna forsteri* (?)—Forster's tern. A tern that was probably this species was seen flying over Medicine Creek.

81. *Podilymbus podiceps*—Carolina grebe. Rather common.

THE RED SQUIRREL.

A WELL-KNOWN inhabitant of our "forest primal" is the red squirrel or chickaree (*Sciurus hudsonicus*). In those parts where the spruce and pine clothe the country for miles around, it is especially numerous, and may be seen jumping from bough to bough, stopping meanwhile to nibble at the cones and scatter their parts over the ground beneath. A merry, sociable little fellow he is, too, loving to come near the farmer's house, and even to the very door; now running with a sort of mimic chatter about the walk; then, suddenly surprised by the opening of a door, scurrying off to the nearest tree and quickly appearing at the summit.

Let the frost be ever so severe, and the snow storm rage in all its fury, our little friend takes his daily rounds in search of something wherewith to please his appetite. It may be a nut, or tasty fungus, or a pine cone, it matters little which, he quietly takes his seat in some cozy nook—generally in the angle formed by the junction of a bough with the trunk. Here, with his back pushed up against the sheltering tree, and tail held like an umbrella above his head, the red squirrel natches away, heedless of the gale which roars through the forest. He is a fearless and confident creature, for often and often have I tried to get as close as possible to one when thus occupied, and sometimes have succeeded in getting my face within two or three feet of his, and as long as I remained quiet he would continue his repast, as if aware that the eye of one who would not willingly injure was upon him.

At the summer the red squirrel makes a nest in some convenient spot—the hollow of a tree, or outside on the bench. In the latter situation it is made of a rounded form of sticks, with a small hole for entrance at the side. I have also known one to rear its family of six young ones in an old nail box, left on a beam in a barn a little distance from the house.

This squirrel will sometimes change its usual color to black, and skins of this color are sometimes sent from Labrador.

It is much more numerous some years than others, and people account for this by stating that it occasionally migrates from one district to another. During sunny days in early spring these squirrels, amorously inclined, chase each other from tree to tree, uttering a peculiar screaming noise while in pursuit.

A more cleanly little creature could scarce be found, and well would it be if the dirty, swarthy Indian who traverses these never-ending forest wilds would take a lesson of neatness from this humble denizen of our northern clime.

FERN LODGE, WATERVILLE STATION, N. S.

THE ENEMIES OF GAME BIRDS.

FAIRHURST, VT., Dec. 31, 1881.

Editor Forest and Stream:—Mr. Bishop's novel theory of the disappearance of ruffed grouse will certainly not hold for this region, for red squirrels are no plendier here than they were thirty years ago. They are not "as thick as house flies," nor is there "one to every square rod of woodland," yet, for some cause, our grouse seem doomed to destruction.

The decrease in their numbers is very noticeable this year, for many lines since the last of October I have ranged through miles of woodland while fox hunting without flushing more than two or three a day's tramp, whereas years ago I should not have thought it remarkable to have flushed thirty. Four years ago, after several seasons of scarcity, they suddenly became quite plenty, and this greatly strengthened my belief in their partial migration. But now it seems as if I must give this up—which I am exceedingly loth to do, as it is like giving up the grouse—for "Charles Mayo" tells us that he has been in the back towns where they were reputed plenty and found them even scarcer than about Rutland. It looks as if the tick must be the villain who is murdering our grouse, and if so, how is he to be circumvented? If he is the same fellow that infest ovals and hawks, may it not be that the scarcity of his old victims has driven him to getting his living off the grouse? Not an unpleasant change for him, one would think, but very bad for the grouse and for us.

"Canada" finds only one female in a score of twenty-one killed in November. The nesting bird is, of course, most likely to fall a victim to the prowling fox, the owl and the hawk, and very likely the tick would take kindest to a quiet bird, but this will not account for the lack of females in this year's broods. Will "Canada" please tell us whether there were more old birds than young among those he killed? This grouse question is a puzzling one, and if we find that our theories will not hold when discussed we must give them up. Mr. Bishop dislikes to give up his—as I do mine. I would like to believe that either was correct, for the bobolinks and the oven birds and the grouse might come back to the old haunts, where cover and food in plenty await their return; but alas and alas, if it is the tick. I do not see the nonsense of thinking squirrels destroy tree-nesting birds much more than ground-nesting ones. Which are the most conspicuous? And where do red squirrels mostly keep, on the trees or on the ground? Compare the number of robins' nests, blackbirds', vireos', hairybirds' and other common tree-nesting birds' nests you have found with those of the bobolinks and the oven birds both found in the open fields, with nothing but the green grass to hide them. The squirrel does not stand so good a chance as a man does of finding a ground nest; a much better one of finding and getting at a nest built in a tree.

R. E. ROBINSON.

—NEW YORK, Dec. 23, 1881.

Editor Forest and Stream:

The decrease of our game birds seems to be meeting with considerable attention in your columns, and it is well that it is so. This matter cannot be discussed too much. Allow me

to quote a few lines from a letter just received in connection with this subject. The letter is from Fishkill, N. Y., and dated Dec. 27: "Something is playing the mischief with game birds about here. Early in the fall there were a good many quail and grouse—more, in fact, than for four or five years before—but all at once they were gone. A number were found dead in the fields and forests, but I have not been able to account for it, as I have only seen one with my mark on it, and that looked as if it were dead killed it. It was a grouse and in fine condition, with no ticks or flies on it."

My friend goes on to say that hawks are unusually numerous and this, I think, is the reason of the disappearance of the birds. When we think of the many enemies our game birds have, as enumerated in your many letters, it is a wonder that any live over. In the first place, there are the hawks and owls, always on the watch from one year's end to the other. A pair of hawks will stick to a bevy of quail day after day, and if not disturbed, will use up a bevy, sometimes, to the last bird. Then there are the weasels, minks, skunks, cats, hawks, foxes, etc., all of which are on the alert for quail and grouse all the year through—to say nothing of the constantly-increasing number of sportsmen armed with the deadly choke-bore breech-loader, and all this destruction is assisted by pot-hunters, nets, traps and severe winters. Flies and disease I have left out of the question.

Now, when you think of all the poor birds have to contend against, no wonder they constantly diminish while their enemies constantly increase. If every sportsman would do his share toward protecting, restocking and feeding game and killing vermin this might be remedied, but talk is cheap and will not help the birds much.

I have just returned from a shooting trip to Virginia and quail are scarce there also. A hard winter and an immense number of hawks are the causes. Almost daily we found the hawks at work on a bevy of quail. W. HOLBERTON.

PROVIDENCE, R. I.—During my annual vacation for a short time in Vermont, in October, I found ruffed grouse in places where there were none last year; and since the red squirrel question came up it brings to my mind that in 1880 the reds were very plenty and the grouse very scarce; this year, more grouse and less reds. Sportsmen can draw their own conclusions. On October 31, I killed a ruffed grouse in a field that had in its crop twenty-seven white oak acorns (*Quercus alba*), several frost grapes and one of the red partridge berries. Was not that rather a large meal? All the birds that I found, if they were not killed at the first flush, were invariably found in a tree at the end of first flight and afterwards. I think this a fashion with Vermont grouse. I join the call for a law to prevent the export of game.—J. H.

PSUDONYMS—Sing Sing, N. Y., Dec. 31, 1891.—*Editor Forest and Stream:* It has always surprised me that so many of your correspondents still persist in using a pseudonym *non de plume*, initials and the like, especially in matters relating to natural history. *Un de plume* may be tolerated in articles which are of no scientific value, but in natural history, where all facts should be indorsed by their writer, it is unfortunate that so many still adhere to the use of an assumed name. Many notes which would be of great value and interest, even to professional naturalists, have to be thrown aside as worthless, on account of their anonymous or pseudonymous character. The only reason that I can see why they are used is either from modesty or fear of ridicule on the part of the author. I can only say that in writing a truth no one should be ashamed or fear ridicule, for the simplest thought or original observation is an addition to our knowledge, and hence thankfully received. I was glad to see that Dr. C. Hart Merriam, in a footnote to one of his articles, condemned their use.—A. K. FISHER, M. D.

WRIGHT OF GRAY SQUIRRELS.—Henderson, N. Y., Jan. 3.—*Editor Forest and Stream:* I noticed in your issue of Dec. 29 "Will" your Virginia correspondent, asks for information concerning the weight of gray squirrels. I shot one this fall that weighed 28 ounces. It was a common gray squirrel, but extra large for this section. We often kill those that "Will" describes and call them a cross between the black and gray; they are generally quite large.—GRAY SQUIRREL.

Game Bag and Gun.

NOTES FROM WORCESTER, MASS.

Jan. 3, 1892.

Editor Forest and Stream:

Having almost the entire month of December the ground remained bare and the weather exceedingly mild and tempting to the sportsman. We have, in common with sportsmen all over the country, been waiting and lamenting the scarcity of partridges, at the same time relentlessly pursuing the few remaining ones, even up to the last hour of the last day in which shooting was legal, more partridges having been killed in December than in any other two months of the shooting season, and during the last few weeks a much larger proportion of the birds have been killed than in any other part of the season. We shall settle for this nonsense next year and it will hardly be becoming to lay it all to the partridge fly, ticks, red squirrels, etc. However, there are a few birds left, and if the "pest" whoever or whatever he be, will let them alone we shall have some birds next year.

The woodcock flight commenced about Sept. 20th and continued much later than usual, a few stragglers being killed in this vicinity in December. Not so large bags were made as in seasons when the weather turns unusually cold and the birds come in with a rush, but those of us who keep a record of our shooting find that the footings on woodcock are fully up to the average. A good many quail lived over last winter, and during the summer seemed to be nesting well, but when the time for shooting arrived not many were to be found. A few good bags have been made, but they certainly cannot be said to have been plentiful. Worcester county is not good quail ground anyway, and when we make a business of quail shooting we must go either to Cap Cod or Connecticut.

The fox hunters are having a regular picnic. As soon as many foxes have been killed since the list appeared in the *FOREST AND STREAM* a few weeks ago, I will give a revised list as it stood on Jan. 1. Our party are residents of Worcester, with the exception of Mr. J. M. White, who is the general proprietor of the Tourtellotte House in the adjoining town of Millbury. The old veteran, Mr. N. S. Harrington, is now in his sixty-eighth year and likes the sport just as well as ever. Six years ago, while out fox hunting, he fell and shot him-

self in the foot, necessitating amputation at the instep, and was obliged to lie by about a year, but "blood will tell," and as soon as his foot was well enough to allow it he was at it again, with all the old relish, and can now put in a good day's work at either bird or fox hunting. He has proved himself "no slouch" this season, having already killed S. J. M. White and partner 19 John A. Slocumb 13, W. S. Perry 7, Horace Adams 7, J. T. Balcorn 3, Henry Locke 3, A. B. F. Kinney 1, J. K. Thayer 1, E. H. Smith 1, L. Rand 2—a total of 65.

Now that the bird shooting season is over it begins to be lively at the club house on Friday afternoons. The team is now in practice for the match which is pending with the Marlborough Club, and which is to come off on our grounds on Jan. 13. The two clubs have already shot five matches, three of which have been won by the Worcester Club. The new rifle club is in a flourishing condition and hold their weekly shoots at the new range at Lovell's Grounds, where they have recently erected a cozy club house. They number about thirty members. K.

A VIRGINIA PHEASANT HUNT.

SOUTH WEST, Virginia, Jan. 2. "RUFFED GROUSE" seems to have raised the "in-jin" in some of your correspondents in his denunciations of what he calls the "murder" of the king of game birds; and some of the goodnatured fellows are coming back at him with a friendly vim. Now, this ought not to be; because a moment's reflection will demonstrate that "Ruffed Grouse" sees the inefficiency of game protection laws, and wishes to inculcate the practice of shooting pheasants (as we call them in the South,) on the wing for their protection; and if he succeeds they will be efficiently protected. But suppose a person does not just want to have his gun crack in a crazy manner all the time, but wants to broil (or stew if he likes better,) this delicious bird, how then? I'm going to tell you, in confidence, how I proceeded to hunt the other day, and if it should leak out, pray let "Ruffed Grouse" restrain his wrath.

During the week of holidays, some beautiful days came for hunting pheasants, and I received a happy thought to excuse myself from my partner. Entering our office one morning, I said, "Henry, don't you think it a shame to have an old father as near as I have, and not spend a day or two during Christmas with him. I'll go and see the old gentleman, if I can be spared." "Certainly, I'd go," said he. "Soon gun and traps were ready. Horse saddled, and my little iron-works red setter whining, barking, tumbling and springing around my horse's head. Into the saddle I go, and a ride of seven miles, through a muddy road, brought me to the old gentleman's." "Hello, hello," said he, "tell the truth, did you come to see me or to hunt?" "Truth? well, both." After dinner the old gentleman says: "Up the branch yard, in the hollows, in the laurel, mountain tea and green briars, they say there is a gang of pheasants, but, son, I've grown too old now to hunt and walk with you in the rough. I will go up the path and get a tenant living near the grounds to show you." Up the path we go. A walk of a quarter mile brought us to the gap in the ridge—and down to this gap along the ridge came a ravine fanned on each side high by tall sandstone cliffs—on which grows the rough, barked birch, the fragrant and lithe hemlock and the dwarf ivy. Down the ravine comes the mountain branch, gurgling under occasional windows of ice, trickling over tiny falls; the ice tipped ferns touching the current and dancing to the little ripples—all inclosed with frequent groups of oak laurel. Say, you've seen all this kind; do you remember how your blood shot through your veins? How you could hardly suppress a yell?

I cannot wait until my father sends my guide, but up the ravine I start. My headstrong little dog is brought to heel. No listless sneaking behind with him, but he takes an even chance by my side, half crouching, his feet hardly tipping the ground, tail straight, mouth half open, eyes only displaying excitement. Say he don't know as well as I do what I am after? My gun is cocked and at a position for quick work. Up the hollow we continue stealthily, when a stick snaps behind and I turn to greet my evening's companion. I wait till he comes up, and he reaches out his hand for a hearty shake, he hugs his shoulder his squirrel rifle. The hummers of my gun are down. Just as we grasp hands, *whirr, whirr, whirr*, up flies a pheasant like a streak of lightning. I wheel. Just one lock has time to click. Bang! The vicious crack, round and round swings the bird and to the ground it comes. Rover don't understand whether it is down safe or not, so out of abundance of caution he runs up and puts his paw upon it. Now, under all the circumstances this was a fair wind-up.

After taking in this modesty, a shower of flattery from my companion, off we go again. Three hundred yards tramp, dog still at heel. "Look yonder! see that pheasant sitting by that tree," says my man. There it was, sure enough, looking precisely like the leaves, tail tucked, neck stretched. My gun comes up, and he lay "murdered" on the ground. We turn for home, and as we neared the old side of the farm, my companion told me that a brood of pheasants had, in the last year, been raised in a thicket near by. A mother hen, and her eight or nine girls, he dog goes to the spot. See how cautious! He gallops up to a log, puts his forefoot on it and looks around. Maybe he'll be laughed at for using his eyes as well as his nose. Presently he gets windward of the thicket and proceeds, not to quarter, but to go where his experience (or reason, perhaps,) has taught him to believe a pheasant is apt to be. We kneel upon the ground and watch his movements by keeping under the boughs of the brush. There he stands, his body half-curved. "Watch that dog stopped that way for," said John. "You'll see the repeater and down we come, but before we get near, *quack! quack! quack!* whirr! whirr! whirr! One lights in a tall birch sapling, another two hundred yards away in a tall oak, among the still hanging dead leaves, two fly up the knolls on the branch. A sharp, fox-like bark from Rover, and the bird in the bush looks down at him. Maybe you think a setter is a dumb dog; any way he holds that bird's attention until I "murder" it. Now for the one in the oak.

"You'll see my mountaineer." "Whistle, then." This bird is "murdered," too. Off we go after the two on the knolls of the branch. "Careful, Rover." I caution him as he trails with the wind. He stops and seems to reason that if he proceeds he will flush, so he quits the track, comes back and circles around some distance, gets against the wind, then turns and half trots, and gallops back carefully, with head high. See now quick he turns his head to the left, crouches, draws and stops stiff, with one foot up. "Too brashy for me to flush and kill, John. I will go to the

opening at the branch, where you can drive him across as you flush." He was accordingly flushed, and through the brush just the wrong way he went, and he wasn't murdered with a cent.

Now for our last bird. Its hiding place is approached, and Rover gallops off to come back to us against the wind, which he does in a careful pace. His hind feet fly off a shock log, but just in that position he stands pointing straight toward me, stoop, peep under the thick brush and see the bird sitting on a fallen limb, two feet off the ground, right between me and the staunch little dog. Who in thunder can kill that bird on the wing when you can't raise the gun to your shoulder, much less turn it? Should I flush it idly and make my business canine believe I am joking with his stands? Not much. I crawled till I got out of range of the setter statue and "murdered" this fellow. My excited comrade, the executioner of many a deer, turkey and pheasant, could contain himself no longer, and a hearty whoop rolled from his broad lungs, hiding the dusky silliness of the closing day, and as he followed the reverberations on the rugged steps, I raised my hat to the forest wilds in reverential thanks, and a whispered "good evening."

So, to be honest, I kill these birds on the wing and consider it a feat highly honorable in myself; I kill them from the tree and consider the feat highly honorable in my dog; I kill them on the ground for fear I won't kill any at all; and in neither of these ways do I ever have time enough to kill more than myself and a genial friend or two or even cat. It is not that I am a coward—if it lingers in me it may be untoward sport, but if it be reason, make the most—I beg pardon. Am I benighted? GRAEME.

THE RIFLE OF THE FUTURE.

FALL BROOK, Cal., Dec. 1891.

IN THE *FOREST AND STREAM* for Dec. 1, a correspondent signing himself "Iron Ramrod," under the heading of "Muzzle-Loader vs. Breech-Loader," asks the following questions: "Is a muzzle-loading with a round ball more accurate in its shooting than breech-loading with a slug or conical bullet? Or is it the fault of the factory-made cartridges? If the fault is in the rifle, why is it more accurate with round balls loaded from the muzzle?" These questions are based upon experiment with a .32 cal. rifle, which, when loaded from the muzzle with round ball and patch, far excelled its best shooting with either rim fire or central fire cartridges. I have myself tried the same experiment with different rifles and always with the same results, and the answer seems to me easy enough.

During the many years that breech-loading rifles of the best quality have been upon the market, and at low prices too, a large class of hunters have persisted in adhering to the old muzzle-loader. It has been the custom among those who deem themselves advanced, to denounce this class as fools or old fogies, and lavish unqualified praise upon the breech-loader. Unfortunately, however, for this theory of their action, that class consists largely of men who have thoroughly tried the best breech-loaders, and men like Major Merrill, who know just exactly what they are talking about. And it is useless to deny that this class is on the increase. I have several who belong to it. And one of the most successful and skillful hunters of my acquaintances this year laid aside the most popular of repeating rifles, bought an old single-barreled muzzle-loader, and has killed more deer with it than he has killed in any year before, and has done it with one-fourth of the shots formerly required to get the same number with the breech-loader. He says no one can ever again talk breech-loader to him.

Although myself a firm believer in the use of fire, I cannot shut my eyes to the fact that in all the breech-loaders I have ever tried—and I have tried many—this advantage is attained at the expense of some accuracy. Those who have never shot a muzzle-loader may talk of the breech-loader's accuracy. But he who has never shot a muzzle-loader, knows not what accuracy is. The man who has grown up with the breech-loader is only a callow youth, who knows nothing of what a rifle can do.

For very long range the breech-loader may be ahead, because the extremely long barrel necessary for a long flight can be loaded from the muzzle by the best system of patching.

The patch will wrinkle too much if put on in the ordinary way, and if patched as for the long range breech-loader, it cannot be fitted tightly enough to the grooves. But I believe it impossible to make a breech-loader that at short range will excel the muzzle-loader; and I believe there is now nothing that will equal it. You may talk about the "unerring" this or "never failing," that; the makers may baptize it "Mid Surcove" or "Old Centrifugal Splitter," or whatever they like, but there is no maker on any one else who can match a rifle loaded at the breech against one loaded from the muzzle to be fired 100 times with dead rest and telescope sights at a hole the diameter of the bullet at 50 yards distance. I admit that some breech-loaders shoot splendidly; that they will throw few wild balls, and those but slightly out of the way; but for every time one will hit a silver dollar at 50 yards the muzzle-loader will hit a silver dime by its side; for every one that will cut into the edge of the same bullet hole you may find a muzzle-loader that will shoot into the hole without cutting it into a hole at all.

By muzzle-loader I here mean a rifle loaded from the muzzle with grease patch in the old style, with the bullet left in the grooves near the bottom. It may be an old-fashioned muzzle-loader or a modern breech-loader. There will be no difference in the results, provided, of course, that the breech-loader is well made and is not choked at the muzzle—as many very needlessly are made. It must also be beveled a little at the muzzle, so as not to choke the patch.

The difference between the two modes of loading might almost be predicted without experiment. In loading from the muzzle the ball is swaged gently to its place in the barrel; all parts of the bullet yield about alike; the patch prevents any scraping off of the lead or cutting by the edges of the grooves. It is pushed gently to its place at the bottom, and—mark now an important point—it is left in the exact place from which it is to start. It goes out exactly as it went in, without a bruise, jam or smash upon any side, and being pushed without any tearing of the barrel.

When loaded from the breech the ball lies below the place where it is to be fully and firmly adjusted to the grooves. Instead of being pushed gently into that place it is dashed into it with tremendous force, and it is thrown across an intermediate space in which it rarely if ever fits tightly enough to prevent a slight wobble, even in case the ball should leave the cartridge on a line true with the axis of the bore of the rifle. Several results may follow. The ball may be unduly thickened or "upset" by the blow of the powder against the dead weight. The patch (if it has one) may be stripped,

cut, frayed, or have an edge doubled over by collision with the shoulder of the chamber or the place where the barrel first tightens upon the ball, which even if bevelled would, under such violent speed, have nearly the effect of a square shoulder.

It is also nearly impossible for the ball to adjust itself so evenly to the grooves as where it is done slowly and gently. Thrown in at such a speed, if its point be turned a hair's breadth from the centre line of the barrel, one side will strike the grooves first. That side is sure to be bruised, and the opposite side of the butt of the ball shares the same fate. It may go out of the barrel in this way, with its point deflected from the line of flight; or it may be bounced and jammed nearly into place by bounding against the other side of the barrel. But two things are certain. First—That where the ball is left in the grooves this cannot happen. Second—When left below the grooves and passing over an open space that is wider than the ball in order to reach them this must occasionally happen.

There are other causes of the superiority of the muzzle-loading rifle to the common breech-loader as generally treated by its owner. But space allows consideration only of this one which is, by far, the most important, and is, in fact, the only fundamental difference between the two. The problem for the rifle maker of the future is this: How to adjust the ball fully, firmly and gently to the grooves before firing, and do it quickly enough to retain the gain at advantage of rapidity of fire. The accuracy of the breech-loader keeps even pace with the approach to this. The long-range rifle owes its accuracy mainly to its ball being pushed in so far before firing, and the .22-cal. owes its accuracy to the extreme lightness and lack of momentum in its bullet. It cannot jam so badly as a heavy one.

Until such an invention comes to the front, there is one sure way to accomplish the same result, viz.:—Load from the muzzle with your double rifle. By care in loading, bullets I now make it shoot as well as any sporting breech-loader I ever saw. But its very best performance when loaded from the breech is nothing compared with its work when loaded from the muzzle, than it is the old muzzle-loader in every respect, and with all its advantages. I keep it loaded with two round balls patched from the muzzle in the ordinary way. I carry a rod in a long pouch like a quiver over my shoulder, and a few bullets and patches. In my belt I carry some shells loaded in the ordinary way for quick loading, and a few loaded with my double rifle. These blank ones are loaded to the end with powder and wads. When there is no need of haste in loading, I take out the rod, wipe out the gun and, loading from the muzzle, push a ball nearly to the shoulder. Then putting a wad in the breech, I put in the blank cartridges, close the gun and then push the bullet gently home. If one of those balls fails to hit, I know positively that the fault is solely and exclusively my own, for, fired from a rest, they will all enter the same hole at forty yards.

If he had, a spook of poisoning in ahead of the blank cartridge, is to insure the suppage of the ball before it comes to the slightest looseness in the barrel at the shoulder. So necessary is this that if the ball drops a trifle too low, or where there is the slightest widening or bevelling at the shoulder, its accuracy will be at once affected.

In this way the round ball and the old-fashioned cone, two of the best balls in the world for 160 and 250 yards, respectively, can be shot as well as from a muzzle-loader. These balls, as well as a cylindrical one with very short bearing, it is nearly impossible to shoot from a breech-loader without great care in loading. And the cone—the truest and swiftest ball ever known for from 200 to 300 yards—cannot be shot at all. It is impossible to get a ball with so short a bearing delivered true into the grooves with a violent jam.

Any breech-loading rifle, if cut straight, bevelled a trifle at the muzzle, and furnished with a ramrod can thus be given all the advantages of the muzzle-loader without losing any of the advantages of the breech-loader. A ramrod should be carried anyhow for cleaning. A joined rod is good enough, and can be carried in a pouch hanging to the cartridge-belt behind. The first action may be used as a "starter," a countersunk ferule being put on the end of the handle. If I were a rifle-maker I should quickly have on the market a muzzle-loading breech-loader of this sort. Any rifle and any action will do. Then the hunter can put in a handful of powder behind an express or light conical ball, and have the highest velocity attainable. He can have one shot or two shots if he has a double gun that will forever and eternally go where the gun is pointed, and not occasionally somewhere else.

If "Iron Ramrod" will try a few more rifles in the same way he will find that the fault is not in the rifles, all of which are now cut well enough, not in the factory ammunition, which is now made as nearly perfect as possible, not in the bullets, all of which will always go well when loaded from the muzzle, and often badly enough when loaded from the breech. Everything else being equal, of course the difficulty lies in the ball being violently smashed into place. This may be partly, though not entirely, remedied by excessive loading. I loaded as high as forty per cent. of tin with steady increase in accuracy, but still there was a tendency to occasional wildness of flight.

The repeater has advantages that will always commend it to many, and it will always be a popular rifle. But there is a large class of hunters who demand absolute precision. Probably, no repeater will ever shoot well enough to suit them. For such I believe the rifle of the future will be the combined breech and muzzle-loaders. And many of this class will rest satisfied with nothing short of a double hammer breech-loader, built just like a shot gun, neat, light and well balanced, having a ramrod beneath the barrels. Use shells with moveable anvils, so that nothing but a bit of stick is needed to de-cap and re-cap them, and such a rifle is good anywhere where powder and lead can be obtained. It will cut a squirrel's head as neatly as the old Kentucky rifle, and will be, if recoil be made even, a short range, express and mid-range rifle at your pleasure, and still can be fired as fast as a repeater. This is my *beau idéal* of a hunting rifle.

I can hardly conclude without saying to that numerous price who owns a choice breech-loader (one of those that "shoots exactly where you hold it") I have seen lots of them and owned them myself, that if he wants a little conceit taken out of him, let him try it against itself, loaded both ways and fired fifty times at a hole of its own calibre at fifty yards, with telescopic sights. But see that it is not choke-bored too much, that the muzzle is not sharp enough to cut the patch, and that the ball does not get into the shoulder in the least.

T. S. VAN DYKE.

CAMDEN, N. J., Dec., 1891.

There has been considerable discussion from time to time,

about the relative merits of the breech-loading and muzzle-loading rifles for short range hunting and target practice. The long range theory has been clearly demonstrated by the wonderful success of our national teams, against the crack loads of our regular army with muzzle-loaders—the breech-loaders in vainly winning and making a better score when both kinds were shot by one person.

For short range—from fifty to one hundred yards or even under—the champions of the muzzle-loader claim much finer shooting than can be done with any breech-loader. If we carefully consider the conditions to which the average breech-loader is subjected, we have no cause to wonder that it does not go quite as well. In the first place it has a much greater charge of powder than is necessary for one hundred yards, the conical or cylinder-conical bullet, gives a greater recoil, disturbing the aim for getting a fine bond on any thing, and the high block on which the fore sight is set, cannot be caught as easily by the eye for snap-shooting.

The muzzle-loader, on the other hand, had low sights, the front one being the broad knife-blade style, made of silver or nickel, and in the rear was one of the Rocky Mountain pattern in the shape of a buck horn. The muzzle-loader also could have the powder charge regulated in a second for the distance fired at, and the round patched bullets gave no recoil, enabling the shooter with a rest to make a dozen in the same hole at twenty yards. The advantages of round balls are so apparent at short range in shooting small game and in fancy marksmanship that I have often wondered why cartridge companies do not make their shells of the regulation sizes, filled with half the ordinary load of powder and a round ball, of course I refer to rim-fire, as those who shoot central fire rifles can re-load them in any desired way. Many do not do so though, because they imagine nothing is better than conical and cylinder shaped bullets, often saying that only muzzle-loaders are good for round balls and the patch must be used invariably with them.

Some years ago I had a small muzzle-loading rifle, taking one hundred balls to the pound, and which, when loaded carefully, was very accurate at close distances. This I tried against a Ballard and Maynard rifle with their conical bullets, and it beat them badly, but as soon as the cartridges of the latter were loaded with round balls there was no apparent difference between them all in accuracy. Lately, I have tried round balls with extremely light charges of powder, in a regular .45 calibre Gaisler cartridge load, giving excellent results at the distances where they were fired. Using a paper wad over the powder, and bullets fifty to the pound slightly greased, I loaded, for fifty or under, with five grains of powder, at one hundred feet ten grains, and at fifty yards fifteen grains.

These loads made no perceptible report, the charge of five grains, in fact, could be fired in the house, as it was not any louder than a Florent rifle.

The round balls and small charges of powder will prevent pistols from rebounding as much as they do now, besides allowing persons to aim directly at an object instead of a foot or two below it, which is now necessary, as any one knows who has shot with a revolver of modern times. I loaded the shells of a Smith & Wesson improved .44 calibre with half the usual load of powder, and a round ball, fifty-five to the pound. There was no kick to the weapon then; it shot up to fifty yards nearly twice as well as before, and could be aimed directly at the mark. With these cartridges on one occasion I struck an ordinary negro pole-lift three times in succession at fifty yards, whereas with the factory made ammunition it would not hit more than three out of five. Pistols more than rifles would be benefited by shorter size cartridges, instead of the long ones now in use, which have more powder than is necessary to kill a man when held straight, besides giving so much recoil that it has to be aimed almost at persons' toes at fifty feet to hit him in the head. There is a special short size .32 calibre cartridge made, which I have fired in a rifle and pistol with favorable results, but the bullets seem to get lost in the barrels of other than the particular pistol it is intended for, and, of course, will not carry as far as it might.

In conclusion, I wish to say that if more persons favoring muzzle-loading rifles would load with round balls and slight charges in their breech-loaders, letting us know what are the results, there would be a change of opinion in those who admit the convenience of the breech-loader, but doubt its accuracy at short ranges.

TREEING VS. WING-SHOOTING.

FERRISBURGH, VT., Dec. 31, 1891.

Editor Forest and Stream:

Now that the grouse have become so scarce that one can hardly get three shots in a ten hours' tramp, it is late in the day to learn how to shoot them, but I like "Iron Ramrod's" idea of shooting with both eyes shut. When one gets the hang of doing this successfully he may reasonably expect to become a fair wing shot on ruffed grouse even in such cover as they are often found in here, that is among low evergreens and thick white birch and poplar sprouts, where half the time they only give evidence of having flushed a bird in the thick clatter of its flight through the maze of branches. If one could learn to shoot straight at the racket, and had a gun that would drive its charge of shot through fifteen or twenty yards of brush, he might delight to have a grouse do its most in such places. But for my part, with my lack of skill, I would rather have the grouse make it as easy for me as possible, and would not think him running what a life insurance agent would count any great risk at that.

Our legislators have made it unlawful to use dogs in the hunting of grouse, making no discrimination between curs and cockers or setters and pointers, so in Vermont the law-abiding sportsman must find and flush his own birds, and the law-abiding pot-hunter must still hunt his. Yes, most gentlemanly sportsmen, if shooting ruffed grouse sitting makes one a pot-hunter, such an anomaly as a law-abiding pot-hunter does exist. Without shame I confess myself such a one. I shoot ruffed grouse wherever I find them, on trees or on the ground, and blaze away at them when they are in the water like a chukar, sometimes getting them, often not. But though I had carried a gun more years before there was any law for their protection in Vermont than I shall again this side the happy hunting grounds, I never yet shot one out of season, nor did I ever kill any game bird, animal or fish at any time or in any manner prohibited by the laws of the land. But for all that I suppose I am a pot-hunter. It is time some one arose to explain the inconsistencies of sporting rules; to tell us why it is more sportsmanlike to shoot into a huddle of ducks sitting in the water than to single grouse on a tree. Why it is legitimate sport to shoot a deer or a hare before

hounds, and an outrageous act to kill a fox under like circumstances. Why ducks and snipe may be shot in spring and other game not, just because some of the ducks and snipe do not happen to breed among us. Why it is a manly and noble spirit to crust-hunt a moose, and not, as it certainly is not, to crust-hunt a deer, and why it is fair to call a moose and not fair to call a wild turkey, or fair to fool a fish with a feathery semblance of a fly, and unfair to fool him with a bit of metal that to him seems a minnow, and so on and so on, almost without end. As L. I. F. says, "give us more light." I like him and M. P. McKoon's manly letters in the last FOREST AND STREAM. In my opinion all the difference in practices of those writers and those who kill their ten-out-of-six grouse on the wing, and like to have them go in the worst places, is that the first tell just what they do, and the others—well, if they ever do for themselves and "murder" a treed grouse, he can't tell of it, and they can't.

R. E. ROBINSON.

CAPERCAILLIE FOR AMERICA.

NEW YORK, Dec. 28, 1891.

Editor Forest and Stream:

Several years ago I suggested, through the columns of FOREST AND STREAM, the experiment of introducing the Capercaillie into our Michigan and Maine pineries, where I believe it would thrive and multiply largely, as it is a much worthier bird than our native white turkey and much slyer. Our Canadian cousins are likely to take the initiative in so laudable an effort, as the following extract from the Quebec Chronicle shows:

"An application was made at the last monthly meeting of the Literary and Historical Society, by Mr. Adam Waters, on behalf of a Scotch taxidermist, to exchange the duplicate bird skins belonging to the Society for fine specimens of the Scotch game, such as Scotch grouse and ptarmigan, black cock, pheasants, capercaillie, etc. The Society had much pleasure in giving its fullest concurrence to a movement calculated to still enlarge the collections in its rooms. Though the museum of the Society was twice destroyed by fire, it has attained such dimensions as to render it very valuable for the study and identification of species. It is to be hoped measures will soon be taken to increase its local so as to be in a position to exhibit the large denizens of Canadian forests. The moose, caribou, wapiti, red deer, long-tailed deer, etc., would make a splendid group. Mr. Waters made a further suggestion, that the Society should attempt, in an attempt, to be made next spring, to introduce the capercaillie in our Northern pine forests. The capercaillie is a large and beautiful game bird of the size of a turkey. It is found in the Northern portions of the European Continent, flourishes even in the intense cold of Siberia, where Mr. Waters stated it was observed and noted by our respected fellow-citizen, Dr. Rowan. It existed of yore in Scotland, and was some years back, re-introduced by the Marquis of Breadalbane and Earl of Fife. It lives on spruce, larch, etc., in winter—eats all other insects in summer, and roosts on the summit of the loftiest forest trees. If the capercaillie and Messine quail can be added to our fauna, it will indeed be a great achievement. Mr. Waters thought \$50 or \$60 would suffice to bring over a large number of capercaillie eggs in April next, to be hatched under the domestic turkey or placed in the nest of the Canadian grouse. The Society was appealed to as being interested in Natural History pursuits and asked to allow a subscription list to be deposited on its tables in order to raise the necessary funds for an experiment. We commend the subject to our veteran sportsmen, Col. Rhodes, Charles Temple, Mr. Gregory, Messrs. Dobell, Becket, W. Jeffery, Col. D'Ossonne and others."

Why not join forces with them and thus insure the success of the undertaking beyond a peradventure of doubt?

G. M. FAIRCHILD, JR.

DEER HUNTING IN ARKANSAS.

A DOUBLE.

LAST evening I shot a "spike" buck, at about seventy yards, with my 5-bore, 19 pound gun, charged with 8 drs. of powder and 3 oz. of No. 3 buckshot. This gun is choked especially for buckshot, and shoots them closer than any gun I have ever seen. I can put an average of twenty-two No. 8 buckshot in a foot square at 40 yards. She shoots larger sizes in the same proportion, and when loaded as she was last night, she makes a half yard. But at forty yards a good way to kill a deer lead in its tracks, so he rattled off through the brush at a lively gait. I saw he was bit very hard, but as it was getting dusk, and the White River bottom is not by any means a pleasant place to get lost in, and as the ground was strange to me, and I was a long way from camp, I concluded to let him go until morning. This morning I took his trail and found him about two hundred yards from where I shot him, hung him up, and concluded to "blaze" a trail to a lake two miles away. I traveled along, marking the tree with my hatchet, and when within about one hundred yards of the lake, while going along without any care whatever, I saw three deer rise up in a patch of green briars to my left, about eighty yards away, and moved diagonally to my right behind a tree top. I sprang forward quickly and softly a few steps, expecting them to "lope" off in the direction they started, but I saw nothing of them. Stepping a few paces further, I saw four deer gazing at me. Two of them were near breast to breast—a large doe and a yearling—about sixty yards away. I brought the other two deer to the same place, and they were looking at me. The young buck dropped in its tracks with a broken neck, and struck with several other shot. The doe started off with the others, but soon fell behind, and I knew she could not go far, but still went out of sight. I took her trail, and so on found her dead, not over one hundred yards from where she was shot. She had one shot square through the butt of her heart, a shot through her back just behind the shoulder, her left fore leg broken in three places and a shot through her neck. She was very fat, and the nearest doe I have ever seen, weighing 146 pounds after disemboweling.

This proves that the right kind of a shot-gun is deadly to deer, and that a deer can get over a good deal of ground carrying a big load of lead. The buck shot last evening had a thigh broken and four shot through the body—one of them through the lungs. He had lived quite a time after lying down.

These incidents prove also how tame the deer are here, in these immense White River bottoms. The buck, last evening, I caught up to him just as he was about to get up a tree, about eighty yards away. I stepped up diagonally about ten steps, so as to bring him in sight. When I shot, another

Homo

together with similar exhibits by Eisener David, completed the Swedish exhibit. In the Netherlands exhibit were nets for the capture of small life near the surface or beneath it; ground drags and oyster catchers.

In the display of the United States we notice that the Coast Survey made a creditable exhibition. Sigbee's apparatus for decaying and analyzing is figured and described as that saves time and labor. It appears to be a complicated machine to the uninitiated and two full-page views of it are given. Sigbee's apparatus for bringing up specimens of water is figured. Dredges, oyster-swabs and "tangles," and similar implements, together with Prof. Hillebrand's apparatus for determining the specific gravity of the water, receive commendation.

Under the head of Meteorological and Signal Apparatus appear implements from the lighthouse at Hamburg; John Holmes, Regent's Park, London; the Meteorological Council, London; and Otto Bolme, Berlin. Reflecting instruments, compasses, balances, ships' glasses, etc., were represented by E. Springer, Berlin; G. Heckelmann, Hamburg; A. Oerthing, Berlin; H. Haecke, Berlin; J. Wacchall, Berlin; L. Reimann, Berlin; Voigtlander & Son, Vienna and Braunschweig; Picht, Bros., Rittenow; A. Meissner, Berlin; and T. Wegener, Berlin. Many useful and curious implements appeared in this collection. The display of microscopes was also interesting and the report on them is well made up.

The History of the Fishery occupies considerable space and includes that of many nations. It glances at the ages of stone, bronze and iron, those of Germany receiving much attention. The ancient books of Switzerland are illustrated and their history is the most interesting of all. No mention of the fine collection of Esquimo and Alaskan wooden and bone hooks, which appeared in the Smithsonian collection, is made.

Chemical and physical experiments follow, and include analyses of water, the flesh of fish, of fat and lean kinds, salt fish, dried and smoked fish. The biological investigations continue the above analyses in comparison with beef, the development of the herring, by A. W. Malm, Director of the Museum of Nat. Hist., Gothenburg; the eel, by Dr. Hermes, model of the zoological station at Naples. Notice of the large chart by Professor Goode, of the U. S. Fish Commission, showing the distribution of the important coast fishes of the United States. Statistics then precede an article on the injury to fish from infected sewers, with analyses of specimens.

The transportation of live fish is, in Germany, not entirely a fish-cultural question, as in America. Fish of fresh waters are taken to market and sold alive, hence the separation of the question of their transportation from the fish-cultural department. The firm of Busse & Co., Berlin, have a steamer with a well in it to bring live fishes from the coast of Sweden and Denmark to Stettin. Mr. Schuster, Freiburg, showed a cask with air-pump for transporting fry. Dr. Hermes, of the Berlin Aquarium, exhibited a large apparatus, consisting of one great tank, which overflowed into a small one in the rear, from which the water was pumped into a third tank standing on the two lower ones, from whence it flowed again into the first.

Botany of the waters is followed by an account of the amber fisheries, which we missed from former reports. A good description of the amber industry and the elegant display at Berlin will be found in *FOREST AND STREAM* of June 3, 1890, from our staff correspondent at the Exhibition. The literature of the fisheries is a vast subject, and is referred to by the titles and dates of the works and includes general zoology, the lower animals, fishes, aquatic mammals, fishery products, packing, etc., the in-land fisheries and pond building, sea fishes in general, descriptions of implements, oyster and lobster fisheries, angling and fly fishing, culture of water animals and the literature of scientific explorations relating to the waters, history of fisheries, biography and catalogues. So extensive was this literature that the mere titles cover forty pages with double columns. The history of the Berlin Fishery Exhibition is a history of the fisheries of the world from pre-historic man down to the year 1890.

MORE GAME PROTECTORS NEEDED.

Dec. 24, 1891.

Editor Forest and Stream:

As our Legislature will soon convene it is not improbable the usual number of changes and amendments to our game laws will be presented for consideration; and, therefore, it seems a suitable time now to protest against any action, except possibly to make penalties larger and punishment more certain for infringement.

The laws are now sufficiently plain and guarded to accomplish their designs, if they be enforced, but by whom they will be enforced is the unsolved problem, and the one thing lacking to preserve and protect game and fish, not for amateurs alone, but for the many, the laboring class, who have neither time to spare, nor money to spend, in going from their homes for recreation or pleasure.

To accomplish this and to make the laws something more than dead letters, I would suggest, instead of using the annual appropriation made for the propagation and distribution of game and fish, that this sum be used in securing the services of thirty State Game Protectors, at a salary of \$750 each, to be located in such counties as naturally would most need their services, and the selection of these men be made by local protective clubs, and the appointments made by the Governor.

It seems to me, with such a number of men distributed over the State, and acting under the advice and surveillance of local clubs, having a direct interest in protection of game and fish in the immediate vicinity, there would be an effective work done that has never heretofore been accomplished, and a result attained that would meet with general satisfaction and approval.

It is simply absurd to make annual appropriations for hatching and distributing fish, only to have them, in fact, when grown to maturity, illegally caught, as they now are, and will continue to be, unless laws protecting them be stringently enforced.

There is no claim for an argument about this. The depletion of waters in many portions of the State, and the disappearance or scarcity of game, are incontrovertible evidence that laws are of no consequence in the eyes of poachers and marksmen. They must be made to respect and obey these laws. Therefore, let us this year have the appropriation for the thirty game protectors.

S. R. CROSBY.

SALMON AS PICK FOOD.—A pickerel (*Esox*) was recently taken in Lake Auburn, Maine, which had several salmon in

its stomach. The latter were of three inches in length. The fishermen about there think that a pickerel fed upon salmon ought to be finely flavored.

ANOTHER ROUTE TO TIM POND.—New Britain Conn.—There is another good route which I have before spoken of. Leave the railroad at North Anson and proceed by stage or private team through North Newport and Dead River and Flagstaff to the Smith farm. The scenery is grand. There are good pickerel ponds near North Newport and Flagstaff, and good trout ponds not far from Parsons's Mt. Bigelow House at Dead River. Parsons told me last August that he was about to put up cabins at "Carry Pond," not far from his hotel. I have not my notes by me, and cannot state the number of miles. The guests at the hotel told us the trouting would be good. There is an excellent place for a few hours' trouting on this road, just before going upon the so-called "horseback," and all along the road from here to the Mt. Bigelow House ruffed grouse are very plenty. As we rode along the banks of Dead River we found ducks on the water. There appears to be everything along this route a sportsman needs, and when he gets to Smith's, six miles takes him to the Tim Pond cabins, and ten or eleven more to the Seven Ponds, by a forest road cut out wide enough for a buckboard wagon with a span of horses.—J. W. T.

HOW CAN THE OYSTER SUPPLY BE MAINTAINED?—The consumption of the oyster is constantly increasing, and as the demand increases so will the disposition to fish the beds, and, should there be any failure of the supply, the increased price consequent upon that failure will induce even more exhaustive fishery; and it will become so great, if it has not already, that only strict protective laws, rigidly enforced, will be sufficient to protect the beds, and prevent the destruction of the fecundity of the beds which merits consideration. During the summer of 1879, Professor W. K. Brooks was successful in securing, by artificial means, the fertilization of the eggs of the female, and in protecting the offspring for some time. Though, owing to various unforeseen combinations of natural causes, and to the accidents incidental to all tentative work, he has not been successful in maintaining the embryos until such a time as they could be deposited upon the beds with a certainty of survival, yet he has accomplished sufficient to show that the impregnation of the female cells can be easily and certainly achieved by a very simple process; and, as probably the greatest loss of the young is due to the failure of the male to deposit the male fluid at the proper time, any method which will insure such contact and protect the embryos, for even a limited period, is of great value, and well worthy of the attention of those interested in the preservation of the oyster-fishery. Any protection afforded the young oyster assures the maturity of a great number, and, as the beds are failing from a want of reproduction, due to the absence of mature oysters, any method which will insure the maturity of an abnormal number should be brought, if possible, to a point of practical benefit.—LIEUTENANT FRANCIS WISLOW in *Popular Science Monthly* for December.

NEW ENGLAND FISHERIES.—We have received the seventh annual report of the Boston Fish Bureau from its Secretary, Mr. W. A. Wilson, a most interesting history of New England fisheries and is followed by a report of the year with nine pages of statistics which give "large catches and 'stocks' by the mackerel fleet in New England waters—season of 1891." "New England fleet catch of codfish, as reported to the Boston Fish Bureau." "New England catch of mackerel—amount of inspected barrels packed at home ports, as reported to the Boston Fish Bureau." "Receipts of fish by Boston dealers from foreign and domestic ports," and "Massachusetts catch of mackerel for 78 years." The record for the past year has been the most successful one for years. The loss of life and property has been great, as usual, nearly all falling on the Gloucester bankers.

A HANDSOME GIFT.—Winstead, Conn., Dec. 17, 1891.—*Editor Forest and Stream:* I wish to acknowledge through *FOREST AND STREAM* a present of about four volumes of your valuable journal from Mr. W. W. Woodcock, of Huxford, N. Y., which completes my set from the start.—FRANK D. HALLIETT.

TRYING TO RHYME TARRAPIN.—IV.

There is an old lady, named Sara Pinn,
She's trying to rhyme the word tarrapin;
And if she makes it, she'll be a poet,
She'll sing, dance and shout;
And if not, I'm sure she don't care a pin.
Good day.

Somerville, Mass.

IRON HAMROD.

Fishculture.

CANADIAN FISICULTURE.

THE following paper, the facts in which were gathered from the annual reports of the Canadian Fish Commission, was prepared and read by Mr. E. I. Miller, of the Michigan Fish Commission, at a recent meeting of the Commissioners of that State, at Detroit, December 29, 1891.

There are now a total ten hatcheries in the Dominion; the first one was erected by Mr. Samuel Wilnot, the Superintendent of the fish breeding establishment, at his home in New Castle, Ont., in 1869. Two more were constructed for each of the years 1878, 1879 and 1879, and the most successful one for years.

The running expenses of these ten hatcheries for the year 1890 was \$29,109.61, (our entire appropriation for that year was only \$5,000). The Canadian work for that year was as follows: Total number of fertilized eggs put down, 26,212,000, of which there were 18,784,000 salmon, 4,684,000 lake trout, 4,000,000 brook trout, 125,000. There were hatched and planted same year, 21,520,000 fry.

During the time the Canadian Commission have been engaged in this enterprise, over 200,000,000 fertilized eggs have been laid down in their hatcheries, and the total number of live fish planted during these years I am not able to state.

The value of the fish taken in the northern districts of Ontario in 1879, was \$307,134, being an increase over the previous year of over \$24,000, and for 1880, \$318,345, as follows:

"The yield of fish in this division continues to show a steady increase; and for the present season being considerably in excess of any previous year. Overseer Belding feels no hesitation in attributing this happy result to the breeding operations of the Sandwich hatchery, and to the fact that the fish caught this year are the fry put in the Detroit River and which are just coming into maturity. The yield would have been greater had not cold

weather taken every one by surprise, and interfered with the fishermen's operations."

The Canadian catch of whitefish in the Detroit River division of hatcheries in 1879, was 1,579,777, and in 1880, 1,035,000; showing a remarkable increase in the number of fish taken, which is attributed by the people following the business to the plants made by Canada and Michigan as appears by a voluntary statement made December 9, 1890, and signed by between thirty and forty of the principal fishermen and dealers on the Detroit River.

It will appear by the foregoing, gathered from official reports, that our brethren in the Dominion are zealous, active and successful in their enterprise, and appear to have made by their government to do more than we of Michigan are able to accomplish. We have, however, as appears by reference to our books, planted since the commencement of the work in 1873, nearly 100,000,000 of living fishes in Michigan waters. Judge Potter, Superintendent of Fishes in Ohio, in the first report of that State made in 1875, speaking of the work accomplished by Canada and Michigan, says: "Lake Erie may be so replenished with the whitefish as to bring its consumption within the reach of all, and instead of ten cents, it will ultimately be sold for three cents per pound. The same gentleman three years later in his annual report, rejoices thus: "There is no uncertainty about the whitefish, their multiplication by artificial means is reduced to a certainty, whitefish for the last season have been sold at the fisheries at an average of three cents per pound, a little more than the cost of hatching."

These and other facts in the increased catch of whitefish in waters planted, encourage our Commission to continue the enterprise to the full extent of our financial capacity.

COLORADO.

DENVER, Col., Dec. 31, 1891.

Editor Forest and Stream:

Our last legislative assembly made an appropriation of \$5,000 from the State Treasury for the establishment of a fish hatchery and to begin the business. That was in February last. Several months passed before a location was made, but that was finally accomplished in the latter part of the summer by the donation of ten acres of ground eight miles north of this city. It is near Platte River, but far enough away to be safe from floods, and embraces about two-thirds bottom land, and one-third level or second bottom, about thirty feet above the bottom. About ten feet above the foot, in the side of the bluff, a great number of springs break out, supplying an abundance of water, at least for the present season. The temperature of the water at 54.

A few rods from the foot of the bluff is a long, narrow pond, filled with vegetation and admirably adapted for carp, but, unfortunately, it is now filled with catfish, wall-eyed pike and other native fishes, and it will be pretty hard to get them out of the pond. The carp pond is a small one, and the water in it has been removed to the ground and placed for the present in a very small pool near the springs, but it is too small and will be too cold for them in summer.

Between the bluff and the pond is a natural growth of cottonwood and box elder trees, and the hillside is covered with wild plum and other shrubs. About one hundred feet from the springs Commissioner Sisty has erected a frame building about 25 by 35 feet, in which are arranged sixteen hatching troughs of the material most approved for use. Early in the present season we have down the first spring water (100,000 from New England, and will add a like number weekly for the next three weeks. He has placed in charge a practical fish-culturist—Mr. Bogart—from our Eastern hatchery. So we will soon see what can be done toward hatching our carp and trout. Strongly recommended by the Legislature in the front part of the hatching-house, and Mr. Sisty says he can get through comfortably with his present plans upon the money provided him until the next meeting of the Legislature, in January, 1893.

Between the hatchery and the pond are distributed to private parties are reported as sent here remarkably well, but the public stock, I am sorry to say, have not grown to be whales by a long shot. First, they were kept for a time in a spring pool at the foot of the bluff, in water very cold and shallow, and a piece of office. Next, they were transferred to a newly-excavated pond in which there was no vegetation, and no food was given them. Of course, they had to "rustle" for a bare living. Now, at last, they are in better quarters, but yet not good, and they go for the water cross with a vim.

N. B. H.

SALMON CULTURE IN MAINE.—1891.

IN published extracts from the forthcoming report of the State Fish Commissioners for 1891, furnished by Hon. E. M. Stillwell, we find a list of interesting facts relating to the fish culture of Mr. Atkins at Grand Lake Stream. It appears that they form a successful and profitable business. The contributions to the Grand Lake Stream fund were as follows: Maine, \$290; dividend, \$1,000; Massachusetts, \$1,000; Connecticut, \$1,000; New York, \$1,000; United States, \$1,450; dividend, \$230; eggs, Total money \$3,000; total eggs, \$50,000 (net).

Total number of eggs taken at Grand Lake Stream is.....400,000
Losses estimated at.....100,000
25 per cent. reserved for hatching for benefit of Grand Lake Stream.....200,000

Not dividend.....100,000
With regard to the salmon culture on the Penobscot we gather from State papers the following: For this year's work, the contribution of Maine to the Bucksport and Orland works was \$2,000; dividend of salmon eggs, 1,000,000, all of which are to be contributed and hatched in the rivers mentioned. Also, the contributions to the Orland works were as follows: By Maine, \$2,000; dividend of eggs, 1,000,000; By Massachusetts, \$500; dividend of eggs, 270,000; By Connecticut, \$300; dividend of eggs, 162,000; By the United States, \$1,457; dividend of eggs, 950,000. Total—money, \$4,557; eggs, 2,462,000 (an advance having been already made for 100,000 loss.

This much we have gathered from non-paper extracts taken from the coming report, which we will review when received. From private sources of information we learn that the facilities for the culture of salmon on the Penobscot are greatly improved. At Grand Lake Stream they have built a hatching house covering about 1,150 square feet of ground, on a side hill close by the lake, with facilities for a fall of nine feet between the upper and lower troughs, which will insure well watered water, and there are now facilities for developing three millions of eggs.

At Bucksport-Orland they have built a cement aqueduct 1,500 feet long, with a 4-inch bore, and have now at command copious supplies of both brook and spring water, sufficient to serve many of the hatcheries, and to take the place of the water from the lake, and obviates the necessity of shipping the eggs in December, as had to be done with a large number of them last season. Mr. Atkins expects now to begin shipments in January and finish in March.

There has been most extraordinary weather up to the end of December—warm, with rain. It is thought that its result on the spawn at Grand Lake Stream will be to retard the hatching if anything. There has been a great deal of snow and ice water mingling with the ordinary supply, which is largely spring water.

FISHCULTURE IN SCOTLAND.—The extracts from a letter written by the gentlemen who brought the turbot and salmon to America and took out carp in return will be read with interest, as in the letter he gives a glimpse of his brother's life in the fish culture. He is Mr. Hall, Dalkett, Scotland, 6th December, 1891, and reads as follows:

Professor S. F. Baird: You will be pleased to hear that the

twenty-five leather-carp have been safely landed, after a very stormy voyage. The gale was a very severe one, and on Wednesday, November 23, the wind blew with hurricane force, and we were obliged to "heave to" for twenty-two hours. The seas were very high indeed. We shipped once during the night which disabled the four seamen on watch; one laid two ribs broken and another his head badly cut; the other two were lamed. The wheelhouse was "stove in" and the galley bulged in. One boat was carried away on duck, breaking down the chimney stack of the boiler engine. Through all this storm the carp did well. The temperature of the water was 50 degrees F. at New York, and during the voyage varied from 51 to 62 degrees. I also fed them with a little oatmeal and potatoes four times. The temperature of the water here at this time of year is about 41 to 50 degrees, which, I suppose, will be rather too cold for the carp. Year by year a little oatmeal but I don't think it will do them any harm. Year by year a few and a few latching troughs with *Salmo leuciscus* eggs in, but the ponds outside will be laborious work. The hatching house is 80 feet long by 30 feet, and built of granite. The first fry pond is just finished, and is 60 feet by 4 feet. The bottom is made of concrete and the walls built up with granite and Portland cement (three of sand and one part cement). This makes a capital pond.—A. WATSON ARMISTEAD.

THE EFFECT OF CULTURE ON THE SPAWNING TIME OF TROUT.—The following is a translation of a communication by Mr. Muller, of Tschischdorf, to the *Fischerei Zeitung*, of Stuttgart. "During the past year the time occupied by the spawning of my trout (in Saxony) was not the same as in the previous year. It becomes more apparent that artificial culture has changed their habit in this respect. Before I began stocking with artificially bred fry the time of spawning was divided into two periods, part of the fish spawning generally about the 1st of October and occurring from nine to ten days, and the rest of the fish spawning afterward, sooner or later according to temperature. If the frosts were early they spawned sooner, but if the weather continued mild the spawning covered a long time. Those which spawned first were the brighter colored ones with reddish tints, while the later ones were darker and had the white parts duller and blacker. "Now we find the fish all come up together to spawn, and this last season they could be seen on the spawning beds every day for five weeks. As a consequence the later ones used the same beds as the first and thereby much spawn was lost. This cannot be explained on any other basis, in advantage, for the reason that if a flood should occur during the time of first spawning all the eggs in the stream would be lost but would be replaced by a later deposit."

FISHLIKE ON LONG ISLAND.—The lease for the Cold Spring property has been signed by Mr. John D. Jones and his brothers, and by the Fish Commissioners of the State of New York, who have selected the property for the reason that the Fish Commissioners is talked of in order to determine when to begin and what to do.

Mayor Grace, of New York, is having a trout preserve to cost \$2,000 built on his place at Great Neck. Two ponds are also to be built on the farm of General Cady, at West Deer Park. In several of the ponds on the south side of the island that have been depleted by eels and pike the German carp has been introduced with success.

Mr. Asaph Furman, who for many years has owned trout preserves at Massena, owing to his heavy losses at the hands of poachers, has moved his establishment and fish to the Smithtown River, where he has created several hatching shanties. He is having a boat built to take his fish alive to the New York market.

CONNECTICUT SHELL FISHERIES.—The Commissioners on shell fisheries of the State of Connecticut will soon issue their annual report. It contains a full and complete account of the meeting of the Commission Mr. Bogart, the Surveyor for the Commission, stated to the members that the cost to the State of a survey of some sixty acres of ground made recently was about \$20, while the revenue was only \$6.50. In large tracts, however, there was a great deal of shell, in advantage, for the reason that the State, B. E. Cutts, of the United States coast survey, has sent the Commission 106 bottles containing samples of the sound bottom at different points in the oyster grounds of the State, and also three packages of oyster shells, showing the growth at one, two and three years from the time of spawning. The specimens of shell were dredged up from the United States steamer *Palomares* last summer, and are expected to prove valuable in showing the relative productiveness for oyster growing of different kinds of bottom.

A STATE ASSOCIATION PROPOSED.—It is proposed to form a fish-cultural association for the State of Ohio, and we have received the following call, which has also appeared in some of the local papers: *Editor Forest and Stream:* As fish culture is growing rapidly within this State and others, it seems advisable that those already engaged in this profession, as well as others who take an interest in fish culture, should form an association which will meet twice a year to advance the science in private as well as in public waters within this State, by collecting facts regarding pisciculture, protection or cultivation of our own good varieties, introduction of new ones, and arranging for the culturists' interchange of information. The association will please communicate their place in the subject, and oblige, yours truly,—HROD MURKETT, 507 Race street, Cincinnati, O.

DEATH OF A FISH COMMISSIONER.—We regret to learn that Mr. J. H. Dinkins, Fish Commissioner of Texas, died recently from the effects of injuries received by falling under a moving railway car while attempting to board it. Mr. Dinkins was a prominent citizen of Austin, and was well known to the sportsman. He had already accomplished much in the way of awakening the people and the Legislature of Texas to the importance of pisciculture. His usefulness was just beginning to be felt. His wife is left to his children.

BLUE CARP.—A blue variety of carp is cultivated in Germany and France. It has lately become a favorite, and is called by some the best of all carp. On Saturday last the North German Lloyd steamer *Donan* brought a can containing a dozen specimens to Mr. Hackford. That gentleman afterward learned that they were from the ponds of Mr. Eckardt, at Lubbenchen, and intended for Professor Baird.

TROUT EGGS FOR GERMANY.—The steamer "Mosel," of the Bremen line (North German Lloyd's), which sailed on Saturday, the 6th inst., took out 15,000 brook trout eggs for Mr. F. Dusse, Geestemünde, this being the second shipment made by Mr. Dusse this winter by Mr. Livingston Stone.

NEW PUBLICATIONS.

THE ART INTERCHANGE publishes colored plates from time to time, and these plates, which have also appeared in some of the local papers: *Editor Forest and Stream:* As fish culture is growing rapidly within this State and others, it seems advisable that those already engaged in this profession, as well as others who take an interest in fish culture, should form an association which will meet twice a year to advance the science in private as well as in public waters within this State, by collecting facts regarding pisciculture, protection or cultivation of our own good varieties, introduction of new ones, and arranging for the culturists' interchange of information. The association will please communicate their place in the subject, and oblige, yours truly,—HROD MURKETT, 507 Race street, Cincinnati, O.

"COUNTRY PLEASURES." By George Munier. Published by Roberts Gray, Boston. The author has looked at nature with the eyes of a painter and the soul of a poet, and his chronicle of a year's text is full of Mr. Munier's passionate Shepherd, who invites his love to come and

in the country. It represents impressions and moods of mind induced by the scenes portrayed, with special reference to that little book on the same subject, *Sketches of a Year's Life in the Country*, whose every page is represented in this picture is situated. The book is rich in quotations, and the author has not only been an appreciative observer of himself, but has been a student of other gifted residents of nature. Read under the light of our new world metaphors and beside one of our hard cold facts, the pages brought with them a delicious odor of the forest, while the splash of the water in the mountain brook made much matter that will be found useful to the poetic moods the book will be a volume to be read and read again.

THE LIVESTOCK JOURNAL ALMANAC FOR 1893.—We have received from the publishers, Cassell, Petter, Galpin & Co., the above-entitled volume. It contains, in condensed form, but conveniently and attractively arranged, much matter that will be found useful to the farmer, the stock raiser, the thrasher and the country gentleman. The book is attractively produced in illustrated paper cover. It can be furnished by mail from this office, on receipt of the price, fifty cents.

The Kennel.

FIXTURES.

JANUARY 11 TO 19. Terre Haute, Ind., Fifth Annual Bench Show. H. H. Harris Secretary.
JANUARY 17 TO 20. St. John, N. B. Second Annual Bench Show. H. W. Wilson Secretary.
MARCH 7. Pittsburg, Pa. Bench Show. Chas. Lincoln Superintendent.

MAY 10, 11 AND 12. Boston, Mass. Third Bench Show of the Massachusetts Kennel Club, Edward J. Foster, Secretary; Chas. Lincoln, Superintendent.

September. National American Kennel Club Field Trials on Prairie Chickens. Jos. H. Dew, Columbia, Tenn., Secretary.
October. National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

TRAINING UP. BREAKING.

IN TEN CHAPTERS—CHAP. VII.

IN the preceding chapters all of our work has been of a preliminary character. We have expended much time and patience in order to perfect our pupil in the rudiments of the education that is so indispensable to that pride of the sportsman's heart, a good dog. Long ago we thought our pet was just about perfect in the performance of his duties, and have anxiously awaited the coming of the crisp October days that we might put to the test our hopes, and, by actual trial in the field, demonstrate how much of wisdom pertains to the course that we have pursued. Do we live among the forest-crowned hills, the home of the lordly ruffed grouse; long ago we have located several broods of these regal birds, and as we have paid them an occasional visit, how our blood has warmed up, how our nerves have thrilled as we fondly dreamed of their store for us when the falling leaf should proclaim that

The hunter's glorious days have come,
The best of all the year;
When through the woodland shades we roam
With rosy speckled gun.

Should our home be toward the setting sun on the broad prairie, whose vast expanse teems with numberless broods of the toothsome chicken, with ever-growing delight and satisfaction have we witnessed from day to day the added strength of the whizzing pinion, and with ever-increasing impatience at legard time's slow flight have we awaited the dawn of the auspicious day that brings such wealth of joy to the sportsman's heart. Or, perchance, our hopes of happiness are turning to the pride of the sables, the gamy, beautiful quail. In eagerly we hasten the feeding grounds, as the merry breeze, with twinkling wings, has burst upon our sight, how have we, with throbbing pulse, watched the ditting wings, and carefully marked their flight as they settled in the friendly cover or upon the distant hillside. What visions of the little bounding forms suddenly transformed into living statues, mingled with flashing brown sprites, the creek of the gun, and the cloud of fleecy feathers floating in air, have filled us with anticipated satisfaction, as we thought of the pleasure to store for us when the early flocks should call us forth to the field. Do thoughts of that lone-bellied aristocrat, of birds, of woodland sport, and of alone engage our thoughts. "Well, we know their sure abiding place, and as we have paid them our debt and seen them depart through the openings, and heard their querulous whistle, how have we thought that the serene and yellow leaf would soon be here to bring to us most royal sport. Do not look upon this as a digression, for we dearly love the pursuit of every one of these favorites; and we hope that you, dear reader, like ourselves, will so train your dog that, no matter where your line cast, you will find sport to spare.

Our favorite sport, since disclosed, has been the pursuit of that best of all game birds, the magnificent ruffed grouse, and we have ever found, when our dog was anywhere near perfect in circumventing this most wily bird, that but few days, or perhaps hours, of practice were required to make him equally adept in the pursuit of any of the others. Many writers pronounce this beautiful bird unfit to train a dog upon; they rail against his subtle cunning, and are unimpaired in condemning his swiftness of wing; and they will give you counsel in disparagement of his preternatural wisdom, which they misleadly witness, and earnestly advise you to keep your young dog away from the ruffed grouse's haunts. Notwithstanding the evident sincerity of these writers, we must beg to differ from their views, and can only regret that their knowledge of the habits of this king of birds is not equal to their skill in framing sentences for his vilification.

Having decided to give our pupil his first practical lessons with this most potent instructor as our co-worker, let us "hie away to the fields with eager dog and trusty gun," and test the sport so long anticipated. Our pupil should be kept at heel until we reach the usual haunt of the birds, where he should be encouraged to go on. Let him go where he pleases, taking care only to keep him within bounds and always under your eye, that you may see just what he is doing. Do not bother him with any orders, if you can possibly avoid it; above all, do not make him beat each particular corner that you may think desirable, but rather allow him to take the lead and to have his own sweet will, content to follow him until he has gained some little insight and become somewhat accustomed to the new life just opening before him. Start with what eager pleasure he explores the hidden mysteries of the covert, how his ever graceful motion tells of joy; how his sparkling eyes mirror his delight; but look, and proudly test your eyes upon the welcome sight, he has discovered that something is in the wind and the "heaven-born instinct" within has frozen him rigid as the rock by his side. Choke down that rising lump in your throat; quiet the quick throbbings of your heart; and, while blessing your good fortune, be cool and collected, for

never more need of cool, deliberate action than now. Your dearest foe is near, and faltering eye or trembling hand will insure his triumphant escape and cause you unwelcome discomfort. Do not hurry, but, with deliberate haste, walk forward and force a rise; calmly now, and, as though on prairie and about to shoot at a chip tossed in air, coolly bring your gun into position, glance along the trusty barrels, and, with "eye of faith and hand of instinct," "out loose!" and, "fortune grant your aim be true!" The chances are greatly against your obtaining a close shot at the first rise, unless among young and unsophisticated birds; but shoot you must, nevertheless, even should the flashing game be far beyond your reach or, as very often happens, entirely out of sight, for we have not done with him yet; and most potent is the sound of gun and whistle of the hurling lead to drive from his crafty brain the wisdom that causes him to shun our close acquaintance. Should your shot prove deadly and the conduct of your dog be all that you could wish, with a loving pat and kindly words, lead your pet straight to your victim and as soon as his sensitive nose locates the bird, at once pet and praise him without stint and talk to him as to an intelligent companion. After a few seconds you should pick up the bird in a dainty manner, and while carefully smoothing out the feathers, allow the dog to sniff the grateful perfume, but on no account let him mouth it, nor poke his nose among the feathers, thus teaching him that the greatest care must be taken that not a feather should be displaced.

When your pup first shows sign that he has scent, do not on any account speak to him nor make any sign, but allow him to act his own pleasure. Should he go through the trying ordeal to your satisfaction, congratulate yourself that you are possessed of a wonder; should his earnest inclination overpower his innate sense of duty and cause him to become musty and flush the bird, you must at once call him in and place him as near as may be in the exact position that he occupied when he should have pointed, and commanding him to *hold*, give him to understand that you are displeased with the performance. If you have killed the bird, and can readily find it, you will add to the force of this lesson if you oblige him to retain his position while you go and bring it to him, and as you hold it a foot or two from his nose, repeat your command of *to-ho*. This, you will find, will cause him to be more careful in the future. Should he become demoralized at the rise of the bird and give chase, do not despair, but calmly say *to-ho*, and if he disregards the command, let him go, and the next time that he has an alarm, commanding him to *hold*, with the knowledge that you are short time you can eradicate the fault, while the virtue will remain and afford you great satisfaction in the future. When he returns you should at once replace him in the position from which he broke, and make him *to-ho* for a short time, while you talk to him about the enormity of the offence. It is not advisable to shoot when he starts to chase, as should you kill, he may seize the bird and handle it too roughly for his future good. Neither does the sound of the gun exercise a steady influence upon his excited nerves. Above all else, do not fail to keep perfectly cool yourself under all circumstances, and to issue all your commands in your ordinary tone of voice, for there is nothing so conducive to unsteadiness in your dog as his knowledge of the fact that you are demoralized, and he is sure to become possessed of this knowledge almost before it is apparent to you. Therefore earnestly strive to retain your self-control, for without that you can never succeed in turning out a steady dog.

Should your bird escape the first sight, let no common occurrence disturb you, and immediately following him put your dog to work, and do not allow him to follow him, but put your whole soul into the work and rest not until you have again routed him. Give him a shot as he rises, and if he again escapes be not discouraged, but with renewed efforts try him again, secure in the knowledge that, can you but find and keep him moving—although he may be the wisest and, consequently, the wildest grouse of them all—at last your reward is sure; at last, utterly demoralized by the relentless persistence of your pursuit, he has clung to his toes, and, finally, crouching on the ground with fear and trembling, waits for you to pass. Fatal mistake! The keen-nosed dog, more eager at each successive defeat, again becomes statuesque and unerringly indicates the bird's hiding place. Now is the supreme moment. With nerves of steel—hardened by the excitement of the long continued chase—you literally kick him from his retreat and coolly bring him down. What satisfaction is in your heart as you smooth his beautiful plumage. What light is in your eye as you gaze upon his plump form. What pride in you as you survey him, a noble prize so gallantly won. A glance at the speaking countenance of your four-footed friend tells you that he, too, is happy; and, our word for it, a few days among these crafty birds will do more to develop the hunting sense of an intelligent animal than thrice the time devoted to the pursuit of any other game.

CANINE AILMENTS.

WE give below chapter fifteen of the appendix to Vere Shaw's illustrated book of the Dog which will be found to contain much valuable information regarding the course of treatment to be pursued in some of the most common cases of illness and accidents which are liable to befall our "dumb friends." This appendix is a treatise on canine medicine, as surgery, by Dr. W. Gordon Stubbs, C. B. N. and should be in the hands of every breeder, as many of the prescriptions are invaluable. This number concludes the series of this valuable addition to the canine literature of the day. We should have published many of the more important articles contained in this book, had not our pages been so crowded. It is our intention, however, to give our readers from time to time such selections as we deem of interest to them. The work can be had of the publishers, Messrs. Cassell, Petter, & Co., New York.

ASCUSSES, DISLOCATIONS, FRACTURES, WOUNDS, STRAINS, ABSCESS,

Alcusses may be defined as matter or pus generated and collected in any of the glands or tissues of the body. They are met with in all regions of the body, and are sometimes small and sometimes very large. They are usually very painful, and in some situations may be highly dangerous, from the effects of their pressure on important parts.

The causes of abscess are numerous; the presence of some foreign body, as a thorn, may give rise to it, or the deposit of unhealthy matter from constitutional reasons. In dogs blows very frequently give rise to large abscesses, and in some cases the abscess and the abscess is the acute or phlegmonous; there is swelling, a glazed and glittering appearance of the skin, which is considerably reddened, and there is great pain and tenderness, accompanied with heat, and the dog is more or less feverish. It is alone the abscess in the eye, and in the eye, it is called a pterygium, and is a very dangerous disease. Mammary abscess is common in the teats of a bitch, frequently occurring where there is milk in the teat that is not removed, at about the time she would have had pups had she been in whelp.

This hills and valleys are the fields.

Woods or steep mountain yields.

Mr. Munier's work is merely a transcript from a diary of a year spent

The fact appears to be that Mr. Murphy has read some book some time or another about hunting and coursing, and, on becoming author, served up his very mixed ideas as an *olla podrida*; but as coursing seems to be a sport coming more and more into favor in America, I think it well to warn young men who desire to follow the leash against taking Mr. Murphy as a guide and instructor and to enforce my views let me quote: In the "Laws of the Leash; or, Coursing," drawn up by the Duke of Norfolk in the reign of Queen Elizabeth, it is stated that "not above on broad

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 5 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-bell and pigeon shooting. Packed in 10 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-bell, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 64 and 128 lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrel, gives both a good penetration and a close pattern; will be found well adapted for glass-bell and pigeon shooting. Made of two sizes, only No. 7 and No. 8. No. 7 being the coarsest. Packed in 64 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistols shooting. Packed in 1 lb. canisters and 64 lb. kegs.

Dupont's Rifle P.Fg.—"Sea Shooting."—P.Fg. and P.F.Fg. The P.Fg. for long-range rifle shooting, the P.Fg. and P.F.Fg. for general use, burning strong and moist. Packed in 1 lb., 1 lb. and 5 lb. canisters, 64, 128 and 256 lb. kegs. P.F. coarse, P.F.F. fine.

Dupont's Sporting, Mining, Surprize and Blasting Powders of all sizes and descriptions. Special grades for Export. Also Rifle, Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S P.Fg. or P.F.F. for orange rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" badge for the best average over nearly 200 competitors. TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five copies for \$16. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Sm. Terquem, 16 Boulevard, St. Martin, Paris, France.

FOR SALE BY NEWSDEALERS EVERYWHERE.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, January 19.

PISTOL SHOOTING.

THE doubt with which some of the correspondents of the FOREST AND STREAM met the assertion that the story of the cowboys of the West and South-west hitting telegraph poles from sixty yards off was somewhat of a myth, opens the question as to what may fairly be done with these small arms.

The subject is very barren of record. We have pistol shooting displays in plenty and, probably, in one case in this city may be seen as fine a showing of *bona fide* targets as can be met with anywhere in the world. Each record has upon it, too, the exact conditions under which it was made, and those conditions were the best possible for the production of high scores.

The pistols used in gallery practice are made specially for such employment, with ten or twelve inch barrels, single breech-loaders and carefully balanced, with sights open, but capable of the finest adjustment. It is very rarely the case that peep sights are employed, but they may be if thought desirable. With such a weapon the good holder may rely on securing satisfactory results. Using the short .22 calibre cartridges these pistols afford an endless amount of amuse-

ment at a very limited cost, and up to moderate distances are unexcelled. With them shots may be grouped by ten or a dozen on spaces to be covered with a silver half dollar. It is such shooting as this that stands recorded in our weekly accounts from the shooting galleries.

But there is another class of small arms, and they outnumber the gallery shooting machines one hundred to one. They are the revolvers of all classes that are turned out in such immense numbers from the various factories. They are marvels of strength, ingenuity and cheapness, and in many cases are as inaccurate as they are pretty to inspect and handle. What these weapons will do under careful test is very wide of an unknown quantity. A few days ago the question was put to the agent of one of the most popular and generally regarded as the best of this class of weapons, whether any test was made of them before shipment from the factory, and the idea of trying a pistol for accuracy seemed to strike him as a novel one. With him a pistol was a pistol, and having been carefully made, as he knew this particular brand of revolver to be, he could not conceive how it could be anything but an accurate and exact shooter. There is a great deal of pot-luck work in the pistol manufacture, and the majority of those turned out are blank failures when called upon to do any hitting, even at the most moderate distances. Taking, for instance, the regulation distance of 12 paces or 36 feet; over this any pistol worth the making ought to shoot with the utmost exactness.

We have received many letters from correspondents speaking of fine scoring done; and we should be pleased if the writers would send on a target of 10 consecutive shots fired strictly off-hand at 12 paces distance. We will measure the string and publish the results. In each case particulars of the sort of pistol used ought to accompany the score diagram. In this way something practical in the way of record may be arrived at as showing what the various classes of small arms will do. We have seen 10 shots from a smooth bore dueling pistol, carrying a $\frac{1}{2}$ ounce ball, crowded on the space of a trade dollar, but this was fine holding and the weapon was of a capital make. What is wanted is some determination of the average value, as shooting implements of the million odd pocket-poppers of every description which are scattered here and there over this land.

THE DELAWARE FISH COMMISSION.

ONE of the last to enter upon pisciculture, as a State industry, was Delaware. A reason for this might be found in the fact that the culture of salt-water fishes has but just begun, and her fisheries are mainly in salt and brackish water. With the exception of the Delaware River on her Eastern borders she has no large rivers; and her small streams, which mainly flow into that river and the great Delaware Bay, are short.

But little interest had been taken in the culture of fish in Maryland, until the appointment of Col. Enoch Moore, Jr., as Commissioner, on the 22d of April, 1881. His appointment was for two years, and the sum of three hundred dollars was appropriated to carry on the work, allowing the Commissioner \$2 per day for each day of actual service. This fall Col. Moore received and distributed 3,000 German carp, mostly to private ponds, and, such is the desire of the people for more, he has over fifty applications for them, which he cannot fill until next spring. This is a very good showing for the few months during which Col. Moore has been in office, and shows how an energetic man can awaken public interest in this subject, even with such an insignificant appropriation, by merely taking hold of it.

Since the appointment of a Commissioner an interest in the good work seems to have sprung up in all parts of the State, and in the city of Wilmington a piscicultural club has been formed, called "The Delaware Piscicultural Association." Its officers are: Dr. E. G. Shortledge, President; Hon. Mayor John P. Almond, Secretary; S. N. Pusey, Treasurer. This society has for its object the stocking of the streams with food and game fishes, and they have one pond of seven to nine acres with a few carp in it; one pond of three-fourths of an acre, containing 30 leather and 29 scale carp, which will spawn this coming spring. From these small beginnings we expect a future for pisciculture in the State of Delaware.

OSCAR Y^e WILD GOETH a-ANGLING.

THE advent of the English esthete Oscar Wild has nearly turned the heads of the ultra-impressables of New York; and we felt flattered when a highly-perfumed note, in an envelope which exceeded in glory the cover of *The Century*, invited us to a little lunch and fishing excursion.

We missed the lunch and hastened to Pier 42, East River, the spot designated as the one to be honored by the poet, artist and piscator. It was a bright morning; and the end of the pier was occupied by little Patsy Hooligan, and a few friends of his own age, seven to nine, who were fishing from the string-piece. The sun, glancing brightly upon the liquid surface of a passing mud-scow, caused Mickey Gilhooly to turn his face to avoid its glare, and looking up the dock, he exclaimed: "Hi, Patsy wots this a-coming down the dock?" Patsy turned quickly, and dropping the broken barrel-hoop which did duty for a rod, simply exclaimed: "Well, I'll be blowed!" We also turned and saw a tall form enveloped in an ulster which reached to his shoes, a sunflower stuck in his button-hole, hair down to his shoulders, and a general lankiness which, to our trained optics, plainly denoted the esthete, even if he had not been accompanied by "twenty love-sick maidens," each with her waist under her arms, or none at all, and decorated with daisies, lilies, cat-tails and other emblems of the Renaissance.

We lifted our hat as we bade him "good morning," feeling that its nine dollar's worth of Broadway style paled before the artistic seal-skin cap with beaver trimmings, which surmounted the esthete's dome. The maidens exclaimed in chorus: "O, isn't this the uttermost verge of the utter?" Patsy Hooligan picked up a stump of a Third Avenue cigar and chewed the end in meditative silence, as became a disciple of the gentle Izaak. The gulls flitted toward Blackwells Island, and the breeze laden with the spicy odors from Hunter's Point played with the flowing locks of Oscar the Wild.

The poet produced a rod made by Keats & Co and a reel by Walt Whitman, and using a silk fly for a fly proceeded to cast. The maidens folded their hands and sighed. Patsy Hooligan whispered to Mickey Gilhooly. We caught the words: "She's a-lying on top of a spile down under dere; slip down and fix it." "Won't you give me away?" asked Mickey. "Naw, what dye yer take me fur?" scornfully answered his preceptor; and the younger of the two disappeared up the pier, and then down under it.

The gulls screamed and the water lapped merrily against the pier. We were wrapt in admiration of the beauty of the scene when one of the rapturous maidens exclaimed: "A bite!" The poet's eye and his reel, both in fine frenzy rolling betokened resistance on the pliant rod, which bending under the weight of its prey seemed a sentient thing of life enjoying the struggle. The maidens clasped their hands firmer. We held our breath. He landed on the pier at our feet, his feet and the forty feet of the maidens, a drowned kitten, which was not a recent one. The gulls laughed, the maidens blushed twenty blushes, and the odors of Hunter's Point subsided in deference to superior force. We ordered a horse-car, on the "belt line" and gave directions to drive to Fulton Market, pondering in the meantime upon the uses of the cat-tail in decorative art, and sorrowing that on Pier 42, there was only one to divide between those twenty-one persons of refined and elevated tastes.

THE ST. NICHOLAS GUN CLUB has recently been organized. Its membership is limited to the members of the well-known St. Nicholas Club of New York. The new organization starts out with a roll of sixteen names, and includes some experts with the shot-gun. The management is in excellent hands, and the club's future most promising. A novel feature of the published set of rules is the provision of some blank score leaves bound up with the book to serve as a permanent record of the scores made during the year. We welcome the St. Nicholas Gun Club to the long list of similar societies of business and professional gentlemen, who seek relaxation from their work in the manly sports of the field.

A MACHINE FOR TESTING GUNS has been devised by Mr. F. G. Farnham, who publishes a description of it in this paper. We understand that it answers its purpose most admirably. It is a very important addition to this class of machines.

BYE-WAYS OF THE NORTHWEST.

ELEVENTH PAPER.

THE year 1881 will long be memorable in the annals of British Columbia salmon fisheries. As indicated in a previous letter, a good run was looked for in the river this season, but up to the middle of July no fish had been taken. The boats had, however, been drifting for them for a week previous, and the presence at the mouth of the river of great numbers of bonaparte gulls, or, as they are called here, hoolachan gulls, was regarded by the fishermen as a sur sign that the fish were at hand. About the twentieth of July salmon began to be taken, and it was not long before the run had so increased that it became impossible for the canneries to use all the fish caught, and a portion of the boats were taken off. Early in August the catch was from 75,000 to 80,000 fish per diem, with only one-half the boats employed. The canneries were all run at their fullest capacity, and the enormous catch was the talk of the town. At all hours of the day and night some of the steamers employed in collecting the fish from the small boats which do the drifting, were tied up at the wharves, unloading their glittering freight, and great piles of the shapely fish were to be seen at the landing-places all along the river. No matter how fast these piles were removed, they were almost at once renewed. The fish were mainly the sockeye salmon and averaged from eight to ten pounds in weight, but there were not wanting specimens of the quinnat, the so-called spring salmon of the Fraser, which ran from fifty up to seventy, and even eighty and one hundred pounds.

The nets used in the capture of the fish are ordinary drift gill-nets with a 5-7-8 inch mesh, about forty meshes deep and one hundred fathoms in length. They are cast off in the usual manner and drift down stream with the current, meeting the advancing salmon which are swarming up the river. From Ewen's cannery I procured a record of the catch of a few of the boats on one or two average days, which is as follows:

August 9, five boats took 970 fish.

August 9, six boats took 1,607 fish.

August 10, six boats took 1,493 fish.

August 11, six boats took 1,533 fish.

Which gives an average of about 244 fish, or rather more than 2,000 pounds to the boat. All the canneries employ steamers to patrol the fishing-grounds, and as soon as a boat has a load, it proceeds to its steamer and transfers its catch, the fish being counted as they are received. In this way no time is lost by the fishermen, who are enabled to keep their nets in the water almost all the time. When the steamer has a full load, she proceeds to her wharf, where by means of iron forks and pikes, the salmon are tossed on to the platforms. A steamer will land from 8,000 to 20,000 fish each trip. All the canneries are at the water's edge, and the fish are no sooner landed, than the work of preparing them begins. An Indian throws them into a large tub of clear water, from which they are taken one by one, by a woman who places the fish on a table before which she stands, and with a large knife removes the head; she then slides it along to a man who, by a single cut of his knife, removes the entrails, and cuts off the fins and tail. The offal is pushed aside into a gutter which leads into a chute, and that into the river. The fish is now passed on into a tub of clean water, and after being washed is carried to the cutting table. Here there is a man armed with knives about four inches apart, which cuts the fish into lengths, and the pieces are then placed in the cans, which are filled up even with the top. These are then passed to another set of workmen, who put on the covers, and then go to the solderer. Several new inventions have been recently patented for soldering on the covers, so that the rendering of each can perfectly air-tight occupies but a small fraction of a minute. Twelve dozen soldered cans are placed in a shallow tray made of strap iron, and this tray is suspended by a chain in a vat of boiling water. The cooking occupies but a few minutes, and on its removal from the water, the rack is placed on a table, and a Chinaman with a small wooden mallet taps each can on the top. The expansion of the contents has made the cover bulge outward, and by tapping it with the mallet, the operator is at once able to determine whether the soldering is perfect, and the can air-tight, or not. If on being tapped, the cover yields noticeably, it is evident that there is an escape for the air, and the can is rejected. The operator then reveres his mallet, which is armed on the other end with a small tack, and with a light blow punctures each can, allowing the escape of the air and steam confined in it, and often of a portion of the juices of the fish. As soon as this is done, another workman seals up this aperture with fresh solder, and the cans are ready to be labeled, boxed, and shipped to a market. The amount put up at this cannery was about 500 cases each day, each case holding, on an average, ten fish. The run of sockeye salmon lasts usually from four to six weeks, and during this time the factory is run from four o'clock A. M. to seven or eight o'clock P. M., and the work goes on without interruption on Sundays as well as week days.

Notwithstanding the enormous numbers of fish which are caught, it was said by old fishermen that in their opinion not one out of ten thousand of those that enter the river were taken. That the proportion of escaping fish is large,

can be inferred from the great numbers that are secured, and that without any special effort, by the Siwash and others further up the river. Two million fish is a very small estimate for the number taken to supply the New Westminster canneries during the fishing season, yet further up the river the salmon are scooped up in purse nets by the Indians almost as fast as the net can be swept through the water.

An excursion up the Fraser River to the town of Yale, the head of navigation of the lower Fraser, had been planned by Mowitch, and taking one of the comfortable river steamers, one afternoon, we set out with a charming party of friends. The river near its mouth is very muddy, thus resembling the Missouri, but as progress is made up its course, it becomes less and less turbid until when Yale is reached, the water, though not yet limpid, has lost its muddy appearance and is beautifully green like that of Niagara. The current is everywhere very rapid, and at certain points, where the channel is narrow and the banks steep, its violence is so great that it seems as if it would be impossible for the vessel to overcome its force. The valley of the river for some distance above New Westminster is rather broad and the bottom extensive and covered with a superb growth of large cottonwoods. The mountains are not very high, seldom exceeding 4,000 feet, and only occasional patches of snow are to be seen on them. Their sides are for the most part very steep, and we saw frequent evidences of extensive landslips, which had laid bare great areas of dark-red rock, which served as beautiful contrasts to the prevailing dark-green of the foliage. Sal's Peak is a noteworthy mountain of great beauty, and Silver Peak, another fine mountain, takes its name from a silver mine which has been opened near its summit. In many places along the river are to be seen the evidences of the mining operations which began here twenty years ago. The gravel and sand bars, and often long stretches of the bottom land, were in many places mere piles of cobblestones, which had accumulated after the finer sand and the soil had been washed for the precious metal which it contained. Many of the bars had been worked over a number of times; all of them twice. Here, as in most other sections of the country where placer mining has been extensively carried on, the white man had gone over the ground at least once, and had been followed by the more patient and persevering Chinaman, who found in the abandoned claim enough to reward his industry.

On the way up the river I talked with a Mr. Hunter, a civil engineer of great experience, who had secured a grant from the Dominion Government for a mining enterprise of great interest to me. From Quesnelle Lake a river of the same name runs to join the Fraser, and its bed is supposed to be very rich in gold—so rich that it is said that the Chinamen, anchoring their boats in the river, and dredging up the dirt from the bottom, make good wages from washing it. Mr. Hunter has obtained the right to mine this river, or so much of it as he can make accessible by turning the water from the bed, so that it can be reached and worked in the usual way. His plan is ingenious, but very simple. He purposes building a dam across the river near Quesnelle Lake, by which, during three or six months of the year, the water can be held back in the lake, so that the volume flowing through the river channel shall be greatly diminished. Of course, the practical success of the scheme depends on a good many contingencies, but if the dirt is as rich as is supposed, it seems likely to be very profitable.

During our passage up the river we passed at frequent intervals the fishing camps of the Siwash, and could see that they were taking great quantities of fish. Their drying stages—thickly hung with the bright-red flesh of the salmon—stood out in bold relief against the green of the deciduous trees or the cold gray of the rocks. Only a small portion of each fish is saved by the Indians, the greater part being thrown back into the river. By a single slash of his knife the Siwash cuts away the whole belly from the throat back to a point behind the anal fin and extending up on the sides as far as to where the solid flesh begins, and this portion he retains, throwing the whole shoulders, back and tail into the river again. The Indians of the coast, however, save the whole fish.

The method employed in taking the salmon is sufficiently simple, and yet owing to their abundance very effective. A purse net is arranged to run by means of wooden rings on a wooden oval, about four feet long by three in breadth, to which a long handle is attached, the frame resembling that of a gigantic landing net with an oval ring. When the implement is to be used a string is pulled, which spreads the net, and it is swept through the water with a slow motion, against the current. The string which holds it open is passed by a loop over the little finger of the left hand, and, as soon as the fisherman feels anything strike the net, is loose, the rings run together, and the object is held securely in the bag. The fish, in their efforts to stem the current, pass close to the steep banks, where the force of the water is least and the eddies help them along. The fishing is for the most part done from stages, which are built of poles and extend a few feet beyond the rocky points which here and there project out into the stream. The right to occupy these points descends from the father to the oldest son of the family.

A short distance below Yale is the town of Hope, a small settlement beautifully located in the wide bottom. It is from this point on the river that the trail for Kootenay, distant about 500 miles, starts, and all the mail and express

matter goes by this route to this inland settlement. Hope was founded during the early days of the mining excitement, and when it was thought that the diggings of the Fraser were inexhaustible. Great expectations were entertained of the future importance of the place, and an active speculation was carried on in building lots. But the tide of emigration passed on as the washings on the lower river ceased to pay; Hope was left behind, and the owners of town lots will be obliged to wait long for the return of the money invested in them.

We found Yale an orderly and respectable town. It was on a Sunday that we reached there, and that the Sunday after pay day, and yet we saw no fighting on the streets, and but few drunken men, probably not more than one in twenty. It is from this point that the Canadian Pacific R. R. is being built eastward, and this is thus the supply point, and the locality where all the laborers employed on the road congregate during holidays. Liquor saloons, of course, abound, and at frequent intervals one stumbles over a drunken man who is sleeping off the effects of his potations heedful of the clamor that is going on about him. Yale is cosmopolitan. You may see here men of all races, but English, Scotch and French predominate. There are a few Germans and Scandinavians and some Americans. Of course Indians are numerous, as are also Chinamen. Negro cooks and washerwomen jostle Mexican packers and muleteers, while mixed bloods, whose parentage can scarcely be conjectured from their countenances, abound. From this point stages run to Lytton, where the river is again practicable for steamers, and this is the route taken by those who go to the mines at Caribou.

I had learned that there was at Yale a taxidermist, who had quite a collection of bird skins, and as soon as the town was reached I set out to find him. In this I was unsuccessful, but I managed to obtain access to his collection, which was in some respects interesting. Among the species noted were the cat bird (*Galusopus carolinensis*), Maryland yellow throat (*Geothlypis trichas*), evening grosbeak (*Hesperiphona vespertina*), pine grosbeak (*Pinicola enucleator*), a species of *Leucosticte*, snow bunting (*Plectrophenax nivalis*), black-headed grosbeak (*Zamelodia melanocephala*), lazuli finch (*Passerina amena*), white-tailed ptarmigan (*Lagopus leucurus*), in winter plumage, gray snipe or dwitich (*Macrorhamphus griseus*) in summer dress, and many others. After looking over the birds, which, however, had to be inspected through glass, owing to the absence of the owner, I walked along the railroad track two or three miles up the river and into the canon. The scenery here is very beautiful, the stream rushing along between high mountains, which rise steeply from its very banks.

Just above Yale, at the entrance of the canon, is a large rock, or, perhaps, more properly, a small island, which divides the current into two streams of nearly equal size. About this rock there is told an Indian legend of some interest. The salmon fishing has always been the most important event of the year to the Fraser River Indians, as it provides them with their winter food, and, indeed, with provisions for almost the entire year. The advent and capture of the first salmon of the season was, therefore, eagerly looked for, and in old times was celebrated with solemn religious rites. This first fish was regarded, not as the property of its captor, but as belonging to the Good Spirit. It was, therefore, as soon as caught, taken to the Chief of the tribe, and delivered into his keeping. A young girl was then chosen, and, after being stripped naked and washed, crosslines in red paint, representing the meshes of a net, were drawn upon her body, and she was then taken down to the water's edge, and, with solemn ceremonies, the net was washed off. This was supposed to make their nets fortunate. Prayers were then made to the Deity, the salmon was cut up, a small portion sacrificed to him and the remainder divided into small pieces, one of which was given to each individual of those present. The story of the rock runs somewhat in this way. One season the first salmon caught was taken by a woman, and she, being very hungry, said nothing about its capture, but devoured it at once. This was neither more nor less than sacrilege, and for the crime she was changed by the Great Spirit into this rock, which was placed where we now see it, to remain for ever as a warning to wrongdoers. Some believe that, although changed to stone, she still retains her power of thought and feeling, and that each year she is obliged to endure the misery of seeing, re-enacted about her, the scenes in which, as a child, a young girl, and, at last, a mother, she had taken part. Each year, too, she must see her people change, little by little, their habits; each year perceive their numbers lessening, and the land that once was all theirs passing into the hands of strangers to her race and to the soil. Already the thunder of the blasting has shaken her, although so steadfast, already the scream of the locomotive and the rattle of the paddle wheel have sounded in her ears. Some day an enterprising engineer, who wishes to improve the navigation of the Fraser, will introduce a charge of dynamite into some crevice of the rock, and the poor sinner, whose punishment has surely by this time expiated her crime, will pass from our sight and at last find rest.

At a point above the first tunnel, an old Siwash was fishing with a purse net, catching a salmon at every sweep that he made. I clambered down the rocks to his stage, and, after watching him for a while, borrowed his net and fished while he dressed those already caught. In about five

minutes I caught as many salmon, each of which would weigh about ten pounds.

The next morning at three o'clock the steamer started down the river and by ten we were at New Westminster. Here we had to part with our friends Mr. and Mrs. H., whose kindness to us, strangers, I can never sufficiently acknowledge. Then we passed on down the river and across the island dotted waters of the gulf; through the narrow passages, where the Indians were still catching their herrings; out again into the straits, whence were to be seen white, majestic Rainier, and the snow-capped peaks of the Olympian Range, and then around Clover Point and into the snug little harbor and Victoria was reached.

A day of hard work enabled us to pack up our traps and take the steamer next morning for Tacoma. All our friends in Victoria had been so kind to us that it was a real pain to me to leave the town. Never have I met more charming or more cultivated people than in this far-away place, and certainly never were strangers more hospitably and genially received than the three whose wanderings I am detailing. But good-byes have to be said, although I think that they are repaid more regretfully each time that the word has to be used, and the traveler who feels a lively sense of gratitude for kindnesses conferred upon him, by those on whom he has no possible claim, uses the word with a deep appreciation of its meaning which most people would never understand. He has perhaps been received into the home and, although never seen before, been treated as an old acquaintance or as a family friend, and he must, if his spirit be at all sensitive, be deeply touched by treatment such as this. Money can procure ease and comforts wherever he goes, but it can never furnish that friendly solicitude for comfort and well-being which is so grateful to the heart of the stranger in a strange land.

The sail over the blue waters of Puget Sound is delightful, but too short, and the evening finds us at Tacoma. A day was spent here, part of which we devoted to an excursion to a rich coal mine at Carbonado, thirty miles distant, since purchased by Colonel Crocker for the Central Pacific Railroad. The branch of the Northern Pacific R.R. which we took passes through a country of great beauty and fertility. Near Puyallup the principal agricultural industry is hop growing, and it is said that 2,000 Siwashes come in every year to help harvest the crop. In 1879 the growers received, we were told, 40 cents per pound for their crop; in 1880 the price had fallen to 19 cents, and in 1881 it was estimated that they would get 16 cents, but even at this price there is a fair margin of profit. The houses for drying the hops are a feature of the land-cape. There is a large stove factory at Puyallup. Much of the land along the track is cultivated, but as the mountains are approached we pass through valuable tracts of timber land. At Carbonado is a sawmill where splendid timber is put out. On our return to New Tacoma we met a number of gentlemen, enthusiastic fishermen and hunters, who gave us valuable hints in regard to our proposed trip over the lines of the N. P. R. R., hints which when adopted, as they afterward were, added greatly to the interest of our journey eastward.

From here we proceeded by rail to Kalama and thence by steamer to Portland, the sail between these two points being marvellously lovely. At one time we could see from the steamer's deck no less than six enormous snow-clad peaks from nine to over fourteen thousand feet in height. These were Mts. Rainier, St. Helens, Adams, Hood, Jefferson and the Three Sisters.

Portland we left early next morning, and proceeded, on a very comfortable steamer, up the Columbia. The river is magnificent, and the lava country, through which it has cut its way, is very beautiful. For the first few miles the bottom is wide and the hills are distant, but after a while we enter a stretch where there is no bottom land, and the river flows between walls of rock. We lounge on the steamer's deck and lazily watch the changing features of the scene. The long grass, over which the maturing touch of summer has passed, shines yellow on the gently undulating curves of the hills which sweep upward from the river banks, but in the shadow of the numberless walls and piles of lava it is brown and dull, without the glimmer and sheen which it takes in the sunlight. The country is open and park-like, the slopes, dotted with dark spruces and pines, which grow most thickly in the ravines and on the steeper hillsides. Their dark foliage and the paler greens of the deciduous trees and shrubs at the water's edge are the only pronounced colors of the landscape. Except these, there is only the dark gray of the rock piles and the yellow of the ripened grass. Over all a dome bluer than the serene of Italian skies, a hot August sun and a purple haze that veils the more distant hills and, while not hiding them, softens their sharper outlines and gives to them a vagueness and a dreamy indistinctness which add to their loveliness by calling in the imagination to aid the eye. The beds of lava between which the river hurries are the most striking characteristics of the landscape and are, indeed, the real reason of its beauty. Without them it would be almost commonplace. A sheet of lava of great thickness covers the whole face of the country and appears everywhere, taking the peculiar forms which characterize eroded volcanic rocks. The vertical bluffs which rise from the water's edge are composed sometimes of a breccia which, weathering easily under the influence of wind and water, has assumed a thousand fantastic shapes, seeming sometimes like columns, or like statues, or obelisks, or great ovals set on end. Or we see

a precipice composed of small, basaltic columns, which easily break up, and, falling out in small cubical fragments, form a high talus at the base of the cliff. Sometimes the columns are of large size, and these offer a greater resistance to atmospheric influences, so that there may be no visible wearing away, and the bluff rises bold and bare from the water that dashes against its base. Often bold headlands extend out into the very river, crowned with a fringe of graceful evergreens, and from these rise rounded, smoothly-sloping hills covered with the yellow grass, and above these are lofty, frowning bluffs. Along the bank of the river the O. R. & N. Co. are building a railroad, and thousands of blue-bloused and broad-hatted Chinamen are busily at work on it. At the Cascades we took the train which carries us seven miles around the rapids, and then, boarding another steamer, proceed until, just at dusk, we reach the Dalles. Here again we change from steamer to rail, reaching Walla Walla early next morning. This is a charming town of 6,000 inhabitants, with a delightful climate and a fertile soil—a veritable garden spot.

ALL HANDS ASLEEP.

LEAVES FROM A LOG-BOOK—VII.

SHE was built—no matter where—by an old oysterman; and, as to her age, it isn't quite the polite thing to inquire a female's time of life, so the Captain forbore asking this question. She was hearty and strong, however, was Peggy, and cheap as dirt; and if bulk gives speed, as our friend of the yachting page declares it does, she should have been a clipper. But whether it was the model, or the barmies on her bottom, or the undersize of her sails, or the faulty handling of her skipper, certain it is that the Peggy's pace was a very moderate one, and she was more famous for a steady, sober plodding along in all weathers, than for any

spasmodic bursts of speed in certain winds. After the old oysterman had made such alterations in rig, cabin, etc., as the Captain demanded, and cleaned, to the best of his ability, the interior, which was replete with the odor from many years' hauls of fish and oysters, the Peggy was, withal, quite a trim little ship, and, before completing his first cruise in her, the Captain conceived a lasting affection for the easy-steering, comfortable-handling, and safety-assuring old smack.

The tide was ebb in Coh Creek as the Peggy dropped down toward the sea, floating slowly, while the Captain cooked his dinner on the spirit-stove near the cabin door, occasionally peering over the house to see that her nose was right. The sails were loose, ready to hoist, ropes and rigging coiled or belayed in place, and everything prepared as carefully as if the Peggy were a man-of-war, or fitted out to find the Northwest Passage. And with good reason. The Captain, crew, supercargo and all were one man—a so-called consumptive at that—and where the sailing, cooking,—ay, and the scrubbing, of a twenty-two foot two-master depends on so small a crew, there are many things to be carefully pondered that would receive but slight attention were there a man or so "before the mast."

As we—the Peggy and Captain—drop down through the mouth of the creek and into the bay, a slight whiff of air is felt as we clear the range of the forest of hackmatacks, and preparations are made for action. The little mizzen is first hoisted and the halliards made fast. Then the jibs run up, the Captain not leaving the cockpit to hoist it. Now the Peggy begins to feel the breath of the light land breeze and, as the mizzen is hoisted, slopes the water from her bow with a musical gurgle. With such a light zephyr we can use all sail, and, as we are anxious to see how our hitherto untried topsail will work, that, too, is sent aloft, and the Peggy has donned her "racing rig" complete.

The voyage is to be made through waters entirely unknown to the Captain, but the chart shows a plenty of harbors along the coast, and the sea-going qualities of the little smack are so well-known that but little anxiety is felt for the possible dangers to be encountered. "She'll find her way all by herself," said the old oysterman, when the Captain bade him

good-bye at the dock, and, verily, his words were not without reason. As the hooked end of Crab Point was passed and the open ocean lay before us, the breeze freshened considerably and the topsail was lowered. The little eight-foot life-boat that served as a dingy, which hitherto had lain to the windward of the house, was shoved into the water, and its painter made fast to the Peggy's stern. Then the Captain leaned back against the dandy mast on the first long leg out to sea and smoked his pipe, while he watched the porpoises playing and the distant sails of a fleet of fishing vessels on their voyage home. There is something soporific in thus sitting silently steering under the rays of the summer sun, with the light waves plashing around, and only enough wind to rock one gently up and down as in a cradle, and soon the Captain began to feel a drowsy sensation stealing over him. An innate facility of sleeping anywhere and under any circumstances, which was a very happy possession in most cases, was here very unwelcome. For a while the somnolent sensation was pleasant, and the Captain abandoned himself to a dreamy reverie, but as his head nodded forward there came a sudden "rat-tat" from the loosed jib-sheets, and, awaking with a start, he found the Peggy rounding to; so, bringing her to her course again, he sat up straight, and began to puff vigorously on the briar-root to keep awake. It was no use, however, and again the head dropped forward on the breast, the pipe fell from the lips, and the lone sailor was in another doze. This time the Peggy kept her course, and worked her way gradually further and further out into the open ocean. A party of young people, passing in an open yacht, saw the sleeping steersman sitting at his post, but took no more notice of the passing craft than to remark the peculiar rig, so seldom seen in those waters. A lumber schooner passed so near as to endanger the safety of the little smack, and the angry skipper bailed with a gruff, "You blasted lubber, haul off! I'd ort to run you down!" But the Captain of the Peggy made no heed of the lumber vessel sailed away, still hurling maledictions back at the solitary voyager. And on and on went the Peggy, and further and further out to sea, and still the Captain slept. At length he dreamed. He seemed to bencar a rocky island, searching for a harbor for his little smack. None appeared, and every moment the waves were growing fiercer. He would certainly be lost. A huge, jagged rock was dead ahead. He seized the helm to chance his course. The tiller would not stir. He gave it a sudden wrench. It broke in two, and he fell over with the force of the shock. The hissing waves engulfed him, and as he struggled vainly to combat them he awoke. The tide had turned, the Peggy had rounded to, and a wave had come "splash" against the Captain's face. Rubbing his eyes and looking around with amazement, he saw the faint dark line of the shore far away. He looked at his watch. He had been aloft four hours, and during the greater part he had slept.

But now work must be quick, for the hours of daylight are passing quickly, and there are low growlings of thunder away off in the West. The Peggy is put about, and away we speed for shore. If we can make Cornerstown Harbor before dark we are all right. If not, we may be lost. Let us examine the chart. Cornerstown lies in a bay midway between two points, Rodney's and Henderson's. These are nine or ten miles apart. The Peggy's nose is headed for one of these, but the question is, which one? If Rodney's, we must bear off to the southward to find the harbor. If Henderson's, we must change our course northward. The distance already sailed cannot be accurately calculated, because the wind has doubled its force since the start, and it is impossible to tell how long its present strength has been kept up. From the distance out at sea the captain is led to believe that Rodney's Point has been passed and that Henderson's is the one in view. There is no craft of any kind in sight, so information from that quarter cannot be expected. A nearer peal of thunder warns that hesitation is dangerous, and the prow of the smack is turned immediately northward, though not without many misgivings. Now, every effort is made to discern the expected harbor as the Peggy bows along. The wind has increased to half a gale, and with reefs turned in in every sail the smack still heels fearfully. A sudden wave dashing into the cockpit wets the chart, and its lines are rendered almost illegible. The Point is still a mile behind, and still no signs of the harbor. The Captain begins to feel that he has mistaken his bearings, but it is too late to turn back now, and hoping that by some chance he may sail into a harbor, he keeps his eyes fixed on the black cloud is chasing rapidly across the sky, and as its heavy folds obscure the light the darkness seems almost like that of night. It is now a certainty that the Captain has taken the wrong course, so, determining to prepare for the worst, the Peggy is laid to, ship's lamps lighted, hatches all tightly closed, heavy coat donned and some of the water in the cockpit pumped out. By the time all this is done the gloom of night has fallen on the water, and, avoiding the perils of an unknown shore, the Captain steers boldly for the open sea.

One of the dangers of a summer thunder shower is the perplexing way the wind has of blowing now this way and now that, and then seemingly from every point of the compass at once. It was this waywardness that troubled the Captain, the sails being at one moment distended to their utmost, and in another moment flapping wildly as he tried to "catch" the new direction of the wind. The whaleboat's compass used on the Peggy had to be scanned by a lantern held between the Captain's knees, and as he gazed for a moment at this bright light it was impossible to see a boat's length ahead in the darkness, and the rain, which beat down into the face at an angle, made looking out ahead an

utter failure. Occasionally a bright arch would shoot across the heavens for a moment, then all would be pitch dark, the air and water bleached in one color, inkly black. The red light of a passing vessel suddenly visible within half a mile, and the Captain cried out, "Hello! Where's Connerstown?" "God knows," I came back over the water, and the red light passed away in the darkness. The little dingy behind began beating like a battering ram on the stern of the Peggy, and the Captain crept back to secure it in a different way, steering the while with his ankle pressed against the tiller. Finally the wind settled in a southwest direction, and although it blew a hurricane the little fishing smack stood up to it bravely; and the crew, gradually becoming accustomed to the state of affairs, began to feel a sort of pleasure in thus flying along at full speed over an unknown course, and even began to light his pipe in the momentary lull of the storm. But the gusts were all damp, and only spluttered without lighting, so he had to content himself with shouting a gay song to the accompaniment of the roaring elements. The storm had lasted over an hour, when straight ahead there appeared a line of light on the water. "Breakers!" shouted the Captain, instantly putting the helm to starboard. But they were not breakers, being instead the reflection on the water of the summer full moon, which had just shown its face at the ragged edge of the black thunder cloud. Now the force of the storm was nearly spent, and the clouds were fast passing away; and the wind asserted its right to stay awhile longer, and the waves still rolled angrily. As the moon shone out with all its brilliancy the Captain saw, to his astonishment, that the smack was only a short distance from the shore, when he had thought her to be far out to sea. And did not that looked point of land and that forest of hackmatacks have a sort of familiar look? It was, it surely was, the bay at the mouth of Cob Creek, the same place from which he had started the afternoon before. As he became aware of this the Captain gave a shout of joy, and raising the Peggy into the well-known channel he soon had a safe anchorage, and with everything made snug, was soon lying comfortably in the little cabin, sipping a hot glass of grog to take the chill off. "I told ye," said the old oysterman, when the Captain afterwards related to him the adventure. "I told ye 'ye' 'smack could find her way all alone by herself; an' 'ye' needn't tell me she didn't know what she was doin' when she brought ye straight home out of 'that gale.'" SENECA.

MEMORY IN LIONS.

DURING the month of September, 1890, whilst residing in Natal, South Africa, I came into possession of a fine pair of lions, about one year old, and as they were exceedingly tame and good, I had a large cage especially constructed, and was constantly in the habit of going in and romping with them. It was always my custom to go inside the cage and feed them from hand, and January, the Kaffir brought me meat, never failed to take a stand in front of the den, in order to see the last of "N'kos," whenever the lions should see it to add him, by way of dessert, to their regular diet of fresh beef. He always met me, on my exit from the rear of the cage, with the astonished ejaculation of "Wau!" and I never could succeed in convincing him that that some sort of ceremony had been observed.

In the year 1870 I was smitten with the "diamond fever," which was raging throughout South Africa, and leaving my lions with a friend, with directions to sell them, I started with January and a Buxton pony, used as a pack animal, on a weary tramp of 550 miles to the "Fields." Having repeatedly traveled with wagons over the road before, the whole country was well known to me; consequently, I was frequently able to take the main road and make short cuts across the country at will. In doing so we would often pass in the neighborhood of Kaffir kraals. So sure as one happened to be seen some little distance off our path, January would suddenly remember that it was the residence of a brother, or some other relative, and would ask leave to pay a passing call. Generally I would stop, light my pipe, enjoy a whiff and allow the pony to graze while the ceremonious visit was being made. Immediately after the arrival of my henchman at the kraal I would notice that there would be a sudden emptying of all the huts, where inmates would assemble in clusters and view me, for a moment, as I passed by. In the mean while January would harangue the crowd for a short time and then return, reporting how much pleased his relative had been to find him traveling in such good company. These visits finally became so frequent that I began to suspect January either of claiming consanguinity back to Ham, or of using me, for some purpose best known to himself, to advance his own interests. A few nights after my suspicions were aroused, and January had during the day had several ceremonious visits, I was lying rolled up in my blankets when I was suddenly attracted by his suspicious movements about the expiring fire. Feigning sleep to throw him off his guard, I saw him cautiously produce from underneath his blanket an extremely dilapidated and abbreviated workman shirt—several pieces of shriveled meat, which he proceeded to grill over the coals. Knowing the perfect craze which all Kaffirs have for meat, even in a hard condition, there was but little difficulty in arriving at a solution of the visiting mystery. Springing to my feet I rebuked the trickster and made him acknowledge that he had been eating my meat for a longer time than he had been relating the wonderful things he had seen me do with the lions, and threatening his end with dire evil if he did not instantly seek my pardon by sending as a present a bit of meat. From that time forward there were no more relations on our road; and whenever I thought January needed meat, a bit of biltong (dried antelope meat) was handed him from the small store carried in the pony's pack.

A few months after my arrival on the Fields, my friend, in whose care I had left the lions, came up also, and informed me that they had been sold to some party, who wished to take them to England. After some two years' diamond digging, I started overland to Cape Town en route to Australia, whilst January turned his face homewards, in company with some returning ox teams, instead of N'kos.

In October, 1873, I reached Melbourne, and the day after my arrival very naturally found my way to the Zoological Garden. It was a fine Sunday afternoon, and after wandering around the grounds for some time, my attention was attracted by a crowd of people in front of a large den standing alone under a huge eucalyptus tree. On approaching and looking into it, I saw that it contained a pair of sleeping lions, which, on a closer inspection I was sure were my old South African pets. In order to test the matter, I drew back until I reached the outer edge of the group, and concealing myself behind a slanting umbrella, held by one of the visitors, I

called out to my old friends, as I had been accustomed to do before leaving Natal. Both animals instantly sprang up and began rapidly pacing to and fro, anxiously looking out between the bars, as if they were endeavoring to ascertain from whence came the sound. Finally the female reared up and looked for some time over the heads of the visitors, but the umbrella screened me, and I gradually worked away unseen for some distance, when I met a keeper, whom I accosted, remarking that the Society were in possession of a pair of fine lions.

"You may well say that, sir,"
"How did you get them?"
"I brought them from South Africa."
"But how did you get them from South Africa?"
"I went up in the interior and got the natives to catch them in pitfalls for me."

"My friend, the natives of South Africa are not in the habit of catching lions in pitfalls. Moreover, I am positively certain that those lions were not my property."

"Beg pardon! but you must be mistaken."
"Do you really think so? Let's go back to the den and I will convince you that I am right."

I instantly began to retrace my steps with the keeper following, and looking very much as if he had "caught a Tartar." On getting up to the rail in front of the cage, I found that both lions had lain down and were dozing. On calling their names, they again bounded up, and I, in spite of the frantic efforts of the keeper to prevent me, and the terrified exclamations of the visitors, scrambled over the rail, ran up to the bars, and, no doubt in the eyes of many of the spectators, made a great fool of myself in fondling and caressing my old pets. At length the keeper ventured to approach and say:

"Be kind enough not to blow on me, sir?"
"I will keep quiet under one condition."
"What's that, sir?"
"That you never attempt to tell that pitfall story again."

"I'm bluffed if I do, as I've managed to tumble into the blasted thing myself."
By this time it had been noised around the garden that something unusual was going on at the lion's den, and in a few moments the space in front of it was filled with people, all anxious to see the Yankee play with the lions. After satisfying their curiosity I got the versatile keeper to pilot me to the office of Mr. de Sout, Secretary of the Society, who kindly informed me that the animals had come direct from Natal, in a vessel laden with sugar, the Captain having purchased them from the party who originally intended to take them to England. FRANK J. THOMPSON.

Zoological Gardens, Cincinnati.

MINNESOTA GAME RESORTS.

THE first point is Sauk Centre, a quiet little town of from St. Paul, on the line of the St. Paul, Minn. and Manitoba Railroad. This town lies at the foot of Sauk Lake, from which it derives its name, and is in the very heart of a splendid prairie-chicken country. Sauk Lake abounds in game fish of a superior quality, is nine miles long, and its sandy banks afford fine shelter for the angler. There are some five sail boats on the lake, notably one owned by E. J. Harrison, who is a true lover of the rod and gun. One can find plenty of sport in this nice little sheet of water—fishing, ducking (in the fall large numbers of ducks congregate here), yachting, bathing and picnicking.

Westport is ten miles due west of Sauk Centre, and here is where one will find the ducks and geese in quantities to suit. Between this point and Sauk Centre is a broad prairie country, partly settled, and with plenty of grain fields wherein *Tetrao capidus* browses in quiet undisturbed by the sportsman's gun. You can enter any of these fields and rest assured no one will disturb your "piece of comfort" while you make the prize ring with the brook-head's brazen voice. A farm can be had at Sauk Centre for \$3.50 to take you out to this place, where you can then find board with some farmer, who will show you every attention. Board, \$3.50 to \$5 per week.

Birch Bark Lake lies twelve miles east and north of Sauk Centre, and is one of the most attractive resorts, especially for "variety hunters," or those who desire to fish a little, hunt a little, sail a good deal, and have a general good time, driving all day and night.

The lake is surrounded on all sides by a real wilderness, where the red cedars bounds lightly in his wildwood domain where the grave yet fierce-looking "bruin" meanders leisurely over hill and dale; where the partridge rises on whirling wings, and flits like a shadow away from his strange intruder; where the plunge of the pickerel, as he makes a grab at some lesser than he, is heard, coupled with a nice little waterfall which sings a wild, soothing lullaby, and where I nearly baptized myself and companion in "running" the rapids.

Swan Lake, proper, is situated twenty miles northeast of Sauk Centre and four miles southwest of Pillsbury, Todd county. It is a broad expanse of bright, blue water, about four and a half miles long and from one-half to three-quarters of a mile wide. Immense beds of wild rice form a very attractive lure for the wary old mallard, blue-wing teal, canvas-back and "whistler." The bank on the east side is heavily timbered. In this forest are found plenty of deer, bears, partridges, squirrels, etc. At this lake my old friend, J. Frank Locke, who is a true lover of all the beauties of nature and a genuine sportsman, and myself have had some capital sport with rod and gun. On one trip we killed sixty-seven ducks, and we did not count those that went away, either; only the dead ones which were brought to bat. Mr. Locke still resides there and could, no doubt, entertain a party of four.

Bass Lake derives its name from the endless quantities of black and striped, or calico, bass, with which it abounds. In company with a gentleman I took forty-five bass as ever one saw, in about seven hours' time. Some of these beauties weighed as high as 8 lbs. They are "clean grit" and will make a reel sing the time merrily. This lake lies one mile east of the one above-mentioned, and is about a mile long by one-half mile wide. It is very deep, and on the east bank may be found a limpid stream of ice-cool water away up on the bluff above and overlooking the lake. There I have lain and enjoyed the view of the surrounding scenery; or have fished, and drank the cooling spring water and listened to its murmur, as it dashed over moss-covered stones and finally to mingle with the waters of the lake. This would be a grand place for some wearied business or professional man. Here he might refresh and lighten life's heavy burden. It would be necessary to take a boat at this point, for there

were none on the lake but an old Indian's dug-out when we were there. The proper way for a party to get to this point is to come direct to Sauk Centre, and then hire a team and go out by the way of Round Prairie.

Rice Lake is about ten miles northeast of Long Prairie, and twenty-eight miles north from Sauk Centre. It is a large sheet of water, well supplied with wild rice, whence its name. Messrs. A. W. Shells, editor Todd County Argus, and W. C. Brower, editor Sauk Centre Tribune, in company with several other gentlemen, spent a most enjoyable time here among the ducks last fall. All would have passed pleasantly enough had it not been for W. C. B.'s unlucky plunge into the lake, with the mercury a "little low." But more than one hundred ducks were brought to bag by the party in a very short time. We think that any one desiring to visit Rice Lake would find capital sport, and if they wanted a jolly good boy along, let them take Arth.

Goose Lake is situated in one of the best sections of country I know of for the pursuit of this magnificent game bird. It is 9 miles northeast of Sauk Centre, and is 123 miles from St. Paul, on the M. St. P. & M. R. R. The sportsman should leave the train at Sauk Centre and hire a team. He could go nearer by rail, but would not be likely to get so good an overland rig at West Union, the nearest place by rail. A camping party could have a grand time by hiring a team and go for a two weeks' sojourn to this splendid resort. I have killed many a very old "honker" here, and sent many a "whistler" on his long, long home. Around this lake is a good settlement, and plenty of stubble fields, fairly alive with prairie chickens and mallard ducks. There are other smaller lakes in this vicinity which abound in ducks of all kinds. No fish worthy of note are found here.

The Ashley River heads in West Port Lake, and winds around among hills, through valleys and level prairies, for a distance of about fifteen miles, the bend taken into measurement, and finally empties into Sauk Lake at a point about one mile above the town site of Sauk Centre. If you do this river after ducks is to take a good ducking shell with a team up to West Port; there launch the boat, and with a good pilot, or in fact any one who can keep a boat in the centre of the stream, paddle and float down, keeping a sharp lookout for ducks in the bend and bays. In some places the boats will require a little "working" in order to progress properly. In this way one may go for a distance of fifteen miles or more and find most excellent shooting all the way, and without getting fatigued, meeting your team at Sauk Centre in the evening, or next day if you choose to linger by the way. First class shooting is the reward. Your boat is back where you started from with little or no trouble.

Some of my best ducking I have had in this very river, where, at times, they flew so fast I hardly had time to throw out the empty shells; and I did most of my shooting on the wing.

I have given a brief sketch regarding several important points, and by the great variety every reader will see I have written in the sportsman's interest only, as I have no "axe to grind." Any one desiring to visit these places can do so and will find my figures facts, not fiction. I have been as explicit as possible. DELL.

Natural History

DO CROWS HOLD COURTS?

NAGARA FALLS, N. Y., Jan. 1891.

GOAT ISLAND, as all the world both know, is the island which divides the falls of Niagara. It is now, and has been time out of mind, a great roosting place for crows. Thousands of these dusky scavengers roost there every night, scurrying off in all directions with their discordant crowing at the first streak of daylight, but always returning at dusk every evening no matter how stormy the weather or how far they have strayed during the day in search of food. It is curious to notice how cunningly they keep out of the way of the hunters until they get over the island, "where of course they are protected, to one being allowed to shoot there." There, feeling themselves perfectly safe, they seem to call a meeting, appoint officers and call the roll, each member answering to his name separately, after which they all join in a chorus flitting from limb to limb, and gradually quieting down for the night. I have never seen them start in the morning, but have no doubt they go through some such regular routine.

One evening last fall, while on the island, I noticed three crows in a row on a limb of a tree, two of them being very noisy, the other quite quiet, but looking sick; his feathers seemed all to grow the wrong way and a more miserable looking crow it would be impossible to imagine. I came to the conclusion that the middle crow had been shot at and wounded, or was sick, and the other two were looking after him. After a while I noticed the two outsiders make a start to fly, like starting for a race, but as the sick one, which was in the middle, did not start, they immediately came back to roost. This they repeated several times, the centre crow not appearing to pay any attention to them. Suddenly the two crows commenced to behave the sick one with beak and wings, until he screamed most piteously, and on the next trial there was a good start, and the three crows flew away together in a line as they had sat on the tree. I have thought much about this incident since, but could never satisfactorily explain it to myself until I noticed the following clip from an English paper, which has convinced me that these were two courtiers of the law and the third a culprit.

The extract says: "I have just now an authentic case of curious intelligence or instinct in birds, which I have verified for the benefit of my readers. A clergyman living in Yorkshire tells me that in the spring of a few years ago he and his daughter were walking in some fields, where the crows were busy in the trees building their nests. Always noisy at this time, they were more than usually so on the occasion, and a number of crows were coming to dinner stopped to see what was the matter. Close by the gate where my friend stood he saw about a dozen crows engaged in the most noisy and violent gesticulations, and on the branch of a tree at hand sat two crows, with a third dejected and miserable-looking crow between them. When the clamor had in some degree subsided, a crow stepped forward from the crowd and seemed to address those seated on the trees—when, quick as thought—the two side crows flew upon the unfortunate wretch between them, and with their beaks began to deliver a blow on the head that he did not wait for a single flutter. After this act of justice, as it undoubtedly was, the birds ceased to make any sound and then flew off as if satisfied.

"This tale is corroborated and supplemented by an incident

of a similar kind, seen by a lady whom I knew, who was present at a court-martial in a field of crows, formed in the same way; and the execution of the criminal took place in a precisely similar manner. Who shall say that gregarious birds have not their judges and juries, and code of laws by which their colonies are regulated, as well as condigna punishment for transgressors?" P.

THE MISTLETOE.

THE mistletoe of England (*Viscum flavescent*), of which mention is made so frequently in ancient superstitions and legends, is a true parasitic plant, that is, it not only grows on trees, but penetrates their bark and draws its support from the sap of the tree. In this respect it differs from the parasitic mosses, ferns, fungi, lichens and orchids, that are to be found growing on trees, but which obtain their support from the atmosphere; these are simply lodgers, while the mistletoe demands both board and lodging.

The word mistletoe is of Anglo-saxon origin, and is derived from the word mistle-tan—mistle, different, and tan a twig, a prong, a shoot of a tree. The mistletoe belongs to the natural order of Lamiaceae, which contains more than 400 known species, mostly tropical evergreen shrubs that are parasitic in their habit, some having showy and odorous flowers.

The mistletoe, when very young is succulent, but as it attains age becomes woody. Its repeatedly forked branches form a pendant bush of from one to five feet in diameter. The mistletoe is very brittle and breaks readily at its joints, particularly so after it has been separated from the tree on which it grew. At each of the joints on the terminal branches grow a pair of opposite sessile, thickish, nearly nerveless leaves, which vary from narrowly oblong to obovate, but are always entire and obtuse. The flowers are deciduous, inconspicuous, of a light green color, and are situated at the ends of the terminal branches (see Fig. 1). The male and female flowers (Figs. 2 and 4) are borne on separate plants.

The berries are about the size of currants (Fig. 3.) are white and semi-transparent in color, and contain a very viscid juice. Birds, when feeding on the berries, reject the seed which, becoming attached to the bark of the tree, in time takes root. In this way the mistletoe becomes detached from the bark is raised, and the seed is placed beneath it. To hide the seed away from birds and small animals, it is planted on the under-side of the branch. No matter in what position the seed may be placed, the radical, which in ordinary plants extends downward, will, with the mistletoe,

FIG. 1.—ENGLISH MISTLETOE.

always reach to the surface of the bark without reference to sunlight, heat, gravitation or other influences. So strong is this habit, that the radical is often obliged to curve itself over before reaching the bark on which to attach itself. The attachment is effected by an expanding or flattening out of the end of the radical into a disc, which gives a firm hold after which roots are developed from the disc, and penetrate the bark till they reach that part of the tree containing the most sap and juices. Nurserymen in England often establish young specimens of the mistletoe on apple and other trees by means of the artificial propagation above described, and dispose of the trees to dealers in the most northern parts of Scotland and England, where the mistletoe is not a native.

The superstitions and legends associated with the mistletoe

FIG. 2. FIG. 3. FIG. 4.

by the ancient Britons and Germans were many. By the ancient order of Druids its collection was attended with great solemnity and religious display and form. In England the mistletoe was more rarely found growing on the oak than upon any other tree, although this fact is contrary to popular belief; hence, that which was found growing upon the sacred oak was considered more powerful, and was regarded with greater honor and sacredness than that which grew on other trees. As soon as it was discovered, the Druids assembled about the tree and a banquet and sacrifices were prepared. These sacrifices consisted not alone of the carcasses of animals; living human beings, also, were offered up on the sacred altars. A priest robed in white vestments caught the sacred mistletoe in an immaculate white cloth as it was detached from the oak bough with a sickle of solid gold; after which two milk white heifers were instantly dispatched and roasted in the way of a burnt offering, the rest of the day being spent in rejoicing, prayer and feasting. By the Druids the misle-

toe was considered the most potent of all substances as a cure for diseases, an antidote for poisons and a charm against all evil powers, and was distributed to the people and carried about their persons.

Another powerful talisman these enterprising and cheerful Druids greatly valued was the egg of a serpent, which, according to Pliny oozed out of the mouths of serpents when collected together, and when supported in the air by their co-operative hissings was the propitious moment in which to seize it or otherwise it lost its magic virtues; but he who attempted to so seize it must suddenly dart from his hiding place and catch it in a napkin, mount a horse (the first one he could get on top of, no anxiety as to who owned it) and gallop off at full speed until he had placed a river between himself and the serpents.

The only uses to which the mistletoe is now applied in England are for feeding cattle when a scarcity of other food prevails, and in the manufacture of bird-lime, which is produced in the following manner: The berries and bark are placed in boiling water for several hours until the viscid and adhesive material contained in them is extracted. This is strained through a cloth to get rid of the woody portion,

FIG. 5.—MISTLETOE OF SOUTHERN STATES

after which it is concentrated by evaporation, when the substance assumes a consistency like that of dissolved caoutchouc. This substance is known to chemists as viscin. The bird-lime when used is smeared on the branches of trees, a live or stuffed bird being used as a decoy. When a bird alights on the charged branches it sticks fast, and as it beats with its wings they also become deluged with the bird-lime so that its wings become useless to a greater or less degree. Only the vilest of pot-hunters and bird catchers use it. It is the most utterly ugly, dirtiest of dirty mean ways of catching small native birds.

The mistletoe in England is in great demand during the Christmas holidays, both for the purpose of decoration and from the custom that if a gentleman discovers or can beguile a lady under the "mistletoe bough" he is entitled to a kiss from her. This is a very ancient custom which has been handed down from the feudal times.

Some years ago the mistletoe was considered a valuable remedy for epileptic fits, blind-falling and other ailments; but it has passed out of use of late years.

The mistletoe of the Southern States differs from the English not only in having both the male and female flowers on the same plant, but also in the form of the leaf, which is stouter, shorter (see Fig.) and of a more yellowish-green color. This variety was first described by Nuttall, who made a new genus for it—*Phoradendron*—"a tree thief." We have many species of *phoradendron*, the commonest being *P. flavescent*, which ranges from southern New Jersey to Illinois, Texas and Mexico. In Texas the mistletoe is so abundant on the mesquite trees that their natural foliage is hidden. Some years ago a Mrs. Millington made known a minute variety which she found growing on the black spruce in Warren county, New York, it being scarcely more than an inch long, but so plentiful as to injure the trees. In the cider-producing districts of England the mistletoe is so abundant on the apple trees as to cause great injury to the crop, often absorbing the entire juices of large trees in a few months and causing their entire destruction.

Few people are aware that large quantities of the English mistletoe are sent to this country during the two weeks preceding Christmas. This mistletoe is handled by the large dealers in the Christmas greens which are used for the decoration of churches, stores and private dwellings during the holiday season. From the hands of the wholesale dealers it passes to the retail florists, who dispose of it to their customers of English birth and extraction, at the rate of from one to two dollars per bunch. This season the dealers were stuck with the mistletoe because the English shippers did not send it here in season. It is not safe still to handle unless it reaches our markets from ten to twelve days before Christmas. It should be packed in a light but solid and firm case, and shipped as soon after being gathered as possible, so as to avoid its becoming dry and brittle before reaching Northern markets.

The Southern mistletoe was a drug on the market this season on account of its being nearly destitute of berries, a condition caused by the very dry season in some parts of the Southern States. The Southern mistletoe is sent North with the leaves of the palmetto and other palms, as well as large quantities of Spanish moss.

I find that very few people know the history of the mistletoe and the strange legends and superstitions associated with it, and very many persons are surprised when told that in the South and West it is so very abundant that it is often destructive to valuable trees. A. W. ROBERTS.

QUESTIONS ABOUT WILD TURKEYS.

SPARKILL, N. Y., Jan. 1, 1893.

Editor Forest and Stream:

This year, while hunting in south-eastern Virginia, I had the pleasure of killing specimens of at least two different species of wild turkey, viz: The "mossy-head" or "branch" turkey and the "red-legged" or "great woods" turkey, as they are called. I had heard for several years that there were at least two separate kinds, but until this fall I had never seen any save the red-legged. The "mossy-head" is one-third smaller, and on its head are many small feathers, which give it the appearance of being moss-grown—whence its name. They frequent, principally, the woods of branches and "wild fields," but are sometimes found in the big woods with their congeners, the large one, whose head is smooth, with pink markings, and whose legs are of a much brighter pink or red. These are generally found in oak or large pine woods, and call much more freely than the mossy-head and are a bolder bird in every respect. There is also considerable difference in their note.

My experience was as follows: During the month of November, having some spare time, I went to Spotsylvania and Greene counties, South Va., to try deer and turkey shooting for a few weeks; having heard that in that region the deer were quite plenty and that, although the turkeys were getting scarce, still there were quite a number to be found.

One Sunday afternoon found me at "Pleasant Shade," the hospitable residence of Col. Spratty. As Monday was Court day and his son (Masser William, as he was called by the darkies) having to attend, there was nothing special on hand. The day opened rainy; so I did not go out until after dinner, when, taking the turkey dog, who was also good for squirrels, Sam Barrow and myself started for the woods. We had not gone more than a mile from the house when we heard the dog bark. "Down," exclaimed Sam, "there are the turkeys." Hardly had we crouched when, sailing over the tops of the pines, came two large birds, which he declared to be a gobbler and a hen. Bang—bang, went both barrels; the hen sailed on untouched, but the gobbler pitched down, about 200 yards off. The underbrush was quite thick, and, although we hunted thoroughly, we could not find him; so, giving up the search, we went back to where the hen was flushed and built a blind. There, hiding ourselves, we yelped and yelled until dark, but no response came. Very downcast were we when we went back to the house, but the Colonel told us they were probably "mossy-heads," and that they would call to-morrow morning about daybreak. So before day Masser Willy and I were in the blinds. Mr. Spratt, who is a fine turkey hunter, had not made more than four or five yelps, when an answering whistle told us a young bird was coming through the woods. One little chuckle brought the bird up, there was a report and some feathers fell, while on the ground lay a fine young gobbler. Procuring the bird we again hid ourselves, and in about ten minutes he called up a pair, which were killed.

About a week after that Messrs. Buford and Spratty proposed that we should go in search of a gang of hybrids that were in the neighborhood. These hybrids are said to be a cross between the large and small varieties. They have some of the markings of the large kind, and also some of the small ones in that place of woods, but four or five years ago they got crossed. We found them without much trouble, and killed two on the flush and one from the blind. The following week our same party got on to the "red-legs." We were riding through a bottom when old B-pops gave tongue. Jumping off our horses, we fired at the birds as they came over our heads. I had the good fortune to drop an old hen, and Mr. Buford two young goblies. The old hen was a beautiful bird, weighing fully 15 lbs., with a head of bright brown and bronze plumage, pink on her smooth beak, bright legs, and, what to me was strange, a beard some 5 in. long. Judging from the beard, they decided she was at least 10 or 12 years old. Thus, you see, I have met two distinct kinds, with a cross between the two, inhabiting one locality. Now, will you please inform me how many varieties there are, for I have heard it claimed by some who profess to be well up in the fauna of our country, that there is but one variety, and yet, as I have just told you, I have seen two.

W. M. WAITE.

[Ornithologists recognize but one species of wild turkey in the Eastern States. This is what our correspondent calls the "red-leg." We should be glad to hear more on this subject from turkey hunters at large. A cross between the wild and the domestic turkey occurs to us as a possible explanation of the foregoing statement.]

PHILADELPHIA, January 8, 1893.—Editor Forest and Stream: E. Gray Paudel in sent us last week a white wild turkey, which he shot near Berkeley Springs, West Virginia. It was beautifully marked with stripes of black, and is considered very rare. This week he sent us an old gobbler, weighing 20 lbs., which was as singularly marked as the white one. It was the most brilliant bronze, shadings down to a blue green, and here and there on the breast and wings were pure white feathers, giving the bird a most peculiar appearance. The tail, which is very large, has a white feather on each side of it. The beard is about six inches in length. Are not these very old specimens of genuine wild turkeys?—VICTOR.

RED-HEADED WOODPECKER IN VERMONT.—FERRISBURGH, VT., Jan. 7, 1893.—Editor Forest and Stream: I must correct a statement which I made a few weeks ago that red-headed woodpeckers never winter here. To-day I saw quite a party of them, probably a family, and shot one. It does not quite agree with Wilson's description of the bird's plumage at any age, and the legs are gray and the middle of the bill brown color. But I suppose there is no question that it is a red-head. I never before saw one here in winter, but this has been an uncommon winter. The birds were wintered, and were quite plentiful till the cold weather set in, about the first of the month. They are not often seen here after the 1st of December. R. E. R.

HAIR SEAL AND PORPOISE SKINS.—The skins of the hair seal (*Phoca vitulina*) are now used for covering many articles of ornament, especially albums and books. The hair is left on, and its irregular spotted surface presents a handsome effect. They have also been used for ladies' capes and muffs. The tanned seal skin is also extensively employed in the manufacture of ladies' hand-bags and belts, and for pocket books, cigar cases and other small articles. Seal skin and seal skin are imported from England and are exceedingly strong and durable. They will outwear two pairs of shoes so says the shoemaker of FOREST AND STREAM.

MACHINE REST AND TARGET FOR TESTING GUNS.

HEREWITH inclose rough outline pen and ink drawing of a machine rest and target, and below an explanation of same. If in your opinion it shall prove of any practical value to sportsmen in general, please give it space in the FOREST AND STREAM.

So far as I am aware, up to the time of the appearance of Mr. Greener's latest work, no drawing or plan for making a machine rest have been given to the public, with the exception of a very indefinite explanation of the apparatus used in the Chicago trials; and even with Mr. Greener's cut before one, it would be a very difficult matter to define its dimensions and arrange its working parts, saying nothing of the expense, as it seems to me, attending its manufacture. I have endeavored to combine cheapness with durability, simplicity and accuracy. I have fired from my machine over 700 charges during the season, with uniformly gratifying results.

I do not wish to set myself up as "authority," but I cannot deprecate too strongly the very common practice of testing the shooting quality of a gun by firing from the shoulder at a stationary target for pattern at 40 yards range, or in tackling up an old magazine and shooting at it, as a force or penetration test. Such tests are, in my opinion, worthless from lack of uniformity of conditions under which each shot is fired. If a sufficient number of thin sheets of paper are nailed up for a penetration test, it will be found almost impossible to prevent bulging of the sheets in different places, and these bulges will vary with each target placed. When the sheets bulge, there will be found the greatest penetration, hence results obtained in this way are of no practical value. I have found that while a 12-gauge 8-pound gun at 40 yards, with 3½ lbs. of C. & H. powder and 1½ oz. No. 8 soft shot, would penetrate only from 3 to 4 sheets of uniform straw board, the same being packed closely, it would penetrate only from 14 to 17 sheets of same when separated at intervals of ¼ inch; and this, to me, is conclusive. If a proper apparatus is ever devised and adopted with uniform rules either by clubs or individual sportsmen, it would lead to a higher standard of finish, so far as shooting qualities are concerned, besides adding to the knowledge and pleasure of ever gun owner.

In making the drawings I have omitted all shading, as interfering with outlines, and also drawn the apparatus without regard to scale, as I could show the parts to better advantage and with less elaborate drawings.

In Figure 1, A is a bed plate of seasoned white pine, 4 feet long, 2½ inches thick and 14 inches wide, substantially fastened to the frame B B as shown. The frame B B is made of 2-inch pine, the side pieces or posts being 8 inches wide, with braces of 2x4. The projecting ends of frame B B allow of pegging to the ground or screwing to a floor. C is a pine plank similar to A, and serves to hold the frame B B together in a substantial manner, at the same time it forms a convenient table for various purposes. Between the table A and piece C, I insert a shelf, not shown in sketch, for holding, shells, swabs, oil, etc. Full height from top of table A to bottom of cross ties is 20 inches. If desired, the table A can be fastened to posts firmly sunk into the ground, which is, I think, the better way.

Resting upon the table A is a second table D, two inches thick, fourteen inches wide and four feet ten inches long, and pivoted at its rear end to plate A by a single bolt with nut and washers. This allows of free side-shifting to right or left of front end of table D when obtaining range, a portion two inches wide as shown on each side of front end of table D is cut away to allow for attaching two six-inch malleable iron screw clamps, E E, the lower bed A being slatted to receive them. To the projecting arms of table D an adjustable block P is attached by means of thumb-screw A. To block P a coiled, steel wire spring H is secured ten inches long, ¾ in. in diameter, a cord I ¾ in. diameter in connection with hook J joins the gun-carriage K with spring H. If preferred, a spring-balance may be substituted for spring H and the recoil be estimated by pounds. In centre of table D, and beneath gun-carriage K, a strip L, 20 in. long, 2 in. wide and 1 in. thick, is fastened to the narrow edge of which is screwed the ratchet plate M, made of ordinary strap iron and notched at intervals of 1-16 of an inch. Opposite each notch, and at right angles to same, is a series of lengthened marks, 1-16 in. apart; every fifth mark being numbered, 5, 10, 15, etc., is placed. Firmly screwed to outer edges of table D are two pieces N N, 8 ft. long, 1 in. thick and 2 in. wide, and resting upon their narrowest faces, and upon these are screwed the pieces O O, their narrow faces outward. Upon the inner faces of the pieces O O are screwed two iron V guides. K represents gun-carriage, 26 in. long, 2½ in. thick and 8 in. broad, to the edges of which are screwed the V, ways as shown, and extending full length of carriage.

Across the extreme front end of K are the blocks P P. The lower one, 1½ in. thick, 2½ in. broad and 5 in. long, is screwed firmly to carriage K, which is notched as shown to receive the feet of screw clamps A A. The lower block P is grooved across its centre to the depth of ¼ of an inch, and in shape to correspond to that of a gun barrel. The upper piece P is removable, and is the same size as the under piece and is grooved in a similar manner with the exception that in the centre of the large groove a deeper groove is cut for sighting when obtaining range. In front and secured to the middle of underside of carriage K is a flat brass spring, 4 in. long, 1½ in. broad at one end, and tapering to ¾ of an inch at its smaller end, and adapted to engage with the ratchet plate M. In thickness it should be 16, Brown & Sharp's gauge. Its small end must be filled to fit the notches, and its stiffness must depend upon the elasticity of spring H, either plain as shown, or balance. Two pieces R R, ¾ thick, 2 in. broad and 7 in. long, are attached to rear of carriage K, which is cut away to receive them as shown. Across and set into the upper portion is the tie S, ¾ in. thick, through which passes the thumb-screw T, and between the pieces R R a removable block U, grooved in the same manner as shown in P, is placed.

Between the standards R R, and securely fastened to carriage K, is a grooved block V, 1½ in. thick and 6 in. long. The groove is cut nearly through to fit the fore end, and should be padded and covered with strong leather.

Two arms W W, ¾ thick, 2½ in. wide and 30 in. long, are screwed to carriage K, which is cut away to receive them, and over this point passes the

Figure 4.

rear ends of V, ways as shown by dotted lines. The arms, W W, extend back upon K 6 inches, and one of them is shown cut away to show the rear attachments to same. A cross-tie X secures the two arms and carries the thumb-screw X' and two ¼ inch iron rods, Y Y, four inches long, firmly bedded in the same. Upon the rods, Y Y, are two pieces, Z Z', adapted to move freely, 6 inches long, ¾ thick and 2 inches broad. The piece Z is padded and between it and Z' are two coiled wire springs, 3 inches long and very stiff. A strong linen chord A' passes through two holes in cross-tie X as shown. A stop pin, C', is inserted in the table A, which prevents injury to the gun carriage K, should the chord I or spring H give way. A slot, P', 4 inches wide in table A extends back to rear of table D, which allows for dropping of breach when loading, cleaning, etc.

THE TARGET.

Figure 2 shows the target proper, and figures 3, 4, 5 and 6 parts in detail. To the two pieces A A, 4 feet long, 6 inches wide and 1 inch thick, are fastened the uprights B B, made of 2x4 scantling, 4 feet 6 inches long. To the uprights B B are nailed 6 pieces of 1½ inch pine, 8 inches wide and 4 feet long. In the centre of target is cut a slot, C, 7x10 inches. In the rear of target and below the perforation C is the table D, and resting upon and fastened to both target and table D is the device for holding the force or penetration sheets, figure 3. It is made of 1½ inch pine, 12 inches long and 9 inches deep, with a slot 6x2 inches, and to the screw and upon each side of said slot are secured the pieces F F, 12 inches long, 7 inches high and 1½ thick, with their

inner faces grooved to a depth of ¼ inch, and at intervals of ¼ inch to receive the penetration sheets of their straw board G. Spring brass clips, Brown & Sharp's gauge, No. 20, 5 inches long, 1½ inches at one end and 1 inch at the other, are bent as shown in figure 4, and attached to the edges of said block is a bullseye of 3 inches diameter. This block is to be used when obtaining range or in shooting for pattern alone. A trammel point, 1x1½ inches, 18 inches long, carries the pencil H at one end and the screw J at the other, the two points being 15 inches apart and is used for obtaining the 30 inch circle. In front and resting on the pieces A A is the table K, which offers a convenient rest for tools, etc., and at the same time adds to the stability of the device.

PATTERN SHEETS.

I know of no sheets in the market 48x48 inches. Sheets of suitable paper, 32x48 are obtainable, and by dividing one of these the 48 inch way you obtain two sheets 16x48. Now paste one of these to your full sheet and you will have a surface of 48x47, which answers all practical purposes. To fasten sheet to target, lift centre clip at top and slip sheet under and it is then easy to adjust to the others. In shooting for patterns only, the bullseye block (Fig. 5) may be left in place and the circle struck directly on the target, otherwise the sheet must be removed and circle struck upon a floor or table. Unless the range is absolutely free from wind effects, the circle should not be struck until after firing, and then the best pattern obtainable should be secured. The apparatus should be housed in all cases, and if possible a board fence, four feet high, should protect one side of range, at least.

TO OBTAIN RANGE.

Place bullseye block (Fig. 5) in slot C in target. Place the gun in the grooves and tighten up all screws but X' and clamps E E. Place gun in machine from beneath, and see that fore end will allow breech to drop freely. Now adjust forward sight on bullseye by running or adding sheets of paper beneath table (D) at front end, and tapping front end of table (D) to right or left. Your vertical and horizontal axis is now supposed to be correct, but should you now fire, say the right hand barrel, and your gun is accurate and no wind to deflect the charge, you will find your true centre to be from eight to ten inches to left of bullseye. Now fit an ordinary card wall, perforated in the centre by a ¼ inch hole, in the muzzle of barrel you are about to use, and insert a paper case in chamber, having first run a 3-16 drill through the anvil. You now have two peep line sights from centre of barrel. By tapping the front end of table D you will bring the axis of barrel in direct line with bullseye and your range is obtained for right-hand barrel. The same process must be followed in obtaining range for left barrel, but the shift will be 16 inches from left to right. I do not claim that all guns vary as much as this, but all guns, both foreign and home-made, which I have tested, vary from 6 to 10 inches at 40 yards. The point blank range, in any case, can readily be ascertained by moving the target nearer the firing point; but I digress. The range now being obtained, remove the block (Fig. 5), insert the force sheets and place the pattern sheet in position. Now load, throw up the breech and tighten the set screw X' sufficiently, which experience alone can teach you. The main dependence for holding the gun must be placed in the clamps Q Q and set screw T, though the padded block Z, backed by the coiled springs in rear of same, materially assist in maintaining the gun in position, any solid breach rest will in time strain the action.

One end of the cord A should now be passed around the trigger, and back through the hole in cross tie X, and its two ends joined by a simple knot.

To discharge the gun a sharp, quick twitch, directly downward upon the trigger cord A', and, since the cross tie X acts as a fulcrum, the pull and resistance will be equal and the effect of pull uniform.

When the gun is discharged, the carriage K slides backward, while the spring finger on front of same engages with ratchet M, and thus holds it until a coil is estimated.

If, however, it is desirable to find the recoil in pounds, a spring balance may, as before said, be substituted for spring H, but the spring finger and ratchet should still be retained, as it would hold the pointer in position on dial, and so give exact recoil, without the necessity of smearing with paint, as was done during the tests at Chicago.

White Mills, Pa.

F. G. FAIRBANKS.

THE CAUSE OF RUST IN GUN BARRELS.

Editor Forest and Stream:

I have followed the correspondence on "Rust in Gun Barrels" with careful attention. It has the great merit of throwing light upon the subject from many different standpoints, and I believe, will have the ultimate result of producing not only a cure but also a preventive against these "menaces of the gun." Now, to arrive at this much desired result, the nature and the causes of this disease must first be studied and understood, then the remedies may be looked for and properly applied.

And here I would wish to direct attention first to the fact that many spots in the barrel are produced by scales of lead adhering to the iron, especially toward the breech; these, of course, can be removed by brushing and friction, and I shall not refer to them hereafter. But the influence, which is the result of an oxidation or corrosion of the iron, and which invariably produces unevenness and roughness of the barrel, will form the subject of my remarks. The following observations will assist us in arriving at some definite conclusions:

1. The iron which is used in the manufacture of guns does not oxidize or rust in dry air. In moist air, and especially in changing the amounts of water in the air—sometimes moist, sometimes dry—the iron oxidizes from the surface, and as the rust or oxide is left on the iron, will gradually be eaten, as it were, until nothing but rust is left.

2. Water, when free from air, corrodes iron but little; but when it is in its natural state and temperature it not only contains considerable quantities of air but also carbonic acid gas, as well as saline matter. This will assist materially the rusting process.

The above two points will at once suggest the rule of preventing the access of air and water to the metallic surfaces of iron, and indeed all the different varnishes, oils and rust preventers are in first line based upon the principle of covering the metallic surface with a thin covering, which will protect the iron from contact with air and moisture. It is, of course, of first importance that such oils and rust preventers do not decompose themselves in contact with the metal; and oils which are liable to produce in any instance free acids are to be strictly excluded, or else the process of oxidation or rusting might be going on quicker than in moist air or water. Perfectly neutral bodies, which are not liable to undergo decomposition under the given circumstances, are the best rust preventers, and I could suggest nothing better than solutions of pure paraffine in benzine. The fats and oils contain fatty acids, which are liable to produce an acid reaction under influence of warmth and air, and this, once commenced, does not prevent rusting or corrosion. I believe that the presence of substances in such fatty matters which are liable to oxidation, and probably more so than iron, would prevent the corrosion of the latter at the expense of the substance in the fat, and the good effects of blue unguentum, which is an intimate mixture of mercury and animal fat, is most likely caused by such circumstances.

I have already indicated that it is not only the air which is apt to carry oxygen to the iron, but that also other substances are apt to do so; and I pointed out that oils and varnishes, which under any circumstances can do so, should be, and may easily be, avoided.

I now come to the consideration of the effects of the remnants of discharged gunpowder upon the gun barrels; and, as it appears in this question call for investigation, I will endeavor to explain some of the things of it. No doubt some of my sportsmen friends will and their views corroborated by what I say; some may still continue to adhere to their own explanations, but I hope all will do me the justice of finding my remarks pertinent and made for the good of the fraternity.

"Californian," in your last number, has already referred to the possible difference in the composition of gunpowder and the effect thereby produced upon the gun barrel. I am not aware that any manufacturer uses soda saltpetre; in my opinion they do not—only potash saltpetre, and that as free as possible from any kind of sulphur. It appears, however, that, except in residue left in its containing soda and moisture, all analyses of gunpowder have lost their significance after it was once ascertained that our suppositions in regard to the composition and the process of decomposition in the explosion of gunpowder were wrong. It was generally supposed in theory that gunpowder should be composed of one atom of saltpetre, one atom of sulphur and three atoms of carbon, and that, as a result of its explosion, three atoms carbonic acid, one atom nitrogen, as gas—and one atom sulphuric acid—should be formed. Instead of this the powder gases contain, beside carbonic acid and nitrogen gas, considerable quantities of carbonic oxide gas; a part of the charcoal remains unburned, and, besides potassium sulphide, the residue contains large quantities of potassium sulphate and carbonate. This process, within certain limits, is also quite independent of the grainings of the powder, and, therefore, not much is gained by analysis or external examination of the powder. These may be considered as facts, and I have, therefore, always used one brand of powder after finding it good, and would even stick to that against all other judgments.

According to the above, the residue which is left in the barrel after discharge, consists of potassium sulphate, sulphide and carbonate. If this residue is left dry, it will remain unchanged; if left in moist air, it will change, form sulphurous acid and corrode the barrel; the charcoal, which is always left in it, will act as an absorbent of air, moisture and carbonic acid gas from the atmosphere, and thereby serve as a medium for the entrance of the latter into the residue distributed over the iron, and will accelerate the exchange of oxygen between potassium sulphide and the iron. This can be in some way experienced, if iron is left with powder residue and water or moist air together. It is also palpable that some little time will elapse before the chemical process will commence. It seems, therefore, to be the right way to clean the gun barrels from this residue.

That some powders are worse in this respect than others, these barrels resist the corrosive influence of the indicated process, and that some powder residues are soft, others hard, and the best methods of preventing their action on the barrel, would form an interesting subject of further discussion.

DR. VOLNEY.

Editor Forest and Stream:

If the subject is not threads let me add my mite of testimony; and as I make an opinion of any weight the length of the spent in forming it should be given. I am sorry to say that I have gained it in what will next summer be forty-two years experience. In your last number your corre-

pondent "C. E." hit it exactly; leaving the dirt from shooting on the barrels will protect them from rusting "sometimes," and sometimes it won't, and when it does not your gun is ruined. One of mine nearly was, for I discovered this discovery long ago, and I am just lazy enough to make the most of every labor-saving arrangement. So I warn others against putting too much faith in it. Whether the uncertainty is caused by the grade of powder, as "Californian" says, or not, I cannot tell; but as I generally use common powder, having been cured of the weakness for expensive ammunition when I was quite youthful, I hardly think that is the reason. Let your readers try the experiment, but do not trust their guns to it too long at a time. The better plan is to get a warm nook in the house, say the corner by the kitchen chimney, and put up a closet. Keeping guns dry is, in the salt air near the coast, the only preventive of rust; and, my friends, "don't you forget it."

ROBERT B. ROOSEVELT.

DUCK SHOOTING ON MORICHES BAY.

I HAD looked forward to having a duck shooting expedition all through the fall, at some point on the eastern end of Long Island, where or when I had not yet determined, when I received from my friend, J. S., the following characteristic letter: "Moriches, L. I., Nov. 6, 1891.—My Dear Duck Hunter: I have been out on the bay to-day, and have seen a very large number of ducks flying about. The prospects look very good, indeed. Bishop has plenty of room and is anxious to see you."

This settled the question, and the following afternoon found me with packed valise in one hand and gun in the other, on the way to the Long Island Railroad station. Securing a seat in the train, I resigned myself to the situation, knowing that when one has occasion to travel on this marvel of intricate railroads one is in constant anxiety lest he should be landed at a station miles away from his destination. But by a streak of good fortune, backed by frequent inquiries of the conductor, at the end of a three hours' journey I reached Moriches in safety, and bundling into "Syb's" ancient vehicle I left a stage, awaited shiveringly the end of my expedition, which proved to be the cosy quarters of John Bishop.

This worthy host was at once farmer, landlord and guide, and by hook or by crook managed the three occupations with both credit and profit.

We were awakened at three o'clock the next morning. The wind whistled from the south in the early part of the night, but had now changed to a steady breeze from the north, and the surf was breaking over the beach. Nothing could be heard save the dull booming of the surf as it broke on the outer beach. Before break of day we were on our way making good speed for our landing—Doctor's Point—a piece of land jutting out into the bay about a mile. In choosing the best points these baymen, whose power of perception is wonderfully acute, always prefer a lee shore, so that when the wind is from the northwest, which is considered to be the best quarter for their select point number of miles from the bay, and string out decoys to the leeward side of the point with their heads to windward.

Having arranged the stools in as duck-like and life-like a condition as possible, but which the fog caused to loom up twice their natural size, we ensconced ourselves in the bottom of the boat and awaited the breaking of day. Suddenly to the westward there was a bright flash, and a second after another, followed by two dull, muffled sounds of "ploong! ploong!" of guns. We knew the ball had opened. The warrant officer of Bishop, looking out, here they came from the eastward, the next moment showed, as painfully raising our heads above the gunwales of the boats, a bunch of ducks, which proved, on closer inspection, to be broadbills. They rapidly approached, and, with almost the velocity of a cannon ball, swooped over the decoys and were off, but not without leaving three of their companions behind, one dead and two crippled so badly that they were soon dispatched. Pre-emptory, a large flock of old squaws, numbering perhaps several hundred, started from their resting place far out on the bay, by a passing sloop, came swinging by just out of gun shot. The guide, seeing they were likely to pass by without noticing the stools, performed the curious action of kicking his feet up into the air, and at the same time uttered, in a semi-falsetto voice, "how-ah-shik-lik" which he afterwards assured me was the cry of the old squaws. The ducks, perceiving this strange feat, and at the same time catching sight of their supposed friends snugly nestled in the sheltered cove, changed their course and came to investigate, but, not liking a flock of old men, they turned back and followed their course for an instant and discharged their contents, and four ducks, arrested in their rapid flight, leave the flock and fall heavily to the water, rebounding from the shock, and lay on their backs stone dead. The fusillade is now general, as far as can be heard. Away to the westward, in the neighborhood of Smith's Point, comes the faint ploong! ploong! of a double report (a peculiar sound on water), and soon after a flock of whistlers appear, their low tremulous whistle proclaiming their species. Rising from the cramped position which the cautious gunner must naturally assume to remain unseen, we pour a volley into their ranks, and have the satisfaction to see three drop.

Five o'clock in the afternoon found us with decoys packed away on the way back to headquarters, with fifteen broadbills, three sheldrakes, seven coots and ten old squaws. Early the following morning we were on another point, in consequence of the wind having shifted to the north and blowing great guns. Not a cloud, nor a duck, could be seen for the thick fog. The guide, armed with old game and local incidents, of which baymen have quite a locker full.

He told, in his quaint way, of an old gunner of Moriches, who had owned, for the greater part of his life, a muzzle-loader, but his curiosity having been so excited by a city friend, who had extolled the merits of the breech-loader, that he was at length persuaded to purchase one. One morning he set out on the bay, bringing both guns with him for the purpose of seeing for himself wherein the merits of each lay. He presently came up with old game and local incidents, of which baymen have quite a locker full. He leveled the breech-loader, the leader and fired—a very fair aim, he thought—but, greatly to his surprise, they only wagged their long-tail feathers, and cried out, as if in derision, "How d'ye look." Again another bunch flew by, and the decisive cry rang out as they flew off unharmed. The blood of the old bayman was now fairly boiling. Muttering a word which is not found in polite rearing, he flung the breech-loader in the bottom of the boat, and snatched up "Old Scream and Blazes," he affectionately termed his old gun, just as he was to level it at a bunch of four passing by, and, to his extreme delight, saw

them all drop. Surveying them with grim satisfaction, as he picked them up, he exclaimed, "Now, d—n ye! how d'ye look."

My second day's sport proved as barren and monotonous as yesterday's had been fruitful and exciting. But along toward 3 P. M. a black duck passed by, and, yielding to increased ballast in the shape of No. 4 shot, set his wings and dropped far out in the bay. Bishop shouted and ran to get it, but it was difficult to tell whether he would be able to return, as he battled against wind and tide, and reminded me of a picture of Ajax defying the tempest. Dark—as put an end to an unsuccessful day's shooting; for on counting the spoils we found we had only a green-winged teal and a black duck. Nothing daunted by the ill-success of the previous day, we were again at our post the next morning. Now, fortune—that fickle goddess—again smiled, and before noon we counted twelve good ducks; but as it was necessary that we should take the afternoon train for home, we reluctantly packed away the decoys, and, casting one lingering, longing look behind, at places rendered charming by our short association, we bade farewell to duck shooting till next year.

GOLDEN EYE.

WING SHOOTING VS. TREEING.

ASHFIELD, MASS.

Editor Forest and Stream:

First, as to the "whiskery." It was mentioned incidentally and no issue sought at that point; but since L. I. F. insists on it, I would say that—however it may be in his case—wherever you find a downright pot-hunter here the amount of whisky drunk is only limited by the supply; but I had not supposed that either the FOREST AND STREAM or its teachings was particularly acceptable to this class. Next comes the caribou comparison. Yes; when a scatter-gun is invented that handles easily and possesses the power to make it as certain of ridding a caribou at twenty rods as a modern choked breech-loader is of doing the same by grouse at a few yards, and when the caribou has the alluring habit of squatting and lying to pointing dogs after a short flight, then, by all means, start him up before you shoot and give him a chance, by a lucky jump sideways or behind some friendly bush, to e-cape your deadly fusillade.

As to the term "murder," the sense of honor and fair play possessed by the true sportsman should intuitively inform him when sport ceases and murder commences. Is it not surprising that, while the terms "trout hogs," "quail murderers," "baldie hunters," etc., are constantly found, without eliciting any reply from the sporting fraternity, the instant a voice is raised to prevent the extinction of the king of game birds by the most disgraceful butchery a tremendous opposition is encountered? What would be thought now of the sportsman who should send in for publication a full set of elaborate rules with valuable suggestions for the most successful method of huddling quail for a murderous shot, or for netting trout in the most killing style, and framed after the manner of our late directions for the more deadly laughing geese?

And yet, good friends, 'tis not a few years since that they were all butchered alike to fill the capacious maw of the pot-hunter. He has swallowed almost the last one of the quail and trout, and a few grouse alone have escaped by their superior cunning. Doubtless when, in a few years, he has—(if unchecked)—reduced the grouse in like manner he will hardly have the stomach to reply while we all storm about the shame of the "manner of their taking off," and talk loudly of their protection as we now do in relation to trout and quail.

The fact is that New England is in the same fix that our northern brethren soon will be. We have comparatively few grouse left, and an army of shooters coming on; and after all our efforts to get them started shooting in a sportsmanlike style, it is hardly to be wondered at that we regard with little favor efforts to proselyte them to pot-hunting. No one that lacks the amount of pluck and esprit de corps necessary to prefer fair play before "buz," need ever expect to acquire much skill in wing-shooting; or ever to taste the sweetest delight that fully possesses the true sportsman as he views his hard-earned spoils.

While we desire to deal justly in our discussions, we must say that a disposition to boast of slaughtering treed birds and giving minute directions for the best methods of accomplishing the same, plainly indicate which side is favored and are about in the same vein as that "solid" advice to our boys, viz., "try all fair wing shots, and perhaps in the course of time you will shoot them in no other way," though of course, on filling up the bag with the "pot-shots" possible. This is the only way to wing-shooters with a vengeance. Why? It reminds me of the advice that an old sharper gave his sons: "Boys, get money honestly, if you can; but boys, get money anyway." Wouldn't it be a curious temperance reformer that would tender the following "solid" advice: "Boys, drink all the whisky you can get, and occasionally take a drink of water, if handy; and perhaps in the course of time you will drink nothing but water."

Boys, I give you a motto which (though the pot-hunter might not consider it "solid") a faithful observance of through a wide and varied experience of twenty-five years has brought to me much solid pleasure. It is, *Take no sitting shots!*

Emblazon it on your banners. Practice it invariably, and you will never regret it.

RUFFED GROUSE.

CAMBRIDGE COUNTY, PA.

Editor Forest and Stream:

Some weeks ago I wrote a short article, which appeared in FOREST AND STREAM, in answer to L. I. F., who had in a previous issue supported the theory that a man was an artist who could kill one ruffed grouse in twenty wing shots. I have noticed in almost every subsequent issue, correspondence bearing *pro* and *con* on this subject.

I do not wish L. I. F. or any one else to imagine that I would not shoot a ruffed grouse sitting, whether on ground or tree, for I most undoubtedly will, and always have done so, whenever an opportunity afforded itself. L. I. F. and I agree in one point only: I believe in killing a ruffed grouse the number of grouse which may be killed on the wing, out of a given number of shots. I have never been so far north as New Brunswick and am not at all acquainted with the character of the cover wherein lie the whirling grouse, L. I. F. and friends so frequently fail to kill when on the wing; but my shooting is mostly confined to the ridges and spurs of the Allegheny Mountains, where the grouse are almost invariably found in thickets of hemlock and laurel.

While writing the first article I decided to keep a record of my shots at grouse during the remainder of the open season and report the same.

I find that I have shot at fifty-six grouse, fifty-four of them on the wing, and two sitting.

Of this number shot at on the wing, I killed sixteen; and killed both of the sitting shots.

The greatest number killed consecutively on the wing, was three.

I shot most of the time a ten-pound, 10-gauge, full choke, hammerless gun. I loaded with 44 drams Oregon lightning powder, No. 6 and 1 1/2 oz. No. 5 or 6 shot, the former late in the season.

I believe that one pellet of No. 5 shot late in the season, when ruffed grouse generally rise wild, will do more execution than half a dozen No. 8's; for, as a late contributor remarks, they are a hardy bird and carry away, very frequently, quite a weight of lead, if a bone in the wing or neck is not broken.

I am, if shooting a ruffed grouse sitting be the criterion, a pot-hunter. But I shoot over a brace of setters and seldom get the opportunity to kill them in this manner. I may be wrong, but I do not believe that shooting an occasional grouse on the ground or in a tree will constitute the shooter a pot-hunter. I imagine that an individual who systematically prepares himself for the slaughter of ruffed grouse by "treecing" them and then deliberately, "with malice aforethought," kills them, deserves the name of pot-hunter and the condemnation of every lover of the "hurling grouse."

OCTO.

MUZZLE AND BREECH.

Editor Forest and Stream:

Editorially you remark that Mr. Van Dyke will find many to agree with him as to the muzzle-loader's accuracy at short range. Possibly so, but, notwithstanding his preposterous claim as to the merits of his muzzle-loading rifle, the persons who still use them, as a rule have not made their "first visit to town."

Admitting his "dime" shooting at 50 yards, won't a ball that hits a half-dollar every time from a breech-loader, at same distance, answer every purpose on game at 200 yards and under?

He claims a *cone ball* "cannot be shot at all." Now, I have put 2 out of 10 naked cone balls from a breech-loading Maynard into an 8-inch bulseye at 200 yards, off-hand, and can send him the proof, if he wishes it.

Would that he could sit behind a glass and see where Charles, Richardson and Jewell plank their 330-gr. cylindrical every time on an iron target, 200 yards away. One visit at Walnut Hill (Mass.) will take the conceit out of him; that he intimates is in others, and show him *how* to shoot the "rifle of the present."

Mr. Van Dyke further says that "the extremely long ball, necessary for a long flight, cannot be loaded from the muzzle by the best system of patching." Now, it is a notorious fact that, at Creedmoor and elsewhere, long range breech-loading rifles have had the bullet put in from the muzzle and fired with as good results as though entered at the breech with the shell.

He states also that the ball, put in at the muzzle, cannot be fitted tightly enough for the grooves. How is it, then, that scores of 234 are made with long range rifles carrying bullets that can be pushed through the barrel by a rod, with scarcely a pound pressure?

It is evident that Mr. Van Dyke has something yet to learn about rifles. From his description one would think a breech-loading rifle barrel to a thermometer, with its bulge at the bottom for a ball to wallow in before starting on its journey.

LOADING FOR GAME.

Editor Forest and Stream:

Many of your correspondents fail to give weight, length and bore of gun, leaving the reader to guess at the very important features. An article stating that 34gr. powder and 1 1/2 oz. of shot is the proper load for ducks, is about as vague as it can well be. I shall confine my views on the subject of loading for game, to guns suitable for general shooting, viz.: 12 gauge, 8 3/4 to 9 1/4 lbs.; 10 gauge, 9 1/2 to 10 1/2 lbs.; length of barrels 20 inches. For the 12 gauge, for general shooting, use 44r. Orange duck powder No. 4 grain, 3 pink lead wads on powder, with one black edge on shot, all on one wad larger than bore of gun; 1 oz. of shot, No. 8, for quail, pinch d and ruffed grouse, quails and rabbits; No. 9 for snipe and plover. For duck shooting use 44r. same powder, and 1 1/2 oz. No. 5 shot in first barrel and same quantity of No. 7 in second, shells loaded same, as to wads. For the 10 gauge use 44r. same powder and 1 1/2 oz. shot same sizes as 12 gauge for general shooting, and 5dr. and 1 1/2 oz. of shot for duck shooting.

Always use wads one size larger than bore of gun in paper shells, and two sizes larger for brass shells. I have found out by experience that trying to economize in powder is not economy. In loading as above mentioned the shells containing No. 8 shot can be used for duck shooting very well if you run out of shells loaded for that purpose. The most absurd idea about loading that I ever read or heard of is advanced by a correspondent from El Paso, Ill., signed "No. 12 Bore," in issue of January 5. No. 12 Bore says he uses 2 1/2 dr. powder and 1 1/2 oz. of No. 4 shot (for squirrels). Such a load will be all right "down in Egypt," but would hardly make muster in this part of the country, especially in the timber along the Chariton River.

The chapter on guns and loading in Capt. Bogardus' book "Field Cover and Trap Shooting," is about as practical as anything that has ever been written on the subject, and by a practical man too. The tallow question mentioned by No. 12 Bore is rather odd, notwithstanding No. 12 Bore says he thinks it is not generally known. It is time thrown away and does no good. Wire cartridges are expensive and are no better than lead shot in a breech-loader, and very little better in a muzzle-loader.

BORDER RUFFIAN.

VERMONT—Sheldon, Jan. 6.—Ruffed grouse are very scarce in this vicinity, and the few killed have been all old birds. We have had but little sport on the beech-ridges, where we have made some heavy bags of gray squirrels, with a few black ones for variety. Foxes and rabbits scarce. Red-headed woodpeckers are very plenty here this season, and are, I believe, a winter resident with us. In your issue of Dec. 15 I see that a caribou was killed near Gaspe Basin with a 32-calibre revolver. For some years past several of the moose and caribou hunters near Campbellton, N. B., use while hunting this large game the "Frank Wesson" pocket

rifle, 12-inch barrel, 32-calibre. "L. I. F." will accept my thanks for his kind expression regarding my former letter. Yes, I have been many times, and trust, that I may be spared to go there many times again. "To Mark West" I would say that every hunter knows and every naturalist should know that all wild birds and animals have certain fixed habits according to their several species, and a thorough knowledge of their peculiar habits make the hunter and trapper successful in their vocation.—STANSTEAD.

SHOOTING IN THE SOUTH.—I have just returned from a two week's shooting trip to Georgia, and can report finding ducks fairly plentiful. I went up the Savannah River about twenty miles and got seventy-two ducks, mostly bluebill, spoonbill and mallard in four days' shooting, and did not work very hard either. The weather was very warm, and, consequently, the ducks not flying well, or I should have made a much larger bag. I did not try for deer, though from reports should judge they were very plentiful this year. Quail and doves abundant everywhere. The best way to shoot on the Savannah is to hire a ducking skiff (about 50 cents per day), go up the river, say 150 miles, and drift down. There is a steamer up the river every Tuesday and Friday at 6 P.M. A dozen decoys are useful, but most of the shooting has to be done by sculling up on the ducks. You can hire a darkey to go with you at from 75 cents to one dollar per day. I had a very intelligent fellow that knew every nook and turn of the river and where to find the ducks. A trip of this kind is inexpensive, compared with Currituck, or even Cobb's Island, and, to my thinking, is quite as enjoyable.—JUNIS P.

ASTRIDE OF A STAG.—Murray's hero has been outdone by a European rival. In the London (Eng.) *Telegraph* I find the following since Mazonia most unwillingly rode to death the wildest Tartar steed of his period, few such surpassing feats of horsemanship have been recorded in the pages of history or romance as that to which publicity has been recently given by the majority of our Hungarian contemporaries. Perhaps horsemanship is scarcely the correct term to apply to this extraordinary performance; deermanship would probably be the more appropriate word. The other day, while a noble stag of ten was being hotly chased by the Kaposztasgyeger hounds—a subscription pack—one Karl Poros, a discharged hunter, managed to bring the terrified animal to a standstill in some close cover through which it was forcing its way, and, by an almost superhuman effort of strength and agility, to vault upon its back. After several desperate but unsuccessful attempts to dislodge its rider from his seat, the stag, stimulated anew to flight by the cry of the fast-approaching hounds, resumed its course, but it soon broke down under the weight of its unaccustomed burden and gave up the ghost through sheer exhaustion and terror. Poros was found by the houndsmen sitting on the wounded carcass of the stag, which he had literally ridden to death and resolutely claimed as the just reward of an achievement unprecedented in the annals of the chase. [THE FOREST AND STREAM office boy suggests that Poros should have fired that name at the stag, Kaposztasgyegercrayzetic.]

KILL THE OWLS.—Canal Fulton, Starke county, O.—I believe a true sportsman takes as much pleasure in killing all enemies of game as he does in killing game. All owls are great enemies of game, killing them while they are asleep and then sleeping in the day in hollow trees away out of sight of the hunter. I have discovered a way to shoot them. When I learn that an owl has located in the woods I get on a horse and take my gun and ride around through the woods where I think the owl are in a hollow tree examining carefully every tree that has a hole in it. I don't talk any, but don't care how much noise the horse makes, as that is what I want the owls to hear. This excites their curiosity and then they will crawl up and look out to see what is going on and give you a chance to shoot them. I one time caught a screech owl in a hollow tree that showed his inquisitiveness by crawling up to look out to see what was going on. It was five feet from the ground. I reached in and pulled him out, and he thought the owl are in a hollow tree that was just like the night before. I suppose the owl was as heavy as the owl.

—G. H.

MEDINA, N. Y., Jan. 12.—Our taxidermist has just received, to be mounted, a red fox, killed three and a half miles southeast of Albion. It is a fine large specimen, and weighed ten pounds. This reminds me that a fox was shot a few weeks since inside of our village corporation. He was seen to enter a drain, the mouth of which was afterward closed by a flat stone, and one of the covering stones taken up a few rods beyond. He was shot and killed. It was taking a rather mean advantage, but the killer felt justified by the number of chickens he and his neighbors had lost. A gray fox has been seen several times prowling around. Rabbit hunting has been good so far this winter, a great many being killed on the light snows we have had lately.—SAL NITZER.

GEORGIA.—Macon.—Middle Georgia has had a very short crop of game this season, our principal birds (quail) being scarcer than we have ever known. Some sections that have formerly had quantities of birds have been this year almost destitute. Though the weather has been warm, we have had a good supply of ducks. The writer had an excellent opportunity of testing the much discussed "hot or cold opossum" subject yesterday, and after a trial, was of the opinion "twas six for one and half a dozen for the other."—J. H. J.

BE CARBUREL where you drop your cartridges. Some person left one on the floor of A. G. Jackson's residence at Jericho, Long Island, and when Louisa Sands, the colored woman, put the sweepings into the kitchen stove last Friday morning, the cartridge exploded, whereby she lost the sight of an eye. We have heard of a case where a "22 short" got into a box of smoking tobacco and thence into a smoker's pipe, giving him a great fright and a narrow escape.

KANSAS—Crawford, Gray Co., Kan., Jan. 2nd.—This is a good time for antelope here, as the fires have burnt off the prairie for miles north of here and bunched up the antelope near the river. Cattlemen from 100 miles south report buffalo plentiful, but in bunches of four and five coming in from the southwest. The head of the herds were just 150 miles from here on the 28th. I shall go down to them on the 25th, to be gone fifteen or twenty days. When I come back will report progress.—W. J. Dixon.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

FRESH WATER.	SALT WATER.
Pickereel, <i>Roeo reticulatus</i> .	Yellow Perch, <i>Perca flavescens</i> .
Pike or Pickereel, <i>Roeo lucius</i> .	Wal-mouth, <i>Chondrostichus</i> .
Blue-perch (wall-eyed pike), <i>Stizostedion americanum</i> , S.	Crappie, <i>Pomoxis maculatus</i> .
Grubee, etc.	Bachelor, <i>Pomoxis quadratus</i> .

Smelt, <i>Osmorus mordax</i> .	White Perch, <i>Morone americana</i> .
Striped Bass or Rockfish, <i>Roeo vitreus</i> .	Pollock, <i>Polachius carbonatus</i> .

THE ANGLER'S DREAM.

The earth is sad—mists dank and gray
Enfold her ancient breast;
The waves, all wearied with their play,
Have trembled into rest,
And silently the god of Day
Is sinking in the West.

Now dead delights, like ghosts, arise
Within my haunted brain;
The tender blue of April skies—
The sound of April rain—
The foaming break—the gentle rise—
The princely pounder slain!

Then fade the flowers from my sight,
O'ershadowed is the stream,
As yonder through the waning light
I see the pier-lamps gleam
And in the great midnight night
I waken from my dream!

In the London Sporting and Dramatic News.

THE ALEWIFE IN INLAND LAKES.

IN the autumn of 1880 interesting accounts were published of the exhibitions which a man gave on Kauka, Seneca, and other lakes of western New York, showing his method of trolling for salmon trout. His success—about but was the mysterious alewives, or "sawbellies," about which there is so much speculation, the problem being how they got into those waters.

So far as appeared, this man obtained the indispensable bait by catching a salmon-trout with a hook baited with a young sucker, opening the trout and taking the alewives out of its stomach. Then he proceeded to troll with the bait thus obtained, and kept up his supply of it by opening every fish that he caught. As a young sucker with which to take the first salmon is not always obtainable by the average fisherman, it may interest some of your readers to learn of a more direct method of procuring the alewives. This is by fly fishing for them late in the evening.

Last July, one evening, I was catching large minnows for bait from a dock on the shore of Seneca Lake, using a fly-rod with the smallest of flies. When a lake became so dark that the minnows ceased to take the flies, I began to catch alewives, and soon had five. The next evening, at the same hour, I tried for them again, and took fifteen in a short time. We continued to take the flies after it was dark.

These lively little interlopers are not welcomed with universal heartiness by the sportsmen on Seneca Lake. It is true that they furnish an excellent food for the game fishes, but the supply is so lavish, so recklessly prodigal, that the salmon-trout and the glass-eye-pike are fairly surfeited, and regard with supreme indifference the most attractive lures of the angler. This is one reason they give in explanation of their inability to capture these fish. If this were all, it would not be so bad. Naturally enough, the alewives, to have excellent appetites, and they are charged with satisfying them with the spawn of their persecutors. It may be a question of "the survival of the fittest," and so far the alewives seem to be having the best of it. It is certainly a fact that trolling for salmon-trout and glass-eye-pike on Seneca Lake has become practically abandoned. Seneca and gilt nets are largely accountable for this, but still the conviction remains that alewives have damaged the fishing.

Up to within a few years past every grass patch in the lake was full of yellow perch. They have all disappeared except a few stragglers. Happily the black bass hold their own, and better still, are on the increase. They protect their spawning beds and have it all their own way with the multitudinous alewife. They, too, devour the little strangers without stint, but nevertheless are always ready for a tussle with the angler properly equipped with fine tackle and experience.

KANADISAGA.

COLOR OF GUT.

"THE FOREST CITY," Ontario, Jan. 9, 1892.

Editor Forest and Stream:

I observe in your issue of 5th inst. an article upon "Color in Fishing Gut." This is a question upon which men will never agree as long as there is a piece of gut to be had. There is, however, one color which I do not think has ever been tried and which has just suggested itself to me, viz., "green." In all paintings of water scenery the water is represented as being of one or more of the various shades of green, excepting, of course, in sepiæ and neutral tint pictures. As the past and present artists of Europe and America were and are, without doubt, deep students of nature in that respect, their adoption of green in its various shades in representing water (with the afore-named exceptions) would tend to prove that such is its normal or natural color, and that those who indulge in the noble art of fly-fishing would do well to color their "leaders" with a green tint.

I have fished in many waters in Ontario (in its western section), from the clearest pond to a turbid stream, and have used both blue-tinted and white gut for "lead-rs," and never found that I caught more or less with one than the other. It is the flies that the fish see, not your casting line or leader, and it is the fly only that he goes for, which is easily proved by casting your "leader" over the water without any flies on it; the entire absence of rises will solve the problem. Our *salmo fontinalis* are of such a variable temper that while on some days rising to the flies as fast as you can throw your line, on other days the most delicate tackle and skill will not allure them from their cosy beds at the bottom of the stream.

From my experience of about fourteen years, during which I have never used bait for trout or black bass fishing, I am satisfied that color of gut has nothing to do with success or failure. The right kind of flies for the day and the requisite skill is all that is necessary, together with good tackle, to insure good sport in trout or bass fishing.

Some years ago I leased a beautiful pond supplied by a spring creek of the purest water, about half a day's drive from home, which I often frequented. This pond covered twenty acres of ground, and I could nearly at all times catch trout in it, having carefully observed their habits and haunts. On arriving there one afternoon, I was told by my caretaker that a "colonel" from Buffalo had, without leave or license, gone to fish up the creek. From the description my man gave of his "fittings," I did not think he could commit great havoc among my peps, so I let him alone, and did not rebuke his impertinence. He made his appearance on the banks of the pond some two or three hours later, in company with a companion of languid appearance, complaining of delful lack—"noy trout." They were equipped in high boots, and had grand rods, immense fish-baskets and lovely "kinky" flies. I examined the ends of their lines, and found each had a non-descript fly perfectly useless, tied on to the ends of their lines by a piece of gut three inches long. I sympathized with their misfortunes, pointed out the very best places, and bade them go and enjoy themselves. By this time I had about sixty or due trout. On leaving the pond at dusk, I heard that the two had departed for their "ancestral halls" digested.

Whether "color" had anything to do with their want of success, I leave your readers to judge. They were decidedly "green."

C. O. D.

A PERFECT DAY.

I TAKE my rod this fair June morning, and go forth to be alone with nature. No business cares, no roar of the city, no recitals of other's troubles and woes which make the lawyer a human hyzometer, no doubts nor fears disturb me, as drinking in the clear sweet air with blissful anticipations, I cannot throw down the mountain line. As I brush the dew from the bushes around me, I spy in a glade, golden flowers glowing on a carpet of pure green, mingled with snowy stars of white blossoms; with their fragrance comes the liquid bell-like voice of the swamp-robins, hidden from our eyes. Soon, seated in my boat, I paddle to the shade of a tall, dark hemlock and rest there, lulled by the intense quiet. Ever and anon as I dreamily cast my ethereal fly, a thrill of pleasure electrifies me, as it is seized by a voracious trout.

I have long dined trout with flowers and birds, and bright sunsets, and charming scenery, and beautiful women, as given for the rational enjoyment and delight of thoughtful men of esthetic tastes. And if

"By deeds our lives shall measured be,
And not by length of days."

then a perfect life has been lived by many a noble trout whose years have been few, but who, caught by the fisher's lure (to which he was predestined as aforesaid,) has leaped into the air, and shaken the sparkling drops from his purple, golden, crimson, graceful form and struggled to be free, to the intense pleasure of the artist who has brought him to basket, where he belonged.

This resting, and floating apparently between the translucent crystal and the blue ethereal, I have felt the presence of a spirit who inspires me with pure thoughts of matters far above the affairs of daily life and toil of the universe, and what lies beyond the blue sky, and of the mind and soul of man, and his future after death.

I love the mountains, and the meadows, and the woods.

Later, satisfied but not satiated with fair provision of corn and wine, and oil, and my creel well filled, the shadows lengthen, and the day begins to die.

Some day I shall hear no more forever the birds sing in the green shadow of the forest with no more behind the woods I love so well. For the last time my feet will slowly tread this woodland road, and I shall watch for the last time the changing shadows made by the clouds upon the hillsides. Then will come a time when the setting sun will paint the West as the bridegroom colors the cheek of the bride, but I shall not know it, and I shall never again share such hours of peace with the leafy trees. Then, with folded hands upon my quiet breast, my friends will bricly gaze upon my face and I shall be gone. In that last day, so full of deepest interest to me and mine, will be pure.

Filled with such thoughts, I regret that I cannot express them like the poet, whose name I know not, but whose words I well recall:

"Good-bye, sweet day, good-bye!
I have loved thee, but I cannot hold thee;
Departing like a dream, the shadows fold thee.
Slowly thy perfect beauty fades away;
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
It was the color of the tranquil splendor.
Safely thou yieldst to the evening tender,
Who wert so fair for thy last morning ray.
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
Thy glow was the color of smiles and tone,
Vainly at first, and serene in advance,
Ah! couldst thou yet a little longer stay,
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
At thy light gifts my grateful heart remembers,
The while I watch thy sunset's soothing embers
Flie in the West beneath the twilight gray.
Good-bye, sweet day!"

As the balmy breathing night wind begins to blow, I turn my back upon the silver glaucous of the moonlight on the rippling waves of the fairy lake, and step bravely into the darkness of the woods, where I cannot see the places where my foot shall fall, but I know that others have safely passed it before, and that I shall find comfort and home at the end.

Geo. W. Van Stelen.

FLORIDA FISH AND GAME—Gainesville, Fla., Jan. 7.—Have been here at the Arlington, kept by J. B. Wislar, where I have gained more comfort than at any other point outside of Jacksonville. Have good bass (wide mouth) fishing at Big Sink, two and a half miles out. Quail abundant a few miles in the country. Was out fishing yesterday and took with reel and live bait some beauties, none under three and a half pounds, some six and one thirteen pounds. This is not guess work, but verified by that which is often a delusion and a sham—the pocket scales.—J. S.

DIRECTIONS FOR COLLECTING AND PRESERVING FISH.

BY TAILLOR H. DEAN.

1. Wash the fish thoroughly in water to remove the slime and dirt that are almost invariably present upon them, not omitting the in-side of the mouth and the gills. In cleansing fish that have a tough, scalesless skin, or such as have the scales firmly fixed, use a stiff paint brush or a scrubbing brush; for thin-skinned fish, and such as have deciduous scales, a softer brush must be taken. Some fish are covered plentifully with tenacious mucus that is with great difficulty removed by water alone; in such cases a solution of two tablespoonfuls of alum in a pint of lukewarm water will be found efficacious.

2. It is often necessary to preserve fish that are stale, or partially digested and offensive to the smell. Such examples may be thoroughly disinfected by the use of the disinfecting solution of chloride of soda. Use a tablespoonful of the solution in one pint of water. With this wash the gills, and pour it into the mouth and stomach, allowing it to return by the mouth.

3. Inject alcohol in the mouth and the vent to preserve the viscera. Make small incisions in the belly and in thick parts of the body, to allow the alcohol to penetrate the tissues. It is nearly always desirable to remove the liver, stomach and intestines from large fish, and to preserve these separately, numbering them so as to correspond with the fish from which they are taken.

4. It is a good plan to keep freshly collected fishes in weak alcohol for a day or two; a mixture of two parts of 95 per cent. alcohol to one part of water will answer for this temporary immersion. Some species are exceedingly soft and flabby, falling to the bottom of a glass jar or other receptacle, becoming partly imbedded in their own mucus, and rapidly disintegrating in consequence. Such specimens should either be suspended in the alcohol by a thread or string from the neck of the jar or the hook sometimes found on the inside of the stopper, or a bed of excelsior or muslin should raise them from the bottom. These are necessary precautions which will prevent many losses. After the fish have been kept for one or more days in the weak alcohol, transfer them to a mixture of three parts of 95 per cent. alcohol to one of water. Ordinarily this latter will preserve specimens that are not crowded too much at least three months. Some, of course, will remain in good condition still longer; but, generally, three months will reduce the preservative power of the liquid so far as to make a renewal of alcohol necessary. The tendency with many collectors is to overcrowd specimens, and, as a result, museums frequently receive a lot of half-rotten material which is too valuable to be thrown away and is yet always a source of trouble and disappointment. A jar, tank, or case of any kind should never be expected to accommodate more than half its own bulk of fish, and even this proportion will require watchfulness to avoid loss. If a collection freshly caught is to be shipped to a distant museum or private collection, observe the directions about cleansing the fish and preserving the viscera separately if needful, and then use nothing weaker than a mixture containing three parts of 95 per cent. alcohol and one part of water.

5. The extensive collections of the United States Fish Commission are usually packed in copper tanks, which are lined within. The lid of the tank is made to screw in the top, and its diameter is always as great as the dimensions of the top will allow. The tanks (called Agassiz tanks) are made to contain 4, 8 or 16 gallons. Strong chests, of a size large enough to accommodate a 16-gallon tank, are used for shipping; the hinges and hasps of these chests are riveted on; handles are screwed on at the sides, and each chest is furnished with a strong lock. The chest may contain one 16-gallon tank, or two of 8 gallons, or four of 4 gallons, or one of 8 gallons and two of 4 gallons, as may best suit the convenience of the collector. When several tanks make up the complement it is usual to separate them by thin wood partitions.

Cases made of ordinary tinned sheet-iron are much more generally used than the expensive copper cans, and they will answer well enough if the joints are perfectly tight and the top is securely soldered on. Oak kegs, holding about 10 gallons each and provided with iron hoops, are capital containers for large fishes, and they will stand the wear and tear of railway travel better than most other receptacles. Glass preserving-jars may be shipped long distances with comparative safety, but they must be treated, by inventorying them, to insure tightness. The stop of the jar and the rubber band should be wiped dry; wrap the jars in strong paper and pack them in some material that will prevent breakage. When corked bottles are used, tie a piece of bladder securely over the cork. Where seals and sea-lions occur, the throat, as prepared by the Aleuts for example, will be found an excellent covering. It is necessary to wet the membrane to make it pliable. Whenever jars, bottles, or any other small containers are filled with fish which are not provided with tin tags, write plainly with a lead-pencil on heavy Manila or writing paper the name of the place where the fish were taken, the date of capture, and the name of the collector. Put a label of this kind inside of each bottle; it will remain legible for years.

6. Each specimen should be provided with a numbered tin tag, which is to be fastened, whenever possible, by means of a string passed through the right gill-opening and out at the mouth. When the string must be tied around the body or tail of the fish it should be fixed securely and yet without injuring the fish. It is necessary always to fill the receptacle of the collector, in which the numbers corresponding with those on the tags must be entered, with notes as to place, time, and mode of capture, and other particulars which will be more fully mentioned further on. Wrap each fish separately in common coarse muslin (the coarser the better), and tie the ends securely. Do not tie the string so tightly around the body of the fish as to make furrows and wrinkles in the skin.

If tin tags are not at hand, a label written firmly on stout paper with a lead-pencil should be wrapped inside the covering of the fish. It is necessary always to fill the receptacle in which specimens are packed—a bottle or jar may be either filled with alcohol or the specimens may be wrapped in muslin. It is not a good plan to put wax, excelsior, or cotton-wool on top of fish, as it presses them close together and prevents the free circulation of alcohol between them. For long journeys it is desirable to secure better protection than the

muslin wrapper alone affords. This may be gained by placing beds of excelsior or thin wood shavings between the layers of fish and at the bottom and top of the case.

A plainly-written card placed at the top of the box, so as to be seen when the lid is removed, telling its contents at a glance by whom it was sent, will save much trouble when the collection is unpacked.

7. Notes of color, taken from fresh specimens, should be sent with them if the fish are to be described in the museum. The collector should also preserve in his own books a record of life-colors under the catalogue numbers corresponding with the tin tags fastened on his fish. He can then obtain the identification of his species by their numbers and publish his studies upon them at his own pleasure.

8. Local names of fish should always accompany the specimens when obtainable.

9. It is desirable to know whether or not the species is abundant; whether different sizes of the same fish are found; whether they associate in schools or not; whether they are permanent residents or migratory; if migratory, by what routes they come and go; whether they form an important article of food; what they feed upon and what species prey upon them; the depth and character of the bottom on which they occur; the mode of capturing them; the uses made of them, and the various products which they go to form—in short, everything pertaining to the life history or the economic applications of the species should be noted in detail.

10. Before washing the fish look them over for external parasites; examine the gills and the inside of the mouth carefully, as these are favorite situations; these parasites often furnish a clue to the migrations of the fish. Remove them if they can be taken off entire, if not, let them remain, and call attention to their presence in your shipping notes. Preserve the parasites in vials or bottles, and provide them with labels stating from what fish they came and in what situation they were found.

To preserve fish indefinitely in glass jars, observe the following directions: First, select a jar of the proper size to accommodate the specimen amply, without bending or distorting it in any way; put in the fish with the tail down in nearly all cases; the tail may often rest upon the bottom of the jar, or the fish may be suspended from the hook which is now found in the stopple of the modern museum jars; cover the fish completely with the alcoholic mixture referred to in the closing sentence of paragraph 4; discoloration of the alcohol is slight and its preservative power is weakened and calls for a renewal; fishes in alcohol will never make a good show unless the liquid is kept clear and clean. A label giving the name of the fish, place of its capture and name of its captor should be tied on the neck of the jar by means of a piece of narrow tape passed through holes punched in the ends of the paper. The jars must have accurately ground glass stopples. It is best to use no kind of sealing wax to coat the joint of the stopple; simply wipe the glass perfectly dry, close the jar properly, and there will be little danger of evaporation. Do not let the direct sunlight strike your jars, and keep them well removed from stoves, registers and the like.—Proceedings U. S. Nat. Museum.

NEW ENGLAND FISHERIES.

OF the numerous industries of New England that of the fisheries is no doubt the oldest, and possesses much of historical interest. The processes of the fishery have been particularly engaged in it. At numerous times much has been written of it, yet its history, particularly the statistical portion, is much broken, many of the old records having been destroyed with no copies in existence. As early as 1618 we find the abundance of fish in the waters of Massachusetts Bay had attracted attention in Europe. The Pilgrims going from Leyden to England in that year to solicit consent of King James to their going to America, the King inquired, "What profit might arise?" The brief reply was simply, "Fishing." To which King James responded, "So God have my soul, 'tis an honest trade; 'twas the Apostles' own calling." The request was granted. To the fisheries the credit is given of saving the infant colony from starvation, that the first free schools were supported with an income from the fisheries; that the government has always recognized the patriotism, bravery and important services rendered the navy in time of need by the fishermen, are all matters well known. With the growth of the country nearly all the important towns had quite large fleets engaged in fishing, with numerous vessels engaged in foreign trade, of which fish products formed a large proportion. For many generations the business was carried on in its primitive way with no marked change until quite recently.

Of late years many new industries have sprung up that in size far surpass that of the fisheries. A large number of ports have given up the business, others have but few vessels. The business is gradually being concentrated to a few ports, the export business with the exception of an occasional cargo confined to Boston.

Although fewer ports and smaller fleets are engaged at present, the business continues of importance, with probably as many fish caught at present as at any previous time.

The many new ways of preparing the catch for the market gives employment ashore to a large number of persons, the increased facilities for a catch making good any decrease in the number of vessels, with fully as many persons employed afloat and ashore as at any previous time with twice as many sail.

Before turning to the present it may be of interest to note a few of the changes and contrast the past with the present.

In the past, as at the present time, Boston was known as the chief port of distribution for all the varieties of salt water fish found in New England or Provincial waters. Here in olden time the fishermen came with their products, selling the same to the grocers or from the vessel and taken inland by teams that came from Vermont, New Hampshire, and other parts of the country, and then to the city and its provisions. Dry fish was handled loose or tied up in bundles, while mackerel and other pickled fish were shipped in barrels, halves or quarters. For many years the catch was made in the most primitive manner, for cool and other ground fish the hook and hand line only being used; the mackerel catch was taken by the gaff, or by "drailing" the latter made by having poles suspended from the side of the vessel, with hook and line attached, the vessel being under sail or no sail, and the hook and line being drawn in, "drailing." With these few appliances the amount of business was annually carried on, the catch, with the exception of the Grand Bank cod fleet, being confined chiefly to the New England coast.

Although Boston was the great point for a market and the distribution of the catch, there was not a single exclusive

bird. This practice you will find will soon make you a better shot than you can ever hope to be if you constantly keep in the openings and trust to the chances there to beings obtained. Your dog will also improve much faster if you pursue this course than if you trust to the chances of the gun with him body and soul, and consequently he will put forth his best efforts and soon learn the grand secret of "working to the gun." This very valuable trait is rarely found in a dog unless the gun has first set the example by working to him. Ponder this well and try to realize what the thoughts of your dog must be when you leave him on his point and, sneaking off to one side, or perhaps to his rear, out of sight, bid him put up the bird which he knows full

CARVER.—London, Jan. 17.—In the three days' shooting match at 1,000 lards, between Dr. Carver and Mr. Bingham, begun yesterday, the former to-day scored 237 birds, and the latter 244, making the total for the two days: Dr. Carver 573 birds, and Mr. Bingham 367.

The Maxwell ranch contains 1,700,000 acres of New Mexico land, and the Atchison, Topeka and Santa Fe Railroad passes through it. The man whose name it bears got it by marriage and by purchasing various interests. He has put it into an English stock company, and a fence is being built around it, preparatory to the raising of blooded stock on a large scale.

THERE is a great deal of fox hunting in the western part of Massachusetts, particularly in Franklin county, among the mountains. This winter has been a good one for the chase, the mild temperature having caused the foxes to appear freely. Trapping is not generally practiced, but the chasing is done afoot, with hounds, and a run of ten or twelve miles is not uncommon for a brisk pedestrian. The men who engage in the sport make a pretence of doing it for profit, but as the skins sell for only 50 cents to \$1.50 each, and cost a day or two of hard work, it would seem to yield rather inadequate remuneration.

ADVERTISEMENTS.
Transient advertisements, 25c. a line for first insertion, and 20c. a line each time thereafter.

Eight words to the line; fractions of a line count as a full line.

Advertisements received later than Tuesday cannot be inserted in the issue of that week.

SIMPSON'S NEW FISHING TACKLE CASE.

A want long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his spoons, hooks and lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections.
Size—Box: Length 12, width 7 1/2, depth 4 1/2 inches; Trays (4): Length 7 1/2, width 4, depth 1 1/2 inches; Top tray: Length 11 1/2, width 7, depth 1 1/2 inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-rook, and each case packed in a neat box and sent on receipt of \$4.00. To Clubs taking six at one time, \$24.00. Send for Catalogue of R. H. SIMPSON, 96 Fulton Street, New York.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the *FOREST AND STREAM* point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The *FOREST AND STREAM* will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the *FOREST AND STREAM* is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the *FOREST AND STREAM* a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the *FOREST AND STREAM* that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the *FOREST AND STREAM* form two volumes each year, of twenty-six numbers, or 600 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five for \$16. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

TO SPORTSMEN:

The Pennsylvania R. R. Co.

Respectfully invite attention to the
SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM EAST TO WEST POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF
Pennsylvania Railroad Comp'y
also reach the best localities for

Gunning and Fishing

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, KENNOVA, BEDFORD, GRESHAM, EASTON, MINNEAPOLIS, and other well-known resorts for

Trout Fishing, Wing Shooting and Still Hunting.
Also to:

TUCKERTON, BEACH HAVEN, CAPE MAY, SOQUAN, and points on the NEW JERSEY COAST, FOR FISHING FOR SALT WATER SPORT AFTER FIN AND FEATHER.

P. FARMER, Gen'l Ass't. Agent.
FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER
TO THE BEST HUNTING AND FISHING
GROUNDS OF VIRGINIA AND
WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,
through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Pennsylvania Extension in the summer of 1891 affords

THE ONLY ALL RAIL ROUTE TO THE
FOURTOWN CENTRAL,
and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

H. W. FULLER,
G. P. & T. A., Richmond, Va.

OLD DOMINION LINE.

THE STEAMERS of this Line reach some of the finest waterways and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island and points on the Peninsula, City Point, James River, Currituck, Kitty Hawk, Currituck, etc., etc. These points can now be reached by rail and stage from Norfolk, Florida and the mountainous country of Florida, etc. Norfolk steamers sail Tuesday, Thursday and Saturday. Lewes, Del., Monday and Thursday.

FARRAH, Jamaica Plain, Mass.

Publications.

THE FARMER'S

ANNUAL HAND-BOOK

For 1882

Compiled by H. P. Armsby, Ph. D., Professor of Agricultural Chemistry in the State of Ohio; and E. H. Jenkins, Ph. D., Chemist to the Connecticut Agricultural-Experiment Station.

It is the object of this little book to bring together, in a convenient, portable, and cheap form, much information of great practical value to the farmer, by which he is enabled to estimate, for estimating the amount of manure produced on the farm; frequency and duration of heat in farm animals; suitable age for weaning. Calendar for determining the period of gestation of farm and domestic animals—mares, ewes and she-goats, sows, bitches, and cats—largely based on the observations of American cattle-breeders. The stock-breeder's register, containing columns for entering name or mark of animal, when served in cow, when dry; from 1 to 12, when due, date of coming in, sex of young; remarks. The average composition of fertilizers and fertilizing materials as sold in the American market, compiled from American analyses, with remarks and explanations.

Feeding standards for farm animals; tables of the composition of fodders and feeding-stuffs, compiled chiefly from American analyses; the average digestibility of fodders and feeding-stuffs. The above is but a part of the contents of this most useful little volume.

10mo, cloth. Price, 50 cents. For sale by book-sellers; or will be sent by mail, postage prepaid, on receipt of price, by

D. APPLETON & CO., Publishers.

1, 8 & Bond Street, New York.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with other muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choise Hore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, 6 1/2 to 7 1/2 fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle E.g. "Sea-Shooting."—FFG and FFG. 7 1/2 fine grain, for long-range rifle shooting, the FFG and FFG. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb., and 6 lb. canisters, 6 1/2, 12 1/2 and 25 lb. kegs. E.g. coarse, FFG. 2 1/2.

Dupont's Sporting, Mining, Shrapnel and Blasting powders of all sizes and descriptions. Special grades for Export, also Rifle, Cartridge, Muzzle Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet powder, U. S. Government Standard powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S E.g. or FFG. for long-range rifle shooting.

The Parker Gun.**Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.**

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. MANUFACTURERS OF

Gunpowder**Hazard's "Electric Powder."**

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five copies for \$16. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Sm. Terquem, 15 Boulevard, St. Martin, Paris, France.

FOR SALE BY NEWSDEALERS EVERYWHERE.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

"WE, THE PEOPLE."

AND why not? Why shall not we, the people, demand of our representatives at Boston, at Albany, at Lansing and Springfield and San Francisco and all other seats of legislation, the due protection of our, the people's, interests, by the conservation of our game and fish?

Laws prohibiting the destruction of game in its breeding season and of fish on their spawning grounds are not for the advantage of any narrow class or clique. They are for the good of us, the people.

Take this broad, level ground: the greatest good to the greatest number. Let there be no misapprehension about it, no popular misconception of the "game laws" and consequent inference to their importance and justice.

The only "class legislation" in game laws is in this, that such statutes are provided to protect the people from the ravages of certain lawless classes, whom nothing short of stringent laws stringently enforced can keep within bounds. These classes, as set forth in a communication elsewhere, comprises "the wolf," the poacher slaying the whole year round, the unscrupulous guide, the would-be "Nimrod," and the unprincipled hotel purveyor of game out of season. Queer company here; lawlessness makes strange bedfellows—the unkempt riff-raff of the "settlement" elbows

the city greenhorn greedy for gore. Class legislation? Yes, just as the statutes against highway robbery and murder are "class legislation."

Look at the other side. Who are the men most earnest in the endeavor to secure that protection which nature demands for the game of our fields and forests and the fish of our lakes and streams? They are business and professional men, tradesmen and mechanics, property owners and farmers—the respectable portion of the community—the people.

On the one side is respectability, thrift and worth; on the other, lawlessness, shiftlessness, vagabondage. There is no disputing the correctness of this classification. The lines are distinctly drawn.

Then how are we to account for this everlasting, annual wrangling over game laws; the constant tinkering of the old laws, the substitution of new, and the total disregard of all, both old and new? There are several partial explanations. One is, that the issue has not been clearly defined. The people have been deceived by this false cry of "class legislation," they are blind to their own interests, their apathy is deep, and from it they can be roused only by the persevering efforts of those who recognize the demands of the hour. Again, it is most unfortunate, that in some States the societies which, with much sounding of trumpets, have appeared before the public ostensibly to accomplish this very work, have proved recreant to their purposes, belied their professions, and worked incalculable injury to the cause so compromised. How best to overcome this apathy and prejudice is the difficult problem which must be solved before we can have any adequate system of game protection. The signs of the times are not discouraging. Progress is the report from one State and another; for the people are awakening, surely, though it may be slowly, from their indifference, and the right men are guiding the movement.

THE BRITISH CHALLENGE.

THE formal terms of the match under which the British marksmen would like to try conclusions at rifle shooting with the militia men of this country are now before us. They propose a trying test, as severe a one as military rifles may well be put to, and those who go to Wimbledon in July next to uphold the credit which American riflemen have already gained abroad must be very proficient indeed if they hope to make good stand against the experts who throng that common on the suburbs of London year after year. The word has been passed throughout the ranks of the half million volunteers of England and the Kingdom asking for the best and most tried men. This is not a match to which the National Rifle Association of Great Britain in its official capacity gives little or no support, as were the long-range international contests. Instead, it has its origin in a meeting of the Council of that organization. The whole shooting interest of Great Britain is backing the proposed competition, and it is in fact a test of the work which has been going on for a score of years past at Wimbledon and a hundred tributary ranges throughout the country. To be beaten would require a very good excuse to escape the charge of unfaithful stewardship on the part of these managing functionaries.

But apart from any thoughts upon the possible outcome of the match, it is fairly now within our province to discuss the conditions as they have been laid before us. We have heretofore pointed out our faith in the standing position and in the duty of the American Committee to insist upon some shooting from a fair off-shoulder attitude at some stage of the match. That view, it seems, struck the committee favorably, and the cable acceptance of the conditions does so with the proviso that the 200 yards range shall be shot over from a standing position.

A curious sort of disturbing element seems to have been flung into the matter by the demand for a guarantee that a British team shall visit this country next year. There was no call for any such demand. If the visiting team should win a victory, there ought to be no need of a second invitation to have a team of British Volunteers on our ranges in 1883 looking for a chance to wipe out the defeat. If our team should return the defeated one, then the full measure of retaliation and vindication will not be had until an American Militia team returns as victors from Wimbledon range.

Many contingencies may arise between now and the proper date for a match in 1883, which would make this exacted guarantee to send a team and our implied guarantee to receive such a squad extremely inconvenient and awkward to carry out. Of course there is much in the past which will make this demand for something like reciprocity in the matter of visits appear just. We have our long-range record to look back to, and a contemplation of the present status of the International small-bore championship does not reflect very favorably upon the vaunted British pluck. The "Palma" to-day rusts in its vault because British manufacturers cannot turn out a weapon accurate enough, or British marksmen cannot organize a team perfect enough to capture it. Still we must bear in mind that the invitation of the British Rifle Council is for a single match to be shot next July. While we sincerely hope and feel confident that it will be but the first of a series of annual trials before the butts, there is nothing to indicate that those who framed the invitation had any such idea, and the American Committee impugn the motives of their fellows across the water when they tack on such a demand to their acceptance of an admirably concise set of conditions.

Simple though they be, these conditions contain much to be studied. They open up an entirely new field of effort to many who thought themselves excellent military shots. The long range shooting must be carefully studied, and here we think that the experience gained by the long range men with their finer rifles will stand in good stead. There is no reason why team shooting with military rifles should not have as excellent an organization and the same perfection of detail which marked all, and more particularly certain of our old time winning teams. These match conditions carry with them all the rules and regulations of the English Rifle Association, and in the matter of targets it must be borne in mind that the sub-divisions are quite different from those in vogue here, and this difference will be apt to give the American marksmen practicing on our home targets following the Creedmoor model a wrong and deceptive idea of their progress and ability. In rifles, too, it will be the easiest thing possible to stumble over some obscure clause of those complex Wimbledon regulations which may work considerable annoyance, which is readily convertible into bad scores. There is ample time now, not only to look over our own field of selection, which is poor enough at best, but the opening of the season for out-door practice should find us thoroughly up in all the minutia of the conditions likely to come up as controlling the fight. It is especially important for our American shooters to find out just where our friends, the enemy, may be. It is not easy to make comparisons since changing targets on the other side destroy all continuity of record, while on our side we have hunted in vain to find a record of twelve men at one time using military rifles over the three long ranges. Still there is a sort of guide in the reports of the Queen's Match at Wimbledon, and a study and tabulation of these will show us how far we are behind. American pluck has done much on this subject in the past. The great impetus to modern rifle practice on this side the Atlantic grew out of the acceptance of a challenge when the accepters had neither men nor rifles to make the semblance of a fight. We have shown what may be done in the way of overcoming great obstacles in the past; there is a great one before us now. We shall be disappointed if it be not in time surmounted, but we are certain it will not be overcome except with hard, well directed effort.

THE CONNECTICUT COMMISSION.

THE terms of two of the Fish Commissioners of Connecticut have expired, and it pleases us to learn that Dr. William M. Hudson has been re-appointed by the Governor to fill his own vacancy. Dr. Hudson has been connected with the fish commission of his State since its formation, and has been its most active member. During this time the commission has accomplished much good work and is now in condition to do much more, having the experience of many years to guide them. The re-appointment of Dr. Hudson is for four years, dating from August 26, 1882. He will no doubt, accept the burden, for his heart is in the work which he has seen develop from a very small beginning to its present status, with no indication of its having reached its maximum. In this appointment the Governor has done wisely.

GAME PROTECTORS.

SOME of the New York game protectors have shown themselves to be great frauds. Others, like agent Dodge, have done efficient and faithful service. These men were not well selected. Localities which stand most in need of such officers were entirely neglected. The number of game protectors is insufficient.

Is it expedient to increase the force?

No, if Tom, Dick and Harry are to draw the salaries of the office, and wink when anything is said to them about moving their lazy stumps from the stove.

Yes, by all means, if the right men can be appointed, who will do their duty, or who can be made to do it.

It has been suggested that the usual State fishculture appropriation be assigned for protection of the fish already on land instead of for propagation of more, to go into the poacher's net. It is not advisable to cut off the funds for the maintenance of the regular work of the hatching house. But it is highly essential that both propagation and protection, should be adequately provided for. An increased fund should be assigned for the game and fish protective machinery of the State. The force of game constables should be trebled. But we don't want public money thrown away on skunks; there must be some way of holding the game protectors to account.

Unless this matter is taken in charge by the proper parties, and carried through by a well-matured and effective plan, the people of New York State will be no better off after the Legislature adjourns than they are now. We publish to-day a second letter on the subject. The writers are in earnest. They are backed by influence. Why can they not themselves form the nucleus around which shall gather the influence necessary?

If the great body of men in this State who are interested in these matters could be brought together to act in unison, they could ask and receive anything they wanted at Albany. What hinders such a union of strength?

WAB RELICS.—An interesting chapter might be written on the manufacture and sale of different bogus relics. A Chattanooga correspondent tells us of an enterprising genius dwelling on the famous Lookout Mountain, Tenn., who has struck a veritable lead mine. He buys up old lead, molds it into bullets, which are fired against the rocks, then gathered up again and smeared with mud. These eloquent "relics of the war" are then disposed of to curiosity-seeking visitors at ten cents apiece. We have in our possession several genuine war bullets, which we gathered ourselves from the rocks and fields, or dug out of the trees of Lookout Mountain. Bombshells, bayonets, an occasional rusted musket barrel, and such souvenirs of the strife often rewarded our expeditions. During our stay on the Mountain a paper-weight formed of such bullets was sent to the poet Whittier, to which he responded with some graceful verses. We trust that the good man may never be imposed upon by the base counterfeit relics of these degenerated times. What a mean, lying thing a manufactured war relic is! And what a mean man it takes to make and sell them!

THE WOLF SHOOTING CASE.—Some weeks ago we reported the case of a young man named Wolfe, one of the thought-it-was-n't-loaded idiots, who, as a good joke, fired a charge of buckshot into the young lady upon whom he was calling, in Peru, New Jersey. Much to the astonishment of her surgeons the girl recovered; but Wolfe is not yet out of trouble. He was arrested last week and is now committed to be held on a charge of atrocious assault pending the action of the Grand Jury. We shall watch this case with some interest. Things have come to a sorry pass if criminal carelessness of this kind is allowed to go unpunished.

AN ANTIPOACH PARK.—In another column will be found the announcement of a most important movement to protect from vandalism a portion of the great North Park of this State. It is said that corporations have no souls. The State of New York certainly has no soul to appreciate the importance of taking care of her great sanitarium regions; and it is, therefore, a most fortunate thing that private citizens are found who can see forward to undertake the work neglected by the State.

THE BELGIAN DEVIL.—A few weeks ago we gave an account of a machine called a Belgian devil, which was used by the fishermen of Belgium for cutting the nets of others in the North Sea and letting the fish into a net of their own which followed the vessel. A bill has just been introduced into the Belgian Chamber making it a penal offence to manufacture, sell, take on board or use engines for cutting or destroying fishing nets at sea. The fishermen of England and Germany have been sufferers from this practice and have made complaints.

DOG PORTRAITURE.—We have recently been shown an oil portrait of the Willoughby pug "Buster," the property of Mrs. C. Berdan, of Hackensack, N. J. The picture, which is exceedingly well done, is the work of Mr. W. Holberton, who is to be congratulated upon the life-like expression he has succeeded in giving to the portrait. As every one knows who has ever tried to paint a dog, the constantly changing expression of the dog's face renders the task a most difficult one.

OFF TO THE SOUTH.—Dr. S. Schoonmaker sailed last week for his annual Florida tour, and promises to give the readers of FOREST AND STREAM some notes. Messrs. E. M. Messenger, of the Bromfield House, Boston, Morrill and Bonnell, of the same city, and D. Greeley, of Nashua, N. H., make up a Florida party. They will stop in North Carolina for a while and will not return to the North before March.

DEATH OF MR. ROCKWELL.—Those who knew Mr. Henry E. Rockwell, for many years the Secretary of the United States Fish Commission, will be pained to learn that he died suddenly of heart disease at his residence in Washington at eleven o'clock on Sunday night last. Mr. Rockwell was seventy-one years of age and was a kind and genial gentleman.

A NEW RIFLE FIRM.—The Marlin Fire Arms Co. has been organized at New Haven, Conn., with Chas. Daly, president; J. M. Marlin, treasurer; and Joseph J. Sweeney, secretary. The company holds the patent of the Marlin arms, which they will manufacture.

TRAINING VS. BREAKING.—The marked favor with which the earlier chapters of this series was welcomed, has been followed since by many demands for them in a permanent form. To meet this demand, the papers will be republished as a book. Due notice of its issue will be given in these columns.

READY NEXT WEEK.—The Forest and Stream Publishing Company will publish, February 2d, "Shooting: Its Appliances, Practice and Purpose." By J. D. Douglass. The volume will be handsomely printed on fine paper and bound in cloth. Price, \$3. See further announcements next week.

A NATIONAL SPORTSMEN'S ASSOCIATION is proposed by the Michigan Association. There was once a national society, which has never been formally disbanded. For all that we know to the contrary, however, it is dead.

THE MICHIGAN ASSOCIATION held its annual convention last week. A full report from a special correspondent will be published in our next issue.

Just as we go to press we are handed the following copy of a dispatch received to-day (Wednesday), by General Wingate:

LONDON, January 25.—Wingate, N. R. A., N. Y.—We accept standing 300 yards. Return match must remain open question.—HATROD.

GAME PROTECTION FOR THE PEOPLE.

ODDENSEBURG, N. Y.

Editor Forest and Stream:

"Syracuse," in your issue of the 12th inst., has struck the key note of game protection. His utterances are a condensed elaboration of the whole subject—of its justification and the means to make it effective. They express the revival from a languishing interest of large numbers whose efforts in the past have met so indifferent success as to have generated a sense of disappointment and disgust, without even the sorry alleviation of the thought that during their lives, at least, the game of the State may not be wholly exterminated.

I believe the utterances of "Syracuse" are the culmination of sentiments which in the last half dozen years have been surely enlisted popular support. Assuredly, their expression follows, and is the outgrowth of a fact generally understood by all, that the question has come to be one of protection or extermination. The issue is at last clearly defined. It cannot be further delayed.

Shall we enforce the laws and protect and perpetuate the game in our forests and streams for the good of all, or shall we utterly abandon it to the wanton destruction of the few who make a trade of lawlessness, and by indiscriminate slaughter in their wretched vocation, scandalize every sentiment of duty, humanity and decency?

And, just here, something more than mere general statement is demanded. It should be borne in mind that the public has come to be fully informed and appreciative of the great abuses existing, and of the methods and times of their perpetration. Indeed, the offending classes and of them only (do I speak in this letter) and their methods have been so ostentatiously paraded as to produce with the most indifferent a sense of outrage and resentment.

Count first the class of persons living in the vicinity of, or hanging about the skirts of our forests, whose acres—when they possess any—are abandoned to thistles in the indolence of lives demoralized for mainly industry by years given to the vagabond business of hunting and fishing. They prey with the voracity of the wolf upon forest-life, struggling for existence with the severities of season and weather, and make their villainy most telling when the game is least capable of self-protection. Their slaughter is indiscriminate and wholesale; and the "groceries" for which they exchange spoils are a new incentive to its repetition. Hides are so much apiece, though there be not meat enough on the carcasses to stay a stomach in the stripping.

"Wolf!"—indeed the name is already utilized.

"He is a wolf," already signalizes the creature—captain of one to half a dozen dogs, who in the months of spring and early summer makes havoc on the land and in the water. By every known appliance he slays mothers bearing young, or tenderly nursing their off-pring by their sides—kills day and night; for the shades of night which invite forth to the water's edge the mother doe, and seem to protect as with a mantle her tender kids, are by torch and shot-gun made the most certain helps to slaughter.

"He is a wolf," signalizes the "cruster," the wretch who tracks the frozen snow, hunts out the nearly starved deer, incapable of flight or resistance, instinctively luddled together for what protection that should give them, and with club and axe knock out their brains.

Why has it never occurred to the caricaturist to present, with the mastery of his art, the salient features of this sport to general appreciation? Never mind the scandal it would fasten upon "sportsman's associations," "game protective

associations," and their carnivals at the trap and in the tavern, but give the details to the public—the people—for it is true and of universal application that "the eyes of the ignorant are more learned than their ears." This business of the night-hunter and the cruster is of a species of horror that would not escape the merest tyro in its exposition.

Count, again, by hundreds, others of a class scarcely less iniquitous, the masters of as many dogs, who habitually and industriously violate the law by killing game and fish in the close season, and, in St. Lawrence county (where that iniquity, bounding, is forbidden at all times), by dogging deer to the water, to be there slaughtered for the amusement of those who can pay them for it.

These classes constitute the bulk of the army of guides. Their equipment—each a boat, dog or dogs, and a knife. In camp they are servants of all work, devoted to the tastes and wishes of their employers by presents, promises and pay. Nominally, but unjustly, classed with them are men whose instincts and feelings are averse to all this lawlessness and outrage, and who will bravely and earnestly second any efforts for reform.

As generally happens in the gradations of society, another class of persons is equally guilty with the guide, and without his excuse. This is the tourist class, those who resort to the woods to violate the law for pleasure and amusement. An army without taste for, or knowledge of, wood-craft, generally alien to the best sentiment and passion that covets forest-life for its proper and peculiar value and fascinations; and in their experience there, the victims of delusive hopes, of a thousand and one annoyances and of impositions they never know and so never appreciate. Fashion is the bane of this class. It is fashionable to go to the woods; once there, what can they do—what appreciate? Why, the chase, and "the chase" for them is the poor panting game driven by dogs to the extreme of endurance, and then made the victim of an instinct that seeks safety in the water, there to be mired, utterly feeble, helpless and forlorn.

To discriminate and appropriate the odium of this business is impossible. It is of such a grade of iniquity as renders all principals—though detestation attaches in the inverse order in which they shall be named—dog, guide, *per se* tourist.

Count again another class, the proprietors of public houses kept along the line of the forest-lakes and rivers. What a loss of caste to be without fresh venison steak in any season! And count with the offenders in this class the guides and others retained about their establishments in the close season for it is to be feared that the *best* of the woods, who supply the tables with "mountain mutton."

Quite a formidable combination, you perceive—formidable in its interests, connections and dependencies, but formidable to the better sentiment of the community only in that absolute indifference, which it is a consolation to know has passed away.

The institution of the game constable was a gratifying evidence of public attention properly directed, and so, too, is the prompt condemnation of that method in practice. Away with the whole hatch of local game constables. As a class they wink at, stand indifferent, or pander to the violation of the law, and this disgraces its administration.

Officials representing the State and its citizens, uninfluenced by local influences of fear, favor, affection or reward; appointed to office in the interest of local protective effort, and recommended by integrity and capacity rather than by political partisanship, are the proper guardians of the public interests in the protection of game.

That the present system of local officials, that "makes annual appropriations for hatching and distributing fish only to have them illegally caught" with impunity. An insane theory that, which spends the people's money for purposes rendered abortive from laxity in administration. The veto of the bill that passed the last Legislature amending the game laws was a positive service to game protection. It was a rebuke to the chronic listlessness that regales itself with the ridiculous notion that to pass laws is to protect fish and game. It virtually and truly asserted the adequacy of laws as they are, and commended their vigorous enforcement. And to this end any legislative aid in the creation of executive officers necessary will not be withheld.

That a larger number of State game protectors is required is unquestioned. That the whole northern section of the State—a forest border and peninsula of hundreds of miles, a region of mountain, lake and stream containing the principal fish and game of the State—was ignored, as were principal markets of illicit trade, is an indication of the influence that the apoplexy of the present crop of game protectors. Such abuses may be prevented in the future. Let us ask for thirty more game protectors. Their services, with the surveillance of local clubs, will organize a public sentiment of obedience to law, and secure for the fish and game in forest and stream a protection like that of our cattle in the pastures. "Syracuse" suggests "local clubs," not "local sportsman's associations," and you observe, there is an absence in his letter of any word or thought that suggests game protection with class or class privileges. He pleads for all—the people. Let us relegate the word sportsman and its derivatives to the knights of the turf and their congeners. It has contracted an odium—it has. It suggests class, class privileges and something worse. Besides, it has no proper significance to, no large affiliation with, the broader and better purposes and results of game protection which concerns the people in some of their broadest and best interests.

In the crusade against the poachers let us say "We the People." Why not? We have the same flat of the sovereignty written on the public statutes, denouncing penalties and imprisonment upon the destroyers of their game, and we have the duty of every good citizen to do what he may to bring offenders to justice.

There should be nothing in the purposes of those discharging a public duty like vindictiveness or gratification of personal resentment. There has been hitherto an indifference, an inattention to the enforcement of the game laws which has amounted, practically, to toleration. The true purpose should be to draw the public into the position, and invite the cooperation of all for the common benefit. To this end general amnesty should be extended. Let the offences of the past be remembered only in aggravation of the offences of the future.

Let us recapitulate:

1. The enforcement of the laws for the protection of fish and game for the common good.
2. The organization of local clubs devoted to that interest.
3. Legislation authorizing the appointment of additional game protectors, to be recommended by local interests most desiring their services.
4. General amnesty for all past offences, and so the co-operation of all for the common benefit.

In these purposes "Syracuse" will be supported by

ODDENSEBURG,

The Sportsman Tourist.

SIX WEEKS ON THE HEADWATERS OF THE
YELLOWSTONE.

AUGUST FIRST found Ned and myself leaving the Union Pacific train at Lawlons. We had already engaged Tom Sun and Lew Simmonds, two well known Rocky Mountain hunters, as guides, with eight ponies—four for saddle and four for pack animals. As there was a space for sixty-five miles between Lawlons and Tom's ranch on the Sweetwater, where we were to make our headquarters, it behooved us to make due preparations for this little journey, being "tender-foot." The considerate Tom had anticipated our tender-footed condition, and provided a lumber wagon to transfer us to his ranch; but, scorning the hinted appellation and the farm wagon, we ordered our traps and provisions to be placed therein, and, mounting our ponies, rode gaily and triumphantly out of the village into the wilderness. Tom was the only ranchman between Lawlons and the North Pole, as far as we were concerned, during a six week's tramp through the vast ranges of mountains lying between the headwaters of the Yellowstone and the North Platte. What a novel and exhilarating ride was that, the clear bright atmosphere and views of the rugged and peculiar scenery of the Rockies. We camped for the night in an old deserted log hut, and slept the sleep of the tender-foot after his first day's effort to keep pace with the hardened native. Within a few miles of the railroad we began to see antelope—singly, in pairs and in herds; and it was the exception rather than the rule to be out of sight of this game during our ride trip. Occasionally a jack-rabbit would start out from almost under our horses' hoofs like a flash, and gracefully bound away over the sage-brush. Occasionally we would flush a covey of sage-bens, which would lazily fly a short distance and alight. Next morning, bright and early, we were again in the saddle. We encountered a number of shallow alkaline lakes filled with wild (Canada) geese, but so tame were they that we easily approached our horses within fifty or seventy-five yards of them. About 5 p. m. we arrived in sight of the ranch and the beautiful valley of the Sweetwater.

After day's preparation and rest at Tom's mountain home, we took up our line of march for the Rattlesnake range, where we were promised elk, mule deer, and perhaps a grizzly or two. For a long distance our course lay up Sage Creek; but toward noon of the second day we struck into the foot-hills. From this time forward Excelsior was the motto forced upon us. "Onward and upward," over rocky cliffs and through deep canyons, until at last, as it seemed, that we could go no longer, we entered Tom's welcome shade of balsams, beside the clearest of tumbling, laughing rivulets, 9,000 feet above the sea level, where nature, in all her virgin purity, reigns supreme. Oh! tired dwellers in the whirling, dusty, fever-stricken city, what would you exchange for a few breaths of this life-giving mountain air? For a drink of this pure and sparkling water? But why waste words on you? Few of you would appreciate it. Habit has so enslaved you, that the best gifts of God to man you turn away from, preferring the idols you have set up.

"Why I am about to relate sounds like a 'big whooper' to an Eastern man, and I do not expect to be fully believed by any one who has not been placed in similar circumstances; but, nevertheless, it is true to the letter, every word of it. We had eaten heartily and arranged our tents for the night and had sat down to smoke our fragrant pipes when strange noises broke the stillness of the twilight hour. 'What's that?' exclaimed this ever-watchful 'big whooper,' replied Tom, as he gave an extra large puff from his meerschaum. 'Calves!' echoed Ned in astonishment. 'What? a herd of cattle way up in these mountains?' 'They are God's own cattle,' says Uncle Lew, solemnly. 'Come,' says Tom, 'I will show them to you,' and proceeding a little way up the stream, we suddenly came upon a herd of cow elk with their calves feeding quietly on the mountain side. After feasting our eyes upon them until the shadows of my shirt slung from our view we returned to camp. We had already learned to outwardly show no signs of surprise before Uncle Lew at any novel sight or occurrence, as our critical guide's level of excellence seemed wholly to depend on the tenderness or non-tenderness of the poetical extremities. So we said nothing, but wrapped ourselves in our blankets and 'lay down to pleasant dreams.'

As the first rays of the morning sun kissed the surrounding mountain peaks Tom, Ned and myself were in the saddle. Proceeding up the canyon about three miles, we left our horses and had gone a few hundred yards when the peculiar sounds beyond the night before greeted our ears. 'Duck noise,' says Tom, and we stood like statues awaiting the coming band, which approached us on a slow walk, fling past us within forty yards, apparently without fear. Occasionally one would stop awhile and look at us curiously, as much as to say, 'What kind of elk are you, anyhow?' There might have been two hundred in this band, more or less.

Now the reader undoubtedly begins to query something in this wise: Didn't you get any hunting? If so, what a pair of blockheads you must have been to have let all of this duck game pass by without firing a shot. Let me explain. It is true neither Ned nor myself fired a shot at them, and this is the part of my story that I fear will be looked upon with a great deal of incredulity; but I assert once more that not a gun was fired at this family of elk. I think the reason was that while gazing in wonder at this magnificent pageant a side show was going on in our rear. Another herd had approached the vicinity of our horses and, becoming frightened, they had stampeded. This caused so much confusion that we returned to look after our horses. Another reason why we did not kill any of the elk was the fact that one animal would easily supply our larder for a week at least, and we were satisfied that we could get one whenever we wished, which we did in the course of the day, as we came upon a large band lying down, looking in the distance like a vast herd of mules. Not selected a fine bull, whose antlers will one day grace his pleasant home in Connecticut. I dare say. One shot from his Winchester did the work effectively. We cut out the tenderloin, sirloin and tongue, hung the huge animal on the limb of a tree, and returned to camp well satisfied with the day's sport.

We spent several weeks in this delightful mountain camp, taking great pleasure in studying the habits of the numerous large animals we found so plentiful, for as to hunting them, we were not so cruel as to slaughter them for the mere sake

of slaughter. Whenever we wished a change of diet from elk (tenderloin or roast venison) a few hours would allow ourselves to bring down a fat buck of the mule-deer species. Did we long for mutton, a trip to the highest surrounding mountain peaks, would be almost sure to gratify that inclination. Antelope were always at hand. Sage hens were not favorites with us, their flesh partaking too strongly of the sage flavor, excepting the young chicks, which were very fair eating. But the willow grouse, coveys of which we often found, were delicious. We met in this vicinity no grizzlies, although their "signs" were frequently apparent.

One day, while riding up the bed of a stream flowing down a canyon, we observed far up the mountain side a large band of cow elk, apparently very much disturbed from some cause. A portion of them would suddenly be thrown into confusion, and running down the mountain incline for a short distance would there as suddenly stop and go to feeding again. Then another portion of the herd would go through the same manoeuvre. As this process was gradually bringing the whole band in our direction, we tied our horses, and walking to a good point of observation, awaited the result of this singular process. At length, the riding up the bed of the stream, a short time before they arrived near enough for us to determine the cause of their agitation. At length we observed the largest bull elk we had yet seen, running from one end of the line to the other, and driving the cows after the manner of a Texas cow-boy. Gradually they approached the stream, where the cows drank copiously, when the old patriarch seemed satisfied and drove them no further. Admiration for the sagacity, indomitable perseverance and fatherly care of his flock was uppermost in all of our minds as we stood gazing at this magnificent creature. But must I write it? Yes, for this is a true narrative. These thoughts in my mind gradually changed to those of a selfish desire to become the owner of his antlers. It took but a moment to level my rifle at his heart. At the report, he jumped into the air and fell to his knees, then gathering himself up, ran into a thicket, tangled undergrowth of willows on the margin of the stream. Without thought of the consequences that might ensue I ran in after him. I soon found myself entangled in the brush-wood and could proceed but slowly. Suddenly I was surprised to see him jump from the ground, where he was long hidden, not a dozen feet from me. With glaring eyeballs and an angry shake of the head, he was about to make a rush upon me. Retreat was impossible; and I knew that with a single bound he would be upon me. I lost no time in putting in my work. The "pump handle" on my .776 model Winchester "flew lively," and the noble animal sank to the ground. His antlers, which measure five feet and one inch in length, now grace my office in Chicago, and I will cheerfully show them to any of the readers of this sketch. To preserve and prepare them for transportation on pony-back, Tom first skinned the neck and head, unjointed the neck, cleaned the flesh from the skull and, with a small saw, which we always carried with us, divided the skull between the antlers, through the tip of the nose into two equal parts. The two sides could then be laid and tied together, taking up comparatively but little space. The taxidermist easily bolted the two portions together into their natural positions.

One lovely afternoon as we were returning to camp, we came in view of a grove of aspens growing down in a valley, said grove surrounded by a large and comparatively level area. At the suggestion of Tom, we rode up as nearly as possible to them, then put our ponies into a lively gallop in their direction, whooping and yelling at the top of our lungs. We succeeded in stampeding them, and with frantic efforts they attempted to rush across the plain, but their proximity to each other retarded their movements to such an extent that we were soon tiding in the midst of them. Then their condition was indeed comical to the majority of the readers of this sketch. They were so much frightened that they began to crowd and touch them with our feet and hands, and they would respond to a lively kick with the most ludicrous sounds, exclamations and efforts to escape us. At last they seemed to appreciate the condition of affairs and began to scatter, and as soon as they had sufficient space to fully use their supple limbs, they quickly left us behind.

After becoming surfeited with the sport in this vicinity we broke camp one morning and started for the buffalo range, lying between Lawlons and the Wind River Mountains. Passing by way of Tom's ranch, we left our trophies and replenish our depleted quartermaster's department. Then, taking a more northwesterly direction, we passed "Devil's Gate," a huge perpendicular chasm of solid rock, several hundred feet high and half a mile long, nearly meeting at the top, through which the Sweetwater flows. We saw, to the once famous "Independence Rock," a landmark of the old emigrant trail. This rock is perhaps two hundred feet high, and is egg-shaped, covering several acres of ground. It is a fine example of the finest volcanic work. As we approached it a jack-rabbit was flushed and started up the steep incline of the rock. By hallooing and firing our guns we frightened the animal so thoroughly out of his wits, that in his spasmodic efforts to get away he made for the highest point of the rock, often slipping and sliding backward. It was most amusing to watch his gyrations, but at length he mastered all difficulties and disappeared over the crest.

That night we camped on the banks of the North Platte, near the Great Platte Canyon. The river being low, we had no difficulty in fording it. The next day's ride was over high mountains, through deep gorges and through lovely green valleys. We arrived toward evening at the head of Horse Creek, which is formed by a large warm spring, the waters of which are impregnated strongly with sulphur and iron. Here we concluded to make our permanent camp, as we had already seen fresh buffalo signs. The next morning we mounted our ponies and started out in quest of buffalo. On arriving at a fine point of view, the Wind River Mountains in view of an extensive plain, with the Wind River Mountains visible in the far distance. Dark spots here and there broke the monotony of the plain, which our field-glass resolved into various sized herds of buffalo, quietly feeding on the sparse bunch-grass. The nearest bunch of them were perhaps three miles distant, and consisted of twenty or thirty bulls. These we determined to approach, which we were easily able to do by keeping behind an intervening ridge, with the wind in our favor. Tying our ponies, we crawled on our hands and knees to the top of the ridge, within one hundred yards of the nearest buffalo. Their huge bodies presented so large a target that it seemed almost impossible to miss them. At a signal, Ned fired at the one to the left, and myself at the one to the right. To our astonishment and chagrin neither of them fell, but with the remainder of the herd started at their peculiar gait down the mountain side. We emptied our magazine into them—twenty-four shots—and but two were apparently crippled, one of which we easily

approached and shot. We found afterward that it required close marksmanship to kill buffalo. With his tongue and hump we were back to camp satisfied.

In this locality we found but few elk, but plenty of mountain sheep, antelope and mule deer. One day, while out alone, I spied a herd of sheep on an opposite ridge, and being anxious to get a shot at a big ram, I tied my horse in the ravine and commenced scrambling up the steep ascent in their direction. I had proceeded about half way when I was brought to a standstill by the loud and not to be mistaken warning of the rattlesnake, observing almost at the same instant, and within a few inches of my nose, a large specimen coiled ready to spring. Two smaller specimens lay near him. It is needless to say that I "fell back," as McClellan used to word it in war times. In fact I was totally demoralized and disorganized, but managed to get to my pony and to camp without further incident. "Buffalo veal" Tom declared to be the most delicious of all game food, so we determined to capture a calf. We found this undertaking one of considerable labor. Starting out one morning we hunted several hours without sighting a calf of the required size. At last, however, Ned and myself observed that Tom had discovered a fine one. Putting our ponies we joined him in the chase. It was long and exciting. Finally Ned brought it down by a lucky aim, and it was after dark that night when we arrived in camp; but the veal was excellent.

One morning, during the first week in September, we awoke to find that a light snow had fallen during the night. Tom observed that this would be a good day for bears. This was a sufficient hint. I saw Ned's eyes sparkle as we rode away from camp, and he seemed to pay but little attention to Tom's warnings, "not to shoot at a grizzly, unless he was near a tree which he could climb." We proceeded to the carcass of an elk, which several days before we had observed. Bruin had visited. Sure enough he had been there the night previous, and his great tracks in the snow were visible some distance away. They led down the steep declivity of the canyon to a little stream bordered with willows. As we found it difficult to follow him on horseback, we tied our ponies and proceeded on foot down the canyon, Tom following the trail in the willows with Ned and myself on either side. We forgot all about danger and convenient trees in our eagerness to get a shot at grizzly. Tom even forgot to warn us of our danger. We followed along in this way perhaps three-quarters of a mile, when with a crash through the bushes he appeared before me, not over eight or ten yards away. He saw me and quickly turned back. As he did so, I made a snap-shot at his huge broad side. The next instant he disappeared in the willows again. A moment later, I heard the discharge of Ned's rifle on the opposite side. When the echoes repeated from the surrounding rocks, he had died away, all was once more still. Tom and myself were soon at Ned's side, but the bear was nowhere to be seen. Advancing cautiously, we soon found him lying dead beneath a projecting rock, over which he had evidently fallen. My shot had entered his stomach, Ned's had broken his neck. "Lucky shot that," said Tom, and we both appreciated the remark. We found that we had killed a large grizzly, which would weigh 800 or 1,000 pounds. We carefully took off his hide, preserving his ears, nose and claws with the skin. To kill a grizzly was our greatest ambition. We had now accomplished this, and were ready to go back to civilization.

On our journey back we came in view of quite a large herd of cow elk. Wishing to test the greatest skill of these animals—viz., their unbounded curiosity—I allowed my companions to keep down the valley, while I skirted around to their rear. I approached them very cautiously, and observing them all facing and intent on the pack train below. I gradually prepared myself to make a dash for them. I almost touched the nearest one with my gun. A stolid motionless sometime until my party was out of sight, when slowly one of the elk turned its head and looked at me. What pussed in that elk's mind I cannot positively assert, but it certainly seemed to me to look as if it were ashamed of itself. Soon all of the band were looking at me, appearing as foolish as they had been caught stealing chickens. After a short observation, the leader concluded it was time to get out of that silly predicament, and he made off, followed by the whole band.

Another incident, worthy of notice, happened in this unfrequented region. Our party had stopped to lunch near an old spring, when we observed a herd of antelope at some distance. Their curiosity prompted them to come within two or three hundred yards of us. Then they all stopped but one, a fawn about two-thirds grown, which continued to approach until it was within a few feet of us, being apparently unconscious of danger. This was the only case of unlimited confidence we were ever given. We were all well. H. L. STONY.

Chicago, 1883

AUTOBIOGRAPHY OF MUNCH. STANDWELL.

A "REMINISCENCE" OF THE WAR.

WHEN the war began I was a very gullible soldier; in fact, I could not think most anybody else the racket commenced in earnest. I even made a verbal contract with Bill Terry, the tanner in our settlement, to furnish him with five hundred of the enemies hides, of my own killing, to make saddle skirts for the cavalry.

Just before the serious fighting began I applied for the sutlership of the regiment and got it. During our first engagement (Seven Pines) we were busy laying out a stock of goods. After the battle of Cold Harbor I rode down to the field, partly from motives of curiosity and also to see how the "boys" fared. When I discovered my regiment lying on their arms on the battlefield one of the "boys" yelled out, "Bill, this is a good chance for you to get them five hundred hides for Bill Terry. He won't know who killed 'em." About the same time I heard a shell burst in the distance and, concluding that my visit was not properly appreciated by the "boys," I turned back toward the city, and traveled on the "spur of the moment" the whole way.

Shortly after this I was out on a private foraging expedition. Riding along the road I arrived at the summit of a hill overlooking a valley through which a small stream ran. Looking down the hill I saw, at the ford below, a man washing his hands. I thought, from his general appearance, that he was one of the enemy. With this reflection I exceedingly quaked and trembled, for I had heard very equivocal sounds in a cornfield behind me, and was making a dash away from that vicinity, not knowing but they might be enemies

also. I dismounted and concealed my horse imperfectly in the sparsely growing bushes on the roadside and laid myself as flat as a pancake in a fence corner. Pretty soon I heard the ominous sounds of the approaching enemy as his boots crunched through the gravel. I laid flatter and flatter, but, unfortunately, just as he got opposite to me my horse kicked at a fly and started. The enemy's attention was immediately directed toward my quarter and, as I had raised my head up a little way, he caught sight of me. In an instant I heard "click—click," and saw him cover me with his pistol. I was armed with a large Colt's revolver heavily loaded with—mud. I had previously brought this weapon into position but, at the critical moment, from long disuse and want of attention, it refused to "click." My extreme terror lent me a sort of fortuitous courage, and I yelled out, "You are my prisoner! Surrender!"

His reply was somewhat chilling to my nerves. He remarked, "Not by a darn sight. Come out of that. I see you've got a horse, and I want one; so bring him out or I'll put a bullet through you."

I managed to untie the horse and lead him out, although my eyes were altogether turned toward my adversary, whom I now perceived to be a Confederate officer. He asked, "What command do you belong to?" I told him, "The—Miss. Lee's—Reconnaissance Brigade." I had just brass con. He left after my secret to say, "Well, Colonel, you got the bulge on me that time—I thought you were a Yankee. What is your command?" He said, "I am Major Jones, of Gen. McGruder's staff." I saluted him. He said further, "I will ride your horse to camp. Go down into the swamp, there about a mile, and you will find my horse, badly lamed. He caught his right fore foot in a crack in the grape-vine bridge over the Chickahominy, and wrenched it badly. Lead him to headquarters." Which I accordingly did.

The next day I was taken very ill with rheumatism, and, after an examination of three weeks' duration, the surgeons gave me a certificate of discharge, as being unfit for active duty. That was in 1862.

I went home and spent the remaining years of the war in dodging the conscript officers and practicing the art of using a crutch and limping. I did this with such assiduity and perseverance that, though the local conscript officers suspected that I was lame, they could find no plausible ground to impune it. Until one night at a country frolic, where there were a few of the "boys" on a furlough, and a band full of music beauties (which were at a high premium), I so far forgot my usual prudence as to drink a little too much "pine-top" whisky, and, being very fond of dancing, which passion, from long restraint, came out strongly now, I threw aside my crutches and fairly surpassed the execution of "Tam O'Shanter's" which in Alloway Kirk. My crutches were left that night at the house of festivity, and I got in me some four miles away, without any very clear recollection of the *modus operandi*, except some glimmering impressions of a foot race which I ran against one of the "boys," who volunteered to wager "the best 'possum dog in four States against a durned p'cat" that he could beat any man in the party to Mr. Thompson's lane. We all started, and I won the "possum dog," but "Lumpy" Peery, the proposer of the race, forgot to send him over.

The next day I was waited upon by three very brilliantly uniformed conscript officers, who were too unwell to get up. I was not rheumatism, however, but headache from the previous night's debauch. The officers, seeing how I was affected, said they would call again when I was better. After their departure I sent my little brother on a mule over to the scene of the previous night's festivities to get my crutches, and the next day, when the officers called, I was stumping around as usual, very lame. One of them observed, however, that my dodge had become entirely too thin; that he had seen "Buggy" (my brother) bring home the crutches, and, moreover, had seen my little brother in a full chase around the yard after a chicken, to be killed for dinner.

After that disclosure I yielded to their pressing invitation and joined a squad bound for the conscript camp at Meridian. But I took my crutches with me, and there were several other pairs in my squad.

While in camp at Meridian, it was ludicrous to witness the clumsy attempts at deception by "greenies." I have seen three men walking abreast, all limping in different ways, and now and then one limping on the wrong foot in the most absurd efforts to deceive.

After remaining in this camp for five weeks we were disturbed by the approach of General Sherman and his army from Vicksburg. All conscripts, paroled soldiers and other troops were ordered to march to Demopolis, Alabama. I was decidedly opposed to marching on foot, and so was of course too lame to walk, so I was mounted on a spare mule. When a few miles out from Meridian I witnessed an incident which afforded me much amusement. Capt. Hoskins, of "Hoskins' Battery," was somehow leading the horse of one of his lieutenants, his battery being ordered. In passing a quartermaster's depot, where much confusion prevailed, on account of the hurried departure, he saw a number of small "valise" saddles, such as are used on "off" horses in artillery teams, being thrown away. He secured half a dozen of them and tied them on to the horse he was leading. When he came up with me it was at a place where a regiment of Texas soldiers were encamped on the roadside. One of them yelled out, "Mister, mister, mister!" Capt. Hoskins declined to recognize the title, but he was charged with just, though he was sure of a "sell," he answered, "What'll you have?" Texas replied: "The next time your saddle has young ones, I wish you would save me one!" Hoskins moved on as fast as he could, amid general applause.

But to return to my own patriotic adventures. That night I took occasion to make a moonlight march alone, and making a detour outward some twenty miles, the next day I marched westward, passing through the country in the character of a scout who had lost his horse. I soon got another one, which I actually lost, however, before reaching home. In crossing Pearl River on a ferry-boat the horse became frightened, and got overboard. His hind foot got caught in the bridle rein, and he was drowned.

I remained at home in comparative tranquillity until the "surrender." I afterward moved to another neighborhood where I was but little known, and by dint of a judicious application of "cheek" and "brass" I soon became a "prominent citizen." It is my chief delight to entertain a crowd of admiring friends, and to relate my exploits during the war, when I was "in command" of such a company, at "Kenesaw Mountain," or "ordered my regiment to deploy behind a rail fence on the turnpike near Nashville," etc. In this way I have acquired several titles, from "Captain" up to "Colonel."

I am now Clerk of the Court, Captain of the Militia Company, Double Extra Past Grand Chancellor of the Red Plume Division of the Knights of Hocus Pocus, and Superintendent of a Sunday School. Besides all of this, I was Chairman of the Committee on Resolutions when President Garfield was shot, and my arrivals and departures are duly announced in the local paper. Likewise, I am the oldest and the best of very antiquated style voted to me as the most popular gentleman (save the mark) at a country bazaar. Very truly your friend,

MUNCH. STANDWELL.

Natural History

ENEMIES OF GAME BIRDS.

FISHKILL (on the HUDSON),
Jan. 16, 1892.

Editor Forest and Stream:

Notwithstanding the many theories of your many able and interesting correspondents, whose articles I always enjoy reading, I cannot bring myself to believe that migration or the grouse fly are the causes for the decrease of game, but the more I observe during my rambles through the woods, the more firm am I in my belief that birds of prey and carnivorous animals are the cause. Any day I can go for a tramp in the woods and find in the remote corner of a fence or at the foot of a tree, the feathers of a grouse or quail that has made a repast for a hawk, owl, skunk or some other of the many enemies which the game birds have. The nests of the grouse and quail are also built in places which, at the period of incubation, afford every opportunity for the prowling fox, weasel or skunk, not only to pounce upon the old bird on the nest, but to destroy the eggs or young birds. The rusty-crowned falcon or sparrow hawk is the worst on any bird we have, but the red-tailed hawk and, in fact, all the birds belonging to the family *Falconidae*, have almost equalty on game and small birds. Not only do the hawks, which are mostly diurnal birds of prey, stick to a covey of quail or brood of grouse all day, but the owls, which are nocturnal, together with the small carnivorous animals that they hunt at night, pick up large numbers while roosting. Hawks are very abundant about here, but during the last year the sportsmen have shot a good many. I have made several trips to the mountains for no other purpose than to shoot hawks and owls. When I first began my shooting, I was twelve or fifteen years ago. I shot most of the time in Connecticut, where ruffed grouse and quail were very plenty. I have often, when tramping through those forests, found piles of feathers and bones of birds, and often, too, seen a hawk go skimming along only a few inches above the ground and suddenly dart into a bunch of quail that were huddled together in the high grass or low underbrush, but I thought nothing of it then—game was plenty. I was not after hawks and did not take the trouble to shoot them; and when I had at last a single-loading gun, I did not want to take so much trouble as to waste charge on a worthless bird and have to reload; and then if I were loaded with fine shot for woodcock and saw a hawk perched on some tree I could not kill him, so would not shoot. But now, I carry a few shells loaded for his special benefit, and I would again say, let every sportsman do this, and by watching the passengers and each doing all he can, we may yet have some sport with the ruffed grouse and quail.

GEO. F. ALDER.

McDONALD'S CORNER, N. B., Jan. 3.

Editor Forest and Stream:

In answer to Mark West's query, concerning color of ruffed grouse, I give the result of my observations, which have been confined to this Province. Of course it is only necessary to give the prevailing tint, as the markings are the same, I believe, everywhere. In the females I have noticed no difference in color, they being uniformly of a tawny red on the back, with yellowish brown throat, and quite dark breast markings. The back feathers of what are usually termed the young cocks are of a deeper, duller red than those of the female; the breast markings clearly defined but pale; the throat of a pale yellow, and the tail feathers entirely free from red. The "old boomers," or gray-backs, are of an ashy gray hue, with the same markings. That they are old cocks I have not the remotest doubt, as they are larger, have larger ruffs, and are the only sort that I have found drumming out of season; and, furthermore, I have never heard of a "gray back" grouse clicking its wings in New Brunswick. Concerning the destruction of grouse by the wretched party of cussedness, the red squirrel, I believe Mr. Bishop is right, for I, like him, have noticed that grouse are always scarce where squirrels are plentiful, this year being a notable example. The cause never dawned on my mind, and I never was aware of Mr. Chicore's bird nesting proclivities till the summer of '76, when I visited my old friend Charlie Perkins at Woodstock. Having a bone in my right hand broken, I had little else to do but watch what was going on in the trees which surrounded the house, and I soon saw that the squirrels were climbing up the birds' nests. I loaded a six-pound Richards muzzle-loader, and allowing the forelock to rest on my right arm near the elbow, I placed the butt in my left shoulder and fired with my left hand. In this way I "ground slowly, but I ground exceedingly small." Last summer, after stealing everything available on the farm of our neighbor, Mr. J. McD. Bolyea, the little pirates proceeded to depopulate the pigeon-loft, and would have succeeded but for the family shotgun. As to the good they do, they are a good way from a small-bore rifle, and are excellent sliding target, at which the small boy can hurl any missile he listeth, thereby developing the muscles of his right arm, and preparing him for future operations against that disturber of midnight repose—the Thomas-cat. One squirrel will last longer as a target for stones than any other animal I know of.

L. I. FLOWER.

NEW YORK, Jan. 13, 1892.—In a recent number I see you mention that the sparrows and sharpshin hawk are not injurious to game birds. I have repeatedly seen both of these hawks after quail, often hunting in couples. I have also known the sparrow hawk to kill the English snipe. I do not know anything about screech owls, excepting that one that I had in confinement in a barn managed to get out one night and ate his way through a piece of small-bore rifle, and then left for his own. I think if I were a quail I would give "Brer Screech Owl" a wide berth.—W. HORTON.

[It seems illogical in the highest degree to charge the diminution of our game birds solely to the attacks of predatory birds and mammals. We can see no reason why these

vermin should have so increased within the past few years as to exterminate in certain localities the resident game birds. There is no doubt that they do much damage, and should be destroyed at every opportunity; but that they are the main cause of the scarcity of grouse and quail we do not at all believe. Nevertheless, we think that a premium put upon their heads by sportsmen's clubs would be, to a certain extent, beneficial, and would have the effect of reducing their numbers. The sparrow hawk, sharpshin and mottled owl may occasionally pick up a young quail shortly after the hatching, but we have never seen anything to lead us to believe that this was the case. Moreover, in a course of bird collecting, extending over more years than we care to name, we have never found in the stomachs of the three species mentioned the remains of any bird larger than a robin. Of course, this is only negative testimony, and, as such, is of no value if opposed to facts, if facts can be adduced; if it is a matter of opinion only, each man will naturally hold to his own view.]

PARTIAL LIST OF MAMMALS FROM SOUTHERN LAKE GEORGE, N. Y.

THE following list of mammals was formed from observations taken around the south end of Lake George, in Warren Co., N. Y. As this part of the lake is now a favorite summer resort, most of the large mammals, especially the wilder species, have moved entirely from the vicinity, or else have retired to the more wooded sections on the eastern and northern parts, where the rough mountain sides afford them a safe retreat. The arrangement of species followed is that given in Jordan's Manual of Vertebrates, 1880.

Felis concolor. Linnaeus. Cougar, American panther. The last record I can find of this formidable animal being taken in this locality, was one shot by Moses Dickinson, November, 1852.

Lynx rufus. (Gmelin). Raf. Wildcat. I can find no positive record of a wildcat being so near for a number of years, though there are reports of their having been seen.

Vulpes vulgaria. Fleming. Red fox, common fox. Very common. A number killed every winter.

Mustela americana. Turton. Sable, pine marten. Rare. More and more so each year.

Putorius vulgaris. Cuvier. Least weasel. This species is probably far less common than in the following and occurs regularly, but I have never seen it.

Putorius ermineus. Cuvier. Common weasel, ermine. Not uncommon. In this locality they all turn white in winter.

Putorius vison. Gapper. Mink. Common. Especially along the lake shores. They kill great numbers of muskrats.

Mephitis mephitis. (Shaw). Badger. Common skunk. Common. They do great good in destroying various insects, but at times they are quite destructive among poultry.

Lutra canadensis. Sabine. American otter. Seen every year, especially in winter.

Ursus americanus. Pallas. Black bear. Several were killed through the year 1880, and I know of at least two in 1881, one of which was seen swimming in the lake, and killed from one of the steamboats.

Procyon lotor. (L.) Storr. Raccoon. Very common.

Canis virginianus. (Say). Red deer. Rare. Still quite common in the northern part of the lake.

Vespertilio subulatus. Say. Little brown bat. Very common. Seen every summer evening.

Atalapha noveboracensis. (Erxleben). Coon. Red bat. Not uncommon.

Scalops aquaticus. (L.) Fischer. Common Mole. Not uncommon.

Condylura cristata. (L.) Desmarest. Star-nosed Mole. Specimens seen.

Blarina brevicauda. (Say). Baird. Mole shrew. Common. Often seen dead about the roadside.

Sciurus hudsonicus. (Pall.) Geoff. Flying squirrel. Common.

Sciurus niger. Linn., var. *hudsonianus*. Fox squirrel. I shot a fine specimen of this species in 1872 or 1873, the exact date I mislaid. M. W. Lockhart informs me he saw one about the same time. I do not think it was an escaped animal.

Sciurus carolinensis. (Auctora). Gray squirrel. Black squirrel. Common. The black form was unusually common this past year.

Sciurus hudsonius. Pallas. Red squirrel. Common.

Janus striatus. (L.) Baird. Chipmunk. Common everywhere.

Arctomys monax. (L.) Gmel. Woodchuck. Common. [Castor fiber. L. Beaver. Long since passed away, though some of their dams are still visible.]

Zapus hudsonius. (Zimmermann). C. G. C. Jumping mouse. Not uncommon, though hard to see resembling a frog when jumping through the long grass.

Mus decumanus. Pallas. Common rat. Common.

Mus musculus. L. Common mouse. Common.

Hesperomys leucopus. (Raf.) LeC. Deer mouse. Common. Good climbers, making their homes often in old bird-nests.

Eutamias striatus. Pallas. Var. *Gapperi*. (Vigou). Coon. Red-backed mouse. Dr. A. K. Fisher writes that he has taken this mouse at Lake George.

Arctomys riparius. Ord. Meadow mouse. Common.

Fiber zibethicus. (L.) Cuvier. Muskrat. Common.

Erethizon dorsatus. (L.) F. Cuvier. Porcupine. Common. They have a habit of cutting off branches of oak trees, then going to the ground and eating the acorns.

Lepus americanus. Erxleben. Northern Hare. Common.

Lepus sylvaticus. Bachman. Gray rabbit. Rare. A few were to be seen along the plank road leading to Glenn Falls. Mr. Casimer Shaw informs me he has seen them at Thendara.

W. B. LOCKHART.

Lake George, Warren county, N. Y.

AMERICAN QUAIL FOR EUROPE.—On Monday last, a FOREST AND STREAM reporter saw, at the store of Messrs. Chas. Reiche & Bro., in this city, a fine, strong lot of about one hundred and fifty quail (*Ortix virginianus*), which were intended to be shipped to Germany. This firm sends many of these birds abroad for public gardens of natural history, for private collections and to be turned out on the estates of noblemen and gentlemen. Large shipments are also made of wild turkeys, other game birds and song birds. A pair of common American deer were awaiting shipment, while among the arrivals were a pair of the German roe deer. The order for American quail to be sent to Europe are reported to be in excess of the supply, and Messrs. Reiche say that they are unable to fill domestic orders.

HABITS OF WOODPECKERS.

HERE in Arkansas Co., Ark., in the heavy timber of the river bottoms, we find the winter home of all our migrating woodpeckers and creepers. Here "mast" is always abundant; for if one thing or a dozen things fail, there are a dozen others that are a undant, giving food in plenty. Nearly everything in the woods and fields failed here this year, of a full crop, except the seeds of the great white or sweet gum, and the seeds of the so-called tupelo gum. But there are seeds enough on the white gum to feed all the woodpeckers, mice, squirrels, jays, robins and other beasts and birds—for nearly everything seems to eat them—that may wish to dine.

The red-headed woodpecker is here in full force, and busy from early morning until dark; storing up in the cracks in the bark of trees, and in holes in the dead trees, the little nuts of this winter food. And the jays and fox squirrels are having lots of fun and good " grub," stealing his hidden treasures.

This bird and the great lazy fox squirrels are at continual warfare, and I have tumbled many a one from a woodpecker's tree where he was stealing his dinner by having my attention attracted to him by the noisy war-fare which the redhead made in defending his property. The gray squirrel which is by far the most numerous squirrel here, does not appear to poach on the stored provender of this bird. If he does so, it has not come under my notice. But the fox squirrel, I think, warms the redhead, and as soon as he scrotes a nut and is away, darts up the tree in search of it. But if Mr. or Mrs. redhead discovers him in the act, they rush at him with sharp beak and great valor, and generally force him to lead a retreat empty handed, or without the coveted nut. The jaybird gathers and stores up "mast" for himself, but seems to take great delight in robbing the woodpecker.

The woodpecker, or *Picus* family, is a rather queer one, for in his life he supposes (*Spizella socialis*), as woodpeckers seem to express by their pecking into holes after worms, that we think never dies so at all, but pecks into them for and lives chiefly or entirely on the inner bark, or young sap wood, of the tree. Then we have this red-headed one that has still more curious habits, one of which, so far as I know, no naturalist or any of our correspondents have noticed, namely: in late summer and early fall he diligently plays the role of a fly-catcher. At that time of year he will perch on the tip of a dead branch of a tall and, often, a solitary tree, and sit at catch passing insects. "We boys have always a game that we "play" on them when at this work. We would take small pebbles and throw them up over the tree; the red-head would see them coming, dart out to catch them, and sometimes caught the stone on the side of his head, and tumbled to the ground.

The red-headed woodpecker does not store up food for his winter supplies alone, for I have seen them store up cherries in July, and I have of an observed them in the fall storing up food in Illinois, where they do not winter. This bird is a provident fellow, there is an excess of food to-day for the numerous stores up some for future use in time of scarcity. But this is all about, for birds and animals that have the instinct of storing up food, do it any time of year, if they find a surplus of such food as they are very fond of.

There is still another point about our red-head friend—does he or does he not peck into trees after worms and insects like most other woodpeckers? Naturalists have, I fear, accepted it as a fact that he does this, without proof. I will not say that he does not do so, but I will say that I do not believe he does. I think that, like the sapsucker, an abnormal thing—like the true woodpeckers in every way, but without their food habits.

This is a glorious region for the ornithologist to winter in. Here he can see every day great numbers of hundreds of species of interesting migratory birds that further north he only catches glimpses of when on their spring and autumn migrations, and can study their habits at leisure. All of them are now in their very best clothes, or rather in their wedding garments. Some, to be sure, will put on a few more extra plumage on their wedding day, and will be a little more gay in early spring, but their coats are now very fresh and perfect.

Crickett's Bluff, Arkansas Co., Ark., Jan. 10th, 1893.

HABITS OF WOODPECKERS—Indianapolis, Ind., 1892.—From personal observation I am sure that woodpeckers store away nuts for winter use. Many times in the hazy days of autumn, I have watched their busy motions as they flitted from the convenient dead tree to the small twigs of the beech tree, there obtaining a nut, and returning again to put it into some crevice or hole; and many a squirrel have I seen busy by their chattering and scoldings when he approached too near their storehouse. As to squirrels storing nuts I am in doubt. I have often, when a boy, gone out with the men on the farm when felling trees to obtain the nuts from the cracks and holes where they had been placed by birds; but I do not remember ever finding nuts stored where they would be found if placed by squirrels. Besides, who ever saw a squirrel with a nut in his mouth, that did not, upon arriving at the first convenient place, proceed to eat it at once?

S. H. M.

"ANIMAL MYTHS OF THE IROQUOIS"—Piney Falls, Tenn.—*Editor Forest and Stream:* While reading an article in your issue of Nov. 17th, under the title of "Animal Myths of the Iroquois," the supposition occurred to me that perhaps many foolish superstitions are saddled on to the Indians which poor Lothrop disapproved of. During the last 60 years I have industriously acquainted with the Seneca Nation of Indians, as also their manner of life, habits, and their (so-called) pagan rites and ceremonies, which a portion of them still adhere to. Now, in regard to that story as related to your correspondent on the Cattaraugus Reservation by a grandson of Cornplanter, I must say that I never was aware that any such traditional or imaginary superstitious notions were ever promulgated among them. I knew the Cornplanter (the name of course originated among the white people), and also knew his two sons, Ned and Charles O'Leary, and I saw which was adopted by the old man in honor of a white man of that name, an especial favorite whom he chanced to meet during Sullivan's raid at Brady's Bend. Those sons were men of better sense than to teach their sons any such simple nonsense. Perhaps such stories might have circulated among the small children, and gained about the same credence that we give to Mother Hubbard's or to Mother Goose's tales. Those tribes of the Senecas knew but very little concerning the animals of the North, and were very subject to the most ignorant allusions. They had no fabulous deities, nor did they worship any beathen Deities. They believed in

the one Great Spirit, the Na-wen-ne-u or Wa-con-dah, the creator of the universe. The average Indian is a close observer, he has keen perceptive faculties and pretty correct ideas of the workings of nature's laws, is slow to believe in any theories which he cannot fully comprehend. ANTLER.

BALTIMORE, JANUARY 17.—My friend, Mr. John Hartner, who is a crack shot, took a stroll yesterday with his dog and gun just in the rear of his own house, which is situated at the head of the marshes of Harris's Creek, when, upon his dog coming to a point, he was surprised to see a (Wilson's) jack snipe get up. He shot and killed his bird, and in a very short time killed five snipe, of which number he presented a pair to me, and I enjoyed them for my breakfast this morning. You would, too, be surprised to see how fat and plump they were at this unusually early time. This, I think, is the earliest I have known snipe to be killed. The idea of killing snipe yesterday, and on awakening this morning finding an old-fashioned snow-storm, makes me feel for the poor birds, for if they have many companions come with them and it should freeze up and get cold, it would be hard for them. J. P. V. H.

The above note was accompanied by the bill of a Wilson's snipe just taken from the bird. The date seems to us unusually early for Baltimore, but it must be remembered that until within a week we have had no cold weather at all to move the birds South.

WINTER BIRDS—Hornellsville, N. Y., January 19.—Saw a kingfisher yesterday; it may be the same one that was here all last winter. Saw also a few shrikes or butcher birds. On the 19 I noticed a meadow lark. He looked as large almost as a pigeon. J. OTIS FELLOWS.

BAY RIDGE, L. I., Jan. 23, 1893.—A flock of about thirty wild pigeons made their appearance here on the 23, (Sunday). Several were killed and I found them to be very plump and in fine feather. This is a rare visitation at this season with us. BAY RIDGE.

Game Bag and Gun.

THE QUAIL SEASON IN VIRGINIA.

ALL things considered we have rarely ever known a poorer season for birds than the one that has just closed in this section. It has not been so much scarcity of game, either as it been due in the main to the abundance of rain that began to fall heavily as soon as all appeared to be over, but the one cry from all quarters has been scarcity of cover.

Owing to the terrible droughts of last year the weeds that generally clothe the stubble fields after harvest with a dense growth were to a great extent scorched up as soon as they appeared above the ground, while the demand for pasture was so great that when the slight showers of early autumn fell the half-finished stock kept short on area of ground three or four times as great as in ordinary years is the case.

In thinly settled and infertile countries the sport, I fear, has been fair, the amount of stock being insignificant and covert more abundant.

I never recollect to have been so utterly at a loss to locate coveys as at this season. In ordinary years, as every quail hunter or knower, the experienced sportsman or the experienced dog, even in an unfamiliar section, can guess pretty much at a glance where the coveys, if there are any, will probably be lying.

This year you might hunt the few patches of "rag weed," that in spite of everything clothed some unusually damp or fertile piece of ground, and seemed created as harbors of refuge for the birds that in the breeding season had seemed so motionless; but the chances were ten to one you would hunt in vain, and when as you were walking in disgust through some piece of woodland, with gun half cocked, and peering between the tree stems in search of some more inviting looking country beyond, you would spring a covey and give you, perhaps, an awkward "sight" at forty-five yards through an eye bush. This kind of thing, sometimes fortuitous in a more modified form, has been the history of the quail season of '81 in our section. The most untiring sportsmen have become disgusted. What birds there are, and there is no reason to suppose them scarcer than usual, have clung to the wood with a tenacity unprecedented, and vaguely hunting the woodlands of Virginia with the best of dogs, would only be to illustrate the familiar "saw" of the haystack and the needle. Most of us have had occasional bits of fun, an hour or two's good sport here and there, though thirty birds is the largest total in a day I have assisted in making, a very poor show even for the part of the country from which I write, which is distinctly second rate as a bird region.

The failure of the mast in the mountains has driven a good many "bats" into civilization, and the immense size of the tracks has been a wonderful topic of conversation to the negroes who, I notice, always confine their sporting ambition in that direction to "tracking," and having quite satisfied themselves that the footprints are "higher than a man's," prudently refrain from further pursuit of sagacious bratin. I see people inquiring through your columns whether it would be possible to procure birds in Virginia by netting. I don't know anything about the letter of the law in regard to that, but I should strongly recommend the gentlemen in question to turn their attention elsewhere. The consequences of such an attempt in this part of the country would be very disagreeable to the netters.

Wild turkeys are I hear, fairly abundant, though I have not heard of many being shot.

There are two good packs of foxhounds within 12 miles of where I write. One has killed over twenty foxes—many of them red—already this year.

The mountain streams got so terribly low last fall we began to get very nervous about the trout. I was glad to hear, however, from a friend a day or two ago that he had camped late in September on a stream well known to me. That was years ago, but he had been very successful, and had seen thousands of them in the pools. This winter so far has been most favorable for the young fry. A taste of the joys of West Virginia trout fishing experienced last summer has I am afraid, rather overshadowed in my estimation our inferior though beautiful streams. Nature is at present in her most defunct state. The pen is handier than the rod or gun. The red roads are deep in that tenacious mud which a great pen

G. O. A. SALL.

has made historic. The mountains are hid in rain clouds. The trees drip unceasingly. What little energy our dusky brethren possess is also in a moribund condition. Regardless that meal is a dollar and over per bushel, they choke the village streets with their lazy forms and cannot be hired for money so soon after their Christmas break. Are the women housewife and the Southern farmer for ever to stagger about under a load of keys and padlocks and to spend a third of their time in locking and unlocking bolts and bars? But enough of this. In sporting matters the Edipian is harmless or nearly so. The "phizz" of his half-loaded musket, it is true, is occasionally borne to one's ears upon the breeze; but Sambo is not much on the wing, for if he were his area would soon be circumscribed by a few grass-stalks around town. I would not curtail the rights of any man, black or white, but a laboring class with no land or money or education, and with nothing but their muscles to depend on, can't go to themselves or their country by looking about with an army market. In other countries and sections where honesty, thrift and morality exist in the corresponding class, constant work, outside a few legitimate holidays, is regarded as necessary to make an honest livelihood. Here amid idleness waiting to be killed and employers waiting to be served, these numbers of the earth and obstructors of improvement, at a moral depth which, poor wretches, they cannot help, give a burlesque the "gentleman at large." IRISWOOD.

WITH THE BIRDS IN TENNESSEE.

PORT ROYAL, TENN.

Editor Forest and Stream:

Well, I will own up and admit that "12-B-re" of El Paso, Ill., beat me squirrel shooting. He says: "I do not think 'Bich' uses enough shot." I gave as my load $\frac{3}{4}$ of an ounce of shot, and he gave as his load $\frac{1}{4}$ ounce. He forgets that I was using a 13-gauge gun.

I give the score of part of two days' squirrel shooting. Dec. 24.—Load, 24 drams powder, one ounce No. 4 shot; 12-gauge gun—0110100000. Dec. 27.—Load, 24 drams powder, one ounce No. 7 shot; 13-gauge gun—1411. This is the poorest score I ever made. On the 24th I used a strange gun, "12-B-re's" score shows that he made eighteen kills in twenty-four shots. I have beaten that. I have killed sixteen out of eighteen shots; thirteen squirrels and one fox out of sixteen shots, and eleven squirrels without a miss. I know some of the readers of *FOREST AND STREAM* will laugh when they read the above score and say "Why did that fellow send that score to *FOREST AND STREAM*? I never would have said anything about it, possibly thirty or four consecutive misses. I would have been happy to be in these." In the *FOREST AND STREAM* of Dec. 15 I said: "Let me put it down in *FOREST AND STREAM* that heavy charges of powder and shot, and large shot for small game are a humbug." Let me repeat it here, particularly the large shot part of it. Look at my score with No. 7 shot.

On the 24th December I had good sport if I did make a poor score. After firing the third shot I heard a squirrel in the direction of the road, and I turned and went that way. Soon I heard the "hook" of a buggy, the driver stopped and gets out. His back is turned toward me and he does not see me. I recognize him. It is friend P. He is in a dense forest, where he thinks no human eyes see him. This is the 24th December. He is an inveterate drinker, and I suppose he is drinking. No; he does not stagger. There! he goes to the buggy and takes out something. It is a jug. He takes it off some distance, conceals it behind a log; he gets into the buggy and drives off. Curiosity prompts me to go and look. Yes, there is the jug, behind a log, and covered with leaves. It is half full of whiskey. I was tempted to pour out the vile stuff, but did not. I saw him late that evening, and he was intoxicated. There, what is that rustling in the leaves before me? It is a covey of quail. There, all they rush under a clump of briars and huddle together, can even distinguish the white heads of the cocks. I cocked my gun; not for a pot-shot, however. I advance and they run to a thick patch of briars. I follow, but do not get a shot when they rise. Late in the evening I walk them up near the same place, and get two more. Did not ruffle a feather. The many hours I have spent in that forest all alone in my glory, squirrel hunting.

I spent part of the Christmas holidays with friends in Robertson county at quail and grouse shooting. We had royal sport. Ruffed grouse used to be very numerous here, but for a long time they were supposed to be extinct. But on farms that have been protected they have again appeared. We heard of several coveys on a farm that has been protected for fifteen or twenty years. After a ride of several miles we rounded the tree-top, and when we shot out like a bullet. "Here's the place." In October I saw them all around here." Yes, it looks like a good place—a dense forest of 400 or 600 acres. He on Sport and Daisy. Our setters beat the woods as if they were used to that kind of hunting. This is their maiden effort after grouse. Ditto all four of the hunters except our guide. We beat the ground "in abreast" about twenty paces apart. Ed is on the left, then "Birds," then Tommy and George. All at once Ed's gun rings out keen and clear, and he breaks the stillness of the forest. "What is it?" is shouted all along the line. "A fox!" Ed shouted, and away went Reynard like lightning. "Pshaw take the luck," said Ed. "I had No 10 in my gun. Give me some larger shot, Bido." Hardly had he loaded when out burst a grouse with a roar and a whirl that completely upset our nerves and bewildered us. But George on the right was cool and worked it down. We beat toward it, but it got up wild as a hawk, and we did not get a shot. Then we beat in the direction it flew for some distance without making it. We then returned to where it rose, and I examined the "lay of the land." I then mentioned certain suggestions that a writer in *FOREST AND STREAM* made about the light and put shot of grouse, and told them that from the lay of the land, I had a double-barrel turned to the left. We advanced, and up it rose not twenty paces before me, and I let fly the left barrel, but scored a zero. "There, he dropped in that tree-top on the ground," they all exclaimed. We hurried on, and soon Daisy was on a staunch point. She had him fast, and surrounded the tree-top, and when he shot out like a bullet, I threw my gun in position to draw on him, but Ed was too quick for me, for with one of those marvelous snap-shots, for which he is famous, he cut the bird down with his little fourteen-gauge muzzle-loader. Ed is the crack shot of the county, and has killed more quail than any five men of his age in the county, but this is his first grouse, and he shook with a "back ache." We are all terribly excited and elated.

We then beat in an easterly direction and emerged near a large stubble field. We were now on what was, in ante-bellum days, the largest tobacco plantation in the world. It con-

toins 13,000 acres, and his owner was the largest tobacco grower in the business. He owned slaves by the hundred. "Look watch large barns for housing and curing tobacco," said our guide: "I made the boards to cover that house, and it required 14,000 to cover it." "Listen," said one of the party. "Some fellow has started that fox." And in the distance we could hear the musical notes of a pack of hounds in full cry after Reynard. It reminded me of a scene in "The Chase," in Scott's "Lady of the Lake."

"The deep-mouthed blood hounds heavy bay, Resounding up the rocky way." Then he heard the report of a gun, and was sure Reynard had felt a mething larger than Ed's No. 10's; but it turned out to be a turkey shooting at rabbits. We then turned and beat toward our horses. Near where we had before flushed the first one we now flushed several more. They go in every direction. We advance and soon Daisy is on a point. The grouse pulls up wild, and Ed shoots but misses. Then a large covey of quail burst from an old fallen tree-top, and then bang, bang, bang, on all sides, and two bite the dust. I advance and let fly both barrels, but get no start. Every few steps and we "turn loose" at quail or grouse. George has not fired his old musket yet. Up goes a grouse and Tommie "turns loose" both barrels, but Mr. Grouse falls on "alle sauce." We work him down on the hill beyond. Soon we are there, and old Sport has him hard and fast. In a fallen tree-top again. With a roar and whirr he bursts from his cover and cleaves the air, and when above the tops of the scrubby oaks that cover the hill-side, simultaneously three reports ring out and the bird falls as dead as Baccus. Then each man rushes up and kills him. Then a water hen with two large horns strapped to him (he was after Reynard) appeared upon the scene and said: "Yes, there was a covey of 8 of these birds, but I killed 3 of them." That terminated the hunt. Dear reader, if you are not already tired of this story I would say that if a certain stream flooded by the recent rains was fordable, I would be with those friends to-night to give the grouse a round to-morrow. George has not shot his musket yet.

BREDO.

A DAY'S SHOOTING IN CALIFORNIA.

WE are a long way off out here on the western edge of the continent with a great mountain range to the east and most of our most comfortable and plain separating us from the East, our former home. The dear old associations that are photographed so tenderly upon our memory crowd back into vivid remembrance as we write. How we treasure up the bright recollections of our happy home away over there in New England. What a joyous boyhood we lived out in it and how little did we anticipate the building of a new one for ourselves here on the Pacific Ocean, that always seemed so far away, when we were told about it at school and had the great intervening space pointed out to us on the map. Recollections are not all that comes to us, however, from the morning side of the "Rockies," for we are well within the reach of the FOREST AND STREAM, whose steady arrival is always looked for and never fails to bring with it much of pleasure.

Our State is a hunter's paradise! Within one hundred miles of her largest city can be had for the seeking game of every description—including bear. The tastes of any sportsman, whether he choose gun or rifle, can be gratified within four hours' ride from the centre of San Francisco. Waterfowl swim in the marshes and along the shores of the bay, and can always be found in season sunning themselves on the sloughs running inland and are easily reached in small boats. Large game frequents the foot hills that form the first line of elevations one must surmount in traveling from high water marks toward the Sierras.

Late in the afternoon I left town, with the popular manager of the O.idental Hotel, a brother of Mr. Welthebe, of the Windsor in New York, and rode out on the Central Pacific thirty-five miles to Salinas, a town of considerable importance and very conveniently near the tule, or marsh lands for wildfowl. Sam P. met us on our arrival and reported birds in large numbers. Next morning we were up a long two hours before the sun and on our way to the creek, where the boat was lying and our guide waiting for us. All our traps were carefully stowed away, and we pulled on to the main slough, a wide, deep creek, fringed with tule ten or twelve feet high on either side. A long, tedious pull of three miles was at last finished. The oars were taken in and the boatmen, the guide going to the tule with his snail in hand, V. stationing himself in the bow, and I just behind him. The boat's head was pointed up a narrow branch slough and we made ready, for the fun was shortly to begin. "No noise now. Look out," Sam called out. Slowly and stealthily we begin to penetrate toward an open basin that lies a short distance ahead. The muffled oar makes no sound as it moves back and forth through the water, under the stern, and propels us steadily forward. We hold our breath in eager expectation; our eyes, full-cocked, are in position for prompt use. Just the other side of this next bend lies the open sheet of water. It does not spread over more than an acre or two, and is almost sure to be covered with birds. Oh, the glorious eagerness of that minute! The delicious sensation of impatience to seat once the birds we almost know are there. The boat moves out from behind the tule that has hidden it and we take in at a glance the whole space. What a beating of wings and feet on the water. What a whistling and frantic endeavor to get out of harm's way. How those wings and feet beat the air. We give them four barrels of No. 6 and pick up seven widgeons, three mallards and two teal. Not so bad, even though there were so many to shoot at. We turn about now, get a duck or two as we scull back to the main slough, and then go on our way, till, reaching other branches or small creeks, we shoot them up and down with varying success.

The goose up toward the wheat-fields come down to the edge of the marsh all making a tremendous racket, for all the world like the shouting of a whole school full of boys let out at recess. We scull up toward them, run the boat's bow on to the bank that is here free from tule, jump quickly ashore, and as the geese rise, give them a double shot; but the distance is great and the shot small, and we get but two. Did you ever hear the horrible din that ten thousand frightened geese make? We do not exaggerate in the slightest degree when we insist that there rose from the ground before us at least this number. These flocks are famous for size; and the farmers who have wheat lands adjoining the marshes employ men to defend the crops against the terrific destructiveness of the geese birds.

Before finishing up the day we took a turn at the snipe.

The only birds we started were what are here known as English snipe. They are not quite so large as the Eastern bird so called, but very similar in appearance. They jump up one at a time, and fly but a short distance, and when the day is favorable, one need not hunt over more than five or six acres to a sure bag.

When we came to determine the result of our day's sport we found that we had seventy ducks including mallard, widgeon, teal, sprig, and canvas-backs, two geese and twenty-one snipe. The quantity seems large, but our success was not unusual. We have friends who average about this quantity for every day's shooting the season through.

Mallards can now be bought in San Francisco markets for \$2.50 per dozen; teal, \$1; sprig-tail, \$1.25; widgeon, \$1; canvas-backs, \$3.25; quail, 25 cents, etc. These figures certainly point to an over-supply of birds. If you are seeking for a hunting ground where game is never wanting, that is accessible and free from the discomforts of winter cold, and this is the place to select, but the same time, and it costs much time and money to get to us, but never will a lover of sport in the field regret having crossed the country to a pitch tent with us.

E. B. C.

FLORIDA SHOOTING.

SANFORD, Fla., Jan. 19.

Eight miles from here up the St. Johns the ducks, chiefly widgeon and coots, are found in large numbers. I have gone to the grounds several times, and always got a few birds; though, having no decoys, have made no large bags.

Toward dusk and in early morning the birds are constantly flying, and the possibilities of making large bags seem fair. The last time I went up the river I took blankets and camped in the large Speir grove on the bank of the river. This grove, with its large orange trees and clean, dry ground makes a fine spot to spend the night, and in the morning one can start out fresh and rested to try the ducks.

When I started out in the morning I came across a small flock of coots and tried the effects of a thread-wound net to one hundred yards. Result: Three coots—one minus his head, which I found several feet from his body. The next time I fired was at a flock of curlew sitting on the bank about ninety yards away. The distance was too long for an ordinary cartridge, so I again shot a thread-wound, but it mangled the bird dreadfully. Should think they could be used at deer with success. Has any one tried it? Three days ago I was after quail, when my pointer stopped near a bunch of grass, when, to my horror, I saw a large rattlesnake coiled and ready to strike the dog. I fired immediately and hit the snake about a couple of feet from his tail; the charge of shot passed so near the dog's head that he seemed stunned for a second and the snake's head vibrated as if to strike, so I shot again and blew off its head. I had just counted the rattles on the monster's tail—there were eleven rattles and a button—when I heard something crawling through the grass and saw another rattlesnake approaching, within a foot. This one was not so large, having six rattles and a button. In quail shooting here it behooves one to use one eye in looking for snakes; keep the other on the dog's movements and walk by faith.

I understand that all the game laws for Florida have been repealed, and that there is now no restriction on any kind of shooting. Am I correct? TRUMP.

[Yes.]

ARKANSAS TRAPPERS.

CAMP ON LITTLE RED RIVER,
Jan'y 10th, 1892.

Stimulated by an inordinate desire of experiencing woodcraft in its wider sense, Chas. E. Conrur, Joe McCluskey and J. Smith Stimmel, of Greene county, Ohio, left their homes early in November for a winter's campaign in White River swamp. Being unacquainted with the nature of the country, they required several weeks to gain any knowledge of the best localities, therefore their trapping operations have been somewhat limited, still both sport and catch have been entirely satisfactory. It was not until early in December that it was the writer's good fortune to join the "jolly trio."

From close observations, I must say that "coon and mink, the principal trapping here, are scarcer than the best trappers have known for several years, from the fact we suppose that the coon crop is almost a total failure. But what varmints are captured are very fat, making our supposition less probable. Skins also show they have emigrated eastward, but in next month we anticipate a fair catch.

Practical trapping has the same basis as any other business. One cannot make good success at it unless favorable opportunities are at hand, hence the amateur should not imagine too much in the catch, nor paint camp life in too bright colors. None but the genuine sportsman can find pleasure in camp life for an entire season. The Arkansas trappers are beyond a doubt natural woodsmen, for they apparently can extract every particle of pleasure in camping and its appendages. Lengthy tramps, perhaps carrying a venison, a pack of furs, or any load that it may fall to our lot to carry, serve only to give impetus to our weary steps, or relish to a dinner of boiled beans, roast "coon, hot coffee, "saw belly," etc. We enjoy life sport, deer hunting, when our "run" of traps do not require our entire attention, frequently seeing ten and fourteen each day. I do not mean that number is brought into camp, but we have venison sufficient to supply our larder and several pairs of antlers, of which any back would feel proud, ornament the ridge pole of our tent. Whether or not gun was increase in value from ten cents to one dollar, more similar ornaments shall occupy like position.

Our operations in the future will be confined to the vicinity of the mouth of this river, which is the best trapping section in this section, as it is in the wilderness. Perhaps our camp will not be as attractive to the near citizens. We shall have a chain of some thirteen lakes to trap, and a good locality for deer and the heavy cane brakes for bear. Then we shall expect to send extraordinary reports of trapping and hunting, and probably an account of an exciting bear hunt. J. Lee Smalley, a practical trapper and fur dealer, Dugdale, Pa., will join us shortly for hunting and trapping for several weeks. We come down solely for sport.

One of our party has killed a gray eagle measuring 7 feet 8 inches from tip to tip of wings spread. This was the largest bird any of us had ever seen, and in consequence each one has a part of the bird as a curiosity.

The weather this season has been very mild, which has a tendency to depreciate value of furs.

WALTER D. CHILDRESS.

GAME IN OREGON.

EUGENE CITY, Or., Jan. 6, 1892.

Editor Forest and Stream.

Owing to long-continued and heavy rains this fall our sportsmen have spent less time than usual among the fowls. On the prairies, in the stubbles and through the marshes there are countless thousands of mallards, teals, sprig-tails and widgeons. Decoys, sink boats and like contrivances for the slaughter of ducks are unknown, yet a great many are shot at fly-ways as the ducks pass to and fro from their feeding places. Canada geese and snow geese are not so plentiful as earlier in the fall, but still afford fair shooting. Feeding altogether on grain they become very fat. Snipe shooting is poor, as all the meadows are overgrown and probably will not be first-class till spring. Hundreds then may be shot in a day on the green flats a few miles from town.

Ruffed grouse are pretty well thinned out near by, but back in the sparsely settled districts they are plentiful and fifty a day to a single gun may be bagged. Not one out of a hundred of these birds killed are shot on the wing, but with the aid of a small dog of the plowdog pedigree they are treed and potted, sometimes several off the same tree or bush.

The past season was very favorable one for our only kind of quail—the mountain quail. As they are shy and generally found in thick cover, very few are shot, yet dozens of them are trapped and sold. Should any one wish to try the experiment of transplanting these beautiful birds to the East they would find no trouble in obtaining a good start of quails at a low price.

In the mountains, deer are being slaughtered by hundreds, in many cases solely for their hides. Already, where herds of the white-tail could once be seen, they are now exterminated, and unless the legislature passes suitable and strict laws, deer hunting in this State will be a sport of the past.

I was out shooting one day last week and got eleven ducks and geese. With a full choke Fox gun, one goose was perforated with 36 No. 4 shot while passing low over head.

J. S.

A DEER CHASE ON LOOKOUT MOUNTAIN.

CHATTAHOOGA, Tenn.

HAD you been sitting on the bluff at Rock City, on the brow of Lookout Mountain, while the "park" was a "park" now, last Wednesday, you would have heard some very pretty music made by nine hounds after a four-year old buck. The deer had been caught previously and allowed to recuperate his strength and energies, when it was published far and wide among lovers of such sport that he would be turned loose at Hawkins' Spring, and everybody and his dogs were invited. At the appointed time there assembled some twenty or twenty-five gentlemen, a few of whom brought the best dogs of their packs. Joe Dobbs brought for "dinner" of which could catch him "Frank Cutchfield, two; Ed Tally, one; Tom Bradley, one, and two other gentlemen one each.

When all was ready the buck was driven out of the "park" at the end of a lane, some seventy-five yards from where the dogs were held; and Mr. Hawkins shouted, "Let 'em loose." Dobbs' Lead got a sight of the deer and was off after him in a jiffy. Cutchfield held his dogs longer, saying, "I want to give Dobbs' dogs a good start." Lead seemed to understand that the buck was circling around the field, and endeavored to head him off. He thus gained about fifty yards the start of the rest of the pack. Cutchfield's dogs took the trail, not having had a sight, and were off—all being lost to sight but not to sound. We started to follow, but perceiving the circle that was being run, retraced our steps and waited at the other end of the lane. Here they came in full cry, Dobbs' Lead still ahead, closely pressed by Cutchfield's Fan. It was a glorious sight, and the snarl of every man present seemed to have entered the ears of the sport, for not a sound could be heard but the cry of the dogs and an occasional halloo from Dobbs or Cutchfield, who followed the hounds. Just as they crossed the road up came Tom Bacon with his pack, all tied, but with heads up and ears well forward. They showed their eagerness to "go in." Upon being questioned as to why he did not "put them in," Bacon quickly replied that "some folks say Dobbs' dogs kill sheep, and I won't run with him." After about two hours' run, during which the deer once scattered over several miles, some being faster than others, but still giving good music, the deer took the creek, which, from recent rains, had become flooded, and the dogs gave up, all except Cutchfield's Guess and Tally's Muse. Soon after crossing the creek Guess overtook him and caught hold of the ham, checking him so that Muse caught at the throat, but seized a piece of flannel instead of the hide. Guess let go his hold to the help of Muse, when her hold on the flannel broke loose and off went the buck into a lane, down the lane, over the fence into Martin's yard, where he was again caught by two curs in the yard. They were beaten off, as were also Guess and Muse, and it was found that the deer wasn't at all hurt, but only scratched; so he was taken back to the park; and when he gets over this one we will have another chase out of him.

The deer seem all to be leaving the mountains and flocking into the valleys, and in one or two instances they have taken up with the cattle in pastures in sight of the houses. About three weeks since I saw one quietly grazing in a field within a hundred feet of the fence. Another was killed with clubs by a party who were fishing about three miles above town while it was crossing the river; and on yesterday I received word from a friend across the river, within sight of town, that a fine buck had been seen for two or three days successively in his pasture, and that he wanted me to bring over my dogs. How do you account for their becoming tame? Is it not more than a year's mast, I reckon, for the winter has been very mild, and at this time the grass is as green as in spring, and many of the trees are budding.

Do foxes ever take water? Have heard divers and sundry opinions, but would like to hear some facts.

I. C. LONOR.

[It is not an unusual thing for a pursued fox to take to the water. We recall several such instances that have come under our own observation. We should like to hear from Col. Tucker on this point. Another favorite stratagem of the fox, when pursued in winter, is to lead his pursuers on to the thickest kind of ice, over which he can skim in safety, but while the water is under his feet he waits until his pursuers are weary and then he turns back. I have seen such a fox in the snow and many a ducking has been given the bounds in this way. We know of some instance in which valuable hounds have gone under the ice and been lost in this way.]

WING-SHOOTING VERSUS GROUND SHOOTING.

NEW YORK, January 21.

Editor Forest and Stream:

This controversy as to whether it is proper to shoot a sitting grouse or not will probably never be brought to an end. I am acquainted with a great many men who would scorn to shoot a quail or woodcock, if the bird was not upon the wing; but who would not hesitate to shoot a grouse upon the ground. On the other hand, I know sportsmen to whom a grouse so killed would be abominable about the neck.

A certain number of men will never consent to lose caste by shooting any game bird that is not flying, while others will allow their color-line to shade off into the dusky by making an exception of the ruffed grouse.

Then there are the boys to be considered. How well do I remember the happy days of childhood when most of my hours were spent in the woods, and when the birds and animals and fishes and plants seemed to be the only things in the whole world worthy of any thought.

I knew just where to find the old partridge's nest in early May on the warm sunny hillside among the sprouts and junipers. How often I have watched the mother bird in her nest; and when the skurried away I would stretch myself at full length by her treasures and with my head between my little hands would gaze eagerly at the eight or ten buff-colored eggs and ponder over their contents, and think of what they would bring forth. When my visits to the nest were frequent, I used to imagine that the old bird grew tamer and that she knew better than to be afraid.

After the little downy chicks were hatched I could always find the brood. If they were not down by the spring brook, where the fox-grapes and skunk-cabbages and hellebores grew, they were up along the old fence among the c-dars and cat-brriers, or they were in the pasture among the huckleberry bushes. At any rate they had favorite resorts and I always knew where those resorts were.

When the autumn days drew near and the birds had grown I used to lug out the old gun, and while hunting I never my heart would beat fast as I penetrated the haunts of the partridges. The old gun was long and heavy and I had to be careful of my aim, and I was too little and too anxious to be steady.

When after much patient watching I happened to see one of my partridges upon the ground before he flew, I nervously set the ponderous hammer back and poking the long barrel through the tangling branches, and trembling more than I ever have since in the presence of much larger game I would pull hurriedly on the trigger.

Why would that trigger hurry up? I could feel it pull and pull and pull and my stubby finger would take a good grip and draw with a vengeance, and through the smoke from the explosion I used to see the bird go whirling away without a feather touched.

The Oreads and Dryads only knew where those shot went to.

Later in the season I used to set twitch-ups for the rabbits, and the two or three ancient family steel traps for muskrats, and snarks for the partridges. How anxiously and how often I would visit those snares, and every time that I approached them, with bated breath I peered through the bushes to see if there was "one in." When from a distance part of the snare fence could be seen all knocked out of shape and the dried leaves scattered about in confusion, I would eagerly rush to the dead partridge that lay in their midst, and pulling from his neck the only mortal coil which he could not shuffle off, I would take the bird in my lap and stroke his feathers one by one, lift up his closed eyelids and look at the hazel eyes, bright even in death, spread his feet out in my hand and rub his good leg against my cheek. It seemed to me that there was life in the bird; his was overflowing with happiness. The robins and red squirrels and other staple game would fade into insignificance for the time being, and the partridge brought a pleasure keener than most mortals ever experience.

But years have rolled by, and the score and the old single-barrel are things of the past. I have owned many a true gun and hunted many a fine setter or pointer "in far distant States," and the days spent in the woods with dog and gun are enjoyed even now with nostalgic enthusiasm. It is many years since I have shot at a sitting grouse, and I do not care to do so again. I have shot at a sitting grouse, and I do not care to do so again. There is a grand feeling of pride in being able to kill the "hurling grouse" as he dashes forth from the brush in front of the well-trained setter; and a pleasure that would be marred by the presence of a murdered bird in the game pocket.

Some of your correspondents are skeptical about the existence of sportsmen who delight in having a ruffed grouse do his very worst when he bursts away through the thicket, but your humble servant is one of the number who do enjoy such shooting the best. A few of my friends will tell you that I am a dead shot, but the aforesaid friends are enthusiastic persons who only look at the bag of birds after a day's shooting and do not count the empty shells. There is an interesting story in many of these empty shells, and I would prefer that it remain untold.

In your last issue "Oeto" says that of fifty-four flying shots at grouse he has killed sixteen, and when I can beat that score—shooting dead, on day-out—I shall be sure to tell of it. I have no under the gun often enough to know what it means. There have been days when eight or ten empty shells represented half a dozen ruffed grouse in the bag; and there have been other days when the same number of shells would indicate only a bird still in the future. I can show you men, though, who can and do average one bird to every two shots, but they are market shooters, who pick out only the fairest chance, and thereby save an ammunition bill. "Oeto" probably shoots at all of the birds that rise within range, and so do I, and ten to one you do the same. "Oeto," I am sorry that you killed those two sitting birds. If you can keep up your average on wing shots come over to our side of the fence and your virtue will be its own reward.

MARK WEST.

MICHIGAN—Essexville, Bay Co., Jan. 1892.—Editor Forest and Stream: Though game is by no means abundant in this locality, yet it affords me pleasure to report to you that quail, and especially duck shooting, has been quite brisk the past season. As it is the case with the quail and ruffed grouse, sportsmen are turning their attention to rabbits and squirrels. The latter sport will be anything but agreeable, owing to the scarcity of any larger species of squirrel than the nimble little red squirrel and chickadee. The gray, fox, and black squirrel are seldom met with in this section. A few years ago these little inhabitants of the forest were numerous here, but scarcity of food and growth of civilization have driven them away.—LAWSON E. RICHARDSON.

MY FIRST WILD GOOSE.

IT was a bitter cold day in March, wind blowing a gale from the northwest, clipping the tops from the waves and dashing them in slaty showers over us, as we lay in the blind. All along the edges of the bog the ice was making fast; and we shivered as the ever-increasing blasts threatened to tear away our frail rampart of sedge grass. A spring autumn morning, as the tall sedge then standing will enable you to build quite a grass wall around to break the wind without making it too conspicuous, but after winter-storms when everything is beaten flat, you have to do with very little cover and keep close to avoid exciting the suspicions of the already wary fowl. We had fourteen live decoys out, each with a huddle on its feet, tethered with about six feet of stout cord to a peg firmly driven into the sand. Poor devils! thought I (as I watched them, standing in the shallow water, heads to the wind and unconsciously preening themselves), I can't imagine how you stand this weather. At that time I was not aware that *Anser canadensis* is one of our most hardy friends, and that the more blustering and colder the day the more they will fly. An occasional gabble at a passing bunch of fowl showed that our decoys were on hand for business, but most of the passing birds were travelers, not to be coaxed into delaying their flight, well knowing, I have no doubt, that delays are sometimes dangerous. An occasional black duck was brought to bag, having yielded to the attractions of a flock of about a dozen of their woodcock-like relatives that we had set out.

Shinnecock Lighthouse loomed up cold and gray, way down over the rough water of the bay, and as we were looking that way we spied two geese slowly forging up against the wind, low down, close to the surface. Their line of flight was such as to carry them by out of shot, unless our decoys could draw them up. Why the mischief don't the old boobies honk? Are they going to fail us at the critical moment, after fussing all the morning? No, by George! there goes the old gander! honk! honk! honk! followed by the whole gang, and such a chorus as they sent up made our blood tingle with eagerness. The wild birds were almost abreast of us, but on hearing this great clamor immediately swerved, and setting their wings, came scaling in toward us, honking with delightful energy as they rapidly approached. Was I excited? Well (as the boys say), "I should smile." I had never pulled a trigger at a wild goose up to that time, and there I was flat on my back not daring to move hand or foot for fear of spilling the little game, relying on Brunt, who was standing on that moment in a quiet voice, his low tones served to add to my already intense excitement until I fairly shook. "Are you ready, Billy?" says Brunt; "they've lit just outside the decoys and a little to the right." "I can't hold her straight to save my neck, Brunt." "You've got to; they look suspicious already," was his reply. "Go it, then," and we both sat up. Every decoy we had rose with the wild birds as they jumped, flopped to the end of their leathers and ignominiously subsided with a tremendous splash. With rapid sweeps of their broad wings our game was on the leave, rapidly falling off before the wind. Being to windward, I took the leader. As I felt the butt on my shoulder I braced for all I was worth, and covered that elegant bird (I can see him now) as well as I could under the circumstances. We both let go on the instant, and by jingo! I got him; downed him as dead as a stone, Brunt taking his mate. You who have been there can sympathize with me as I waded out and clutched him, knowing that mine was the first human hand that had ever grasped that glossy plumage. We made a nice bag that day, but that first goose was the very biggest kind of a thing. Memory has a bright spot which freshens up when I think of old Shinnecock, and the day I brought down my first wild goose.

BAY RIDGE.

SPORTING RIFLES.

MODERN breech-loading rifle systems have brought forward many improvements that during the period they have been in use competition and erroneous theories have compromised merit by misapplication.

The military and long-range systems and their theories have been adopted for sporting purpose without reference to appropriateness. The short twist and heavy projectiles, have produced marvelous results in range work over known distances, and the magazine guns have practically, for attack or defense, transformed a company into a regiment. In adopting a system for sports we make a nice bag that day, but that first goose was the very biggest kind of a thing. Memory has a bright spot which freshens up when I think of old Shinnecock, and the day I brought down my first wild goose.

The heavy projectile and short twist of the long-range reduces speed and sacrifices flat trajectory, the prominent quality for unknown distances. Again, the disabling qualities of the repeater that are as valuable in military use, as fatal effects, are objectionable elements in a sporting rifle, where wounding and partially disabling shots have nothing satisfactory or sportsmanlike to be recommended. For more than a quarter of a century I have carried the rifle, and have tested quite to my satisfaction the different prominent American breech-loaders, and recent years' experience have tended to confirm present convictions. I offer this much as an apology for occupying space for the following opinions, that have materially aided me in securing satisfactory results, and I am sure they are not derogatory to conservative practices.

The essential qualities of a perfect sporting rifle may be classified in the following order of prominence—safety, accuracy, simplicity and durability; and I would not compromise any of these qualities to secure rapidity, as any modern single breech-loader is sufficiently fast to meet all the requirements of legitimate sport. Five or three shots in a minute can be fired and give better results than can be obtained from twenty, as with one shot properly delivered the remainder will do more harm than good.

As a rule, rapidity compromises accuracy, and when carried to extremes of risk, simplicity will lose its uncertainty, and such a device, as to quite under the riflemen for creditable work when a single or limited number of shots are to be fired. Especially is it true in deer stalking that the careful shot makes a better score, secures chance and more wholesome meat, and is generally the man of the party to be better satisfied with the results of the day's sport than the one who relies on speed and his migration and blazes away as long as there is a shell left or a tail in sight.

The paramount quality first, and always is safety, and any system, however complete, that is not absolutely above

criticism in this respect, should be rejected at once. Next to safety, accuracy should be investigated, and this opens volumes of theories practical, valuable and otherwise. For sporting purposes the gauge sight, degrees of elevation, and all the valuable lore of the range are nearly useless, the rough and ready work of the field demanding a gun stripped of holiday trappings that shall send the leader missile killingly to the straight line over the necessarily unknown distance. It must be able to cut the head of a grouse as certainly at twenty yards as to penetrate the vitals of a deer at two hundred yards. It must be able to strike with sufficient violence to almost preclude the possibility of a noble animal's being able to crawl away and die unharmed or a dangerous animal attacking the pursuer.

There should be no doubt about the ability to accomplish these ends, or else the weapon fails to fulfill its mission and should be discarded. Simplicity and durability may or may not be synonymous terms when applied to a breech-loading system, as a moderate increase of parts may relieve those in use sufficiently to enhance durability, yet a multiplicity of parts must in a certain degree increase liability to disarrangement and irregularity in action, and consequently should be avoided.

Simplicity increases wonderfully in prominence as the distance from gun stores and repair shops increases, and the elements of uncertainty always hover about the remote camp of the sportsman. He suddenly awakens to a new sensation, he handles his rifle with increasing care and solicitude, notes any irregularities in the action, oils up the working parts, and sometimes not a little nervously ponders over the complicated mechanism that is so necessary a factor in his sport. He sees visions, and sometimes dreams of the loss of his rare anticipated opportunities should an insignificant spring or a single screw fail to perform its mission. For this reason alone there is not sufficient merit in the possibility of complicated construction to sacrifice the probability that can constitute the sole foundation of legitimate and satisfactory sports. The possibilities are attainable seldom or never in a life time; they live and have their existence in legends and dreams. A rifle that will safely and effectively meet the probabilities of sport is the most satisfactory companion, and rapidity is not among the prominent factors to secure this.

Again, it may be questioned whether the magazine system applied to sporting rifles is not pernicious in its tendency, and whether conservative sportsmen should encourage their use in the face of such earnest work as there is being done in the way of preservation and propagation of game. I have in mind a communication that appeared in these columns some time since from a prominent sportsman, wherein he recorded for us the crowning glory of his rifle in the following language: "I was enabled to kill several deer out of a band jumping up suddenly before me."

I know of but a single word in all the sportsman's nomenclature to apply to a man that sends a shower of balls from a magazine gun after a band of frightened deer, maiming and tearing many that cannot possibly be recovered. It matters not whether the echoes of destruction died away among the remote cliffs of the Sierras or the sand hills of Dakota, or whether the work was accomplished by a disciple of the cross, a defender of the flag or a scion of titled nobility, the perpetrator can be up but one place in the memory of conscientious sportsmen.

A recent correspondent has built for us the rifle of the future, and while I may not fully endorse his model, nor live to see the millennium, I have an abiding faith in the good judgment of American sportsmen, and that in the near future the coming rifle will be stripped of much that has made the rifle of the period temporarily popular. I don't believe it will be a weapon encumbered with the necessary appliances to "put numerous consecutive shots in the same ball hole at fifty yards," neither will it be necessary to have a "ramrod attachment for either the man or the gun."

I do believe it will be safe, simple and effective, and will carry a sporting range with reasonable accuracy and quickly effect, and that the sportsman who handle it will not need twenty shots a minute to satisfy their killing propensities.

MILLS.

BREECH AND MUZZLE.

FROSTBERG, Md., Jan. 16, 1892.

Editor Forest and Stream:

The discussion of the "muzzle-loader vs. the breech-loader," involving the question of superior accuracy, is an interesting one, and will doubtless bring out some very valuable hints, of one of which I will here speak. Mr. Arthur Baker, of this place, purchased about a year ago a breech-loading rifle .38 caliber, centre fire, and not being satisfied with its work, made a long ball according to his own notion. This ball has three rings near the front, leaving just room enough for a short-rounded end, and the rear or shell portion of the ball is smooth. By this process the ball is enabled to take hold of the grooves before the rifle is discharged, being pushed home gently by the pressure of the breech-block.

I think his gun is quite as accurate under his plan as any muzzle-loader ever made.

Is the difference in the various breech-loaders of the day adapted to loaded balls, loaded from the muzzle?

C. W. O.

WESTERLY, R. I., Jan. 20, 1892.

Editor Forest and Stream:

I have watched your columns closely since October 1st: for an answer to "Iron Ramrod's" letter, contained in your issue of that date. The letter of V. D. Baker in *Forest and Stream* of January 12 is interesting and instructive, but it does not answer Iron Ramrod's query, that I can read, and I think it would create a false impression in the mind of a reader not familiar with the subject. As I understand him, he means to say that any breech-loader when tested as Iron Ramrod tested his is liable to produce similar results, allowing "no fault with the factory ammunition."

If this is true, would the breech-loading rifle be found in the market in 1892?

If the superiority of muzzle-loading is thus easily demonstrated, would any of our expert riflemen load their rifles at the breech to-day? Are they sacrificing accuracy for convenience?

After years of discussion and exhaustive experimenting the breech-loading rifle still holds its own. I think this fact alone proves that the breech-loader, as found in the hands of the best riflemen to-day, is either fully up to the standard of the best muzzle-loaders, in point of accuracy, or so near to it, that the difference is not clearly shown.

I confess I am not completely at sea to admit that the remarkable performance of "Iron Ramrod's" rifle. Out of

twenty shots (breach-loading) only thirteen were where they ought to be; one goes three in. to the left, three two in. high, and the other three not quite so bad.

I cannot think with Mr. Van Dyke that there was "no fault with the rifle, no fault with the factory ammunition." One or the other or both must have been wrong somewhere. If both were without fault, this wild shooting at such a short distance could not, in my opinion, be caused simply by the bullet being delivered with their axis at a slight angle to the axis of the barrel.

Too much grease on the bullets will frequently cause uneven shooting, particularly in cold weather. The standard fixed ammunition does not always fit all rifles alike. The No. 1 buckshot with patch might have fitted the bore just right, while some of the conical bullets might not have been large enough to receive any impress from the lands, thus going out without revolving. However it may have been in this particular case I am confident of this: I can take any one of five or six different makes of rifles, 32 cal., 30 in. barrel, and with standard fixed ammunition made by the W. R. A. Co., place 95 out of 100 shots inside of a ring, three-fourths of an inch in diameter, at 25 yards, loading at breach and firing from immovable rest. The other five shots will go within an inch of the centre of the other shots. N. E. M.

CAUSE OF A PREMATURE EXPLOSION.

SOMERVILLE, Mass., Jan. 2, 1892.

Editor Forest and Stream:

I have a few words that I would like to say about gun accidents. Not about the idiots who "didn't know it was loaded," nor the ones who are careless with firearms. But there are instances where accidents are seemingly unavoidable, and I once came near being a victim of such a one. An old sportsman—and a good one, too—with whom I used to hunt once said to me, "Talk about gun accidents; I tell you it's all carelessness. A gun never goes off without some cause or other; and a man who gets hurt with one is a careless fellow, to say the least." This I always supposed to be true, and, as I have always made some pretensions to carefulness in handling firearms, have never had a premature discharge.

Due to the story. Early in September last a trusty companion, whom I shall call Jack, and your humble servant, started for New Hampshire for the purpose of gathering in a few birds and having a good time generally. We stopped with an old man who lived alone on a farm away from "town" about three miles. One morning Jack and I had been out to try the grouse. We had been out perhaps an hour or so when it began to rain and we went back. We had just reached the house when it commenced to rain in good earnest, and as we were wet Jack neglected to remove his charge before he entered the house. I was wiping out my right barrel and Jack had his gun laid across his knees and was wiping the outside of the barrels when there was a deafening report and the room was filled with smoke, glass rattled from the window and things seemed lively for an instant. "Jack, are you hurt?" I exclaimed. "No," he replied. "Then what on earth is the matter?" "I don't know," said he; "only the gun went off in my hands." Jack declared that it was the lock and, as I knew him to be a man of truth, I was at a loss to account for the accident. "Will the gun go at half-cock?" asked I. "Try it." Jack half-cocked it and could not pull it off. I tried, with the same result.

Here was a pretty mess of it: a hole through the door and beyond, in the next room, a window smashed, and, worst of all, a gun that would "go off" without a cause. I was not satisfied; I wanted to know the reason why that explosion occurred, and I went to work to find out, if possible, the reason. Upon examination I found that the rear or left-hand trigger was a little too long, and just touched the guard, so that when the hammer was raised the trigger could not get forward enough to let the "sear" catch properly and, consequently, down went the hammer and the explosion followed. We removed the guard and filed off the end of the trigger and it was all right. Now, this gun was not an old, worn out thing; it was not one of the pot-metal guns that are sold for two or three dollars. It was purchased just before we started and bran new; it was made by one of the best-known English gunmakers, and I am sure that it was no better than criminal carelessness on the part of the workman to let a gun go away from the factory in such a dangerous condition. So I would advise all men who own or handle guns to look and see if the triggers clear the guards all right, and this precaution may save some one a limb and possibly a life. If the gun had been made with rebounding locks such an accident would never happen. Too much cannot be said in favor of rebounding locks, as far as safety is concerned; and, if I could not have them rebounded, I never could have been so near from my gun as the full value of the arms, for I consider the rebounding lock safe, and safety is something that I aim at. The older I grow the more afraid I am of my gun.

The old gentleman that we stopped with was away from the house at the time of the accident, but the "good-natured old soul" took a common sense view of it, and we had no trouble in fixing the damage with him.

I would add, in conclusion, that I never saw ruffed grouse so scarce as they were then. We were up there a week and killed only two, and they were young ones and "poor as crows." This was at Hancock, N. H.

We had some fun with hedge hogs, and, as Jack had never seen one before, it was amusement for him to send a charge of No. 4 Newcastle shot at them and see the quills fly. We killed seven while we were there. IRON RAMROD.

THE CAYUGA COUNTY LAW.—Cortlandt, N. Y., Jan. 1892.—The restriction placed over sportsmen forbidding the shooting of ruffed grouse and quail in Cayuga county for the term of three years has been repealed. It proved too much of a luxury to hunters that disregarded all game laws, besides an aggravation to the founders. Can the supervisors pass a special act in regard to this matter when it is provided for in the State game laws?—"Mig." (Sec. 37 of the law provides: "It shall be lawful for the boards of supervisors of any county, at their annual meeting, to make any regulations or ordinances protecting other birds, fish, or game, than those mentioned in this act; and also for the further protection of such birds, fish, or game as are in this act mentioned, except wild deer, and to this end to prohibit hunting or fishing in particular localities or waters lying wholly within their respective counties for limited periods and during certain months of the year, and to prescribe penalties and penalties for the violation thereof, and adopt all necessary measures for the enforcement of such punishments and collection

of such penalties; and such regulations and ordinances shall be published in the papers of the county in which the session laws are published, and a certified copy thereof shall be filed in the office of the clerk of the county.")

THE HUNTERS' TRAIN.—Last Sunday morning's train on the South Pacific Coast Railroad consisted of four cars of hunters, all filled, including those who went up the evening previous, and all of whom returned on Sunday morning, amounting to nearly two hundred and fifty. Debarbarkit begins at Alvarado, and a few drop off at Newark and Mowry's, but a large majority leave the cars at the draw bridges, and none go beyond Alviso. Those who go up to spend the night have had shanties erected near the road wherein they can comfortably lodge and be ready for their sanguinary work by the crack of day. —*Alameda Argus.*

A gentleman connected with a leading Eastern sportsman's journal, and who is evidently familiar with the hunting grounds about San Francisco, sends us the above, in a letter, with the following comments:

"Only think of it! two hundred and fifty pot-hunters, each armed with an old musket, a tin can of powder, a bottle of shot (and doubtless two bottles of whisky) let loose every Sunday during the winter to blaze away at every living thing, be it sand-peep, cat, hen, or whatever else may show itself within range of their gunshots. This is not exaggeration, but a true sketch of the Sunday hunters seen in California. Remember, also, that this is only one of the dozen grounds near San Francisco that are thus overrun. Shooting should be stopped on Sunday. I do not put it on any other moral ground than that it is an easy and pretty effectual way to prevent the decrease of game birds."

Our friend is partly right and partly wrong. He is right, at least, in deprecating the better-skillet style of shooting that such an army of wild hunters are apt to indulge in when they find themselves let loose upon the fields and marshes. Of course they cannot all be gentlemen, nor most of them likely to have much consideration for the rights of the country people over whose heads they roam. But we doubt whether they kill so many ducks that the number will be noticeably depleted the following season. These birds are migratory, and each year's new broods seem to be quite as numerous as the preceding one. The Alameda marshes are convenient to the metropolis, and so long as "the army" confines its operations to that section, comparatively little harm can be done. But we can readily understand how disastrous might be the result if this "loving brigade," when it strays, should happen to alight on some poor frequenter by the native quail. In that case we might well contemplate the situation with alarm. As for the Sunday exodus, it is probably that that is the only day in the week on which these men, or most of them, can leave their business or labor to indulge in rural recreation. In such case their action can be regarded with a considerable degree of leniency. At all events, if no stones were cast at them until by some one who is himself without sin of that kind, the shower of rocks would not, we opine, be an alarmingly heavy one. —*Sacramento, Cal., B.*

BRASS AND PAPER SHELLS.—Philadelphia, Jan. 7.—*Editor Forest and Stream:* As it seems to be generally admitted that brass shells are superior to paper ones in the matter of penetration and pattern, it would be interesting to know precisely what the percentage of gain is, and as Mr. Greener has probably fired as many experimental shots as any man in the world, with the view of settling the figures, taking as an example a 9 to 10 gauge gun, using as a uniform charge 43 drams powder and 14 oz. No. 4 shot, with 32 inch barrels and choke bore. Also will he state what the highest possible pattern is at 40 yards, using the above charge and No. 4 shot, soft or chilled. Another thing: would he advise the use of brass shells unless the fore end of the barrels are especially heavy to withstand the strain consequent upon driving No. 8s through them and quite likely fly's best or hardest felt. In other words, is there not great danger of the barrels bulging at the choke if wads are used two sizes larger than the gauge of the gun, as would be the case in using brass shells. I would not be afraid of this using the Parker, Colt, or almost any American made gun, as they are left heavy at the muzzle with a view, I presume, to the danger suggested, but with most of the English guns I could, though they will no doubt stand any wad the paper shell would take without bulging. For field shooting I regard brass shells as a first-class nuisance, but for duck shooting, where any shooting in face where there is great exposure to dampness, they are par excellence and that they are superior to paper ones in penetration I have no doubt, but just how much is a question I will ask. —*PINK EDER.*

COLUMBIA COUNTY. West Winsted, Conn., Jan. 9. *Editor Forest and Stream:* Three weeks ago I had the pleasure of a trip into Columbia county, N. Y., partly for sport with the partridge. On the way stayed over-night at Great Barrington, and had the pleasure of a talk with Mr. C. H. Sage, a noted sportsman, and doubtless well-known to many of your readers. His dog "Zac" is a beauty to look at and doubtless a grand field dog. Mr. Sage is a genial, pleasant man to meet. Partridge, in the region of East Chatham (where Mr. Granville Hills' dog "Tillie" was unfortunately shot last fall), are not so plenty as in former years. Yet one, in a day's tramp, by hard work, can put up twenty or thirty birds. I am fully converted to the practice of using heavy shot, say 4's or 6's, in shooting grouse. Heretofore I have used 8's. These may kill in an open shot; and will, if you hold on the bird and shoot within a reasonable distance, but they won't now down a pine tree and then kill. I go on the principle of shooting at every bird that rises within gun-shot. It's a poor shot that is afraid of missing. The grouse is the noblest game-bird in these parts. He is a royal fellow! I love to see one boil out of a cover in front of a dog, and then I love to empty both barrels at him, and then, perhaps, watch him go right on like an arm with banners. You have the sport of hunting him up, seeing him boil and shoot again. I also had the pleasure of visiting Hudson and some of the sportsmen there. If appearances go for anything, Hudson may be proud of her sportsmen. They are gentlemen. Mr. Granville Hills is the owner of five fine pair of red Irish pups as one can find in a week's travel. Daisy and Snap, 5-mo's old, out of Tillie by Max Wenzel's Chief. It was a treat to see their intelligent and accurate performances. Quail in the region of Winsted, Conn., are not numerous, but the prospect for next fall is good. Very few have been killed. —*ROBERTUS.*

DODGING DEER.—Aaron Taylor, of the "Bog," was arrested by Officer King, of this village, on Wednesday of last week, upon a warrant issued by Justice Bugbee, charging

Taylor with pursuing deer with dogs in the South Woods. Mr. Taylor appeared, in common with a great many other persons, to be of the opinion, that dodging deer was not prohibited by law. At the trial, which took place on Thursday and Friday, the evidence was plain enough to justify a conviction, which Squire Bugbee did not hesitate in awarding, and Mr. Taylor was fined \$25 or the alternative of twenty-five days in jail. Mr. Taylor, having the money, as he had ought, for according to his own statement he had killed, with the aid of his dogs, \$75 worth of venison the previous week, forked over the fine and was allowed to depart. This conviction is a reasonable one, and it is expected that others will immediately follow, for the ice being once broken, evidence in other cases will be more easily obtained. This is the first conviction in the county, we believe, under the new law, but it is not likely to be the last prosecution. Enough should follow this to break up the unlawful practice of pursuing deer with dogs in St. Lawrence. It was mainly through the efforts of Assistant District Attorney Ellsworth that Taylor was arrested and brought to trial. —*Canton, N. Y. Advertiser.*

WISCONSIN SHOOTING GROUNDS.—Chippewa Falls, Wisconsin, Jan. 17.—A mouse was killed by the "boys" at one of the lumbering camps to the north of us a week or two since. The animal is said to have been a large one, the antlers having a spread of over three feet. Moose were years ago plenty all over here, but to see one now is rare. Deer have been numerous the past season, and large numbers have been killed, mostly by professional hunters. This section offers a good field for sportsmen in search of such game, as well as having a liberal supply of the smaller varieties in the catalogue of game animals and birds. The section of country between the Wisconsin Central and Northern Wisconsin roads is mostly wilderness, and abounds in game and fish. A railroad is being built from here northwest to strike the Northern Wisconsin road, thereby making up, affording another means of transportation. —*BADGER.*

MICHIGAN'S FIRE-ARM LAW.—Grand Rapids, Mich., Jan. 21, 1892.—*Editor Forest and Stream:* In your issue of Jan. 12th inst. (vol. 17, page 470), under the caption, "A Whole-some Fire-arm Law," you give an abstract of the law of Mississippi to prevent the careless use of fire-arms. It gives me pleasure to know that one more State has fallen into line. In 1869 Michigan enacted a similar law, which may be found on Page 86 of the transactions (of the Michigan Sportsmen's Association) for 1881. It seems strange that the various societies for the Prevention of Cruelty to Animals should be so solicitous to keep sportsmen from killing pigeons for food, and yet have no care as to how much they shoot themselves or others by carelessness. Chippewa gun is not of as much value in their eyes as the low animals. I believe similar laws will be enacted and enforced everywhere. —*E. S. H.*

THE GEDDES CLUB.—Geddes, N. Y., Jan. 19.—The Geddes Shooting and Fishing Club held their third annual meeting Tuesday, January 17, 1892, at the office of E. M. Klock. The following officers were elected for the ensuing year: President, Edward Earl; Vice-President, Vincent Case; Secretary, George G. Cotton; Treasurer, Edward M. Klock; Executive Committee, Edward M. Klock, Horace Bronson, William H. Burrill. The treasurer reports the club in a prosperous condition, all debts paid and some \$50 in his hands. The club has forty-two active members. We have held monthly glass ball shoots for a gold medal (the property of the club) to belong to the member who wins it three times in succession, but so lively has been the competition that but two members have held it twice in succession in two years. We find this has done much to keep our club together and interested. We have your paper, and it is read with much interest, and sometimes provokes a good deal of discussion. —*GEDDES SHOOTING AND FISHING CLUB.*

A NATIONAL ASSOCIATION.—East Saginaw, Mich., July 20.—*Editor Forest and Stream:* At the seventh annual meeting of the Michigan Sportsmen's Association, held in this city Tuesday and Wednesday of this week, the Secretary was instructed to confer with the secretaries of other State associations, with regard to calling a meeting of representatives from as many States as possible to take action towards forming a National Sportsmen's Association. We therefore request the secretaries of the different State associations, as well as all other parties interested, to send their names and addresses to the undersigned as soon as possible, so that this excellent idea may take definite form at once.—*WM. B. MEADON, Secretary Michigan Sportsmen's Association.*

LAKE GEORGE SPORTSMEN'S ASSOCIATION.—Chicago, Jan. 18, 1892.—The annual meeting of the Lake George Sportsmen's Association of this city was held last Tuesday evening at 43 South Clark street, Vice-President Gillespie in the chair. The members present were Messrs. W. G. Payson, H. B. Foss, E. S. Douglas, E. T. Martin, F. Barnard, S. and W. Woods, E. Goodman, Perry, White, Burroughs, Kimbark, Jones, Worthington, Thomas, Peach, Huft, Darlington and Farmer. Professor R. A. Twitche was elected President for the ensuing year. Mr. Darlington Vice-President, E. T. Martin Secretary, Mr. White Treasurer, Mr. Hunter Assistant Secretary. Directors, Turtle, Martin, Woods and Foss.—*TEN BOK.*

TENNESSEE.—Port Royal, Jan. 14.—The quail season does not expire in our State until March 1, but there will not be much shooting done from now on. A few more grand final shoots will wind up the season. We will have a fine lot of birds left over for breeding. I went to a pond last Saturday duck shooting and en route flushed several fine coveys. I bagged four. I intend to give the ducks a round late this evening. If I had a boy I could make fine bags. I intend to go to boat, and anticipate fine sport. What a fine evening this is for squirrels! But never mind; I will give them a round soon. I do dearly love the sport.—*BIRDO.*

DESPOILING THE ADIRONDACKS.—The Ilion (N. Y.) *Citizen* remarks: "Some wealthy Boston tanners have purchased the hemlock bark on 25,000 acres of forest land in the Adirondack region, and purposed to strip the trees. We thought the legislature had contracted to preserve the great northern wilderness for the purpose of promoting the rain fall of the State, and of supplying the Erie Canal and Hudson River with water enough to float boats. We can't spare hemlock bark for tanning purposes any longer. Let some one invent a substitute."

LENGTH OF BARRELS.—Red Bank, N. J., January 23.—“Butter Ball” wants to know why a No 12, 28-inch barrel cannot be made to shoot equal to a 30-inch. I have used both lengths in a 12-gauge and find the 28-inch gives equal shooting in every respect, and is preferable, as you can get on a bird much quicker in the cover. The short barrels will take finer powder, and should they be bored the same as the 30-inch, no perceptible difference will be found in the targets.—WILD.

INDIANA.—Indianapolis, Jan. 14.—Shooting in this region this fall has not been good. Have never known quail so scarce. The long continued cold weather and deep snow of last winter destroyed both quail and rabbits. Woodcock shooting was unusually good during early part of the season. I obtained woodcock on each of my first three trips after quail, finding them in coveys and unexpected places. I and a friend obtained the finest pair of woodcock I have ever seen, during a day after quail in the latter part of October. We had them prepared and mounted by Jack Beasley, a noted taxidermist, of Lebanon, Ind. They are beauties.—S. H. M.

THE UNKNOWN GUN CLUB, of Brooklyn, held its annual meeting on Friday evening last. The following officers were elected for the ensuing year: Henry Knebel, President; John Schlemmer, Vice-President; Henry van Staden, Sr., Treasurer; Henry Baruth, Secretary. It was agreed to shoot for two prizes at every match on the classified plan, at Dexter’s, on the fourth Thursday of every month. The first shoot will be on Thursday, January 26, at pigeons and glass balls.

FOX HUNTING.—Hornellsville, N. Y.—A great many red foxes are being shot here this winter. Fox hunting here is all done on foot. The hunters all want slow dogs. They say that a fast dog will run a fox out of the country.—J. OTIS FELLOWS.

DOUBLE WADS WANTED.—Indianapolis.—By the way, why don’t some of our enterprising ammunition manufacturers make a suitable prepared gun wad thick enough, so that one will do over powder, and save the trouble of always having to put two in? A box of wads might consist of one-half thick wads to go over powder and the other half, still thinner than those now in use to go over shot.—S. H. M.

EAST SAGINAW, MICH., GAME PROTECTION CLUB.—President, A. H. Mershon; Vice-President, William J. Cleveland; Secretary and Treasurer, William B. Mershon. Executive Committee:—A. H. Mershon, George L. Remington and H. B. Roney.

BROOKLYN GUN CLUB.—The following officers were elected last week for the ensuing year: President, George W. Fort; Vice-President, John M. Gill; Secretary, A. Elmdorf; Treasurer, Dr. Monroe. Executive Committee:—Messrs. Walter, Appel, Creed.

VIRGINIA.—Charlottesville, Va., Jan. 19.—Game is very scarce, and almost all the land for miles around is posted, so that there is a poor chance to break dogs or to keep them in practice.—J. T.

PORT JEFFERSON, L. I.—January 17th. We have plenty of ducks here this winter. I go after them every day that the weather will permit. I have just returned from a month’s shooting trip in South Carolina, where I found game very plenty.—W. H. R.

Sea and River Fishing

FISH IN SEASON IN JANUARY.

PRIME WATER.

Mackerel, *Scomber reticulatus*, Pike or Pickerel, *Esox lucius*, Pike-perch (wall-eye), pike, *Stizostedion americanum*, *Stizostedion primum*, etc.

YELLOW PERCH, *Perca flavescens*, Warmouth, *Channorthys plumosa*, Yellow Perch, *Perca flavescens*, Bachelot, *Pomoxys annularis*.

SALT WATER.

Smelt, *Osmerus mordax*, Striped Bass or Rockfish, *Morone chalcidus*, White Perch, *Morone americana*, Pollock, *Pollachius americanus*.

ARMED CAPS-A-PIC with baskets, bags and rods, The angler early to the river plods; At night his looks a woeful truth announce, The luggage half a ton, the fish an ounce. (Putnam’s Yacht Manual for Trout Fishes, London, 1880.)

HALCYON DAYS.

AN EXPERIMENTAL MEETING INVITED.

MEMORIES of a lonely camp, a picture of a weather beaten tent beneath a giant pine, the midnight music of wavelets upon a pebbled beach, all these come floating up to-night on the bosom of the storm wind and with them the remembrance of a duty unperformed.

As the writer in August last mournfully unjoined his rod at the close of his tenth annual sojourn in the mountains amid the bass, it was the determination to forthwith share the pleasures of the tale of ten years with his brethren of the angler. Instead of so doing he has been content to fatten on the pabulum of “Nessmuk,” content to dwell with that gray-haired chief in abodes almost a counterpart to his own—either fit for the gods. True, Nessmuk has been a Nimrod, a veritable Ulysses, so far as wandering goes, while the writer has listened nightly to the whisperings of the same elves in the roof tree, yet the inmost currents of the soul have down in the same channel; the same kisses from breeze and shower have wafted to their bronzed faces; the same artist hand has flung before each the glories of the morning, the splendors of cloud and peak that stood “sunset flushed,” and the shadows that would have defied the genius of a Rembrandt even to recall.

“All life is not the same life,” yet there is that “touch of nature” which makes many lives one, those alone, born of the Great Mother. And, were Rabbi Ishmael to perform the task imposed upon him in song of finding one, who, for a single day, had been happy, had been happy with naught to mar the perfection, we believe that he would pass two names, at least, to the Recording Angel.

Of those ten sojourns with tent and rod—of a month in each year passed in the solitude of the mountains, with sport unrivalled with the bass—and that, too, not one hundred miles from New York—much might be said. It was only Nessmuk, the great hunter, far off whistling of a locomotive reminded one that a great civilization, with its throbbing beyond those mountains and far below, and recalled us from barbaric lapses. Indeed, we would have been content for the nonce to have known that the shadow on the dial had gone back to the time when the squat Laplander was master of Europe.

There is an “old, old story,” as dear to the angler camper as to women, and like that of the latter, to be told only to the chosen few. In the present instance, that story must be confined to some degree, for the veterans shall have finished their record of the summer, or perchance, Nessmuk shall have completed his loved confession.

So, to pass this by, and to bring forward the result—our experience—for the profit of the gentle craft, we are compelled to record that for some, to us unknown, cause, bass refuse to take the fly, and more especially the bait, with the avidity of the days when no ponds and lakes were first stocked. Especially is this the case in Orange county, N. Y. Time was when the angler with a fair assortment of bait—for instance, grasshopper, minnows, black crickets or with the spoon—was certain of the sport. This has changed, and the sport is growing poorer year by year. Not that our waters are depleted, for some of our ponds are literally alive with black bass, yet they refuse all bait. Now and then a pair of five-pounders will be the reward of a day’s fishing, which pleasing episode will not be repeated for, perhaps, a month of daily fishing. There may be exceptions to this state of things, but they are rare. Greenwood Lake seems to be falling into line with the rest, as regards black bass. We mention this resort that may be corrected, if in error, by some one of the many readers of FOREST AND STREAM who frequents its waters, and whose experience may differ from ours. Up to the season just passed, we believe there has been some fair sport had there, but the present season has not been so. Within a radius of ten miles, no less than that number of ponds, or, rather, small lakes, most of them with rocky shores, have been stocked with bass for twelve or fifteen years. During the first five years the sport was excellent. Then came a gradual falling off until now, in one of them, at least, it is almost useless to cast. Yet, in this pond, great numbers of bass can be seen at times ranging from three to five or six pounds; so the ready answer “fished out” has no application here.

The writer, during the ten years above mentioned, has devoted his leisure, almost exclusively, to black bass fishing; and has his favorite spots, which afford good sport, and are to him what a certain clump of alders in a run is to a vald correspondent of the Game Bag and Gun department of THE FOREST AND STREAM. Still, the general condition above outlined, remains to us a mystery. Can some brother of the angle explain it?

It may be presumptuous in a stranger, upon his first entrance into the columns of FOREST AND STREAM, to call an “experience meeting,” but the compulsion of many a night by the camp fire, read by flickering torch, bids us seek the truth. Whether it lies “in the bottom of a well,” peeped in the brain of the editor, or reposes in the experience of some good craftsman, let us leave to him.

And if an “experience meeting” may be opened, will not some “contemplative man” tell what he knows about “signs,” to what extent luck has been had in the teeth of all unfavorable ones; what, if any, he has found infallible. Let Nessmuk lead, and “be who left half told,” the memories of a pleasant week with bass at a Pennsylvania lake, with the two boys, “June in,” and let no one be “backward.” Let us hear from “Kingfisher.”

The breath of spring will soon be wafted to us on the gales; soon rods will again be joined and camp fires in the mountains, blaze and burn as of yore; again, reposing on her bosom, her children will commune with the Great Mother and, Anteus like, arise new born. Speed the day! and he, who can carry with him, as food for contemplation, new thoughts, be they but vagaries or living truths, superstitions, trusted in by gentle anglers—now dusk—in the long ago, or the new light which, day by day, comes to progressive man; he who has these ever with him—whether in the guise of “the Nimrod” in the “Bye-way” of the Northwest, or “the Forests of Yucatan”—paddles and tramps not in vain, though night finds him chilled and drenched on a lee shore, or without a string or with an empty creel.

SOUTHERN SEA-FISHES IN 1875.

THE extracts given below from the log-book of that rare old piratical buccannier, Captain Dampier, were handed us by Mr. Frank Endicott, the well known lithographer of this city, and the President of the Richmond County Game Association. They are valuable for many reasons, one of which is the showing of how the names of some fishes were spelled in those days, especially the vulgar name of *Megalops thalassoides*, which was tarpon, now changed to tarpm, and occasionally to tarpon. The latter spelling seems to have only a few followers.

What glimpses of freebooting pleasures “as he sailed, as he sailed,” the extracts call up! Rich galleons laden to the coopers with the gold of the helpless old Dons, silks and jewels and precious stones, and bejeweled and adorned breastplates and rapiers, with bits quaintly patterned and studded with precious stones, and other like aesthetic plunder which is not to be had in these degenerate days. It moves us to make the office boy walk the plank out of the third story window, and only considerations for the fat apple woman below, to whom his descent in that manner would be particularly disagreeable, prevent it.

The extracts show that the old captain was a keen and accurate observer, and a good describer of the tarpon and of the methods of its capture. This is probably the earliest mention of this fish and therefore should not be overlooked by future writers upon it. The book is entitled “A Collection of Voyages by Capt. William Dampier, Anno, 1675; London. Printed for James and John Knapton, at the Crown in St. Paul’s Churchyard, 1729.” Vol. 2, part 3; Chap. 1, pp. 12, 13, furnish the following, which we give, spelling, capitals, and all:

BAY OF MEXICO (Coast of Yucatan). “The Tarpm is a large scaly Fish shaped somewhat like a Salmon but somewhat flatter. ‘Tis of a dull Silver Colour with Scales as big as a Half Crown. A large Tarpm will weigh 25 or 30 Pounds. ‘Tis good sweet wholesome Meat and the Flesh solid and firm. In its Belly you shall find two

large Scallops of Fat weighing two or three Pound each; I never Knew any taken with Hook and Line; but are either with Nets or by striking them with Harpoons, at which the Mosquito Men are very expert. The Nets for this Purpose are made with strong double Twine the Meshes five or six Inches square. For if they are too small So that the Fish be not entangled therein, he presently draws himself a little backward, and then springs over the Net; Yet I have seen them taken in a Sain made with small Meshes in this manner. After we have inclosed a great Number, whilst the two ends of the Net were drawing ashore, ten or twelve naked Men have followed; when a Fish struck against the Net the next Man to it grasped both Net and Fish in his Arms and held all fast till others came to his Assistance. Besides the bait of three Men in a Canoe, in which they moved sideways after the Net, and many of the Fish in springing over the Net, would fall into the Canoe. And by these means we should take two or three at every draught. These Fish are found plentifully all along that shore from Cape Catoch to Trist, especially in clear Water, near sandy Bays; but no where in muddy or rocky Ground. They are also about Jamaica, and all the Coast of the Main; especially near Carthagena.”

Again, in speaking of the natural productions of the Bay of Carthagena, he says: “The Lagunes, Creeks and rivers are plentifully stored with great variety of Fish (viz.) Mullers, Spooks, Ten-pounders, Tarpm, Cavallies, Parricottos, Gar-Fish, Sting-rays, Spanish Blacklir, with many others.”

AN ADIRONDACK PRESERVE.

MESSRS. George W. Coterill and Joel B. Erhardt, members of the bar in this city, are the promoters of an important undertaking, designed to convert a large portion of the Adirondack region into a game preserve of a character in many respects superior to any other in that section of country. Mr. Coterill secured last week from the land board of the State, at Albany, a grant of thirteen thousand acres of land in Hamilton county, embracing Township 40, within which is situated almost the entire extent of Raquette Lake, the largest and most remarkable of the Adirondack lakes, it having a length of nearly twenty miles, sixty-six miles of coast, and an elevation of 1,731 feet. This large tract of land is heavily timbered, and it is the intention of the sportsmen into whose charge it has now passed to preserve the forests in all their primitive grandeur, furnishing cover for the large game now abundant on the property.

It is their desire to do all in their power to check the destruction of the natural timber supply, the protection of which is highly important, not only to meet future demand, but to insure the continued existence of large and valuable bodies of water, which now irrigate the lands through which their tributaries and outlets pass.

There is at present no intention of creating any club-house or public gathering place in connection with this preserve, the design being to furnish sites to those who may become members of the association on which to erect their own private camps, supply stores being located at convenient points from which everything necessary of camp supplies, provisions, ammunition, tackle, and even dogs and guns may be procured. It being to the interest of the guides to protect the property of the sportsmen and tourists from whom they earn their living, any furniture or other goods left at the camps from season to season, will be found undisturbed, upon the return of the owners. There are on the lake in the season from forty to fifty of these camps, already in the occupation of which those who have previously used them will remain undisturbed, so long as they use their privileges with the spirit of sportsmanship, and join with the new association in its efforts to preserve and perpetuate the resources of that grand game reserve. In addition to the land already secured from the State, large tracts now privately held will probably hereafter be joined to the property of this association, either by purchase or by the admission of the present owners to the new club.

Raquette Lake is one of the greatest of black bass waters in the Adirondacks; in fact the supply is so large that the minnows, upon which the bass feed, are becoming very much reduced in numbers, causing the bass to devour one another, the larger eating the smaller. In consequence of this, part of the bass will be allowed to pass into the lower lakes. The method of fishing for bass by anglers in this lake, differs greatly from that usually pursued. The usual plan is to either troll with a spoon, or to cast or sink a fly. Bass seldom rise to the fly, and when the fly is sunk, the bass caught are chiefly small fish near the shore. The proper way is to troll with live bait, a ten ounce rod, with twenty or thirty feet of line, and a nine-foot gut leader. The bait must be toughened by being placed in a perforated box in the lake, where it will be fed for two or three days, at the end of which, a large proportion of them will be found to have died; but those remaining will exhibit greater vigor than when first caught. The hook must be placed through the lips of the bait; there should be a light wind, enough to cause a ripple on the water; and then the angler, seated in his flat-bottomed row boat, which should be of green color, can, with the assistance of a man to propel the boat, capture many fish of three pounds, or nearly that, in weight, by skimming the bait on the surface of the water. There should be a well in the stern of the boat, divided into two compartments, one for the game fish and the other for the bait, and both should communicate, by perforations, with the water of the lake, so that the bait may be kept lively and the bass fresh until the angler’s return to shore. In this manner fishing can often be enjoyed throughout an entire day, so long as there is a ripple on the surface of some part of the lake, and the wind is not too strong.

The same also both lake and brook trout to be found here. The former are usually caught by still-fishing at a spot previously baited, and marked by a buoy; the privilege of fishing at that point being considered to belong only to the person who has pre-empted it in this manner. Lake trout are often caught weighing twenty pounds each.

Deer are very plentiful, one man having killed nineteen on the shores of Raquette Lake within two months. Ruffed grouse are also found in large numbers, and various kinds of ducks on the lake.

Raquette Lake is an important thoroughfare, all persons going by water to the upper lakes, Forked Lake, Long Lake, Little Tupper and Great Tupper Lakes, etc., having to pass through Raquette. There are now two hotels on Raquette Lake, one of which is on the land embraced in this tract.

ANGELUS should read the announcement of Thomas H. Chubb’s new patent reel-plate. See our advertising columns.

NIGHT BOBBING FOR BULLHEADS.

THE article of F. S. J. C. in the FOREST AND STREAM of January 13, on "Night Fishing," carried me back to a full half-century, when night was about the only time the boys could have for sport of any kind. Work, constant and hard, was far more the rule among farmer's sons then than now. Alas! how few of the participants in these nocturnal sports are yet on the hillside side of the dark river.

In a certain town in the county of Dutchess, there is, or was, a shallow pond of dark water—containing perhaps twenty acres—nearly covered with lily-pads, fringed all around with alders, bogs and muck, the latter of an unknown depth, as many of us found in unsuccessful attempts to reach the bottom with a bar from the bank.

What name the pond now bears, or whether it is called a pond or swamp, I am not certain, as a partial attempt to drain it was made many years ago, but I think not very successful. But in the times of which I am writing it was widely known as "Hyder's Pond," and was often resorted to by parties from a long distance but only at night, and mostly in the summer months. The sole and only fish I have any knowledge of ever having been taken from its dark waters were bullheads; but they were very numerous, and were often taken in large quantities.

The owner of the pond had an only but, flat-bottomed, clumsy and leaky. But when it wanted by the "Hyder boys," it was freely loaned to parties from abroad. Hence, it was an object to be early at the pond to get the first use of the boat. These coming later, usually slept in their wayans or in Mr. Hyder's hay barn till the first party were satisfied with their sport, say from ten o'clock till midnight, when the boat was returned to the next party in order.

If the first party were from a long distance and there was no moon, they would break themselves to the "hay-mow" and wait for daylight, but not always to sleep.

In taking bullheads on that particular pond, hooks were never used.

"What, never?"

Well, hardly ever!

"What, then?" does the reader ask. "Why, bobs." "And what is a bob?" some fly-caster may wonder. It is about two feet—more or less—of angle, worms strung on a line, three or four. Berge was a power in the days of "Long Syne." This string of worms was doubled and redoubled till about four inches in length, and fastened to a short hand line, no pole being required in using it. The bob was made in the afternoon before the night it was to be used, so that it should be fresh. Soon after lowering it into the water through the lily pads, a bite was usually felt, but there must be no jerk; a gentle pull till near the top of the water was all that must be done, and if the biting continued, a quick motion would raise the fish above and over the bank before the catch of feeling his hold on the bob. And when he let go, his fall was into the boat instead of the pond.

In other ponds where eels were numerous they were often taken in the same manner.

When the bobs gave, out the naked fingers were sometimes used instead, with equally good success, as to catching the bullheads, but it was no so pleasant for the bobbler the next day—by which time the bitten and scratched fingers would be flamed and painful.

The great advantage of the bob over the hook is, that with the former there is no handling of the fish, hence no wounds from their horns—a thing of no small account when fishing in the dark—as all can testify who ever attempted to dislodge a hook from the internal arrangements of a bullhead by the sense of feeling only.

I am aware that bobbing is not exactly the scientific way of taking fish, but I doubt if the most expert fly fisher gets more enjoyment or one-tenth the rollicking fun we had in these far-away days.

Now, a few words to the scientific and I will lay aside my pen for the present.

Thirty years and more ago bullheads were very numerous, and taken in large quantities at various points on the Hudson River; catfish were unknown. To-day catfish abound all along the river, but not a bullhead has been taken in years, to my knowledge.

The questions are: What has become of the bullheads? and where have the catfish come from? It is quite possible the Erie Canal may have been the artery that brought the latter from the Western States.

But we have come of the former?

Will some one be good enough to reply? J. H. D. Poughkeepsie, N. Y., 1892.

COOKING CARP.

I SEND you the following receipt, which has been given to me by the famous master of the German Fishculture Association, who has watched with interest the introduction of German's pet fish into American waters. My own opinion of the carp is that it needs "sugar and spice and everything nice" to make it as palatable, as some of even our commensurate varieties; but then my appetite may have a patriotic prejudice; and it certainly is a fish that seems to fill a gap that no other variety has yet adequately filled. I love the language of the receipt, just as it came, with its slightly foreign turn of phrase that gives a quaintness and novelty to the direct as found in the old English cookery books. By it we should judge that the carp is not a temperance fish, and the combination of ginger-brad and luck seems novel. The receipt reads: "Carpin Polness Manner.—Wash the carps, gut them carefully, and cut them to pieces. After having done this, you overspread the bottom of a stew-pan with little slices of some onions, with parsley roots, laurel leaves, cloves and slices of a lemon. Then you put the fish upon this, add a piece of ginger-bread, some butter and salt, and pour half a bottle of black and half a bottle of Bordeaux wine over the whole that the fish is perfectly covered by it. The fish, having sufficiently boiled, you take it out of the pan, sift the fish-soup, and appreciate it to your taste. For a fish of three pounds this receipt will do; for a bigger carp you must take more wine."

ROBERT B. ROOSEVELT.

CHUB FISHING.—The chubfish—could some of our friends give some points concerning chub fishing? I am told that in the absence of trout it is fair sport.—L. A. B. The chub, *Lepomis gibbosus*, I then grows to a good size, and is a fish needed by anglers in America. Many of our brooks could do better. They are found all over the country.

NEWARK, N. J., Jan. 22, 1892.—The Essex Fishing Club have elected the following officers for the ensuing year: Francis Wiener, President; Job Lork, Vice-President; John H. Howard, Rev. Secretary; Abraham H. Crane, Fin. Secretary; David Thompson, Treasurer.

A WORD TO ANGLERS.

KILL YOUR FISH WHEN CAUGHT.

I HAVE lately read in several papers accounts of vacation trips in pursuit of pleasure and of game, both fin and feather, and it has pained me to know that any would-be sportsman could land a fish and then write of his watching the same in its dying leaps and gasps with such delight as some seem to have possessed.

Every true angler will kill his fish at once—even before taking the hook from its gills, when practicable. This may be done easily in one of three ways, varying according to the size of the fish captured. 1st, by bending the head of the fish over the thumb nail of the left hand, thus breaking the vertebrae; 2d, by severing the vertebrae (in the same place) by a knife; or, 3d, by striking the head of the fish with a bludgeon.

For years I have practiced one of these methods, as the kind and size of the fish might require, and when the captive was consigned to the creel there was no annoying flopping to remind me of the death throes going on therein, had I not given the fish a gentle quietus before continuing my sport. To kill the fish when caught is not only merciful, but it also assures a better state of the flesh when upon the table, and once practiced will always be continued.

The flesh of a fish well conditioned for the table, however it may be cooked, should be firm and free from any indication of sliminess. If a fish be left to die a lingering death the flesh will be flabby, more or less tainted in flavor and, to the epicurean ear, repulsive for the palate or the stomach. Therefore, my honest advice, kill your fish at once and thank Heaven that you can enjoy such a dainty, toothsome dish as your skill and mercy rewards you with!

As appropos to the subject I am minded to copy some lines styled "Ad Lectorem," by the author and to be found pre-facing the comers of "The Art of Fishing on the Principle of Avoiding Cruelty," by the Rev. Oliver Raymond, LL.B.:

"Gentle reader, if this name

"Thy character, as I blame

"Will you cease on this endeavor—

"Fishing sports from pain to sever,

"Nor captured fish, e'en death denied,

"Gaspings by the water-side,

"Left in agony to lie,

"Shall disgrace you, and dishonor line."

"Verily, so our poet sings,

"Like dew on early things

"Falls from your eyes to the ground—

"Man below with her sweet grace,"

"I will then entreat her well

"While she deigns with me to dwell

"And for love will I eschore her

"In her search beneath the water.

"On a sudden will she cease to breathe,

"Sweet companions, side by side,

"Where, amidst their own beds,

"Lie with their own eyes their threads,

"And joyful issues in her see

"Their benevolent, Mercy."

My aim, then, do not lack absurd,

"But cease with us to make a third;

"For Mercy first, then you and I

"With ground bait, minnow, net and fly."

The author of the above work on fishing advocates the killing of his fish by using, as well as the killing of fish, immediately on being landed. In some contemplated papers on angling I may take occasion to quote from other works not always accessible to the casual reader, and doubly interesting now that the snow covers the earth, and from our beloved pastime we rest in reality, though, by the blessed aid of the mind and books, we can take an ideal fishing day in spite of the bitter blasts and "cager" air. O. W. R.

THE FISHERMEN'S AID TO SCIENCE.

COLLECTING SPECIMENS UNDER DIFFICULTIES.

WASHINGTON, January 16, 1892.

NO CLASS of men in the United States have shown more intelligent appreciation of the work being done by the U. S. Fish Commission, and the director of the same, Mr. F. Baird, than the fishermen of Gloucester, Mass. This has been amply demonstrated by the large collections which they have made for scientific purposes, during the past three years, presenting them as a free gift to Prof. Baird, who furnished the means for the proper preservation of the same. Thousands of specimens of fish and invertebrates have thus been added to the Smithsonian collections, among which are many new to science, besides others new to the fauna of North America. These have been put down on fishing lines, caught in seines and gill-nets, and taken from the coast of the East coast of America, all the way from the capes of Virginia to Greenland, and so expert have many of the fishermen become in collecting "curios," as they term them, that they readily notice any forms which they have not previously seen, and are thus enabled to procure such as are most valuable to naturalists.

It has happened, however, that among the collections made by the fishermen, and the still more extensive ones of the fish commission, so gravid slime eels (*Mizone glutinosa*) have been taken. Prof. Baird is, therefore, anxious to obtain some specimens of this species with eggs fully developed. Accordingly a letter was addressed to one of the Gloucester captains, by a member of the commission, asking if he would make some collections of slime eels, should he find any with eggs in a ripe condition. The following reply, which has been recently received, shows the interest still felt in this work, and graphically depicts the difficulties often encountered by the fishermen in making collections.

The name of the writer has been suppressed for obvious reasons:

"GLOUCESTER, January 10, 1892.

"FRIEND G:

"I write in answer to your letter of Dec. 27th, and the slime eel question. Shortly after I received your letter I went out on a haddock trip, and when the dories were ready to set the traps I gave orders to save all the slippery cusses they caught. But when the men were all on board again I found only one eel among all the dories, and, intending to keep him until I got some more, I laid it on the house for the time being.

"The night there came on a heavy gale from the north-east. It came without warning, commencing at 8 p. m. and lasting until about daylight. We were in a tight place, when it began, and had to scramble for dear life. I set out to run for Provincetown, but it came on so thick with snow that I soon gave that up; reefed our sails, and stood off shore, being at that time close on to Peaked Hill Bar.

"We came down from whole sail to two reefs; then to two reefed fore sail and jib; then to two reefed fore sail and 'bob' jib; and, at last, to two reefed fore sail. If it wasn't

howling about that time then my name is not C—. I would not have cared if I had had sea-room enough, but I was jammed against the backside of Cape Cod.

"When I looked for that slimy cuss after the breeze was over he was not there. But never mind, I will get some for you yet. Yours, etc., W. C."

It is to be hoped that the efforts of the gallant captain may meet with success, and that thereby the researches of scientists may be aided, and the time and habits of reproduction of the "slippery cuss" be better understood than they are at present.

J. W. C.

—On account of the thick glutinous slime that covers the body of the *Mizone* they are an object particularly disgusting to the fishermen.

A dangerous sand bar, which extends out a distance of half a mile or more from the east side—generally called the "jack wide"—of Cape Cod. There is no worse place on the coast of the United States for a vessel to be caught in during a heavy northeast gale, as is evidenced by the numerous wrecks that occur in the locality.

STRENGTH OF GUT AND HAIR.—I was a witness the other day as to the truth of an assertion that silk worm gut of upwards of thirty years old could be produced that would raise a weight of 15 lb. avoirdupois; and a single strand of hair, of a cinnamon color, that would lift a weight of 2 lb., and, it would appear, was equal to lift a far greater test; but, out of admiration for so admirable a bit of stuff, I cried "halt!" The latter was from a stallion of three years old. Both gut and hair had been preserved in an old parchment pocket case, dry and clean, and were as good as new. The gut, after the keeping of gut or hair free from the atmosphere, and not in too dry a place, is the whole secret of their lasting strength. The gut in question was not stained, and he attributes much of the weakness of the gut of the present day to the processes used to alter its color. I thought to say that in the formula of the preparation given by me for the preservation of gimp, I inadvertently omitted half a pint of boiled oil to be added to the quarter of a pint of gold size, and a tablespoonful of orange varnish. In the same way the tracing and fling, the hoop and riggle hooks ought to be left, until the last, and whipped the last thing, or the preparation used for the previous purpose would dissolve the wax and loosen the hold. By all means avoid bicarbonate of platinum, which is a most seductive but evanescent lure, ultimately destructive. The complaint of the weakness of the gut of the present day I take to be due to the process used to stain it. For, by steeping it in boiling ink and water, the combined fibres of the silk worm which compose the gut are separated, by melting the substance or gum which causes them more perfect adhesion.—GREVILLE F.—In *London Field*.

Fishculture.

REPORT OF THE CONNECTICUT COMMISSION.

"THE Sixteenth Annual Report of the Fish Commissioners and First Report of the Shellfish Commissioners of the State of Connecticut to the General Assembly, January Session, 1892," is before us. The two reports occupy 132 pages and two maps.

The Fish Commissioners, by act of the last General Assembly, were constituted a Board of Commissioners on Shell Fisheries, so that while the work of the two commissions is distinct the same individuals compose them. The Fish Commissioners report that the demand for the fry of brook trout was greater than the supply, and that the fry of brook trout were sold for 40 cents per dozen, but that only 350,000 were obtained. Of these 70,000 were accidentally lost. This loss fell upon the contractor, who had agreed to furnish them at a given sum per thousand; 277,000 were distributed, however.

The whole number of land-locked salmon eggs received from Grand Lake Stream, Me., for the year, was 496,500. Of these 350,000 were sent to the hatchery of Mr. H. J. Fenton, at Poquonock, and 146,500 to Mr. George Jelliffe, at Westport. There was no appropriation for Salmon culture, but Prof. Baird kindly presented the State with 250,000 salmon fry, which he suggested should all be planted in one place. In accordance with his suggestion they were all placed in the Farmington River, a branch of the Connecticut River, at the mouth of the river, near the town of Chas. G. (this is published, written Dec. 2, 1891, in which he describes the pens for keeping the salmon until the spawning time, and gives the estimated number of eggs which each of the States which contribute to the support of the two establishments should contribute.)

Shad hatching operations were entrusted to Messrs. Chalker and Kain, who were similarly employed last year. They turned out 2,128,000 fry into the Farmington River, and at the same time Prof. Baird, at the request of U. S. Senator Joseph H. Hawley, sent 1,000,000 more from the Delaware River, which were placed in the Connecticut. Attempts to hatch shad in sea water were again unsuccessful. We will quote the operations at length in a future article.

Statistics show that 81,760 shad were reported caught in 1891 (this is 35.0). The pound nets took more and the gill nets and seines less, but all of the latter did not report their catch. The interest in the German carp is increasing. An important list of fish commissioners, which leaves out Arkansas, Indiana, Nebraska, Texas and Wyoming closes the hatching portion.

The commissioners of shellfisheries cover a period of seven months, during which time, only, they have existed. Much preliminary work was necessary in surveying and mapping the grounds within the jurisdiction of the State. Mr. James P. Board, graduate of the Sheffield Scientific School, was appointed engineer of the board at the beginning of the work, and Mr. Charles A. Baldwin, clerk. The latter was succeeded, after one month, by Mr. Frederick Botsford. The board have regular sessions on Monday of each week, and usually on 23.75, 19 having already been collected and paid into the State treasury.

Much difference of opinion prevails among oystermen as to how the grounds shall be taxed, some advocating none at present, or at least a merely nominal one, because the State is now exporting instead of importing, and it would therefore be impolitic to tax the producers of oysters; others advocate a tax in form of a license to be paid by all who cultivate beds, while a third class advocate a tax on the annual product of the beds. Much valuable information concerning the oyster trade is embodied in the report and some remarks upon the structure of the oyster.

A fine colored "General Map of the Oyster Grounds of the State of Connecticut," and a sketch of the triangulation of the coast-points, together with a report of the engineer, form of application for grants, etc., and laws relating to the fisheries, close this exceedingly valuable report.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 7, 9 and 10, Pittsburgh, Pa. Bench Show. Chas. Lincoln Superintendent. Entries closed.

May 9, 10, 11 and 12, Boston, Mass. Third Bench Show of the Massachusetts Kennel Club, Edward J. Foster, Secretary; Chas. Lincoln, Superintendent.

September, National American Kennel Club Field Trials on Prairie Chickens, Jos. H. Dew, Columbia, Tenn. Secretary.

October, National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. IX.

IN the previous chapters we have carefully refrained from saying anything about the great benefit to be derived from having a trained dog to assist you in perfecting your pupil in his lessons. We have purposely pursued this course in order to show the new beginner that he can safely rely upon his own resources, and not be led by the hand at all right without any assistance. Nevertheless we have ever found that an old dog that is well trained and steady is of great importance in perfecting the pupil in the rudiments of well as the higher branches of his education; and we cannot forbear devoting a little space to the subject. In the first place our canine co-worker should be thoroughly trained and quick to obey; he must also be very intelligent and of a good disposition. You should let the two associate together from the first, and they will soon become attached to one another, unless the old dog is unusually stupid. We do not recommend that the pup should receive any guidance from the old dog until he is sufficiently grounded in his lessons to understand what is required of him. Thus, in teaching him *To ho*, after he will go through the performance fairly, we take the old dog into the pen with him, and after they have had a little time at play we take the pup in our arms, and making sure that he sees all that is going on, we place two pieces of meat on the ground about two feet apart, and calling up the old dog, make him, at the word *To ho*, point one of the pieces. We then walk around a little with the pup still in our arms, taking care that he can see the performance all the time. We then place the pup with his nose within a few inches of the second piece, and telling him *To ho*, make him wait a few seconds, and then cluck as a signal that they can each eat their piece. This has a wonderfully steady effect upon the pup, especially when you come to prolong the time a little, for he, seeing that the old dog is perfectly staunch and steady, will soon learn to emulate him. He will also acquire the very important habit of remaining steady when in the company of other dogs; this we consider of great importance, and under all circumstances we accustom the pup to doing his work in the presence of his companions, even if we have to impress the services of a cur and chain him in one corner of the pen. If this latter course has to be adopted, it is not necessary that it should be commenced until our pupil is somewhat advanced in his education, as the only object in view is to accustom him to perform his duties in the presence of other dogs, and to lay the ground rules for his steadiness among strangers that is so pleasing to see. So particular are we in this that we invariably train our pup to point a piece of meat and stand perfectly staunch, while his companion takes the bit and eats it. This he will readily learn to do if you immediately reward him with another piece. If he is well trained in this he will not annoy you by going to pieces should half a dozen dogs rush in upon the bird that he is pointing.

After our pup is well acquainted with the old dog and has become accustomed to the chain, they should be coupled together for a short time each day until his gets used to it. We shall find further on that this will be a great help to us. The coupling chain should be short with two good swivels. Men persons make a mistake in having the coupling chain too long. Four inches is plenty long enough when your dogs are anywhere near of a size, and you will generally find it long enough under any circumstances. Should the old dog be very high headed the chain can easily be lengthened an inch or two. After they go together, our pup will find that the men and his minds fairly go, and he will find that it will be of great benefit to him to practice him when coupled to the old dog, for the example of the latter will steady him, which is a matter of great importance, and once his mind is thoroughly impressed with the idea that he must hold his position, even when in fear that his companion will secure the tempting morsel, it will be comparatively easy to keep him up to his work. He will also learn to remain quiet at charge with much less trouble to you if coupled to the old dog. As he grows older and in this position, we should by all means recommend this course; indeed we have found that the services of a well trained, steady dog are invaluable all through until our pupil's education is complete. As we have before remarked the assistance of the old dog should never be called in requisition until our pupil has been taught his lesson and is somewhat proficient in its performance, then he can understandingly view the old dog as he performs the task, and if he is reasonably intelligent he will soon learn to imitate his steadiness, and if all else fails, if our pup is inclined to work too close to us when quartering his ground, that the example of the old dog will soon cause him to increase his range. We much prefer that our pup should range freely of his own accord, but should he not quite please us in this, we couple him to the old dog and practice them together until we obtain satisfactory results. Great caution must be observed in this and the lessons must not be too frequent nor too long continued, or our pup will lose his interest and for the very best of him of making the education cut out the work which will seriously detract from his usefulness in the field.

As it is very desirable that our dog should possess a fair amount of speed, we should so conduct his exercise that when we come to cut him loose in the field he will not pester and poke, but at once strike a slashing gait and with head well up, take to his work like a veteran. Many dogs can never become fast, but if you have followed the instructions in selecting your pup that we have given above, and have secured a well trained dog to work with plenty of life and spirit, there will be no trouble in bringing him out a fairly speedy animal; indeed, we have taken in hand old dogs that were decidedly slow, and in a few weeks, by judicious management, have succeeded in turning them out astonishingly fast. Of course, we cannot give instructions that will enable you

to infallibly produce a speedy animal, but if you will intelligently follow our plan, you can in most cases succeed in accomplishing your purpose. Do not forget, in your anxiety for speed, that a fast dog with a slow nose is nearly worthless; therefore, before you attempt to force the pace, you should thoroughly satisfy yourself that your pupil's olfactory organs are all right; you can form a nearly correct opinion upon this point by carefully watching him while he is at play, and taking note of each time that he "winds" anything that attracts him, and paying close attention to the distance he is from the object. This, though not an infallible test, will generally give you a very good idea of his powers. Should he appear to have a quick sensitive nose and you desire to quicken his gait, try the following plan, and our word for it, if you pursue the proper course, you will be astonished at the improvement he will show in a few lessons. When commencing these lessons you should select for exercise ground a large open field, and if the surface is undulating, it will be all the better, for when the old dog disappears over the knolls it will make the pup all the more eager to join him. When you arrive at the ground you should let the old dog go, and keep the pup close at heel, and when you are in the act of taking great care not to overdo the matter by keeping him under restraint too long, nor on the other hand should you let him go until he is in the proper frame of mind to put forth his best efforts when he hears the welcome signal. If you have acquired such knowledge of his disposition and temper as you should have done, you will be sure, by closely watching him, to hit upon just the right instant when his impatient feelings are at their greatest height to give him the word to go on. If this order is given in an eager tone, accompanied with a quick step or two forward, you will find that your pupil will at once start with an eager rush and put forth his best efforts to catch the old dog. You should carefully watch him, and as soon as he slackens his speed, call him in at once and keep him at heel until he is again impatient, when you can repeat the performance. If this course is understandingly pursued, your pupil will soon learn that in order to have his liberty he must not pester, and he will in a short time astonish you with his greatly improved gait. The speed of almost any dog can be improved in this way, but the best results are obtained when your dog is possessed of a high strong nervous temperament. With such a one properly handled marvelous improvement is sure to follow.

You will also find that the example of the old dog will be productive of much good, when you commence accustoming your pup to the sights and sounds of the street, you will be spared much trouble in way-wising him by coupling them together when taking a walk through the streets, especially if you are in a city where each sight and sound is new to your pupil. If this order is followed, his companion will be concerned and thereby acquire confidence, but he will soon learn that he cannot bolt should anything strange occur, and in a short time he will become steady and behave like a veteran.

Backing is an accomplishment that affords us much pleasure—in fact, one-half of our enjoyment, when shooting over a brace of dogs, is in witnessing the faultless performance of a well-trained animal, as he instantly honors the point of his companion. This accomplishment is inherent in many dogs, and is as natural to them as the instinct of pointing. Yet, there are many first-class animals who will not back a companion's point, but will work forward until they obtain the scent. This is always unpleasant, and often not only mars our enjoyment of the sport, but the practice is very apt to unsteady the other dog, especially when the dog that should back thrusts his nose a little ahead, which he is very prone to do. The dog that will remain perfectly steady and staunch while his companion repeatedly practices this, is, indeed, a treasure, and worthy fairer treatment. That your dog will not back is a matter that you should be sure to find out, and rest assured, if you have carefully followed our instructions in his early training and will intelligently handle him when he first goes into the field with a companion. As we have often remarked, first impressions play a very important part in the future behavior of your dog, therefore you should be very careful that nothing occurs that will give him any wrong ideas. The first time that you take him out with another dog, they should be well acquainted, if possible, or at least have time to play together until they become somewhat used to each other. You should be accompanied by a friend, who should have the care of the other dog, while you keep your pupil close to heel until the other dog finds and comes to a point. Be very careful now, and as soon as your dog catches sight of him, raise your hand and bid him *To ho*, and on no account must you stir so much as a finger, but remain perfectly quiet and staunch, as though you were also backing, until your companion has flushed the bird. Your example will have much to do in perfecting his steadiness, and you will find that after a few lessons of this kind—good even in the remotest parts of Scotland—his back will understand what is required, and instantly back of his own accord as soon as he catches sight of a companion's point.

FIELD TRIALS.

HEAT SYSTEM VS. SHIREBURY SYSTEM.

WE publish the following from *Land and Water* and would suggest that the committee having charge of the amendment of our own Field Trial Rules should carefully read and consider the changes advocated:

"Mr. George Brevie, who will be remembered, purchased Dash (the pup Mr. Brevie's), and won several trials with that dog at the Kennel Club, and then, as always, conducted on the heats plan of judging, has of late declared himself in favor of the Shirebury system. Moreover, he has been powerful enough to get a committee of the kennel club elected to look into the question."

Perhaps, before going into the subject, it will be best to show wherein the two systems of judging differ, for field trials have become of late years an institution of the greatest importance to sportsmen when engaged on the moors, and few are the landmen in the remotest parts of Scotland who have not gained something by it—may be only indirect—crossing with the blood of field trial winners. In both systems of judging the mode of bringing together the contesting dogs by what is called "the draw" is the same. The name of every dog in the stake is written on a separate slip of rolled paper placed in a hat. They are then drawn out by lot, and every two coming together run together in the stake, the judges being the same in each case. Here the likeness between the two systems ends. In the Shirebury system the dogs are drawn out by lot, and the judges, if free to award the prizes then and there, without having given any verdict between any two dogs which, according to the draw, have run together. Everything is optional with the judges. As a matter of fact it generally happens that the judges, as the time draws near, are so completely taken up with the excitement, and also see many of the dogs down a second time generally.

In the heats plan, as the contending braces are taken up, the judges are bound to deliver a verdict, and when the end has been

run through once, every unbeaten dog, that is half the number of the original stake, together with the bye or odd dog (should the number in the stake have been an uneven one) are paired in the order in which they have previously run, and the judges again go to work, if it had not been decided before, and again judge between every two contesting dogs, taking note of the work they have done in their former competition, but judging between the two dogs before them in circumstances of place, time, atmosphere and scent, which are alike for both. The whole of the trial is having the same dog in the stake, and the same thing is contested until only one dog is left in the stake, to whom, of course, first prize falls. In awarding the second and other prizes two systems have been adopted, neither less than the other a part of the heats plan, and the last dogs turned out of the stake at the second, third and fourth prize, according to the number of dogs in the stake when they were turned out, the last dog turned out, of course, taking second prize. The other way of awarding these prizes, which has also been used at the kennel club heat system trials, and which is to be more tempered with justice than the other, is this: When the first prize dog has been discovered, then the last dog turned out of the stake has to form a stake, and run it out, on the heats plan, against every dog previously met and beaten directly by the winner of first prize. The same thing happens to the third prize, except that it is every dog beaten by the second prize dog which comes out, and so on, if there are more than three prizes to be given, which in our opinion never ought to be.

The Kennel Club has adopted the heats plan as its own, and has put it up as superior to the Shirebury system, where it was argued, and very justly, that the best dog in the stake, by running on the worst ground and in the worst time of the day for scent, might do the worst work of any dog in the stake. Such a thing has happened more than once. The organs of the Kennel Club have been tired of hearing their officers, and the superior to that of Shirebury, and people were forcibly reminded that they there paid a big entry fee for the pleasure of running their dog before the judges, without the satisfaction of a contest with the result, and moreover, not knowing what the judges thought of his dog, and his performance, and that the dog running under favorable circumstances of time, place, atmosphere might be highly thought of, while other, better, were never asked for again. The Kennel Club made rather too much of this, and decided to award prizes on the Shirebury system, but not to anything like so great an extent as it has been sought to be made to appear; for although the best dog has not always won, certain it is that no bad one has ever done so.

We venture to say that, if the heats system been attacked by any one, Mr. George Brevie would have been the first to attack it, and the Kennel Club, the gentleman who gives it a dwelling and an estate on which to hold its trials, the Kennel Club would have defended every particle and offshoot of the system as a settled question, with more Brevie than Mr. John Bright himself at that time. We venture to raise the question, and with that protection, and for the same reason, because both are of a party that has settled a question, and the reputation of both depends upon the respective questions remaining settled. It is a happy occasion, when the dog that is so far from being a consideration of their way of conducting field trials by the heat system, for so it is called, and the heats system has everything of the Kennel Club Field Trials become, and so committed to it is the club, that otherwise no discussion would have been possible in any other club. Now, we repeat, we are sure, and with that view give the four objections against the heats system enumerated by Mr. George Brevie. They are as follows:

1. It is very unfair to the second best dog in the stake, if, as is often the case, it is drawn against the absolute winner. Under such circumstances the second best dog is sure to be beaten, while an inferior animal creeps into what should have been another's place.

2. As we witnessed last week, the waste of ground and time entailed in running together two inferior dogs, it may be for more than a month and a half, if you decide on the heat system, the best, but really and truly which is the worst of the brace.

3. The injustice done to a dog that has had an hour's trial and won it handily, being made to run against a comparatively fresh dog, and previous ground, is a waste of time and ground.

4. The luck of the bye, by which a dog practically wins a tie, however bad he may be, without being slipped.

The first of these objections is no argument against the heats system; it is simply an objection to the mode of giving second prize, and that is a matter that is not to be considered, and not at others. It is an objection (with which we perfectly agree) to giving second prize to the last dog beaten by the winner, instead of to the best dog beaten by the winner, discoverable by a further trial, as a separate stake, as described above, and which has been tried with good results at the Kennel Club, and the Kennel Club. The only exception taken to it has been founded on the time it takes to carry it out. This is not much and can be overcome. In a sixteen dog stake it takes fifteen contests to decide first prize, three to decide second, and from two to five to decide third.

Mr. Brevie's second objection deals with the question of waste of ground and time, and I will take this objection with reference to time alone, as the two, time and ground, can easily be shown to be inseparable, so far as the heats system is concerned. The great length of time the heat system has always been made to occupy that has been its one fault; and this year, with singularly protracted trials, resulted in Mr. Brevie's protest. All other points being far in advance of the Shirebury system, either regarded from the view of a sportsman, or from the view of a sportsman, to a certain extent how the game is going; or from the view of an exhibitor, who knows his dog will have an exactly equal chance of doing himself credit, toward winning, as every other dog in the stake, and he would be sure to get a fair trial, and a fair trial whether he has had ground or good, so long as it is the same for both, as it is, of course, always, and as it is not, and cannot be, under the Shirebury plan. Now, it appears to us that without in the least breaking away from the heats system, as a system, and while retaining every advantage of that system, especially the greatest of all, which is that no dog is turned out of the stake only because he has done bad work (it may be without a possibility of doing better), but only because he is beaten by another dog, and that dog is better work than he, and he is the same chance, it appears to us that a great saving of time and ground, and saving the judges more power in two directions. First, give them power to judge more competitors in the stake, instead of as under the Shirebury system of turning both out. Second, give them power to judge more competitors in the stake, instead of as under the Shirebury system, which is to give the dogs a fair trial, and a fair trial in the order, and in any pairing they choose for the trial, and running in that stake, always retaining the power of keeping both competitors in the stake to run against different dogs of the judges' choosing in the next course of heats. The advantages of these extended powers would be as follows: First, the sportsman would run through the list of dogs as drawn and on the field card, noting not only the work of each dog as compared with its antagonist, but they would keep an eye on the general form of the dogs as they run, and watching them, and the result of the heats for the obtaining of speedy results. The judges would thus be able to "give-and-take trial," which, under the present rules, have been known to occupy the best part of a morning, stop them so soon as they saw no speedy decision could be arrived at whether the dogs had beaten one another or twenty, to go down to the next round, and in the next course of heats, either better or worse (according to opinion), as they had seemed above or below the average of the dogs in the stake.

Mr. Brevie's third objection seems to me to require less attention. He says that a great evil will be for one dog to run a second or longer than another, I think old sportsmen will agree with me that it would be a still greater evil to attempt to judge between dogs run at different times of the day, in good scent and cover and on ground, and on ground, in good scent and cover and on ground. Those who have seen the best dogs run at different times of the day, and they know also that some bits of the moor and some fields also never hold scent. Why, the

accidental flight of a falcon, or even a hawk, over a bit of ground, will make the greatest difference to the birds and the ability of the dogs to find them. Clearly, every account should happen to be as accurate as much as possible the same. However, with the modifications of the hea's system which I have suggested, these long runs need only occur when the two last dogs left in to fight it out for a prize as nearly equal as possible. The objection (No. 3), raised by Mr. Brown, although not entirely removed by my suggestions, is reduced to a minimum, and, as much as possible, in fair competition of pointers and setters at work.

The fourth objection, "the lack of the bye," would, I think, entirely disappear. The only use of the bye was—first, to keep a dog fresh; and second, to give the dog the last four in the stake. With short trials instead of long ones, and with second and third prize run off, as they should be, there would be no advantage gained by a bye.

Those who do not remember the causes of so much loss of time at the late trials will discover, on reference to the reports of the meeting, that it was lost by protracted trials between dogs which never got into the end of the stake, many of which might have been disposed of in five minutes, had they been properly matched by the judges with some dogs which were good enough to get near the end. If the time had been saved in this way, there would have been lots of time to have run off the minor prizes, and we should have come to the end of the stake very much quicker into the bargain. A change of the rules in this direction would be an accompanying change in the time given for bringing up dogs when called; for, as there would be many more trials, so would there be more time lost in bringing up fresh dogs; unless this was looked to, a quarter of an hour or twenty minutes, as it is now, is absurdly long.

FALCON.

ON IMPORTING DOGS.

WE present, below, a statement of the charges of the various steamship lines to this port on dogs carried by them; also important information as to Custom House regulations regarding imported live stock.

Allen line, Love & Alden, agents, 207 Broadway, New York, carries from either Londonderry, Galway or Queenstown, Ireland; Glasgow, Scotland, or Liverpool, England; to Portland, Boston or Baltimore in winter, or to Quebec in summer, at a uniform charge of \$5 for each dog, including feeding and attendance.

Dogs are placed in charge of the steward during the passage.

Anchor line, Henderson Brothers, agents, 7 Bowling Green, New York, carries from Glasgow, Londonderry, Dublin, London or Liverpool in England; New York, at a charge of from two to three guineas on each dog, for passage only. The animal is usually placed in charge of the cook, with whom private arrangements must be made in regard to feeding and attendance, there being no settled scale of prices for this service.

Compagnie Generale Transatlantique, Le Debiat, agent, 6 Bowling Green, New York, carries from Havre, France, to New York. On each dog shipped as freight the charge is 125 francs, or if with a passenger, 50 francs. This includes food in either case, and in the former attendance also.

North German Lloyd Line, Oelrichs & Co., agents, 2 Bowling Green, carries from Bremen and Southampton at a charge of twenty dollars on each dog, which includes food; but a private arrangement must be made with the cook, the steward or some other employee on the vessel regarding exercising and tending the animal.

National line, F. W. J. Hurst, manager, 69, 71 and 73 Broadway, New York, carries from Liverpool, Queenstown and London to New York, charging from three to five guineas on each dog, which is put in charge of the butcher, and to him an additional fee, not stated, must be paid for feeding and attendance.

State line, Austin, Baldwin & Co., general agents, 58 Broadway, New York, carries from Glasgow, Belfast and Liverpool to New York. The charge on each dog, part of which is paid by the State, is put in charge of the butcher, and to him an additional fee, not stated, must be paid for feeding and attendance.

White Star line, B. J. Cortis, agent, 37 Broadway, New York, carries from Liverpool to New York at a charge of 45 on each dog, which sum includes feeding and attendance, no extra fee being demanded. The butcher takes care of dogs on the ship.

Imman line, John G. Dale, agent, 31 and 33 Broadway, New York, carries from Liverpool to New York for three guineas on each dog. The details in all other particulars are the same as those regarding the State line, printed above.

Wilson line, Sanderson & Son, agents, 39 South William street, New York, carries from Hull to New York, for £1.10, each dog, which is placed in charge of the steward. Meat is furnished by him, but it is requested that two paws, for food and water, and a supply of dog biscuit be sent with the dog.

The American, Red Star, Guand, Monarch and Guion lines will not carry dogs.

In case a steamship company liable for the death or injury of a dog during a voyage, except when actual intent, negligence or carelessness, on the part of the company or its servants, can be proven. All of the rates given above must be paid before shipment, and are not, for examination only, must be paid, but those are comparatively nominal. Matters may be very much expedited by having the importation consigned to some really reputable custom house broker, who will attend to all necessary details upon its arrival, and then send it on to the purchaser.

In case where the dog is killed, etc., it is well to have an understanding that the payment will be made upon the arrival of the dog; and even where no payment, other than the freight charge, is demanded by the carrier or its servants, it will be to the advantage of the purchaser to have the shipper him to the broker must expect a gift here, if the dog arrives in good condition. This will probably prevent neglect, at least; but imported dogs as often suffer from over-feeding, on board ship, as anything else.

BROCK AND COUNTERS.—Mr. Geo. T. Leach, of this city, who imported and owns this fine pair of setters, requests us to say that Brock is not out of Countess as some of the sporting papers have published, but that they are both from the same litter, and as was stated by us in our issue of Nov. 11, 1912, Brock is the son of Mr. W. J. Duncanson. Brock will be remembered as the winner of the Members' Cup and also the FOREST AND STREAM Cup for the best dog owned and handled by an amateur at the late Field Trials on Robbins' Island. The importance of recording correct pedigrees of all dogs, and of breeders should see that mistakes when they occur are at once corrected.

FERIDA-POLLUX MATCH.—Mr. E. I. Martin writes that owing to the constant demand upon his time in caring for the valuable puppies just arrived, it will be impossible for him to bring the above match to a successful conclusion. This note was inadvertently omitted from our last issue.

At a meeting of the Westminster Kennel Club Nov. 10, the following named gentlemen were elected members: Mr. A. Wright Smith, Mr. Henry Nichols, Mr. D. T. Worden and Mr. John G. Heckscher.

PITTSBURG DOG SHOW.

WE have received the premium list of the bench show to be held at Pittsburgh, Pa., commencing March 7. Judging from the number and value of the special prizes offered, the sportsmen of that vicinity are determined that the show shall be a success.

The show will be held under the rules and regulations of the National American Kennel Club. Dogs will not be received before 7 A.M. Monday, March 6, nor after 8 A.M. Tuesday, March 7. Premium lists and entry blanks can be had at this office and at the office of Mr. J. Palmer O'Neil, or by addressing the Superintendent, Mr. C. H. Lincoln, P. O. Box 303, Pittsburgh, Pa. The B. & O. Adams and Union Express Companies will carry and return dogs for fare one way.

PREMIUM LIST.

- 1 Champion English setter dogs, \$20.
- 2 Same for bitches.
- 3 English setter dogs (except pure Laveracks), \$20, \$15, silver medal.
- 4 Same for bitches.
- 5 English setters (pure Laverack pedigree), \$20, \$10.
- 6 Same for bitches.
- 7 English setters puppies, under 12 mos., dogs, \$7, \$3.
- 8 Same for bitches.
- 9 Champion Irish setter dogs, \$20.
- 10 Same for bitches.
- 11 Irish setter dogs, \$20, \$10.
- 12 Same for bitches.
- 13 Irish setter puppies, dogs or bitch, \$7, \$3.
- 14 Irish setter puppies, under 6 mos., dogs or bitch, \$7, \$3.
- 15 Same for bitches.
- 16 Gordon setter dogs, \$20, \$10.
- 17 Same for bitches.
- 18 Gordon setter puppies, dogs or bitch, \$7, \$3.
- 19 Champion pointer dogs, over 45 lbs., \$20.
- 20 Same for bitches, under 50 lbs.
- 21 Champion pointer dogs, over 45 lbs., \$20.
- 22 Pointer dogs, under 50 lbs.
- 23 Pointer dogs, over 50 lbs., \$20, \$10.
- 24 Same for bitches, under 50 lbs.
- 25 Pointer dogs, over 50 lbs., \$20, \$10.
- 26 Same for bitches, under 50 lbs.
- 27 Pointer puppies, either sex, \$5.
- 28 Irish water spaniels, dogs or bitch, \$10, \$5.
- 29 Black spaniels (large size) either sex, over 25 lbs., \$1, \$5.
- 30 Same small size, under 25 lbs.
- 31 Fox terrier puppies either sex, \$10, cup valued at \$5.
- 32 Fox terrier puppies, either sex, \$5.
- 33 Fox terrier puppies, either sex, \$5.
- 34 Fox terrier puppies, either sex, \$5.
- 35 Fox terrier puppies, either sex, \$5.
- 36 Fox terrier puppies, either sex, \$5.
- 37 Fox terrier puppies, either sex, \$5.
- 38 Fox terrier puppies, either sex, \$5.
- 39 Fox terrier puppies, either sex, \$5.
- 40 Fox terrier puppies, either sex, \$5.
- 41 Fox terrier puppies, either sex, \$5.
- 42 Fox terrier puppies, either sex, \$5.
- 43 Fox terrier puppies, either sex, \$5.
- 44 Fox terrier puppies, either sex, \$5.
- 45 Fox terrier puppies, either sex, \$5.
- 46 Fox terrier puppies, either sex, \$5.
- 47 Fox terrier puppies, either sex, \$5.
- 48 Fox terrier puppies, either sex, \$5.
- 49 Fox terrier puppies, either sex, \$5.
- 50 Fox terrier puppies, either sex, \$5.
- 51 Fox terrier puppies, either sex, \$5.
- 52 Fox terrier puppies, either sex, \$5.
- 53 Fox terrier puppies, either sex, \$5.
- 54 Fox terrier puppies, either sex, \$5.
- 55 Fox terrier puppies, either sex, \$5.
- 56 Fox terrier puppies, either sex, \$5.
- 57 Fox terrier puppies, either sex, \$5.
- 58 Fox terrier puppies, either sex, \$5.
- 59 Fox terrier puppies, either sex, \$5.
- 60 Fox terrier puppies, either sex, \$5.
- 61 Fox terrier puppies, either sex, \$5.
- 62 Fox terrier puppies, either sex, \$5.
- 63 Fox terrier puppies, either sex, \$5.
- 64 Fox terrier puppies, either sex, \$5.
- 65 Fox terrier puppies, either sex, \$5.
- 66 Fox terrier puppies, either sex, \$5.
- 67 Fox terrier puppies, either sex, \$5.
- 68 Fox terrier puppies, either sex, \$5.
- 69 Fox terrier puppies, either sex, \$5.
- 70 Fox terrier puppies, either sex, \$5.
- 71 Fox terrier puppies, either sex, \$5.
- 72 Fox terrier puppies, either sex, \$5.
- 73 Fox terrier puppies, either sex, \$5.
- 74 Fox terrier puppies, either sex, \$5.
- 75 Fox terrier puppies, either sex, \$5.
- 76 Fox terrier puppies, either sex, \$5.
- 77 Fox terrier puppies, either sex, \$5.
- 78 Fox terrier puppies, either sex, \$5.
- 79 Fox terrier puppies, either sex, \$5.
- 80 Fox terrier puppies, either sex, \$5.
- 81 Fox terrier puppies, either sex, \$5.
- 82 Fox terrier puppies, either sex, \$5.
- 83 Fox terrier puppies, either sex, \$5.
- 84 Fox terrier puppies, either sex, \$5.
- 85 Fox terrier puppies, either sex, \$5.
- 86 Fox terrier puppies, either sex, \$5.
- 87 Fox terrier puppies, either sex, \$5.
- 88 Fox terrier puppies, either sex, \$5.
- 89 Fox terrier puppies, either sex, \$5.
- 90 Fox terrier puppies, either sex, \$5.
- 91 Fox terrier puppies, either sex, \$5.
- 92 Fox terrier puppies, either sex, \$5.
- 93 Fox terrier puppies, either sex, \$5.
- 94 Fox terrier puppies, either sex, \$5.
- 95 Fox terrier puppies, either sex, \$5.
- 96 Fox terrier puppies, either sex, \$5.
- 97 Fox terrier puppies, either sex, \$5.
- 98 Fox terrier puppies, either sex, \$5.
- 99 Fox terrier puppies, either sex, \$5.
- 100 Fox terrier puppies, either sex, \$5.

NON-SPORTING.

41 Mastiffs, \$10, cup valued at \$5.

42 St. Bernards (rough coated), silver cup valued at \$10.

43 Same for St. Bernards (smooth coated).

44 Newfoundland, silver cup valued at \$10.

45 Champion collies, champion medal.

46 Collie dogs, \$10, \$5.

47 Same for bitches.

48 Collie puppies, silver medal.

49 Collie puppies, silver medal.

50 Collie puppies, silver medal.

51 Collie puppies, silver medal.

52 Collie puppies, silver medal.

53 Collie puppies, silver medal.

54 Collie puppies, silver medal.

55 Collie puppies, silver medal.

56 Collie puppies, silver medal.

57 Collie puppies, silver medal.

58 Collie puppies, silver medal.

59 Collie puppies, silver medal.

60 Collie puppies, silver medal.

61 Collie puppies, silver medal.

62 Collie puppies, silver medal.

63 Collie puppies, silver medal.

64 Collie puppies, silver medal.

65 Collie puppies, silver medal.

66 Collie puppies, silver medal.

67 Collie puppies, silver medal.

68 Collie puppies, silver medal.

69 Collie puppies, silver medal.

70 Collie puppies, silver medal.

71 Collie puppies, silver medal.

72 Collie puppies, silver medal.

73 Collie puppies, silver medal.

74 Collie puppies, silver medal.

75 Collie puppies, silver medal.

76 Collie puppies, silver medal.

77 Collie puppies, silver medal.

78 Collie puppies, silver medal.

79 Collie puppies, silver medal.

80 Collie puppies, silver medal.

97 Collie puppies, silver medal.

98 Collie puppies, silver medal.

99 Collie puppies, silver medal.

100 Collie puppies, silver medal.

SPECIAL PRIZES.

Silver medals will be given for A. best kennel of five English setters.

B. Best kennel of five Irish setters.

C. Best kennel of five Gordon setters.

D. Best kennel of five pointer dogs.

E. Best kennel of five Irish water spaniels.

F. Best kennel of five cocker or field spaniels.

G. For best English setter, dog or bitch, Messrs. Parker Brothers offer through agents Messrs. J. Palmer O'Neil & Co., of Pittsburgh, a double-barreled breech-loading shotgun, value, \$125.

H. For best three English setters, dogs or bitches, bred and owned by exhibitor, J. L. Henricks, offer an automatic musical cabinet, value, \$100.

I. For best Laverack setter dog, open class, Edward Gregg, President of the Association, offers handsome gold medal, value, \$20.

J. For setter or pointer (dog or bitch) that has the best field trial record, the record only to be considered, a prize given by Society of \$20 cash.

K. For brace of English setter dogs with best field trial record, J. J. Snellensburgh, of New Brighton, Pa., offers pair of silver dog collars, value, \$15.

L. For best matched pair of English setters (regardless of sex) color and quality to be considered, J. R. Henricks donates handsome gold whistle, value, \$10.

M. For best English setter, dog, under two years old, J. J. Snellensburgh offers English cutdown or fustian hunting suit, value, \$40.

N. For best native English setter dog, without Laverack, Llewellyn or field trial blood, J. J. Snellensburgh offers canvas suit, value, \$12.50.

O. For best spring dog or bitch that is exhibited in the best show condition, J. J. Snellensburgh offers one ordinary professional trainer's jacket, value, \$15.

P. For best dog or bitch puppy, sired by the Laverack dog "Champion," owned by J. J. Snellensburgh, of Pittsburgh, Pa., donate five dog collars, white and whip.

Q. For best English setter, stud dog, to be shown with two of his get, a silver cup given by Grogan & Merz, Pittsburgh.

R. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

S. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

T. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

U. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

V. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

W. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

X. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

Y. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

Z. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AA. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AB. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AC. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AD. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AE. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AF. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AG. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AH. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AI. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AJ. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AK. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AL. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AM. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AN. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AO. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AP. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AQ. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AR. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AS. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

AT. For best English setter, brood bitch, to be shown with two of her progeny, Dr. J. H. Hoopes, Esq., New Brighton.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishcultivist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family centre-table, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five for \$16. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN:
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the
ROUTING PARKS and RACE COURSES in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT POINTS, avoid the dan-
gers and dangers of reshipment, while the ex-
cellent cars which run over the smooth steel track
enable SPORTS to be TRANSPORTED without
failure or injury.

THE LINES OF
Pennsylvania Railroad Compy
also reach the best localities for
Gunning and Fishing
In Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the company in
all the principal cities to KANE, RENOVIA, BED-
FORD, CRESSON, HESTON, MINNEQUA, and
other well-known centres for
Trout Fishing, Wing Shooting and Still
Hunting.

Also to:
TUCKERTON, BEACH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST
renewed for SALT WATER SPORT AND FISH
AND FEATHER.

FARMER, Gen'l Assn. Agent.<
